HOUSE OF COMMONS

First Session—Twenty-eighth Parliament

1968-69

STANDING COMMITTEE

ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

PROCEEDINGS

No. 1 - 16

THURSDAY, OCTOBER 17, 1968

LIBRARY

★ NOV - 6 1968 ★

UNIVERSITY OF TORONTO

INCLUDING

Appendix A

Revised Main Estimates (1968-69) of the Department of
Fisheries and Forestry.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and

Messrs.

¹Anderson,
Blouin,
Breau,
Comeau,
Crouse,
Cyr,

Dionne,
Goode,
Hogarth,
Howard (*Skeena*),
Lundrigan,
Mather,
McQuaid,

Moore (Bonavista-
Trinity-Conception),
Noble,
Smith (Northumberland-
Miramichi),
Smith (*Saint-Jean*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee

¹ Replaced Mr. Honey on October 15, 1968.

TUESDAY, October 8, 1968.

Resolved,—That the following Members do compose the Standing Committee on Fisheries and Forestry:

Messrs.

Blouin,
Breau,
Comeau,
Crossman,
Crouse,
Cyr,
Dionne,

Durante,
Goode,
Hogarth,
Honey,
Howard (*Skeena*),

Mather,

McQuaid,
Moores,
Smith (*Northumberland-Miramichi*),
Smith (*Saint-Jean*),
Whelan—(20).

TUESDAY, October 15, 1968.

Ordered,—That the name of Mr. Anderson be substituted for that of Mr. Honey on the Standing Committee on Fisheries and Forestry.

WEDNESDAY, October 16, 1968.

Ordered,—That, saving always the powers of the Committee of Supply in relation to the voting of public moneys, the items listed in the Revised Main Estimates for 1968-69, relating to Fisheries and Forestry, be withdrawn from the Committee of Supply and referred to the Standing Committee on Fisheries and Forestry.

ATTEST:

ALISTAIR FRASER

The Clerk of the House of Commons

MINUTES OF PROCEEDINGS

THURSDAY, October 17, 1968

(1)

The Standing Committee on Fisheries and Forestry met this day at 9.35 a.m. for the purposes of organization.

Members present: Messrs. Anderson, Blouin, Breau, Comeau, Crossman, Crouse, Cyr, Dionne, Durante, Goode, Hogarth, Howard (*Skeena*), Lundrigan, Mather, Moores (*Bonavista-Trinity-Conception*), Noble, Smith (*Northumberland-Miramichi*), Smith (*Saint-Jean*), Whelan (19).

The Clerk attending and having called for nominations to elect a Chairman, it was moved by Mr. Goode, seconded by Mr. Cyr, that Mr. Guy Crossman be elected Chairman of this Committee.

On motion of Mr. Anderson, seconded by Mr. Blouin,
Resolved,—That nominations be closed.

The Clerk put Mr. Goode's motion and it was resolved in the affirmative.

Mr. Crossman took the Chair, and thanked the Committee for the honour conferred on him.

The Clerk read the Committee's Order of Reference dated October 16, 1968.

The Chairman called for nominations for the election of a Vice-Chairman.

It was moved by Mr. Blouin, seconded by Mr. Hogarth,
That Mr. Durante be elected Vice-Chairman.

There being no other nominations, Mr. Durante was declared elected Vice-Chairman of this Committee.

On motion of Mr. Crouse, seconded by Mr. Noble,

Resolved,—That the Committee print 750 copies in English and 250 copies in French of its Minutes of Proceedings and Evidence, with the understanding that additional copies will be printed when required.

On motion of Mr. Hogarth, seconded by Mr. Goode,

Resolved,—That the Subcommittee on Agenda and Procedure be comprised of the Chairman, the Vice-Chairman and four other members appointed by the Chairman after the usual consultations with the Whips of the different parties.

On motion of Mr. Durante, seconded by Mr. Anderson,

Resolved,—That the items listed in the Revised Main Estimates for 1968-69 relating to Fisheries and Forestry be printed as an appendix in Issue No. 1 of the proceedings of this Committee. (*See Appendix "A"*)

On motion of Mr. Hogarth, seconded by Mr. Goode,

Resolved,—(a) That the Committee seek permission to adjourn from place to place within Canada;

(b) That the Clerk of the Committee and the supporting staff accompany the said Committee.

The Chairman was ordered to present it as the Committee's First Report to the House.

At 10.05 a.m., the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE
ON
FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 2

TUESDAY, OCTOBER 29, 1968

Respecting LIBRARY

The Revised Main Estimates (1968-69) of Fisheries and Forestry

WITNESSES:

From the Department of Fisheries: The Honourable Jack Davis, Minister;
Dr. A. W. H. Needler, Deputy Minister; and Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional).

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and

Messrs.

Anderson,
Breau,
Comeau,
Crouse,
Cyr,
Dionne,
Goode,

Hogarth,
Lundrigan,
Mather,
McQuaid,
Moore (Bonavista-
Trinity-Conception),
Noble,

Smith (Northumberland-
Miramichi),
Smith (Saint-Jean),
² St. Pierre,
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

¹ Replaced Mr. Howard (*Skeena*) on October 23, 1968.

² Replaced Mr. Blouin on October 23, 1968.

ORDER OF REFERENCE

WEDNESDAY, October 23, 1968.

Ordered,—That the names of Messrs. Rose and St. Pierre be substituted for those of Messrs. Howard (*Skeena*) and Blouin on the Standing Committee on Fisheries and Forestry.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

REPORT TO THE HOUSE

TUESDAY, October 29, 1968

The Standing Committee on Fisheries and Forestry has the honour to present the following as its

FIRST REPORT

Your Committee recommends that it be granted leave to adjourn from place to place within Canada, accompanied by the Clerk of the Committee and necessary supporting staff.

A copy of the relevant Minutes of Proceedings and Evidence (*Issue No. 1*) is tabled.

Respectfully submitted,

GUY CROSSMAN,
Chairman.

MINUTES OF PROCEEDINGS

TUESDAY, October 29, 1968.

(2)

The Standing Committee on Fisheries and Forestry met this day at 9.35 a.m., the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Anderson, Breau, Comeau, Crossman, Crouse, Cyr, Durante, Goode, Hogarth, Lundrigan, Mather, McQuaid, Moores (*Bona-vista-Trinity-Conception*), Noble, Rose, Smith (*Saint-Jean*), St. Pierre, Whelan—(18).

In attendance: The Honourable Jack Davis, Minister of Fisheries; *from the Department of Fisheries:* Dr. A. W. H. Needler, Deputy Minister; Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); and Departmental officials from Fisheries and Forestry.

The Chairman informed the Committee that the Subcommittee on Agenda and Procedure is composed of the following members: Mr. Crossman, Chairman; Mr. Durante, Vice-Chairman; Mr. Crouse, Mr. Dionne, Mr. Howard (*Skeena*), and Mr. Whelan. Mr. Howard (*Skeena*) was later replaced by Mr. Rose.

The Clerk read the First Report of the Subcommittee, as follows:

Your Subcommittee met on Friday, October 25, 1968.

Members present: Messrs. Crouse, Durante, Rose and Whelan—(4).

Also present: Mr. Anderson, M.P.

The Committee discussed Agenda and Procedure.

Your Committee recommends:

1. That Vote 1: General administration—will be called for the purpose of hearing the Minister's statement;
2. That the Main Committee schedule a meeting for 9.00 a.m. to 11.00 a.m. Friday, November 1, 1968 for the purpose of hearing a statement from Mr. R. I. Nelson of the Fisheries Council of Canada.

On motion of Mr. Noble,

Resolved,—That the First Report of the Subcommittee on Agenda and Procedure be adopted.

Following debate it was agreed,—

That the Subcommittee on Agenda and Procedure would meet to arrange future meetings to hear the Minister of Fisheries.

It was also agreed,—

That the Committee concentrate on the Fisheries estimates before going on to the Forestry estimates.

The Chairman called

Item 1—Revised Estimates, 1968-69, Fisheries and Forestry—Departmental Administration and introduced the Minister.

The Deputy Minister of Fisheries introduced the Departmental officials.

The Honourable Jack Davis, Minister of Fisheries addressed the Committee.

The Committee questioned the Minister and his officials.

On motion of Mr. Whelan, it was agreed,—

That the text of the Minister's address be printed as an appendix to today's Minutes of Proceedings and Evidence. (*See APPENDIX "B"*)

At 11.00 a.m. the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, October 29, 1968.

and Mr. Bradbury, Industrial Development, Fisheries.

● 0935

The Chairman: I see a quorum. I will call the meeting to order.

Before we start I wish to say that we are tied to a schedule today as far as time is concerned. The co-ordinator has informed me that we can only have this room until 11 o'clock so I hope everybody will co-operate in being as efficient and brief as possible.

The Subcommittee on Agenda and Procedure is composed of the following members: myself, as Chairman; Mr. Durante, Vice-Chairman; Mr. Crouse; Mr. Howard (Skeena); Mr. Dionne and Mr. Whelan. Mr. Howard was replaced by Mr. Rose. I will now ask the Clerk to read the report of the Subcommittee.

(See Minutes of Proceedings)

I shall now call the first item of the revised main estimates for 1968-69.

It is my pleasure to welcome the Honourable Jack Davis, Minister of Fisheries, who will attend this meeting along with his staff and the Deputy Minister, Dr. Needler. I will ask Dr. Needler to introduce his associates.

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Dr. Redmond, an economist, Forestry; Mr. McAuley, Forestry; Dr. Prebble, Assistant Deputy Minister, Forestry; Dr. Schwartz, Program Co-ordinator, Forestry; Mr. Ozers, Assistant Deputy Minister, International Jurisdictional Affairs, Fisheries; Dr. Hayes, Chairman, Fisheries Research Board; Mr. MacKenzie, Chief Fisheries Economist; Mr. Levelton, Chief, Conservation and Protection, Fisheries; Mr. Burridge, Resources and Development, Fisheries; Mr. Turner, Fisheries Information; Mr. Sinclair, Financial Management, Fisheries; Mr. Dempsey, Fisheries Inspection; Mr. Falardeau, Special Programmes, Fisheries; Mr. Young, International Affairs, Fisheries; Dr. Martin, Vice-Chairman, Fisheries Research Board; Mr. Morin, Fisheries Research Board;

● 0940

The Hon. Jack Davis (Minister of Fisheries): Mr. Chairman, I am wondering how you wish to proceed. I have a general statement here which is rather lengthy and I will try to boil it down. Perhaps you want me to proceed with that. I was wondering also whether you wanted me to go right through Fisheries and Forestry in some detail in the statement, or break it in two, to deal with Fisheries, for example, and then have questions. How do you wish to proceed?

The Chairman: What would be the wish of the Committee on this?

Mr. Mather: Mr. Chairman, it seems to me that we could perhaps do best to have the Minister go through the Fisheries part of this and give us a broad picture and then possibly pause for questions before going on.

[Interpretation]

Mr. Cyr: Mr. Chairman, if the minister cannot come back next week. I wonder if he could return and we will then just deal with Fisheries this morning; do you intend to come back?

[English]

Mr. Davis: Certainly I am available. I am available all this week, so if you were to schedule meetings later this week we could have the Forestry submission on another day, but this is entirely up to your Committee.

I might say, generally, that I am available on weekdays for a number of weeks, so it is entirely up to you. The Department is available and at your call at any time.

The Chairman: We are to meet on Friday. Would it be acceptable to meet on Thursday, if needed? We are to meet on Friday as well this week. In case the Committee would wish the Minister to return, would it be all right if we met on Thursday for that purpose?

Mr. Crouse: This would have to be determined by your steering committee, Mr. Chairman. This is the purpose of setting up a steering committee, to determine the number of meetings to be held per week so that we know where we are going and so that there is some regularity and some system to our meetings. I have no objection. I just raised this as a point of order, to keep the Committee on the rails.

The Chairman: In that case we could decide at the next steering committee meeting on three meetings next week and leave this week as is. Would that be acceptable?

Some hon. Members: Agreed.

Mr. Davis: Looking at the estimates, you will notice that the total estimate of expenditure for the current financial year, the year 1968-69, for the combined departments, the new Department of Fisheries and Forestry, totals \$75.1 million. That is up very roughly 2 per cent over 1967-68. The \$75 million total is broken down roughly as follows: \$4 million for departmental administration, or nearly \$4 million, \$48 million for the fisheries side, and \$23 million for forestry. Again in dollar terms, the fisheries side is slightly more than twice as large as the forestry element of the new department's operations in the current fiscal year.

I will concentrate in my remarks now on the fisheries side, and begin by saying that under the British North America Act, the legislative jurisdiction on Fisheries is vested in the Federal Government. It is national. Over the years, however, the federal government has delegated its powers over the freshwater fishery, to the provinces. The non-tidal fishery, in other words, is administered by the provinces. The tidal fishery, the salt water fishery, is administered by the nation. The provinces write new regulations from time to time. However, these regulations must be approved here in Ottawa. So, substantially, the jurisdiction rests here in Ottawa for all fishery. The administration is divided. The ocean fishery, the offshore fishery, is administered federally and the freshwater fishery provincially.

• 0945

To obtain the greatest advantage for our fishermen from the location of the principal Canadian fisheries on the Atlantic and Pacific coasts of Canada, the Government is involved

in many problems of an international nature as well as in the regulation of the fishery itself.

In areas outside our territorial waters and fishing zones conservation problems can only be solved by agreement on joint measures adopted by the governments whose fishermen participate in the fisheries. Thus Canada is now party to nine international conservation conventions—three with the United States—and six with a number of States varying from three in the case of the International North Pacific Fisheries Convention to 17 in the case of the Whaling Convention. Each of these Conventions established Commissions, which on the basis of studies of scientific investigations, recommend to the participating governments any necessary conservation measures. The Fisheries Branch of the Department is represented on these Commissions and has also the responsibility of implementing the recommendations accepted by the Government.

In addition to its responsibilities in connection with the international fishery commissions, the Fisheries Branch, in liaison with the Department of External Affairs, is involved in negotiations and conferences relating to the law of the sea and the development of fishery resources in the high seas sponsored by the United Nations agencies.

While our program of fisheries management is aimed at maintaining and, if possible, expanding fish stocks in both our seas and fresh water, I should like to refer specifically to measures we are taking regarding two of our most valuable species. These are the salmon on the Pacific coast and lobsters on the Atlantic coast.

Recently I announced a new management program for the Pacific coast salmon fishery which will result in increasing the earning power of British Columbia salmon fishermen by controlling the entry of fishing vessels into this fishery. This will be put into effect next year. The need for controlling salmon fishing is obvious to anyone who looks seriously at the long-term trends in the fishery. Here we have a case of too many vessels chasing too few fish. Instead I feel that the fishing effort should be tightened to the point where we have the right number of vessels catching the right number of fish. In other words, where we have optimum yield and optimum benefit.

In very general terms, over the last several decades on the West Coast, we have had the same volume of fish being caught by roughly

the same number of fishermen. In terms of fish per fisherman productivity has improved very little. But in addition to this we have had a nearly three-fold increase in the real value of the vessels and gear involved. We have had a remarkable increase in investments. As a result, the catching capability has gone up, the number of days which we could permit the industry to fish has gone down; we have had fewer days, in effect less productivity—certainly less productivity in terms of the fish caught per dollar invested in equipment. We are over-equipped—we have far too much equipment on the West coast—we are capable of catching many more salmon; the problem is to shape over a period of years the ability of the industry down to the point where it matches the resource much more suitably and, therefore, to a point where incomes can be increased through extending the number of days of fishing. Essentially that is the objective. So the approach is one of limiting the numbers of vessels and, indirectly, of course the number of fishermen involved.

• 0950

A similar situation prevails in the lobster fishery on the Atlantic coast. Again it is a case of too much effort and capital expended on harvesting a crop that is too small to make it a profitable venture for the more than 20,000 people engaged in this industry. We have started to shape the future of this fishery by instituting a program of trap limitation in all lobster fishing districts in the Maritime Provinces this year. Quebec has had trap limitations for some time. This measure was followed this year by the registration of all lobster fishing boats. Through registration, we are able to keep an accurate inventory of the types of lobster fishing boats and the types of gear and the number of people engaged in the fishery.

We are continuing to watch this fishery very closely, and it may be that more management measures may be necessary. In so far as it is possible, we want to keep the harvesting of the lobster crop in the hands of fishermen who depend on lobsters for an important part of their living. Again, as on the West coast, we have too much capital, we probably have too many fishermen, and the objective over the long pull will be to reduce the amount of equipment and the numbers of fishermen involved to the point where they are all making a good living. Of course, at the

same time there are other steps being taken to hopefully expand the resource, and this applies of course to the salmon fishery on the West coast as well as to the lobster fishery in the Maritimes.

An important adjunct to fisheries management is the work we are doing to develop and increase the resource. A couple of examples may be useful. In the development of the Pacific sockeye salmon resource, our resource development service has under way a massive project in the Babine Lake region of British Columbia. This project utilizes the artificial spawning channel technique which has proven singularly successful. It has been in progress three years, and has four years to go. When it is completed, it will add an estimated one million sockeye salmon to the Skeena River fishery, and will be a continuing asset to our West Coast fishermen.

On the Atlantic, we have just recently taken possession of the world's largest Atlantic salmon rearing station at Mactaquac on the St. John River, New Brunswick. This station, constructed by the New Brunswick Electric Power Commission in collaboration with our Fisheries specialists, is designed to compensate for the loss of natural reproduction upstream as a result of the construction of the hydro-electric dam. Fish are collected in an especially designed facility at the dam site and the required number of eggs are raised at the rearing station to the sea-going stage. Our target is 500,000 sea-going salmon each year. The surplus fish—those over and above those required for stripping and for egg production, are transported upstream above the dam to provide sport for anglers and natural spawning stock for the river system. In other Atlantic areas as well biologists and engineers are working on projects aimed at maintaining and expanding the salmon stocks.

While on the general subject of resource development, I might refer to two particularly interesting programs now in progress under the auspices of the Fisheries Research Board which involve the introduction of well known species to entirely new areas. One of these is the transplant of Atlantic coast lobsters to Fatty Basin on Vancouver Island. Studies are being carried out on the practicability of introducing adult lobsters from the East coast and the development of techniques for culturing lobster larvae. The other project involves the transplant of pink salmon, at the egg stage from the Pacific to the Atlantic, specifically to North Harbour River in New-

foundland. Results so far have been reasonably encouraging and we are especially looking forward to next year's returns of the pink salmon which will be the first from natural spawning only.

Pollution is another pressing problem to which we are devoting a great deal of attention and we have scientific and technical teams on both coasts, as well as in our inland region, coping with this matter. These experts conduct field studies, monitor programs and negotiate with industry and other water users who might, through their activities, alter water quality to the detriment of the fish stocks.

I might, as an aside, say that the powers of Canada as a nation in respect to the development of our water resources are mixed. This is obviously an area in which the provinces have a great deal of authority—they certainly have a great deal to say. The provinces, with their control over property, have considerable control over the location and the nature of industry; the provinces, with their control over municipalities, have a great deal to say in how the municipalities manage their sewage treatment facilities—indeed if they build them or not. But the federal government does have control over navigation, it certainly has control over the fisheries, and those are two avenues through which federal control can certainly be exercised under the Constitution as it now stands.

• 0955

To cite an example of the type of work that is being done by the Department of Fisheries and Forestry, the contamination of the Great Lakes and other inland waters is one of the most pressing problems of our times. Under an assignment from the International Joint Commission, a multi-disciplinary effort has been launched to investigate and, hopefully, to arrest and relieve this pollution. We are deeply involved in this matter through the Fisheries Research Board of Canada which has the task of determining the mechanism and the biological effects of man-made increases in the nutrient level of lakes and to seek efficient means of controlling the process.

I have asked a number of times what the division of labour is between the Department of Energy, Mines and Resources and the Department of Fisheries and Forestry and it seems—perhaps Dr. Needler will correct me if I am wrong—that inanimate matter—minerals and so on—come under the Department of Energy, Mines and Resources but living

organisms come under the Department of Fisheries and Forestry. As algae is living matter, this Department has some interest in algae as well as the Department of Energy, Mines and Resources. I have also been interested in comments some people have made about the fisheries, particularly in the Far East where there is often a nice balance between algae and fish and where a number of the fish species live off algae. So there are relationships here which are important and must be investigated. Gene Whelan has a fishery on Lake Erie which seems to thrive. The perch there are getting bigger and growing in numbers with every passing year. So Lake Erie may be polluted in spots but the perch are doing very well there recently, so maybe the two are, to some degree, compatible.

The Department provides a great deal of technical advice and assistance to fishermen and the industry and is helping to co-ordinate fisheries vocational training and manpower activities. Its over-all program in these respects has already had a considerable impact on the fishing industry as a whole. It is now engaged in a wide variety of industrial development projects in the primary industry at the fishermen's level, and in the processing plants and other land-based activities. Some of these are carried out by the Department's Industrial Development Service; others on a shared-cost basis with the various provinces, as provided for in the Fisheries Development Act.

In addition to speeding up the expansion and diversification of the fisheries, we are also endeavouring to bring new resources into production. Exploratory fishing operations are carried out to determine the feasibility of harvesting stocks of fish and shellfish and other resources, such as marine plants, which hitherto have been under-exploited or completely ignored.

Attention is also being given to new and improved vessel design and fishing gear and equipment. We are improving skills in the fisheries by making available specialized technical assistance not only from Canada but from other leading fishing nations. This is done by engaging specialists on short-term contracts for instructional and demonstration purposes. This assistance is being provided wherever it is needed, on fishing vessels, at dockside and in the shore establishments.

I should like to go into a little detail about some of the projects which have already produced significant results.

One of these is the queen crab fishery on the Atlantic coast. This shellfish used to be known as the spider crab, and it plagued fishermen for years because it gets entangled in their nets. It was a nuisance. Today it is a gourmet item and there is an expanding fishery for it. This has resulted from a program demonstrating catching and processing methods which the Department of Fisheries and Forestry initiated. Almost overnight the queen crab fishery has grown from zero to a catch, last year, of more than a million and a half pounds in the Gulf of St. Lawrence and off the southeast coast of Newfoundland.

The midwater trawl, introduced by the Fisheries Industrial Development Service during the past few years, is proving dramatically that it can be a big factor in the remarkable growth of the Atlantic herring fishery. This is an extremely efficient catching gear in which improved net design, fishing techniques and sophisticated electronic equipment have made a successful combination. Last year a converted scallop dragger made unprecedented landings of fish by using the midwater trawl, and a few weeks ago the same type of gear, used on a stern ramp trawler, made another breakthrough by taking 427 tons of herring in just 30 hours of fishing. Large quantities of herring, until recently, were taken only by purse seiners, operating after dark when herring are close to the surface.

• 1000

One of the big advantages of the midwater trawl is that it is used effectively both at night and in the daytime, when the herring are normally too deep and dispersed for successful purse seining.

There are now several commercial processing plants for Irish Moss in the Maritimes. They are there largely because a Marine Plants Experimental Station, built by the Department at Miminegash in Prince Edward Island, proved that mechanical drying methods could profitably be adapted to the Irish Moss Industry. As a result, the income of many fishing communities has risen sharply. Irish Moss, which brought half a million dollars to fishermen's families in 1965, provided them with more than two million dollars last year. This station, I might add, is carrying on experimental work with various types of seaweeds for the benefit of the Canadian industry.

We are also conducting exploratory and experimental programs on a number of species of fish and shellfish which are thought to

hold greater potential than has as yet been demonstrated. These include shrimp, capelin, argentine, sandlance and whiting, and already a noteworthy shrimp fishery has been developed in New Brunswick.

A very significant undertaking in Newfoundland is the resettlement of isolated segments of the fishing population under the Federal-Provincial Household Resettlement Program, which has been in operation for a little more than three years. It is necessary for proper fisheries development in the province, and it also provides sociological benefits by re-establishing thousands of people in centres where greater opportunities exist for employment, education and a better way of life. About 100 communities have now been evacuated or are in the process of evacuation. This has involved the movement of 1,650 families, or 7,000 people, up to the end of last June. Another 130 families had been approved for resettlement at the same date and the movement is proceeding smoothly. The target under agreements with the Province of Newfoundland is for the resettlement of from 50,000 to 60,000 people during the next 10 years. It is expected that the current resettlement rate of 1,000 households, or 5,000 people, each year, will be maintained. Under the agreement the Federal Government meets 75 per cent of the cost and the Provincial Government 25 per cent. The cost to the Federal Government from April 1965 to March of this year was slightly over two million one hundred thousand dollars. Each household gets \$1,000 plus \$200 for each member of the household.

While a great deal of emphasis has been placed on the industrial development of the Atlantic fisheries, useful work has been carried out in British Columbia and in the inland waters, of Canada. Trawling experiments in Lake Erie in particular have resulted in greatly increased production and exploratory efforts are now continuing in Lake Ontario with a view to the utilization of species commonly known as trash fish. On the Pacific coast a great deal of work has been done to improve methods for the transportation of fish, particularly by the use of refrigerated sea water, so that quality can be maintained. Fishing techniques are being improved also, and we are now stepping up our activities on the Pacific coast with a view to further development of the offshore herring and groundfish fisheries.

The Department's Industrial Development Service does much of the organizational work

and provides the secretariat for major conferences on fisheries industrial development, which promote an important exchange of views on various phases of the industry as well as making available to Canadians a wealth of information. To date four such conferences, sponsored by the Federal-Provincial Atlantic Fisheries Committee, have been held. They deal with offshore fishing vessels, the Atlantic herring fishery, fish protein concentrate, and fishing vessel construction materials. Participants are attracted to these conferences not only from Canada but from many other fishing countries, and the benefits arising from these have been obvious. Vessel design has improved, the herring fishery was provided with new impetus, and it became apparent at the fish protein concentrate conference that an FPC industry in Canada is likely to develop within the near future. A fifth such conference, on automation and mechanization in the fishing industry, is planned for 1970

• 1005

Having looked at the harvesting and, in some measure, processing, I shall now comment on our inspection and quality control program. We have a firmly established and, I am proud to say, highly-regarded system for inspecting all products destined for export and inter-provincial trade, as well as for all imported fishery products. The quality of our inspection program is such that a number of countries have sought our advice in establishing and improving their systems in this field.

A new federal Fish Inspection Act and revised regulations form the basis for the present Canadian inspection system. It provides for compulsory registration of practically all processing plants which prepare fish for inter-provincial trade or for export. In addition, all products prepared in registered plants are subject to inspection. Regulations were drawn up in close collaboration with the fishing industry and these now include minimum requirements for fishing boats, cold storage and transportation of fish or shell-fish products. Quality designations on fishery products are not permitted unless specific standards of quality have been defined by regulation and are complied with.

To assist fishermen, processors and others in the industry, the Inspection Service undertakes programs of applied and developmental research for solving problems in the handling, processing, preservation, storage and distribution of fish and shellfish. The Inspection Service demonstrates to fishermen and industry

new and improved quality control techniques and equipment so that wastage may be reduced and earnings increased. A great deal of related work is also done by the Fisheries Research Board on commercial processes and consumer products, particularly on their composition and nutritive value.

Our Inspection personnel are active in many other ways; for example, in working with provincial governments to develop a uniform national inspection system. This is especially important because the regulation of trade within a province is a matter of provincial jurisdiction. Federal officers are prepared to undertake inspection on behalf of a province if this is desired. We are also involved, through FAO and WHO in developing world trading standards for fishery products.

And now a brief look at the economics of the fisheries and what it means to Canadians. At present the fisheries employ about ninety thousand persons—seventy-three thousand in fishing operations and seventeen thousand in handling and processing the catch. Our fishermen use a great variety of vessels and gear in fishing our inshore and offshore marine areas and our inland waters. Investment in the fishing fleet is estimated at close to \$200 million and in gear at approximately \$35 million. While the number of fishermen varies little from year to year there has been a note-worthy upsurge in investment in both fishing vessels and shore processing facilities in recent years. The value of our fishing fleet alone has doubled since 1960 and tripled since 1952.

Also in the 1960's there has been a significant upswing in the catch both in quality and value. Annual total landings have increased from less than two billion pounds in 1961 to an average of two and a half billion pounds over the last three years. In terms of landed value—that is, the direct returns to fishermen—the increase during the same period has been about 50 per cent, or from \$110 million to \$168 million. The increase in the marketed value of the catch has been even more pronounced, from an average of \$210 million between 1959 and 1961 to a peak of \$358 million in 1966.

Total landings of all species by our fishermen last year amounted to 2.5 billion pounds, valued to fishermen at \$167 million. Both of these figures are slightly below the previous year's. However, indications so far this year are that the catch will be well above last year's in both quantity and value.

To avoid delaying the work of the Committee I shall not at this time go into details of the catch in so far as the species, volumes and values are concerned. However, if there are any questions on these matters I shall be happy to provide the information.

Now as to marketing—nearly to-thirds of our fish production goes to export markets which places Canada second only to Japan among the world's fish exporting countries in terms of value. In 1967 we exported fishery products to 77 countries and our exports had an all-time record value of \$235 million. In this field we work closely with the Department of Trade and Commerce in promoting consumption of Canadian fishery products abroad.

As most of you know, we experienced some difficulty in disposing of all our last year's production of frozen groundfish mainly as a result of an over-supply situation in the main market of the world—the United States. I must stress that this did not represent a decline in consumer demand; in fact, consumption of fish in the United States is generally rising. However, there was a marked increase in supply from other nations last year. Moreover, changes in trade arrangements brought about by devaluation, tariff changes and other economic factors have led to higher exports from other countries to the U.S. market, and consequently a situation over-supply.

• 1010

The result has been a decline in the market price which has had a serious effect on the Canadian east coast fishery. In view of this situation, the Government last spring approved an expenditure of \$4 million to support the prices to Atlantic coast fishermen for cod, redfish and flounder sold to freezing plants. This program terminated on September 30, 1968. Once again I must emphasize that without this action on our part, the livelihood of the fishermen would have been seriously impaired. Certainly prices to the fishermen would have gone down.

Problems also arose earlier this year in disposing of surplus holdings of salted cod caused by a variety of factors, principally over-supply. To promote the orderly disposal of this salt cod surplus, the Government authorized an expenditure of \$2.2 million by the Fisheries Prices Support Board to purchase the surplus and directed that this food be included in the relief programs to needy nations. A shipment from Halifax in mid-

October included some 3,000 metric tons of salted fish for Biafra-Nigeria.

We have several studies under way which I think will be of interest to this Committee. One of these concerns the efficiency of trawler operations and in-plant methods and operations in Newfoundland. This study is being financed jointly by the Federal and Provincial Governments and a preliminary report has already been received. The final report is expected by the end of October.

We are also co-operating with the fishing industry and provincial administrations in a study of the Canadian domestic market, with a view to increasing sales of fishery products at home. I might mention also that the Atlantic Development Board has undertaken a study of marketing methods of the Atlantic coast industry in the United States with a view to increasing the efficiency of the distribution system.

Before concluding there are a couple of other matters relating to the Department's interest in the welfare of fishermen, which I feel I should mention. One of these is the Fishing Vessel Indemnity Plan under which we provide low-cost insurance for fishermen's vessels. As the costs of small vessel construction have increased we have endeavoured to keep pace and the Plan now covers vessels valued at up to \$25,000. The need for this Plan is self-evident. Without it insurance costs on fishing craft would be so high that fishermen would not be able to protect their investment. With it they can feel secure and they are protected in case of misfortune.

One final example of our interest in fishermen is the recently introduced federal program to assist Indian fishermen in British Columbia. This is a five-year program and is jointly sponsored by the Department of Indian Affairs and Northern Development and the Department of Fisheries. The program will provide loans and grants of up to \$4.6 million for the construction and purchase of fishing vessels, equipment, gear and shore facilities, as well as for training courses. A board to administer the program has recently been appointed.

Mr. Chairman, that has been a rather lengthy submission. I have touched many of the bases, all of which I know will be of interest to individual members of the Committee, and perhaps much of the additional information that is required can be elicited through questions rather than by submissions of the kind I have just made.

The Chairman: It is now just past ten o'clock and I think we will have sufficient time to question the Minister on anything of interest. I recognize Mr. Crouse first.

Mr. Crouse: Mr. Chairman, I am sure I express the views of all the members of the Committee when I say how much we appreciate the Minister taking time out from his busy schedule to come here and be with us this morning, and to give us his very factual and informative report on the fishing industry. It will serve as a basis, I am sure, for future discussions after we have had an opportunity to scan all the material which he has provided us with this morning.

• 1015

Now there are many questions that we would like to put to the Minister, and I am sure that after listening to him all of us are aware of the many ramifications of the fishing industry. When we speak of this industry it is difficult to do so in terms of defining just one particular area or one particular part of the industry. There are so many parts of the fishing industry that it is difficult to know where to begin. We have already noted that the Department of Energy, Mines and Resources, the Department of Trade and Commerce, as well as the Department of Fisheries and other departments are involved in the affairs of the fishing industry.

I have a question that I would like to put to the Minister. It relates to a statement he made this morning, and also to a statement that he made in his speech in Boston where he referred to the fishing industry which lies beyond our twelve-mile limit. The Minister said, and I quote:

Out beyond our exclusive fishing zone we are in a sort of no man's land. We are out in an area where there is, as yet, little information on the nature and extent of fish as a resource. We are out in an area, also, where international treaties are few and far between.

Now I believe that all sections of the fishing industry and all those involved in the industry, especially on the Atlantic Coast, are concerned with the decline in the actual resource—the quantity of fish seems to be diminishing. The Minister stated this morning that the Development of fisheries resources on the high seas comes under the sponsorship of the United Nations, and my question to him concerns conservation measures. I would like to know if Canada at any

time has ever made a request to the United Nations for a register to be set up which would cover all nations—a register which would indicate the amount of research, or oceanographic surveys that are being conducted by nations. We have a large oceanographic base at Halifax, for example, we know that the Americans, through an American university, have a large research ship called *The Vema*, we know from pictures supplied to us by the Department of National Defence that the Russians are carrying on considerable research as well as expanded fishing activities on our offshore banks, and I do not believe that any effort has been made to determine the extent of these fisheries research programs by anybody, specifically by the United Nations. Now if such a register were set up it might well prevent overlapping of research activities, it might well serve as an indicator for future fisheries programs by other nations, and I would like to know from the Minister if Canada has ever made this type of request to the United Nations?

Mr. Davis: First, let me make a very general comment and then I will turn to Mr. Ozere of the Fisheries Department who can answer your question specifically—I know I cannot. The fishery, it seems to me, is a largely unexplored resource. Certainly man does not know much about the nature of the fishery, particularly in the high seas. There are many species and their interdependence and so on is very important. The extent of the impact of commercial fishing activities in an unrestricted entry industry has not been fully measured. We do not know enough about the response of a resource to exploitation and so on. It has only been in the last decade or two that countries have begun to look beyond what was formerly just the three-mile territorial limit and to look more aggressively at the resources off their Coast. Certainly it has only been recently they have become intelligently concerned about the optimum management of the resources—not just within their own exclusive fishing zones but out and beyond them, where the effects of fishing efforts can be every bit as great as their own fishing effort within their own exclusive zones. So we as a nation, dependent to a considerable extent on the fishery and with very long coast lines and extensive shelf areas, must be concerned in my view about the optimum management of the resources not just within our exclusive fishing zones, however they are measured, but out to the edge of the Continental Shelf and even beyond. Now I mentioned earlier

that Canada is a party to 9 international conservation conventions, but they apply to individual species. I am sure the staffs reporting to those commissions do not say they have adequate information on those particular species, and, of course, there are many other fisheries where there is no international understanding at all. The United Nations has sponsored several meetings, several law of the sea conventions of its own; the FAO and so on have been concerned about fish as a source of food, but we still do not know anything like enough about the adequacy of the resources. I do not know that we have a full documentation on the extent of the fishing effort of a number of nations fishing internationally, or outside the exclusive fishing zones, but I will ask Mr. Ozere if he would like to comment on this inventory matter. Dr. Needler would you like to speak to this?

• 1020

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Mr. Chairman, to try to answer Mr. Crouse's question in a general way, I take it that you include United Nations agencies with United Nations; you know, it is a family of agencies. The Food and Agriculture Organization of the United Nations, FAO, is the agency that concerns itself with fisheries as a resource, with the exploration of the resource and with scientific studies of the resource and it is part of its charter, part of its purpose, to spend most of its efforts to help the developing countries. They used to be called under-developed, but now they are called developing.

Canada is not usually classified as one of these and, indeed, in the Northeast Atlantic and Northwest Atlantic the fisheries are more highly developed and more intensive, probably, than in any other part of the world, except possibly in the waters around Japan. Now, FAO does have a publication which lists all research cruises. It does a lot of work in co-ordinating through exchange of information and co-ordinating the research work on the fisheries resource, and it has also been active in setting up other international bodies where there seemed to be a particular need. The latest of these was taking steps toward the setting up of an Atlantic tuna commission.

In the Northwest Atlantic the actual responsibility for international efforts at conservation or management are in the hands of the International Convention for the Northwest Atlantic Fisheries in which almost all of those fishing nations fishing off our coasts are par-

ticipants. They have concentrated mainly by agreement among themselves on certain species of groundfish. They have also recently expanded their interests to a few other species, but the commission co-ordinates the research by all of the countries on the species with which they are concerned and it also takes some part in the co-ordination of general background research on the nature of the waters and of the resource and this body, which is established under an international convention between the 15 countries concerned, is the active body in the Northwest Atlantic which does this. It happens that it was not set up under United Nations auspices, but it co-operates with the United Nations so far as the exchange of information is concerned.

• 1025

Does that answer your question, sir?

Mr. Crouse: Well, Mr. Chairman, it covers part of the question. My concern over this matter stems from the statement made by the Minister, also in his speech in Boston, where he said,

Along with other countries we must make sure that the resources which live out over our Continental Shelf are managed in the best, long term, interests of mankind.

This statement was greeted with considerable enthusiasm by all people in the fishing industry, for it is commendable that some type of control be exercised on our offshore banks but quite frankly, Mr. Chairman, questions have been raised by responsible people within the industry with regard to the Minister's statement and they are wondering just how you propose to gain control of the resources on our offshore banks. Unless the United Nations, which you told us this morning is alerted to its responsibilities and takes some stand to correlate or to register the activities of other nations, I fail to see how we can even make a start on the worth-while program that you have enunciated.

Could you give this Committee some idea of or background to the thinking which prompted that type of statement which, as I say, is worthwhile and commendable? We would like to know, and I am sure the fishing industry would like to know, how you intend to implement it since we have had considerable difficulty in implementing the 12-mile limit, for example, which I noticed you did not mention this morning but which is very

much in the minds of people in the fishing industry since it was designed partly as a conservation measure and which has not been fully implemented since it was established way back in 1964.

It is for this reason that I put these questions, Mr. Chairman.

Mr. Davis: Well, we must certainly implement the 12-mile limit, the 12-mile limit outside of certain base lines, but this goes only part way towards managing the resource. It goes only part way towards covering the bodies of water in which our own fishermen are active, as you very well know. Beyond the 12-mile limit—which is a limit now beginning to be recognized on a world-wide basis as a reasonable limit for exclusive fishing by all or nearly all countries—we are into an area of international involvement. We not only have foreign fishermen active there now, but even if at some future date we were to obtain some authority in a unilateral sense over that area, we would still have to recognize the existence of their traditional activities, and so on.

Clearly we are moving out into an area of international interest—I hope not unduly of international conflict, but certainly competing claims—and I think the first step must be a concern about the resource, measuring the resource, measuring the impact of the fishing activity on the resource and by being better informed and presenting this better information in, let us say, future law of the sea conferences; at least get other countries to adjust the sum total of their fishing effort in such a way as to not destroy the resource. This is in the interests of all countries.

Now, how we go beyond my statement in Boston and, in effect, manage as well as merely measure what is happening out beyond our own 12-mile limit is a very big question, but I would like to see the next law of the sea conference, for example, concern itself more with conservation in this practical sense, conservation beyond exclusive fishing zones and out into the high seas, marrying in, of course, the activities of existing international commissions, but covering all fish resources since they are interrelated in various ways.

• 1030

Mr. Crouse: Mr. Chairman, I do not wish to monopolize the time of the Committee this morning because I am sure other members have questions to ask, but I have one final

question on this particular subject. Would the Minister consider requesting the United Nations to set up a register of all research projects being carried out by all fishing nations and in this way endeavour to secure information on their future research activities and possible fisheries development programs?

Mr. Davis: It sounds like a very reasonable request. I assume there is a considerable degree of exchange of information now of a scientific nature, but it is a good thought and certainly goes in the direction I was heading, I hope, in my little talk in Boston. I was groping out towards the rest of the resource, the resource we are actually exploiting but which is beyond our exclusive fishing zones and is in international waters, at least as defined at the moment.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: We have a half hour left and I have, in order, Mr. Anderson, Mr. Cyr, Mr. Durante, Mr. Rose, Mr. Mather, and Mr. Lundrigan. Mr. Anderson?

Mr. Anderson: Thank you, Mr. Chairman. I will try to be brief to give the other members an opportunity to use the half hour. Sir, I am concerned about the West Coast fishery. While I am quite in agreement with your plans to reduce the amount of gear used on the West Coast to catch salmon, I feel that this will not be effective unless we take steps to make sure that other nations fishing in the Pacific collaborate with us in much the same way.

In other words, it would be unfortunate if we reduced the amount of Canadian gear used only to find that Japanese, American, South Korean, Taiwanese gear, takes up the slack that we make available. I wondered whether you could give us some idea of what plans you have to make sure, through international agreement, through prohibition or however it is done, that the new regulation you brought into effect will not simply reduce the amount of fish caught by B.C. boats?

Mr. Davis: Perhaps someone, Dr. Needler, should describe the international agreements we have on the Pacific, particularly with the U.S. and Japan. The Japanese are not supposed to catch any of our salmon or any salmon in our half of the Pacific. I understand that other nations are alleged not to be catching any substantial quantities of salmon off our coasts, but perhaps I should leave it to Dr. Needler and his staff.

Mr. Anderson: Yes, but as I see the situation it is quite possible for a Russian factory ship with fishing vessels to come to the 12-mile limit on the West Coast, and if the Russians or some other nation decide to put more factory ships and fishing boats at the 12-mile limit it may be that British Columbia fishermen are catching fewer fish and foreign fishermen are catching more, and the net result of restricting the amount of gear on the West Coast will simply be to divert some of the fish to other nations that otherwise might have come to British Columbia.

Dr. Needler: Mr. Chairman, I think the point should be made that the policy announced this summer on the restriction of the entrance of new vessels into the fishery referred only to the salmon fishery. In accordance with the International North Pacific Fisheries Convention between Canada, the United States and Japan, Japan does not fish east of longitude 175 West. That is practically the middle line.

So far as we know, they have been guilty of no infractions of this. So far as the U.S.S.R. is concerned, what we know of their policy is that they are opposed in general to high-seas and fishing and do not even carry out high-seas fishing—for salmon, I mean—in the Northwest Pacific. Our best information is that they do not fish for salmon in our waters.

Therefore, our only competitor for British Columbia salmon is the United States and we catch some of their salmon as they go by our coast, too. It is a sort of *quid pro quo*. So far as the fishery for ground fish is concerned—the cod and flat fish and that sort of thing—of course the U.S.S.R. has had large fleets in the Northeast Pacific and Japan has had some recently and there is definitely competition there, but there is no restriction on the entry of vessels from British Columbia into that fishery. Does that answer your question?

• 1035

Mr. Anderson: In part; I will probably return to it later. I have one other question, however, and that again is concerned with the restrictions on the West Coast. I feel that perhaps, now that restrictions are on, the Department of Fisheries should pay much more attention to increasing the number of salmon by way of improving the spawning beds, and I wonder whether you have any plans for any fairly extensive increase of your programs to date which, I might add, have been extremely good.

Mr. Davis: There is a very large development on the Babine River, and there is another development on the Qualicum River. Perhaps again, Dr. Needler, you might elaborate on this.

Dr. Needler: Mr. Chairman, in the long term we have very ambitious plans. We would like to see a larger effort. However, I think it should be realized that not only are these projects rather expensive but they are always to some degree experimental and we would like to see the prototype projects, as it were, like the Qualicum and the Babine, show that they pay off before entering into a very large expanded program.

There is some disagreement; elements in the fishing industry would like us to move faster but, on the other hand, we are spending millions of dollars of the taxpayers money and we want to be sure that it is spent in a way that will really pay off, but the long-term program is for expansion of this sort of activity.

Mr. Anderson: If I may ask one last question, Mr. Chairman, you mentioned that these programs are still experimental. Could you give some indication of how successful they have been, how far you are from realizing further programs, or how far you are from evaluating the success of your existing programs?

Dr. Needler: May I answer, Mr. Chairman? I would say that we know these programs produce more young salmon emerging from the gravel and even young salmon going to sea, but the proof of the pudding is in the eating of the returning salmon, and the extent to which these artificial increases in the production of young salmon going to sea will lead to returning runs is still a little doubtful. We have faith that this will happen, but we do not have the figures down on an experience.

Mr. Davis: I might add that the base is measured in the order of magnitude of about \$10 million, adding these several projects together.

Dr. Needler: That is right.

Mr. Davis: That is the capital investment, current and being installed, in facilities for returning more small salmon to salt water.

Mr. Anderson: Thank you.

The Chairman: Mr. Cyr?

[Interpretation]

Mr. Cyr: Thank you, Mr. Chairman. I would like to commend you for your statement and would like to talk about your reference to the crab-meat industry.

Mr. Davis: ...the crab...

Mr. Cyr: As you said, this is getting to be an important industry but, I was not aware that you had started a public information program about this new crab meat, so much in demand by gourmets that last year we in Gaspé learned that there was a lot of crab in the Gulf of St. Lawrence and tourists from California, from Florida, Manitoba were coming there and asking for crab in the hotels, but we had never heard of it. It was only in July and August that boats arrived in Chandler—4 or 5 from Prince Edward Island; they were coming to buy crab caught along our coast.

• 1040

I would like to tell you, Sir, that last summer, I met some of the fishermen and they told me that the Fisheries Department will have to start a program, an information program for the benefit of fishermen as soon as possible to protect the crab and to establish fairly strict regulations because the great numbers of females being destroyed; it's like amateur fishing at the moment. And I don't think it is realized that in 10 or 15 years this industry could be an important one, as important as lobster. As you know, we only have a couple of months for lobster, it's a very short season while the crab season lasts all summer. I think we have to set up a strict regulation for the fishing of crab. I also see that there are a couple of small processing plants in the Gaspé and they are run by amateur fishermen. If your department intends to fix regulations to protect the crab, you will also have to come to an understanding, I think, with the Provincial Fisheries Department to set up strict regulations for processing plants. I am afraid that within a few years, there will be too many of these small processing plants. It will be disastrous to crab fishing which appears to have a very good future. I should like to know whether you have anything in mind in this regard. Thank you.

[English]

Mr. Davis: I have the impression that we do not know too much about many of our resources and we really do not find out what fishing pressure they can support until a com-

mercial fishery starts. Now the crab fishery on the East Coast is relatively new. Perhaps, Dr. Needler, there is someone here who could speak briefly on the extent of the pressure now on the crab fishery resource and whether or not there is any indication that the crab populations are actually declining seriously.

Dr. Needler: Mr. Chairman, I think I might answer that question myself, falling back on my experience as a fisheries' biologist on the Atlantic for many years.

This new fishery, as far as species of crab not fished before is concerned, requires close observation and regulations both for the protection of the stock and for quality because these crabs need to be handled with the same care as lobsters. Also, the public needs to be informed on the availability of these crabs so that the people will eat them. Actually the demand for the "Queen Crab", as we call it, which is a close relative of the "King Crab" of the Pacific, is very good, so on the marketing side there is not too much need for an information program. We are developing regulations governing the handling of these to maintain quality and we have an investigation under way by the Fisheries Research Board on the stock and on the life history of these crabs so as to bring in regulations to prevent over-fishing. There is a good bit of confusion with the crab that lobster fishermen have always taken. Frequently this small crab, which is taken with lobsters, is processed and then used but it is such marginal activity that they topped processing it because they can barely make it pay. So far there has not developed a fishery that would affect the stock because of a lack of demand for this small inshore crab. Does this answer your question?

• 1045

Mr. Cyr: Yes. But to return to the amateur processors. I think that within a few years we will have a lot of small processing plants every 50 or 60 miles along the coast and this could be detrimental to the industry as a whole, particularly for the crab industry. Especially as it will be very difficult to keep any control over them.

[English]

Dr. Needler: Mr. Chairman, I think, that we really should discuss this with the Quebec authorities to see whether we can help in solving this problem.

Mr. Davis: When you say "amateur" you do not mean sports, you mean individuals

supplementing their own food supply and so on?

Mr. Cyr: No, they start small plants here and there. It is a new industry so everybody thinks there is a fortune in it.

The Chairman: You will excuse me if I ask you to be as brief as possible. I still have Mr. Durante, Mr. Rose, Mr. Mather and Mr. Lundrigan.

Mr. Durante: Mr. Minister, I found your statement very interesting and informative, particularly the statistics you cited regarding the economics and the marketing of this resource. However, as you mentioned in your preface, we have too many vessels chasing too few fish and this business of too few fish is what concerns me.

My questions are related to conservation and to increasing stocks of both the Pacific and Atlantic salmon. Am I to understand from what you said, Mr. Minister, that as pollution affects water life the Department of Fisheries through the federal government has constitutional rights to legislate regulations governing industrial use of water resources?

Mr. Davis: Well I better be careful here. The Constitution spells out, as one of the areas of exclusive federal jurisdiction, fisheries. The federal government or this Parliament has not, in my view anyway, fully occupied that area in legislation, but the Constitution as it stands perhaps invites some additional legislation. In other words, perhaps we could put more teeth in federal legislation.

To go over specifically to what happens, for example in the case of a new pulp mill being installed on a river containing fish, such as the Fraser River in British Columbia, the advice and approval of the Fisheries Department is sought during the preparation of the plans for the pulp mill and so on. The extent to which we could under present legislation stop a development going ahead because of exceptional damage to the fishery, or expected exceptional damage to the fishery, is something which I am not fully appraised of but I am sure there are people here who could give us a more definitive statement on that.

Dr. Needler: I suggest that perhaps Mr. Ozere might answer this one.

Mr. S. V. Ozere (Assistant Deputy Minister, International and Jurisdictional, Department of Fisheries): Mr. Chairman, we now have provisions in the Fisheries Act which prevent

anybody from putting into waters frequented by fish any kind of substances that would be harmful to fish life, but of course this means that we can only prosecute after the offence has been committed. Now an industrial plant, for example, starts building and until it starts polluting the waters we cannot take action, so the way to strengthen our authority would be to have legislation that would require anybody establishing any kind of plant that would discharge effluents into water to submit plans to the Department for approval.

• 1050

Mr. Durante: Have any such prosecutions been conducted?

Mr. Ozere: Yes, a number of prosecutions have been conducted over the years.

Mr. Durante: I have one other point related to this topic. Do we have any control whatsoever over the forestry industry mutilating and destroying the natural spawning channels, particularly on the West Coast of British Columbia where they are running their machines up the creek beds thereby destroying the spawning channels and leaving the creek beds filled with debris which backs up the water and finally breaks through and washes out all the gravel, eggs, fry and so on.

Mr. Davis: Well, we have what is known as fishery wardens whose job in some areas is almost entirely that of catching forest industry operations before they do too much damage and requiring them to cease and desist from the practice, but again I would like to hear what our officials have to say on that subject.

Mr. Ozere: Mr. Chairman, as you know, water resources are the responsibility, jurisdictionally, of the province and the legislative jurisdiction for fisheries is vested in the federal government. Now very often there is a conflict of jurisdiction. We do have now regulations which prevent anybody from putting in debris and cluttering up the rivers in such a way as to prevent spawning. However, the province at times issues permits for the floating of logs and it is necessary for the provincial and federal authorities to get together on this subject in order to avoid this conflict, and I think this has been done in the past in the case of British Columbia.

Mr. Durante: Mr. Chairman, I would like to pursue this matter much further but I am sure there are other questioners. I would like

to suggest that possibly we could continue our discussion on fisheries next week before moving on into forestry.

The Chairman: Would that be agreeable? If so, we will go to Mr. Rose.

Mr. Rose: Mr. Chairman, as mentioned by the other speakers, I was extremely interested in the Minister's presentation. Certainly there are numerous questions that would come out of an examination of his statement and I think the suggestion, that the Minister appear next week, is a very sensible one because I am certain that we are not going to get to all the people today who wish to question the Minister.

However, the thing that concerns me most at the particular moment and that I would like to dwell on briefly today is the new licensing regulations. As the Minister knows, this is an extremely controversial matter. There are a number of fishermen, as represented by their unions and associations, that are very concerned about the manner in which the licences are now to be applied to boats rather than people. I will not elaborate too much on that because I feel that the Minister has had considerable information about this, but I would like to mention that I think there are a number of considerations here that certainly will bear some examination. One of them is that the private fisherman is being led to believe that this will put him in an unfavourable position because he does not have the financial resources to purchase a boat which has a licence and therefore he will be precluded from actually taking part in fishing as a private fisherman. Then there is the probability of the licence being applied to the boat kiting the price of the boat way beyond the means of the average fisherman who wishes to get into this kind of business. I feel that perhaps if these boat prices are, in fact, kited by this type of regulation we might have an even greater contrast between the investment and the yield and, therefore, an apparent loss of productivity caused by this situation prevailing.

• 1055

There are other concerns as well. Certainly a person who has been a fisherman all his life may well be prevented from going on his own and be tied forever to a fishing company who is the owner of a licence. These are the major things that I would like to say at this moment and then I will wait for the reply. Perhaps I might ask a supplementary, if I might.

Mr. Davis: Mr. Rose, as you undoubtedly know, we have one notable exception: all the organizations—vessel owners, the industry, the union and so on on the West Coast were in favour of some form of limitation of entry into the salmon fishery in British Columbia; the notable exception was the co-operative in Prince Rupert. They did not want any form of regulation whatsoever in respect of entry. The question then, assuming the majority view prevailed, and there was an overwhelming majority view in favour of limitation of entry, was: did we limit the entry of people or did we limit entry, say, through restricting things—restricting vessels, and we chose to limit the number of vessels. However you do this, whether you limit the number of fishermen as people or the number of vessels—things, you are creating some sort of select club and this select club is going to be exploiting a resource which is maintained and hopefully expanding as a result of public investment. Much of the budget of this Department is aimed at expanding the fishery resource, including the salmon resource. So there is a public input here and a genuine public concern in the efficiency with which it is harvested, particularly because incomes have tended to fall behind incomes in other industry, and the route we chose was to limit numbers of vessels. Now those who have vessels are in the club as of the moment of the announcement of the system and in a sense they are better off—at least they feel a lot better about it and they have something which they can sell when they retire to something else, or trade and so on.

New people can enter by purchasing a vessel so there is no limit in the sense of entry other than the very important limit of having enough cash to be able to buy a licensed boat. This is the impediment.

Mr. Rose: This is the very point I am raising.

Mr. Davis: Now the alternative scheme—the scheme of limiting the number of fishermen, in a sense downgrades the value of the vessel, the vessel being somewhat incidental, and if a man retired from that fishery he has something which is really not worth very much—what is worth something is being a designated fisherman. That is the alternate system. Hopefully, of course, both the numbers of vessels and the number of fishermen will decline with time, but that system certainly lends itself to a closed club. It would tend to perpetuate the present fishermen in

the industry. They would certainly be growing older. The entry of young men would certainly be less than by being able to buy in as under the present system. And of course the residual value of a man's boat is down rather than up. So by choosing the restriction of vessel route we have undoubtedly added some intangible value that will turn up in terms of dollars in any transaction in respect of vessels. By going the other way, had we gone to a limitation on people, we would have reduced the value of a man's investment in boats and gear.

The Chairman: Our time has expired, I regret to say.

Mr. Rose: Can we carry on with this line of questioning?

The Chairman: I wish to thank the Minister for consenting to meet with us next week. We will take note of the gentlemen who have indicated that they want to ask questions next week.

Mr. Whelan: Mr. Chairman, I move that the Minister's statement be made an appendix to our proceedings today.

Mr. Crouse: I second the motion.

Motion agreed to.

APPENDIX B

ESTIMATES NOTES FOR MINISTER

As a new Minister I welcome this occasion to appear before the Committee on Fisheries and Forestry.

Under the British North America Act, legislative jurisdiction on Fisheries is vested in the Federal Government. The provinces, however, have property rights in the non-tidal fisheries, and in the years following Confederation certain administrative responsibilities were delegated to the provinces in varying degrees with the result that, while all the regulations governing fisheries are made at Ottawa, the recommendations and enforcement of the regulations, mostly in the fresh-water fisheries, have been undertaken by a number of provincial governments concerned which have also established agencies to promote the development of the fishing industry within their province. The co-operative approach to the problems of development is maintained by the Fishery Branch through joint federal-provincial committees.

To obtain the greatest advantage for our fishermen from the location of the principal Canadian fisheries on the Atlantic and Pacific coasts of Canada, the Government is involved in many problems of an international nature in the regulation of our coastal fisheries.

In areas outside our territorial waters and fishing zones conservation problems can only be solved by agreement on joint measures adopted by the governments whose fishermen participate in the fisheries. Thus Canada is now party to nine international conservation conventions—three with the United States—and six with a number of States varying from three in the case of the International North Pacific Fisheries Convention to seventeen in the case of the Whaling Convention. Each of these Conventions established Commissions, which on the basis of studies of scientific investigations, recommend to the participating governments any necessary conservation measures. The Fisheries Branch of the Department is represented on these Commissions and has also the responsibility of implementing the recommendations accepted by the Government.

In addition to its responsibilities in connection with the international fishery commissions, the Fisheries Branch, in liaison with the Department of External Affairs, is involved in negotiations and conferences relating to the law of the sea and the devel-

opment of fishery resources in the high seas sponsored by the United Nations agencies.

While our program of fisheries management is aimed at maintaining and, if possible, expanding fish stocks in both our seas and fresh water, I should like to refer specifically to measures we are taking regarding two of our most valuable species. These are the salmon on the Pacific coast and lobsters on the Atlantic coast.

Just recently I announced a new management program for the Pacific coast salmon fishery which will result in increasing the earning power of British Columbia salmon fishermen by controlling the entry of fishing vessels into this fishery. This will be put into effect next year. The need for controlling salmon fishing is obvious to anyone who looks seriously at this fishery. Here we have a case of too many vessels chasing too few fish. Instead I feel that the fishing effort should be tightened to the point where we have the right number of vessels catching the right number of fish. In other words, where we have optimum yield and optimum benefit.

A similar situation prevails in the lobster fishery on the Atlantic coast. Again it is a case of too much effort and capital expended on harvesting a crop that is too small to make it a profitable venture for the more than twenty-thousand people engaged in it. We have started to shape the future of this fishery by instituting a program of trap limitation in all lobster fishing districts in the Maritime Provinces this year. Quebec has had trap limitations for some time. This measure was followed this year by the registration of all lobster fishing boats. Through registration, we are able to keep an accurate inventory of the types of lobster fishing boats and the types of gear and the number of people engaged in the fishery.

We are continuing to watch this fishery very closely, and it may be that more management measures may be necessary. Insofar as it is possible, we want to keep the harvesting of the lobster crop in the hands of fishermen who depend on lobsters for an important part of their living.

An important adjunct to fisheries management is the work we are doing to develop and increase the resource. A couple of examples may be useful. In the development of the Pacific sockeye salmon resource, our Resource Development Service has underway a massive

project in the Babine Lake Region of British Columbia. This project utilizes the artificial spawning channel technique which has proven singularly successful. It has been in progress three years, and has four years to go. When it is completed, it will add an estimated one million sockeye salmon to the Skeena River fishery, and will be a continuing asset to our West Coast fisheries.

On the Atlantic, we have just recently taken possession of the world's largest Atlantic salmon rearing station at Mactaquac on the St. John River in New Brunswick. This station, constructed by the New Brunswick Electric Power Commission, in collaboration with our Fisheries specialists, is designed to compensate for the loss of natural reproduction upstream resulting from construction of the hydro-electric dam. Fish are collected in an especially designed facility at the dam site and the required number of eggs are raised at the rearing station to the sea-going stage. Our target is 500,000 sea-going salmon each year. Excess fish above those required for eggs are transported upstream above the dam to provide sport for anglers and natural spawning stock for the river system. In other Atlantic areas as well biologists and engineers are working on projects aimed at maintaining and expanding the salmon stocks.

While on the general subject of resource development, I might refer to two particularly interesting programs now in progress under the auspices of the Fisheries Research Board which involve the introduction of well known species to entirely new areas. One of these is transplant of Atlantic coast lobsters to Fatty Basin on Vancouver Island. Studies are being carried out on the practicability of introducing adult lobsters from the east coast and the development of techniques for culturing lobster larvae. The other project involves the transplant of pink salmon, at the egg stage, from the Pacific to the Atlantic, specifically to North Harbour River in Newfoundland. Results so far have been reasonably encouraging and we are especially looking forward to next year's returns of the pink salmon which will be the first from natural spawning only.

Pollution is another pressing problem to which we are devoting a great deal of attention and we have scientific and technical teams on both coasts, as well as in our inland region, coping with this matter. These experts conduct field studies, monitor programs and negotiate with industry and other water users who might, through their activities, alter

water quality to the detriment of the fish stocks.

To cite an example—the contamination of the Great Lakes and other inland waters is one of the most pressing problems of our times. Under an assignment from the International Joint Commission, a multi-disciplinary effort has been launched to investigate and, hopefully, to arrest and relieve this pollution. We are deeply involved in this matter through the Fisheries Research Board of Canada which has the task of determining the mechanism and the biological effects of man-made increases in the nutrient level of lakes and to seek efficient means of controlling the process.

I should like to comment now on some of the Department's activities to improve our fisheries in terms of catch volume, value and quality.

The Department provides a great deal of technical advice and assistance to fishermen and the industry and is helping to co-ordinate fisheries vocational training and manpower activities. Its over-all program in these respects has already had a considerable impact on the fishing industry as a whole. It is now engaged in a wide variety of industrial development projects in the primary industry at the fishermen's level, and in the processing plants and other land-based activities. Some of these are carried out by the Department's Industrial Development Service; others on a shared-cost basis with the various provinces, as provided for in the Fisheries Development Act.

In addition to speeding up the expansion and diversification of the fisheries, we are also endeavouring to bring new resources into production. Exploratory fishing operations are carried out to determine the feasibility of harvesting stocks of fish and shellfish and other resources, such as marine plants, which hitherto have been under-exploited or completely ignored.

Attention is also being given to new and improved vessel design and fishing gear and equipment. We are improving skills in the fisheries by making available specialized technical assistance not only from Canada but from other leading fishing nations. This is done by engaging specialists on short-term contracts for instructional and demonstration purposes. This assistance is being provided wherever it is needed, on fishing vessels, at dockside and in the shore establishments.

I should like to go into a little detail about some of the projects which have already produced significant results.

One of these is the queen crab fishery on the Atlantic coast. This shellfish used to be known as the spider crab, and it plagued fishermen for years because it gets entangled in their nets. It was a nuisance. Today it is a gourmet item and there is an expanding fishery for it. This has resulted from a program demonstrating catching and processing methods which we have carried out. Almost overnight the queen crab fishery has grown from zero to a catch, last year, of more than one and one-half million pounds in the Gulf of St. Lawrence and off the southeast coast of Newfoundland.

The midwater trawl, introduced by the Fisheries Industrial Development Service during the past few years, is proving dramatically that it can be a big factor in the remarkable growth of the Atlantic herring fishery. This is an extremely efficient catching gear, in which improved net design, fishing techniques and sophisticated electronic equipment have made a successful combination. Last year a converted scallop dragger made unprecedented landings of fish by using the midwater trawl, and a few weeks ago the same type of gear, used on a stern ramp trawler, made another breakthrough by taking 427 tons of herring in just 30 hours of fishing. Large quantities of herring, until recently, were taken only by purse seiners, operating after dark when herring are close to the surface. One of the big advantages of the midwater trawl is that it is used effectively both at night and in the daytime, when the herring are normally too deep and dispersed for successful purse seining.

There are now several commercial processing plants for Irish Moss in the Maritimes. They are there largely because a Marine Plants Experimental Station, built by the Department at Miminegash in Prince Edward Island, proved that mechanical drying methods could profitably be adopted to the Irish Moss industry. As a result, the income of many fishing communities has risen sharply. Irish Moss, which brought half a million dollars to fishermen's families in 1965, provided them with more than two million dollars last year. This station, I might add, is carrying on experimental work with various types of seaweeds for the benefit of the Canadian industry.

We are also conducting exploratory and experimental programs on a number of spe-

cies of fish and shellfish which are thought to hold greater potential than has as yet been demonstrated. These include shrimp, capelin, argentine, sandlaunce and whiting, and already a noteworthy shrimp fishery has been developed in New Brunswick.

A very significant undertaking in Newfoundland is the resettlement of isolated segments of the fishing population under the Federal-Provincial Household Resettlement Program, which has been in operation for a little more than three years. This is necessary for proper fisheries development in the province, and it also provides sociological benefits by re-establishing thousands of people in centres where greater opportunities exist for employment, education and a better way of life. About 100 communities have now been evacuated or are in the process of evacuation. This has involved the movement of about 1,650 families, or 7,000 people, up to the end of last June. Another 130 families had been approved for resettlement at the same date and the movement is proceeding smoothly. The target under agreements with the Province is for the resettlement of from 50,000 to 60,000 people during the next 10 years. It is expected that the current resettlement rate of 1,000 households, or 5,000 people, each year, will be maintained. Under the agreement the Federal Government meets 75 per cent of the cost and the Provincial Government 25 per cent. The cost to the Federal Government from April 1965 to March of this year was slightly over two million one hundred thousand dollars. Each household gets \$1,000 plus \$200 for each member of the household.

While a great deal of emphasis has been placed on the industrial development of the Atlantic fisheries, useful work has been carried out in British Columbia and in the inland waters. Trawling experiments in Lake Erie in particular have resulted in greatly increased production and exploratory efforts are now continuing in Lake Ontario with a view to the utilization of species commonly known as trash fish. On the Pacific coast a great deal of work has been done to improve methods for the transportation of fish, particularly by the use of refrigerated sea water, so that quality can be maintained. Fishing techniques are being improved also, and we are now stepping up our activities on the Pacific coast with a view to further development of the offshore herring and groundfish fisheries.

The Department's Industrial Development Service does much of the organizational work and provides the secretariat for major confer-

ences on fisheries industrial development, which promote an important exchange of views on various phases of the industry as well as making available to Canadians a wealth of information. To date four such conferences, sponsored by the Federal-Provincial Atlantic Fisheries Committee, have been held. They dealt with offshore fishing vessels, the Atlantic herring fishery, fish protein concentrate, and fishing vessel construction materials. Participants are attracted to these conferences not only from Canada but from many other fishing countries, and the benefits arising from these have been obvious. Vessel design has improved, the herring fishery was provided with new impetus, and it became apparent at the fish protein concentrate conference that an FPC industry in Canada is likely to develop within the near future. A fifth such conference, on automation and mechanization in the fishing industry, is planned for 1970.

Having looked at the harvesting and, in some measure, processing, I shall now comment on our inspection and quality control program. We have a firmly established and, I am proud to say, highly-regarded system for inspecting all products destined for export and inter-provincial trade, as well as for all imported fishery products. The quality of our inspection program is such that a number of countries have sought our advice in establishing and improving their systems in this field.

A new federal Fish Inspection Act and revised regulations form the basis for the present Canadian inspection system. It provides for compulsory registration of practically all processing plants which prepare fish for inter-provincial trade or for export. In addition, all products prepared in registered plants are subject to inspection. Regulations were drawn up in close collaboration with the fishing industry and these now include minimum requirements for fishing boats, cold storages and transportation of fish or shellfish products. Quality designations on fishery products are not permitted unless specific standards of quality have been defined by regulation and are complied with.

To assist fishermen, processors and others in the industry, the Inspection Service undertakes programs of applied and developmental research for solving problems in the handling, processing, preservation, storage and distribution of fish and shellfish. The inspection Service demonstrates to fishermen and industry new and improved quality control techniques and equipment so that wastage

may be reduced and earnings increased. A great deal of related work is also done by the Fisheries Research Board on commercial processes and consumer products, particularly on their composition and nutritive value.

Our Inspection personnel are active in many other ways; for example, in working with provincial governments to develop a uniform national inspection system. This is especially important because the regulation of trade within a province is a matter of provincial jurisdiction. Federal officers are prepared to undertake inspection on behalf of a province if this is desired. We are also involved, through FAO and WHO in developing world trading standards for fishery products.

And now a brief look at the economics of the fisheries and what they mean to Canadians. At present the fisheries employ about 90 thousand persons—73 thousand in fishing operation and 17 thousand in handling and processing the catch. Our fishermen use a great variety of vessels and gear in fishing our inshore and offshore marine areas and our inland waters. Investment in the fishing fleet is estimated at close to \$200 million and in gear at approximately \$35 million. While the number of fishermen varies little from year to year there has been a noteworthy upsurge in investment in both fishing vessels and shore processing facilities in recent years. The value of our fishing fleet alone has doubled since 1960 and tripled since 1952.

Also in the 1960's there has been a significant upswing in the catch both in quantity and value. Annual total landings have increased from less than two billion pounds in 1961 to an average of two and a half billion pounds in the last three years. In terms of landed value—that is, the direct returns to fishermen—the increase during the same period has been about 50 per cent, or from \$110 million to \$168 million. The increase in the marketed value of the catch has been even more pronounced, from an average of \$210 million between 1959 and 1961 to a peak of \$358 million in 1966.

Total landings of all species by our fishermen last year amounted to 2.5 billion pounds, valued to fishermen at \$167 million. Both of these figures are slightly below the previous year's. However, indications so far this year are that the catch will be well above last year's in both quantity and value.

To avoid delaying the work of the Committee I shall not at this time go into details of the catch insofar as the species, volumes and values are concerned. However, if there are

any questions on these matters I shall be happy to provide the information.

Now as to marketing—nearly two-thirds of our fish production goes to export markets which places Canada second only to Japan among the world's fish exporting countries in terms of value. In 1967 we exported fishery products to 77 countries and our exports had an all-time record value of \$235 million. In this field we work closely with the Department of Trade and Commerce in promoting consumption of Canadian fishery products abroad.

As most of you know, we experienced some difficulty in disposing of all our last year's production of frozen groundfish mainly as a result of an over-supply situation in the main market of the world—the United States. I must stress that this did not represent a decline in consumer demand; in fact, consumption of fish in the U.S. is generally rising. However, there was a marked increase in supply by other nations last year. Moreover, changes in trade arrangements brought about by devaluation, tariff changes and other economic factors have led to higher exports from other countries to the U.S. market and consequently to over-supply.

The result has been a decline in the market price which has had serious effects on the Canadian east coast industry. In view of this situation, the Government last spring approved an expenditure of \$4 million to support the prices to Atlantic coast fishermen for cod, redfish and flounder sold to freezing plants. This program terminated on September 30th. Once again I must emphasize that without this action on our part, the livelihood of the fishermen would have been seriously impaired.

Problems also arose earlier this year in disposing of surplus holdings of salted cod caused by a variety of factors, principally over-supply. To promote the orderly disposal of this salt cod surplus, the Government authorized an expenditure of \$2.2 million by the Fisheries Prices Support Board to purchase the surplus and directed that this food be included in the relief programs to needy nations. A shipment from Halifax in mid-

October included some 3,000 metric tons of salted fish for Biafra-Nigeria.

We have several studies under way which, I think will be of interest to the Committee. One of these concerns the efficiency of trawler operations and in-plant methods and operations in Newfoundland. This study is being financed jointly by the Federal and Provincial Governments and a preliminary report has already been produced. The final report is expected by the end of October.

We are also co-operating with the fishing industry and provincial administrations in a study of the Canadian domestic market, with a view to increasing sales of fishery products at home. I might mention also that the Atlantic Development Board has undertaken a study of marketing methods of the Atlantic coast industry in the United States with a view to increasing the efficiency of the distribution system.

Before concluding there are a couple of other matters relating to the Department's interest in the welfare of fishermen, which I feel I should mention. One of these is the Fishing Vessel Indemnity Plan under which we provide low-cost insurance for fishermen's vessels. As the costs of small vessel construction have increased we have endeavoured to keep pace and the Plan now covers vessels valued at up to \$25,000. The need for this Plan is self-evident. Without it insurance costs on fishing craft would be so high that fishermen would not be able to protect their investment. With it they can feel secure that they are protected in case of misfortune.

One final example of our interest in fishermen is the recently introduced federal program to assist Indian fishermen in British Columbia. This is a five-year program and is jointly sponsored by the Department of Indian Affairs and Northern Development and the Department of Fisheries. The program will provide loans and grants of up to \$4.6 million for the construction and purchase of fishing vessels, equipment, gear and shore facilities, as well as for training courses. A board to administer the program has recently been appointed.

OFFICIAL REPORT OF MINUTES
OF
PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

Translations under the direction of the Bureau for Translations, Secretary of State.

ALISTAIR FRASER,
The Clerk of the House.

HOUSE OF COMMONS

First Session—Twenty-eighth Parliament

1968

STANDING COMMITTEE

ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 3

FRIDAY, NOVEMBER 1, 1968

Respecting

Revised Main Estimates (1968-69) of Fisheries and Forestry

WITNESSES:

From the Fisheries Council of Canada: Messrs. Richard I. Nelson, President; D. W. Monroe, Director; E. L. Harrison, Vice-President; Bernard Blais, Vice-President; K. M. Campbell; R. F. Johnson; and C. Gordon O'Brien, Manager. *From the Department of Fisheries:* Dr. A. W. H. Needler, Deputy Minister; and Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional).

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and

Mr. Anderson,
Mr. Breau,
Mr. Comeau,
Mr. Crouse,
Mr. Cyr,
Mr. Dionne,

Mr. Goode,
Mr. Hogarth,
Mr. Lundrigan,
Mr. Mather,
Mr. McQuaid,
Mr. Moores (*Bonavista-
Trinity-Conception*),

Mr. Noble,
Mr. Rose,
Mr. St. Pierre,
Mr. Smith (*Northumberland-
Miramichi*),
Mr. Smith (*Saint-Jean*),
Mr. Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

MINUTES OF PROCEEDINGS

Friday, November 1, 1968.

(3)

The Standing Committee on Fisheries and Forestry met this day at 9.10 a.m. The Chairman, Mr. Crossman, presiding.

Members present: Messrs. Anderson, Breau, Comeau, Crossman, Crouse, Cyr, Durante, Goode, Hogarth, Lundrigan, Mather, McQuaid, Moores (*Bonavista-Trinity-Conception*), Noble, Smith (*Saint-Jean*), St. Pierre, Whelan—(17).

Also present: The Honourable Jack Davis, Minister of Fisheries.

In attendance: From the Fisheries Council of Canada: Messrs. Richard I. Nelson, President; D. W. Munroe, Director; Bernard Blais, Vice-President; E. L. Harrison, Vice-President; Paul P. Russell; R. F. Johnson; K. M. Campbell; and C. Gordon O'Brien, Manager; *from the Fisheries Department:* Dr. A. W. H. Needler, Deputy Minister; and Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional).

The Chairman presented the Second Report of the Subcommittee on Agenda and Procedure which met on Tuesday, October 29, 1968, as follows:

Members present: Messrs. Crossman, Durante, Crouse, Rose and Whelan.

Your Subcommittee recommends:

That each Committee member be limited to 10 minutes for questions.

On motion of Mr. Hogarth,

Resolved,—That the Second Report of the Subcommittee be adopted.

The Chairman asked the Committee to consider a motion, that it seek permission to sit while the House is sitting.

Debate ensued and it was agreed that no action be taken for the present.

The Chairman called

Item 1—Revised Main Estimates, 1968-69

Fisheries and Forestry, and introduced Mr. Richard I. Nelson, President of the Fisheries Council of Canada, who introduced his associates.

Mr. Nelson read his prepared brief and he and his associates were questioned.

Dr. A. W. H. Needler, Deputy Minister of Fisheries, and Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional) assisted in the questioning.

It was agreed that the Fisheries Council of Canada's brief be filed with the Clerk of the Committee as EXHIBIT I.

At 11.00 a.m. the meeting adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

• 0920

Friday, November 1, 1968.

The Chairman: Gentlemen, I will call Item No. 1-Revised Estimates Fisheries and Forestry and I wish to introduce Mr. Nelson of the Fisheries Council of Canada who is here with the other members of the Council. I will ask Mr. Nelson to introduce the other members.

Mr. Richard I. Nelson (President, Fisheries Council of Canada): Mr. Chairman and gentlemen, my name is Dick Nelson of Vancouver, B.C. In my capacity as President of the Fisheries Council of Canada it is a privilege indeed to have this opportunity to discuss matters of concern to the fishing industry with the members of this Standing Committee, whose deliberations are so important to our industry.

In attendance with me here today, starting in Eastern Canada, is Mr. D. W. Monroe, Director of the Fisheries Council of Canada, President of The Frozen Fish Trades Association Limited, St. John's and Vice-President of Fishery Products Ltd., St. John's, Newfoundland; Mr. Paul P. Russell, Vice-President of The Frozen Fish Trades Association Limited, St. John's and General Manager of Bonavista Cold Storage Company Ltd., St. John's, Newfoundland; Mr. R. F. Johnson, Secretary-Manager of the Nova Scotia Fish Packers Association, the Canadian Atlantic Salt Fish Exporters Association and the Atlantic Fisheries By-Products Association, from Halifax, N.S.; Mr. Bernard Blais, Vice-President of the Fisheries Council of Canada, President of the Quebec Fish Producers Association and General Manager, St. Lawrence Sea Products Co., Quebec, P.Q.; Mr. E. L. Harrison, Vice-President of the Fisheries Council of Canada, Chairman of the Fisheries Association of B.C., and a Vice-President of British Columbia Packers Ltd., Vancouver, B.C.; Mr. K. M. Campbell, Secretary-Manager, Fisheries Association of British Columbia, Vancouver, B.C., and the Manager of our Council, Mr. C. Gordon O'Brien of Ottawa.

Mr. Chairman, we have copies of this brief for the members if they would like to have it; whatever you desire.

Mr. Chairman, Appendix A indicates the membership of our Council, which is a national trade association based in Ottawa and having a membership from the commercial fishing industry from coast to coast.

This membership includes private, corporate and fishermen's co-operative organizations across Canada. We speak, therefore, with a keen sense of our responsibilities to all segments of the industry.

Our industry has a long and varied history. It provides substantial employment across Canada, often in areas where little alternative employment is available. It earns a substantial sum of foreign exchange each year, some \$250 million last year, and it will continue to be of real importance in our economy.

Some of the matters we want to discuss today include exclusive fishing zones.

In 1963, the Fisheries Council of Canada presented a brief to the Government of Canada proposing a 12-mile exclusive fishing zone measured from a straight baseline drawn point to point on the outer extremities of the coastline. It was anticipated that the waters enclosed by this baseline would be considered Canadian internal waters.

In 1964 Parliament passed the Territorial Sea and Fishing Zones Act establishing the 12-mile exclusive fishing zone but measured from the sinuosities of the coast. The Act also provided authority for the Governor General in Council to name coordinates for the straight baseline. The government thought it necessary, however, to negotiate potential claims of countries which might be affected by these new baselines before proclaiming them. As a result no proclamations were made until 1967 when, as a token measure, coordinates were named on a part of the coast of Newfoundland and Labrador.

• 0925

The negotiations which have been carried on from time to time over the past four years have not been particularly productive. The chances of universal agreement on our baselines before their declaration are not very good and the principal objection apparently has come from the United States.

In the meantime, foreign fishing effort has continued to grow on both coasts. Most European nations now send fishing fleets to the Northwest Atlantic, including our traditional banks, some of them very sophisticated, very large and very productive. Many are fishing close to our coasts and even inside the Gulf of St. Lawrence.

In 1965 Russian trawlers, supported by factory vessels, began fishing off the coast of British Columbia and more recently Japanese fleets have entered the fishery. Fleets of other countries can be expected to follow. The Russians and Japanese are fishing outside the 12-mile limit as it presently exists but they are also fishing in Queen Charlotte Sound which, if the straight baseline were proclaimed, would be closed to them.

We consider it essential for the preservation of stocks and of our rights to fish them that the straight baseline as we proposed in 1963 be proclaimed without further delay, and we would suggest this proclamation should only refer to fisheries. We feel that much of the difficulty in securing action arises from confusing territorial waters with restricted fishing zones.

Having done this, there would still remain the problem of conservation of stocks of fish which are outside Canadian jurisdiction but are related to our continental shelf, and also the problem of protection of salmon whose seaward migrations could never be enclosed by boundaries.

These two problems require international agreement and we urge the calling of an International Law of the Sea Conference at which Canada would propose:

(a) that coastal states own and control the fishery resources on and above the continental shelf and that the nationals of other countries would be subject to the conservation regime of the coastal state and

(b) that all nations recognize the special status of anadromous species, particularly salmon, and agree to abstain from fishing them on the high seas.

There is a related problem which requires attention and that is servicing of foreign fishing fleets.

We believe that economics are an important consideration in distant water fisheries even for socialist countries and that where Canadian ports and services are open to foreign vessels the economies and therefore the probability of an operation at all are greatly enhanced. The Coastal Fisheries Protection Act prevents foreign fishing vessels from entering Canadian

ports except in an emergency. This Act is enforced on the West Coast but unfortunately it does not preclude the entry of supply vessels and these do enter west coast ports for provisions and water for the fishing fleets. We urge that this practice be prevented so as to reduce the present attractiveness of these new and competing fishing ventures off our Pacific Coast.

On the Atlantic Coast an exemption to the Coastal Fisheries Protection Act permits foreign vessels to enter Canadian ports and a practice and trade has built up in provisioning them and supplying bait. Any reluctance to change this situation, which has a long history and some implications for the fishing industry, in supplying bait should not, in any case, prevent the action we recommend in respect of the Pacific Coast.

Concerning Atlantic groundfish, you are all well aware of the current problem in the groundfish industry—groundfish being a term commonly applied to cod, haddock, ocean perch, cusk, hake, pollock, sole and flounder.

This situation applies to both the fresh—frozen and dry—salted products.

The Minister will be receiving recommendations in respect to this fishery very shortly from the East Coast industry. No doubt you will receive copies of this submission in due course. It would, therefore, be premature, even if we had that brief, to deal with its recommendations at this time. However, a few words about the general situation are, I believe, in order.

During the past several years this groundfish industry has been experiencing declining revenues as a result of declining prices in the market place and, at the same time, has been faced with increasing costs.

• 0930

As a result, there has been no expansion in fishermen's earnings and, in the processing sector, operating losses have been general and, in some cases, have resulted in insolvency.

This past period followed one of an expansionary nature, one that persisted roughly from 1960 to 1965. Because of strong demand and rising prices in the market, there was substantial investment in plants and fishing vessels during that period.

What caused the reversal of this expansionary trend? As we see it there were a number of factors involved. Among these were:

(a) The effective implementation of the tariff protecting the European Common Market.

(b) A similar type of development in the European Free Trade Association.

(c) Currency devaluations which affected competitive selling and market returns.

(d) Civil unrest—and civil war—in Africa, particularly in Nigeria, which cut off supplies of stock fish from Iceland and Norway.

Some people argue, also, that the change in the Roman Catholic Church rules, which took place in the fall of 1966, had an adverse affect on consumption in North America. While there were some short-term adverse effects, we are unable to prove, statistically, that this was an important factor.

Cod is the main species involved in landings by the European countries—the chief species used in the salted and drying trade. As markets were lost by the developments referred to above, more cod was diverted to frozen products—and the only major market for these products is the United States.

Pressure in that market was quickly reflected by lower prices for frozen cod and this drop in price spread to the fillets and blocks made from other species—flounders, ocean perch, haddock, and so forth.

This drop in price has been severe—cod blocks dropped from 30 cents per pound in November of 1965 to 21 cents in July of this year—and were as low as that on previous occasions during that period. This decrease of nine cents is equivalent to a drop of three cents at the fishermen's level—because you need 3 pounds of the raw product to produce one pound of blocks. Of course, prices to fishermen did not drop by 3 cents—one way and another the prices to fishermen were fairly well maintained—but at the cost of using up working capital, by bank financing and drawing on earnings from other enterprises.

The situation, by this spring, however, became acute, and you are aware that only the deficiency payment plan introduced by the federal government averted a drop in the price to fishermen—and probably closure of plants in some instances. This plan terminated recently, but the problem remains and we see no sign that there is any strengthening trend in the United States market.

As I said, we offer no solutions today—but the sections of the industry concerned will be meeting with the Minister of Fisheries before too long.

It seems obvious, however, that without some kind of assistance, prices to fishermen cannot be maintained and the resources of many processors may not enable them to continue operations.

We have said, already, that the above situation applies to various forms of groundfish—including the saltfish industry.

As in the case of the frozen, there are special problems in this sector—and these, too, will be discussed shortly by the industry with the government.

From the short-term point of view, one of the more serious problems is the unusually large amount of salted fish still in the hands of the fishermen.

Atlantic Herring

The Council is concerned about the manner in which the Atlantic herring fishery appears to be developing. This concern is partly as a result of the experience in British Columbia, where the catch of herring has declined rapidly in a few years to the point where no fishery at all is permitted this year, and partly by the fact that the herring fishery in the Bay of Fundy area is beginning to show similar characteristics to that in British Columbia.

We have asked the Minister of Fisheries to expand research into Atlantic herring in order that the fishery can be managed on a scientific basis. Although some research has been carried out, little is really known of the size of the various stocks, the degree of intermingling and their migration paths. We realize that this research will require both time and money, but we feel that this is one of the most important contributions the Department could make at this time. In the meantime, we feel that caution should be exercised in order to prevent over-development of the fishery.

● 0935

More specifically, we are concerned that practices which many feel contributed to the decline of the British Columbia fishery, such as the use of pitlamps for attraction and the use of small and spawning herring for reduction, are permitted on the Atlantic coast. It is our opinion that the desirability of these practices should be reviewed in the light of our limited knowledge of the stocks and the rapid increases in catches that are occurring. One final item should be mentioned, and that is the export of herring caught by Canadian vessels to the United States for reduction there. This export of herring was permitted on a reciprocal agreement and has been valuable to the Canadian sardine canning industry. However, when there are Canadian reduction plants in the Bay of Fundy area which are operating considerably below capacity, it would not appear to be advantageous to permit the export for reduction purposes.

Salmon Development

One of the most encouraging aspects of fisheries science has been the development of techniques to increase salmon runs.

The artificial spawning channel or controlled-flow channel has been developed in British Columbia and shows promise of being able to significantly increase the stocks of Pacific salmon returning to our river systems. Although there is still an experimental element involved in the operation of these channels, the results become progressively more convincing and the industry is confident that the technique should be expanded. Our scientific personnel should be highly congratulated on their efforts in this field.

There are now ten artificial spawning channels operating in British Columbia and another under construction. The technique is to improve the survival of the salmon in one of the most critical stages—from egg to fry, by eliminating the fluctuations in water flow in a given spawning stream. The survival is further enhanced by control of temperatures and selection of gravel. In these ways the egg to fry survival can be increased from an average 10-15 per cent in nature to more than 50 per cent. There is every reason to believe that the quality of the fry thus produced is equal to those produced in completely natural conditions.

Our only concern is that the application of these techniques may not proceed quickly enough. There are a number of locations in British Columbia where further channels should be built, either to rehabilitate a run damaged in some way or to improve on a run's natural potential. But there is a tendency to cut back on such programs when government is forced to cut expenditures, as at the present time. This kind of expenditure, however, is an investment which will be repaid handsomely in terms of new wealth and in a relatively short time.

We asked for and received this committee's wholehearted support for this approach two years ago and this obviously has had an effect on government policy. We do not want to see this program become a casualty of the most recent austerity program of our government.

There is another phase of salmon development which is less advanced technically but also very promising. This is the use of hatcheries for coho and chinook salmon. By way of explanation, these species, and particularly coho are limited more by the rearing capacity of their home stream than by spawning area as in the case of sockeye, pink and chum. Therefore the application of channels is limited. But very

promising results have been obtained in Washington and Oregon from hatcheries, and new techniques developed there could be applied in British Columbia. Since these species are the most desirable salmon for sports fishermen increasing their numbers would have wide public appeal. We know from American experience that great numbers of cohoes can be produced in this way. There is still a question of the cost of doing it and we urge that investigations aimed at assessing the feasibility of hatcheries be expedited.

These techniques are not confined to the West Coast or to Pacific salmon. In Newfoundland some encouraging early results have been obtained from transplants of Pink salmon eggs from British Columbia. The adult salmon have appeared in the fishery and some have returned to the Indian River to spawn although not enough yet to sustain the run without additional transplants. The world's largest salmon hatchery has been built for Atlantic salmon at the Mactaquac power site to maintain the St. John River salmon runs.

All these developments are making important contributions to our knowledge and our ability to maintain and increase stocks of salmon in the face of increasing pressure on natural habitat from industrialization.

Fish Marketing Strategy Survey

The Council is most appreciative of the cooperation of the federal government and of many of the provincial governments in the conducting of a joint Government-Industry marketing survey now underway.

• 0940

The study will take two years in the process and we expect it to indicate the most promising directions for developing promotion and marketing in Canada.

An interim report was received just 10 days ago from the management consulting firm which is conducting the study and this has been distributed to the participating governments.

It is in areas such as this that government expenditure can be productive of very useful results.

In conclusion, gentlemen, thank you for your kind attention and we trust that we can give satisfactory answers to your questions on these and related subjects.

The Chairman: I wish to thank you, Mr. Nelson, for a very interesting report. We will now open the meeting to questions. Mr. Lundrigan?

Mr. Lundrigan: I would like to preface my remarks by congratulating Mr. Nelson for a very fine presentation. He has done an excellent job of identifying many of the problems that are facing the Canadian fisheries.

In reference to his remarks pertaining to the recommendations to be made to the Minister of Fisheries regarding the ground fishery, all I can say in this regard is that we hope an early solution will be found and thereby encourage that you get your recommendations in as quickly as possible, because the fishery, as we are all aware, is facing an emergency at the present moment.

Now, my first question is in relationship to the Resolution 30, which will come before the House shortly, in relationship to the fresh fish marketing corporation. Is the Council prepared to give the Committee some indication of its position in respect to the principle inherent in the fresh fish marketing corporation? The Resolution says:

That it is expedient to introduce a measure to regulate interprovincial and export trade in freshwater fish and to establish the Freshwater Fish Marketing Corporation; to provide that the Corporation shall conduct its operations on a self-sustaining financial basis without appropriations. . .

and so on.

Mr. Nelson: Well, Mr. Chairman and Mr. Lundrigan, one of the problems we have in commenting on this is actually not knowing in too much detail what is proposed, but based on some of the recommendations of the McIvor Report and reports that we have received from the Prairies, it would appear that what is being recommended is a complete takeover by the government of the purchase, processing and sale of fish and creating a legalized monopoly in the fishing business, and I think we can say that the Council is opposed to this.

We do not feel the fact that the monopoly is approved by the government makes it any more desirable. We just wonder; we feel it is a little unrealistic to think that prices are always going to remain level or go up; we are a little concerned about what happens when the price goes down. I think our feeling is that if government spending is anticipated, it could be done under the present format as well as under some kind of government monopoly situation.

Mr. Lundrigan: I am going to follow, Mr. Chairman, by asking would the Council have the same basic attitude towards the recommendations of the Report of

the Royal Commission on Canada's Economic Prospects relating to the salt cod fishery of the Atlantic Coast, wherein they recommend the setting up of a marketing board for salt cod, and that marketing board would, in actual fact, have basically the same kinds of powers and responsibilities as the fresh fish marketing board?

Mr. Nelson: Mr. Lundrigan, the Council has really not considered your question so I do not think we could offer an opinion at this time, but Mr. O'Brien, our Manager, has a comment.

Mr. C. Gordon O'Brien (Manager, Fisheries Council of Canada): I was just saying, Mr. Chairman, that this is one recommendation but there have been others, and I think more recently than that one there was a commission set up under Dr. Finn to investigate the marketing of salt cod, and his recommendation was that such a marketing board should not be set up.

Mr. Lundrigan: May I ask this question; is the Council satisfied with the efforts of the trade in the processing and marketing of fish, or could I go further and say is it relatively in agreement with the McIvor Report's statement and its finding when it said that because of the domestic handlings and processing of fish generally, and because of the inefficiency and the costliness of it, the price paid to the consumer is far too low? In other words, is the Council relatively satisfied with the present endeavours with respect to marketing and processing by the trades in the fresh fish, and the fresh fish marketing and in the coastal marketing?

• 0945

Mr. Nelson: As far as the fresh water marketing at the present time is concerned, we really have no associations from the Prairies, and we really are not in a position to give the proposals detailed examination, but we were just speaking as a matter of principle, and the principles that were involved in that case did not appeal to us.

Mr. Lundrigan: Mr. Chairman, I have one last question before I get off the topic. The Commission, the McIvor Report, and most of the reports on processing and marketing of fish have taken the stand that the reason for recommendations regarding marketing boards is because of the inefficiency in the processing and marketing of fish by the trades. This is a statement that I could quote, if I had time, from the McIvor Report. Now, what are the alternatives, therefore, to marketing boards in view of this situation?

What are the alternatives as visualized by the Council to government marketing boards?

Mr. Nelson: I think Mr. Harrison would be the best one to comment on this.

Mr. E. L. Harrison (Vice-President of the Fisheries Council of Canada): Mr. Chairman, this is a very complex question. Mr. McIvor wrote a very long report on his examination of the factors involved and, if I remember correctly, I think the emphasis was laid on the purchasing of a large proportion of the output of the Prairie fisheries by Chicago distributors or wholesale houses and expressed the concern over whether or not the Canadian fishing industry was in a position to bargain effectively with that group.

The premise then is made that bargaining could be more effective if there were a common selling desk and therefore a common export price with control over both the quality and the quantities available, and it is from that premise that the government-authorized monopoly is then recommended in the McIvor Report.

Now, as Mr. Nelson has said, we do not know what the legislation says at this stage; all we know is the introductory observation that it will be allowed to borrow up to \$5 million and will have \$100,000 to set it up. I think it can be assumed that if the government moves in with this type of organization there will be periods when the government will have to sustain losses in their operation just the same way as private operators have in that area.

In the McIvor Report there is no statement as to what happens to the redundant equipment, either packing or packing house or any of the facilities which, if this report were adopted, would be unusable unless approved and used by the new government commission setup. I think this matter of redundancy is a principle which this Committee should watch very carefully because if the government can move into an area which it determines is having economic difficulties and by setting up an organization can make some of the facilities which are normally competitive redundant without paying for them, this would be a form of appropriation without any recompense.

I think this is an area that has to be examined. The industry, looking at the situation themselves, really is not a unit from Northwestern Ontario to the Northwest Territories—they happened to be dealing in the same fish—but there is no doubt that in some areas where there were common selling organizations on a voluntary basis this might well have improved the

situation based on the opinions rendered here, but the McIvor Report goes far beyond that; it actually creates a full monopoly.

• 0950

Mr. Lundrigan: Mr. Chairman, we can assume that the Council is in direct opposition to the resolution setting up a marketing board which would for all intents and purposes give the government the monopoly on the marketing of fresh water fish?

Mr. Harrison: I would say, Mr. Chairman, that the term "marketing board" if it follows this is rather loosely used. This is a board which runs the whole industry.

Mr. O'Brien: Mr. Chairman, I do not think the Council wants to go on record as being against marketing boards, period. There might be other occasions when a type of marketing board might be considered, for instance, for the salt fish industry, and when that occasion would arise why, then, naturally we would want to have a hard look at that one, but our comments re marketing boards are confined today to this specific fresh water fish marketing board.

Mr. McQuaid: Mr. Chairman, may I ask a supplementary question? Did I understand you to say, then, that you are not necessarily opposed to a marketing board so long as it is not controlled by government? Would you be in favour of a marketing board controlled by something other than government?

Mr. Nelson: We are getting a little detailed here, I think. Of course, I think we are into a problem of semantics; there are so many kinds of marketing boards. A sort of single desk selling agent marketing boards perhaps might be desirable, but as Mr. O'Brien has said we like to look at these particular cases and see exactly what we are talking about. I do not think you can have blanket approval or disapproval of marketing boards, as such.

Mr. Lundrigan: Thank you, Mr. Chairman.

Mr. Crouse: Just one further supplementary, if I may, Mr. Chairman. In view of the comments made by the President this morning, would he care to give his views on the situation existing in the fresh water fishing industry markets? Is he of the opinion that the Government has fully utilized the Fisheries Prices Support Board as a vehicle for the improvement of prices in the fresh water fishing area?

Mr. Nelson: Mr. Crouse, if you do not mind I will pass this question on to Mr. Harrison. There are several reasons. He is one of the members of the Fisheries Prices Support Board, so I do not think it would be proper for me to comment on that.

The Chairman: This was the time allotted to Mr. Lundrigan. Would you mind, Mr. Crouse, if we return to you? Mr. Mather is the next member who has indicated his wish to ask questions.

Mr. Mather: Mr. Chairman, as did the previous questioner, I want to compliment Mr. Nelson on the presentation of what seems to me to be a very good brief. It touched on many of the problems of the industry and offered a few solutions. I am particularly interested in the section of the submission dealing with exclusive fishing zones. I come from the West Coast and this question of establishing an exclusive fishing limit to preserve the resources and the business for Canadians has been a very long-standing one. It is one of the rather few questions upon which the operators and the union are in some general agreement in that they both favour the establishment of an exclusive fishing zone for Canadians.

I notice from the submission that it is five years since the Fisheries Council of Canada urged the Canadian Government to establish a 12-mile exclusive fishing zone, measured from straight baselines; and that it was back in 1964 that we, in Parliament, passed an Act which, in theory, established a 12-mile zone. Since then, though negotiations have gone on for a long time, there has been no agreement on the details and the actual lines to be drawn.

I am now coming to my question, and it is the only one I have today, Mr. Chairman. As the Council suggests, my opinion is that we should, without further delay, proclaim a straight baseline.

• 0955

If that were done, and having declared the baseline and its coordinates, could Canada then, if necessary, welcome negotiations with other countries who might wish to negotiate with us on the basis of what we had declared and were standing for in that regard? Would the Council approve that idea?

Mr. Nelson: Mr. Mather, perhaps you would allow Mr. Harrison answer this question.

Mr. Harrison: Mr. Mather, if I understand your question, you are asking the priority of our recommendations in relation to the interests of both nations

which now fish the grounds that we consider should be Canadian.

I think the relationship of these matters is pretty well spelled out in our presentation. As you say, it is five years since we made the presentation in which the baselines were set out. At that time, in Queen Charlotte Sound on the Pacific Coast, there were no large fleet of foreigners dragging the area, and we, of course, went out and developed it.

On the East Coast there is a different situation. Foreign nations have had fisheries there historically.

Our proposal now, is, and has been since the inception, that we should declare the 12-mile limit from the baselines now, and then take the matter to a conference on the international law of the sea to propose that the coastal state own and control the fisheries resources on and above the Continental Shelf.

Obviously, if Canada were to pursue that order there would be negotiations following the declaration of the 12-mile limit, because I am sure that many foreign nations would raise the matter immediately. Just how, I do not know.

Mr. Mather: Thank you, sir.

I notice that in your brief it is stated that the chances of universal agreement on the baselines before Canada's declaration of them are not good, and you follow that on page 4 of the brief by saying that you consider that the baselines should be declared without delay.

From what you have said I gather that you would then expect that Canada, having spelled out what it stands for and marked out its limits, could then negotiate with other countries if they so desired—on the basis that we have marked out?

Mr. Harrison: Yes, sir. The answer to your question is a direct yes.

The Chairman: Mr. Comeau?

Mr. Comeau: Thank you, Mr. Chairman.

At the beginning of this month the Minister urged Canadians to eat more fish. I thoroughly commend him for that. As you know, the *per capita* consumption of fish in Canada in 1965-66 was around 15.3 pounds; for the United States it was 10.6 pounds, I believe; and for Japan, 61.1 pounds.

The *per capita* consumption of red meats in 1967 in Canada was approximately 153.8, I believe; and for

poultry meats it was 40.9. These figures are significantly different.

Briefly, could you tell us what the Fisheries Council of Canada is, or has been, doing for the promotion of fish or fish products?

Mr. O'Brien: Mr. Chairman, over the years, as a Council, we have made several attempts to run rather modest promotion programs on a national basis, and I think, by and large, the amount of money so spent was useful.

At the present time we are not directly engaged in a promotional program, but some of these efforts are still being carried on by individual sectors of the trade. For instance, the salmon canners have just started in the last month a \$300,000 promotion on canned salmon to increase Canadian consumption.

• 1000

My impression on the consumption figures, however, is perhaps a little different. We have not seen much change in our consumption figure for many, many years. It hangs around 13.3 or 13.5, whereas in the United States it runs pretty consistently about 3 pounds *per capita* below ours.

However, to come back to what are we doing, we have been greatly concerned with this, and about a year ago we came to the Department of Fisheries and made a suggestion. We admitted that we really did not know how to spend a dollar to the best advantage to promote fish, and that we felt it was necessary to conduct some really good research to find out how to do it. As a result—and I will shorten this story as much as possible—we are engaged in a \$200,000 co-operative project at the present time that will take two years. It is being conducted by the best people we could find, a firm of business consultants in Toronto.

The federal government is contributing \$75,000 over the two-year period to that program; nine of the provincial governments are involved and they are contributing a like amount, and we thought we did pretty well to break up the other \$50,000 under current conditions. That project is under way. We had the first report last month from the business consultant people. It is on schedule. It is much too early to talk about results, trends and what they are finding. I would say if we were before you next year that we would be able to give you some very definite hints as to what we expect might come out of it. We have not had all the money in the world, but we have been doing the best we can with what we have.

Mr. Comeau: You just answered my second question which was whether the Fisheries Council had ever recommended this sort of thing to the government? The Fisheries Council then feel this would definitely be commendable to relieve our marketing problem? Is that correct?

Mr. Nelson: Mr. Comeau, the purpose of this study is to devise the best marketing strategy and this will have to be followed by promotional efforts on behalf of both the various aspects of the fishing industry in Canada and possibly by the Fisheries Council. We do not know what the results are going to be, but it is felt this is the necessary first step to develop a good marketing program for the Canadian fishing industry.

Mr. Comeau: Am I to understand that the government at the present time is not directly engaged in this promotion program. The only promotion program going on is this \$200,000 that you spoke of?

Mr. O'Brien: I am sorry, Mr. Chairman, if we gave that impression, we were speaking purely from our own activities. No, the government does quite a bit of work in this field. They have a staff of well-trained dieticians who are located in strategic spots across Canada. They issue a tremendous number of very good leaflets, cookbooks, and this sort of material. They issue considerable material to the food editors, the press and so on. I would say the government is doing very well in this field.

Mr. Comeau: Mr. Chairman, I have one more question. I would like to see the government or somebody do a lot more in this line. I think one of the problems we are facing today is that Canadians do not eat enough fish. Therefore, we should do a lot more than we are, and I would like to know why the government—I should really ask this question of the Minister but he is not a witness today—why the Government is not engaging more fully in this type of program. I am wondering whether you have any reason for not engaging more fully in this? I do not think. . .

Mr. O'Brien: I think, Mr. Comeau, it is probably primarily a matter of dollars and cents. Second, perhaps when we find out from this other project that is on now just how the money should be spent, maybe if we followed that up and said: Now we are going to spend X dollars can we look for some assistance, it might be a reasonable approach. We hope it would be. However, I do feel that the government justifiably might expect industry to participate along with them to the best of their ability, as we are doing in the current project.

• 1005

Mr. Comeau: Mr. Chairman, do I have time for one more question; a short one. I am wondering, sir, do you feel that these trades—are they satisfied with the government's effort in these lines? Of course, this is probably all going to come out of your study.

Mr. Nelson: In the promotional line?

Mr. Comeau: Yes.

Mr. Nelson: Yes, as Mr. O'Brien has said, I think we are satisfied with what is being done so far.

Mr. Comeau: That is all, Mr. Chairman.

Mr. Nelson: With the budget available, Mr. O'Brien reminds me.

Mr. Comeau: Oh yēs, this is correct, but I suggest that we should increase the budget to promote this even further. That is all Mr. Chairman.

The Chairman: Mr. Moores?

Mr. Moores: I have two questions, Mr. Chairman. First of all, pertaining to the Atlantic herring fishery, I notice in the Council's brief that the fine tendencies are the same as were in British Columbia when its catch declined considerably. I know that in Eastern Canada there is considerable interest by foreign fleets again in the herring catching process now. West Germany in particular, I think, are bringing in a great many factory ships and doing particularly well. Does the Council feel that there is any way to control the catching of fish on the Atlantic Coast, or even controlling the research knowledge that is made available in any way other than their Continental Shelf recommendation? Do they think this can be done by negotiation with these countries or can it only be done—well, not unilaterally, but through Canadian control?

Mr. Nelson: Well, Mr. Moores, I do not know if I am answering your question exactly. The problem we were getting at is not the problem of foreign competition; it was actually competition among our own fishermen in our own waters.

Mr. Moores: Mr. Nelson, the foreign competition would be a big factor in the over-all problem, would it not?

Mr. Nelson: Well, I think we suggested here that we should approach this from the Continental Shelf point

of view and I believe most of the herring West Germany catches, and so on, is caught above the Continental Shelf, I think that is the approach that would have to be taken.

Mr. Moores: Fine, thank you. I have another question I wanted to ask. I noticed here, and I think quite rightly, that this deficiency payment invoked this past year for the fresh fish industry in Newfoundland had a considerable effect on—one could almost say salvaging the industry. I understand there is another brief to come up shortly, as the Minister has mentioned in the House. Are there any plans amongst the trade to do their own homework? Are there any plans amongst the industry in Newfoundland in particular to make a contribution by improving their technology, by co-operation in the trade itself, or is this going to be a government thing to keep up until the price comes back, or is this a long-term plan whereby the industry in total gets back on its feet through everybody's participation and what have you?

Mr. Nelson: Mr. Monroe, would you like to reply to that?

Mr. Monroe: Mr Chairman, we think it is inappropriate to discuss the recommendations that are to be contained in the brief which will be in the Minister's hands next week. However, the industry is endeavouring to increase productivity and some progress has been made in this respect and much more is to be done. I understand, however, that because the industry has been through a period of almost two and a half years of declining revenues and increasing costs, to a great extent it is beyond self-help. It costs money in many cases to increase productivity, to buy facilities even though the pay-back on such facilities may be very rapid. Also discussions are taking place to rationalize the industry in Newfoundland wherever possible, but this is a very complex problem.

• 1010

Mr. Lundrigan: Mr. Chairman, could I ask a supplementary question? When can the fishermen expect the trades to make a move in respect to the brief we have heard about? I understand there are 60,000 quintals of fish on the west coast of Newfoundland that have not moved out of the stages, if you want, and it is an emergency. I think the Minister of Fisheries is quite aware of many of the aspects of the problem, but being a person who is very interested in long-term planning and in trying to resolve a problem beneficially, he is interested in getting as many points of view and positions as possible. Consequently, the

need for the brief from the trades. Could the Council give any indication to the Committee as to when the brief will be submitted to the Minister? I appreciate Mr. Monroë's problem, that he would not like to disclose any of the recommendations at the present moment, but this is rather an emergency, in my opinion.

Mr. Nelson: Well, Mr. Lundrigan, it just seems that the East Coast has this brief and they would like to present it to the Minister and they do not feel that they should discuss it ahead of time. I am sorry.

Mr. Lundrigan: Pardon me, sir, but I think it was the timing. . .

Mr. Nelson: Unless I am badly mistaken, Mr. Monroë just said it would be in the hands of the Minister next week.

Mr. Monroë: I will repeat that statement if I may.

Mr. Lundrigan: There is nothing like repeating it, sir.

The Chairman: Mr. Crouse.

Mr. Crouse: Mr. Chairman, I, too, would like to go on record as expressing my thanks and appreciation to Mr. Nelson and the members of the Fisheries Council for taking time out to come before this Committee and I also congratulate them on the excellent brief which they have presented to us this morning. I like the rather subtle way in which they have rapped the government over the knuckles for not doing anything about the 12-mile limit, which was passed by statute in 1964 and which still does not provide us with the protection we should have in the industry. In your view, Mr. Nelson, do you feel that the lack of implementing this legislation would threaten our new queen crab industry in the Gulf of St. Lawrence? Does it expose this industry to fishing by other nationals?

Mr. Nelson: I think Mr. Blais would be better equipped to answer this question because I am not familiar with where the queen crab are on the Atlantic coast.

Mr. Blais: I am not personally involved in the queen crab but I would suggest, in any event, that if nothing is done to close the Gulf of St. Lawrence the resources will be left open to foreign fishing.

Mr. Moores (Bonavista-Trinity-Conception): A supplementary Mr. Chairman. Is it not correct, and this is

my understanding, that at the present time shellfish on the Continental Shelf are already protected as Canadian fish. Is that not correct?

Mr. Nelson: No, they are not protected on the Continental Shelf in Canada.

Mr. Moores (Bonavista-Trinity-Conception): I think you will find that shellfish are protected on the Continental Shelf and it is the fish above that that are not. At least, there was a statement made the other day to just that effect, I believe, in a speech in Boston, which some of you people may have attended.

Mr. Nelson: Perhaps we could get some expert opinion from Mr. Ozere, but my feeling is that Canada has never ratified that section of The Geneva Conference on the Law of the Sea.

Mr. Crouse: Is it your intention, Mr. Chairman, to have Mr. Ozere answer that question before I proceed with my line of questioning?

The Chairman: Mr. Ozere.

Mr. S. V. Ozere (Assistant Deputy Minister, International and Jurisdictional, Department of Fisheries): It is true that Canada has not yet ratified the Convention on the Continental Shelf. However, the Convention is in force, having been ratified by the requisite number of countries, which I think is 22. Whether Canada has ratified the Convention or not, it is now part of the customary international law so that we can take advantage of the principles that are enunciated in that Convention. Under that Convention those resources that are attached to the bed of the sea are included in the Continental Shelf, over which each country has complete jurisdiction.

• 1015

The resources that are mentioned in the Convention are those that at the harvestable stage are in constant physical contact with the sea bed, so it becomes a question of fact whether the queen crab is in constant contact with the sea bed. In the case of some shellfish—for example, oysters or things of that nature—there is no doubt about the fact that they are in constant contact.

On the West Coast the United States have claimed that the king crab is in constant contact with the sea bed and therefore it is part of the Continental Shelf. However, this has not been universally recognized. For example, Japan has opposed the idea but I think the

Russians have recognized it. So that I think we would have a very good case for claiming that the queen crab is in constant contact with the sea bed and therefore part of the Continental Shelf, and as such it is one of our resources.

Mr. Crouse: This raises a supplementary question, Mr. Chairman, before I go on with my regular line of questioning of Mr. Ozere. At the present time the catching of off-shore lobster, for example, on Georges Bank is only restricted to other nationals, while Canadians are not permitted to catch and land off-shore lobsters. Would I be correct in inferring from Mr. Ozere's statement that we have the right and title to these off-shore lobsters, since they are on our Continental Shelf, and although we permit other nationals to catch them we refuse our own people the right to do so. Is this a correct assumption?

Mr. Ozere: As I said, Mr. Chairman, it becomes a question of fact whether lobsters can be proven to be in constant contact with the sea bed at all times during their harvestable stage. I think this would be something for the scientists to prove. From what I know through discussions that have been held on the subject I do not think that lobsters are in that category. That is, they depart from the bottom at times. Perhaps Dr. Needler could say something on that.

The Chairman: Dr. Needler?

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Mr. Chairman, I think the history has been that various kinds of lobsters—not only the real lobster but also the langouste rock spiny lobsters—have been claimed not to be attached. In this particular case I think, as everybody knows, they flip their tails and sometimes swim considerable distances. I think it would be more difficult to claim this than it would be to claim that crabs were Continental Shelf animals, but we might prevail. At the moment there are international discussions going on regarding the status of the spiny lobsters in southern waters, and they do just about the same amount of swimming as the true lobsters.

Mr. Crouse: Mr. Chairman, I will continue with my line of questioning. The Government of Canada has now indicated its intention to enter the freshwater fishing industry by completely regulating, according to the resolution, the interprovincial and export trade in freshwater fish. This is perhaps the most important change in government thinking in many years because the government, which is supposed to be the servant of the people and the industry, now becomes its

master. The resolution setting up the board which will control the freshwater industry will be supplementary to the Fisheries Prices Support Board, and I would now direct my question to Mr. Harrison and ask him rather than have the government enter the industry would it not be more advisable for the Fisheries Prices Support Board to be put to greater use by beefing up or supporting those species of fish that are sold below production cost?

• 1020

Mr. Harrison: Mr. Crouse, you offer one alternative to the plan which is being suggested and I do not think that I can answer that correctly because obviously this involves government assistance, whether you call it a subsidy or not. The question is—and we have not seen the legislation—what government assistance is involved and what is being planned.

Mr. Crouse has handed me the resolution and underlined this part;

to provide that the Corporation shall conduct its operations on a self-sustaining financial basis without appropriations therefor by Parliament;

I cannot answer it. I do not know what it will do.

Mr. Crouse: One further question, Mr. Chairman, if I have time. In the president's presentation to us this morning he stated that one of the recommendations is:

that coastal states own and control the fishery resources on and above the continental shelf and that the nationals of other countries would be subject to the conservation regime of the coastal state.

This is a highly desirable recommendation. Has the Council, or have you, Mr. President, any views for this Committee on how you would propose to police this type of policy, or even implement it?

Mr. Nelson: I am sorry; we have been working Mr. Harrison a great deal this morning, but he is the expert on most of the questions that are being asked. Perhaps he would comment on that.

Mr. Harrison: The answer to this is that we have proposed the calling of an international law of the sea conference and that the proposition we have outlined here be adopted by that conference.

In that case I would think that the policing, as you express it, would be automatic. If it were internationally agreed that it be the practice that the coastal state would own and control the fishery

resource then I would not think the policing would be very difficult. It is just a question of defining the continental shelf of our shores.

Mr. Crouse: Have I any time left, Mr. Chairman?

The Chairman: You are drawing near.

Mr. Crouse: I have just one further question, then.

In your brief you have also stated that it seems obvious, however, that without some kind of assistance prices to fishermen cannot be maintained. You are referring to the withdrawal of the price support to the Atlantic Coast and you state:

... the resources of many processors may not enable them to continue operations.

In view of that statement and the fact that the resolution just read by Mr. Harrison only recognizes the problems of the freshwater industry, thereby indirectly implying that the saltwater industry and all other sections of the fishing industry are in top shape, do you believe that this will eventually bring about an expansion of the marketing board which will take over the entire industry—saltwater and fresh?

Mr. Nelson: I am not sure that I understand your question, but our comments on the marketing board, as I said before, were restricted entirely to the freshwater fisheries. We have not given any indication of what our thoughts might be on the Atlantic Coast, for instance.

Mr. Crouse: Mr. President, if I might refer to your brief, you state:

It seems obvious, however, that without some kind of assistance prices to fishermen cannot be maintained and the resources of many processors may not enable them to continue operations.

By that statement are you implying that the industry on the Atlantic Coast is in just as dire a situation as is the industry in the central part of Canada and that it may eventually have to request the Government of Canada to market all the saltwater fish as they are now proposing to do for the freshwater industry?

Mr. D. W. Monroe (Director of the Fisheries Council of Canada): Mr. Chairman, there is no question that the problems of the industry on the Atlantic Coast are very acute and that the industry is undergoing the greatest difficulties, but nobody has suggested, to my knowledge, that a marketing board would cure, or in any way aid, the situation at the present time.

• 1025

The prices will not go up in the United States, where most of our fish is sold, until demand and supply are more or less brought into balance; and I do not think a marketing board is going to bring that about.

Mr. Crouse: Thank you.

The Chairman: Mr. Whelan.

Mr. Whelan: Mr. Chairman, I first of all wish to ask Mr. Nelson if his organization is satisfied with the Government's administration of the seafood industry? By this I mean the many departments that are involved, such as External Affairs, Trade and Commerce, Fisheries and the Atlantic Development Board?

Mr. Nelson: We are concerned about apparent multiplication of these various agencies that are becoming involved in fisheries. It appears to us that often there is not adequate co-ordination between some of the activities that are taking place.

I do not know of any detailed problems, but it is our impression that as more and more government departments and agencies are becoming involved in fisheries there is need for more co-ordination.

Mr. Whelan: Many of the Members here know that I am new to the Fisheries Department. I am utterly amazed at the different departments that have some part in administering the fishing industry, or the seafood industry, as I would prefer to call it. Are you satisfied with the efforts in advertising seafood? Do you think you get results from the present advertising that is being done?

Mr. Nelson: Mr. Campbell, would you like to comment on this one?

Mr. K. M. Campbell (Secretary-Manager, Fisheries Association of British Columbia): Mr. Chairman, I do not believe that the Government is directly involved in advertising fishery products, so I cannot say that we are satisfied with that effort.

We would like to see government participation in this in Canada, and perhaps more direct advertising in some of the export markets where we must admit the Department of Trade and Commerce does do a good job in public relations promotion work for fishery products.

But the direct advertising that is done in Canada is really by the industry itself, and we are not even satisfied with the extent of that.

Mr. Whelan: I meant more the advertising that is done by the industry itself. Were you satisfied with the results of the advertising your industry does?

Mr. Campbell: No, I think we could safely say that more effort would produce a good benefit.

Mr. Whelan: One of the Members of the Committee followed that line of questioning, and I think it was Mr. Harrison who gave evidence that a great deal of equipment would disappear if, say, the marketing board took over the marketing of all fish. Have you any idea how many lobster canning plants and salmon canning plants—general seafood canning plants—have disappeared over, say, the last 10 or 20 years?

I was in Prince Edward Island on Wednesday—Mr. McQuaid will probably correct me if I give the wrong figures—and I was told that there were around 56 little lobster canning plants there just a few short years ago, that there were now 15 or 16 left and that they could probably do it with four or five canning plants on the Island. There is no marketing board there, but these have disappeared.

I know there is not a very great amount of equipment involved in it, but how evident is this in other fishing industries such as in the canning of salmon and other seafood products?

Mr. Nelson: Mr. Whelan, I think that is typical of fisheries in which the supply of fish is limited, such as lobsters and salmon.

Canadians have been asked to increase their productivity, you might say, and the only way one can do that is to centralize operations, have a larger scale and reduce the overhead per unit, and that sort of thing. This is the trend everywhere.

• 1030

Mr. Whelan: This happens not just in the seafood industry, but in all primary food industries so far as that goes—this trend to a more efficient operation and a higher quality operation, which makes a better product for the market. Do you not agree?

Mr. Nelson: The unusual thing about the fishing industry is that we can increase the productivity of the plant operation but we cannot improve the productivity of the fishery, because, until recently, no attempt has really been made to limit the number of fishermen, and the number of fishermen may even increase in spite of a fall in catch. Therefore, there is no control over the productivity of the fishing aspect

of a fishing business, and partly to compensate for this the processing sector has had to centralize. They really had no other recourse.

Mr. Whelan: That is my point. The formation of the marketing board would not necessarily mean the elimination of these little plants. This is the trend anyhow, is it not?

Mr. Nelson: Oh yes, definitely.

The Chairman: Mr. Harrison?

Mr. Harrison: Mr. Chairman, I do not wish to be misunderstood. I hope I did not indicate that I was opposed to consolidation of plants where greater efficiency takes place.

The principle I was concerned with, Mr. Whelan, was that with this government-authorized monopoly, in the terms of this proposed marketing board—if this is the way the legislation comes out—they would have power to operate the industry from the catching to the final sale and nobody else would be able to operate in the area. Therefore, if they do not utilize the plant, then that plant has no function and it does not voluntarily consolidate with another plant. Therefore, I think the principle that must be watched is that the capital that is invested there is not just taken over without any recompense to the owners of that part of the process which is made redundant.

Mr. Whelan: I just want to make one thing clear. I have had a lot of experience with primary producers and marketing boards and it certainly has not hurt the private enterprise system as far as other food crops are concerned. Actually the most successful ones are under marketing boards, and I speak particularly of provincial marketing boards and the canning industry which is somewhat similar to the primary seafoods production.

Has there ever been a qualified study by qualified marketing people of the problem of marketing ground-fish?

Mr. Johnson: Yes, there has been a limited study. The Nova Scotia Fish Packers Association has for the past approximately ten years provided a modest budget each year to expend on promotion and because the amount has been so modest we have confined it pretty well to public relations rather than direct advertising.

Last year we decided on the recommendation of a public relations agency which was working for us to

have a survey made of 150 housewives in the Toronto area and, from the information thus obtained, to conclude how we might to best advantage spend our small budget. On the basis of these findings we decided to spend our entire budget last year in one area and to concentrate for a period of approximately a month to promote fish because out of these interviews with housewives it became apparent that there was some reluctance to purchase frozen groundfish products as they felt that the quality of frozen groundfish was inferior to the fresh product. The area we chose was Port Arthur and Fort William, we advertised on radio and television, we had home economists with the co-operation of the Department of Fisheries work in the area, and we used the slogan "To serve it fresh you cook it frozen". I am sorry to say the results were very inconclusive. The reason we picked Port Arthur-Fort William as an area was that there was approximately 100,000 people there, it was a more or less isolated area or a pocket where we thought we would have ways and means of assessing the amount of fish that moved into that market during the particular period. But, as I say, the results were very inconclusive.

• 1035

Mr. Lundrigan: I wonder if Mr. Whelan would permit a supplementary on his time?

The Chairman: That is up to Mr. Whelan.

Mr. Lundrigan: Excuse me, Mr. Whelan. Would you elaborate on that question, Mr. O'Brien?

Mr. O'Brien: I believe there have been over the years a number of marketing studies made, Mr. Whelan. People from Trade and Commerce and some of the provincial governments have gone out into the foreign markets assessing the possibilities. Trade missions composed of federal and industry people have been touring various countries investigating possibilities and so forth. At the present time there is another one underway in connection with the marketing of East Coast groundfish which is being conducted by the Atlantic Development Board. Now we feel that this may be quite useful. They seem to have the right kind of people, are going into it very thoroughly, and the industry is hopeful that they may come up with some answers on the steps that might be taken to improve the marketing of that product. They are following it right through from the processor into the markets, with particular reference to our marketing of this product in the United States.

Mr. Whelan: I might say, Mr. O'Brien, that I had the pleasure of riding from Charlottetown back to Ottawa yesterday with the man from ADB who is doing the

survey and I was highly impressed with his ability, his eagerness to do the job that he is doing, and I only hope that we have many more people of that calibre doing this type of work.

The Chairman: Your time has just about expired, Mr. Whelan. You have time for one more short question.

Mr. Whelan: Perhaps some of you who are concerned about marketing boards have read an article in an American publication in respect of American buyers who visited a certain area in Canada—I am not going to name it—and were watching them pack certain high quality seafood products; one producer was packing them in a chicken house—it was not sea chicken either—and this did not go over very big with them. I have been trying to read as much as I can lately on fishing problems and this utterly amazed me.

The Chairman: Your time is up now, Mr. Whelan. Mr. Durante is next.

Mr. Durante: Thank you, Mr. Chairman. I would like to commend the President of the Fisheries Council of Canada, Mr. Nelson, for his presentation this morning.

If I may change the line of questioning somewhat at this time, I would like to refer to that portion of his brief which deals with salmon development. On page 10 I detect some generalities and a certain degree of contradiction. I refer to the development of artificial spawning channels and/or controlled flow channels. Although the brief makes reference to these developments as being experimental at the top of page 10, at the bottom of the page it says:

This kind of expenditure, however, is an investment which will be repaid handsomely in terms of new wealth and in a relatively short time.

Now I have always advocated that we should be doing more in the way of artificial spawning channels and I realize that the terms you use here, sir, are relative. For example, what does "repaid handsomely" really mean? Do you have some statistics to support your contention in this regard? Could you tell us, for example, that for every dollar we invest we would realize a \$5 return, a \$10 return, or \$1.25 return?

• 1040

Mr. Nelson: Mr. Durante, I think Mr. Campbell has done some work on this aspect of it, if you would permit him to reply to this question.

Mr. Campbell: Mr. Chairman, I think this is an important aspect of what we are trying to say here. The technique has been pretty well developed now, at least to industry people, so that we are satisfied that it is proven well enough that it could go ahead on a faster basis. Some of the biologists and people who are in charge of these developments are a little more cautious than we are. They like to move one step at a time; improve one before they go on to the next. This is what we mean by the experimental nature that still exists. They are still finally proving some fine points. But even the biologists are very optimistic about the prospects of this technique.

When we speak of the return on the investment, one example that we could give, and again we do not have proof because none of the channels have been in operation long enough to bring out their returns, but the prognosis for the Babine project, for instance, which consists of three large channels, is that about a million sockeye per year could be produced in addition to the natural production from the Babine. The total cost of the project will perhaps be \$7 million or \$8 million when it is finished, depending on how inflation affects it. If you increase the catch of the Skeena River sockeye by one million fish, this is equivalent to about \$2.5 million landed value. Sockeye are worth about \$2.40 per fish as they come out of the net. So that this \$8 million which is spent is going to produce about \$2.4 million annually. So I think we are being conservative in saying that this could repay itself in four years.

Mr. Durante: Mr. Chairman, I can understand the industry being very optimistic—and I think that everyone is—with regard to artificial spawning channels. However, I was sorry to note, Mr. Nelson, that there was no reference made to that one source which still provides the large majority of fish; that is, the natural spawning channels. I am personally concerned about the natural spawning channels not producing at the present time as they have in the past. What in your opinion could we do to improve the runs from our natural spawning channels? Or, what is reducing these runs?

Mr. Nelson: If you look at the runs of salmon in British Columbia for the last few years I think you will see that they have been increasing. I am sure that part of this is because of the artificial spawning channels, but from recent experience it must have been an increase in the naturally-spawned fish. I think the sorts of things that could affect it badly are matters that we are very concerned about, and I suppose we might have mentioned these in our brief but we did not

want to cover too many things. We have been talking about this so much, about polluting our rivers, building hydro-electric power projects on salmon streams, that sort of thing, which of course we are very much opposed to.

Mr. Durante: This is exactly what I wanted to hear you say, of course. I am very concerned about the pollution of our rivers and creeks and I am also concerned about the destruction of our natural spawning channels because of the carelessness that we see as the result of the operations of the forestry industry in and around our fishing channels.

● 1045

Mr. Nelson: We share your concern, Mr. Durante. I think when you have a developing province like British Columbia, and you have different industries competing for the same resources, you have a very difficult situation. I think particularly in the case of British Columbia, where fisheries are under federal jurisdiction and the other resources are under provincial jurisdiction, there is no really effective co-ordinating body to resolve some of these conflicts.

Mr. Durante: Mr. Chairman, if I may pursue this one step further, I understand the Babine project is costing in the vicinity of \$7 million to \$8 million, and from the evidence, I have seen in tramping up and down the west coast of British Columbia, and Vancouver Island particularly, where I have seen creeks that have been plugged with logging debris and I know that we are conducting a program whereby these creeks are being kept clear by our Fisheries Department, but I do not think that it is being conducted as effectively as it should be, and if we were to spend a similar amount of money in cleaning out these natural spawning channels is it felt that we would realize as good a return as previously indicated, that is, \$2.5 million a year?

Mr. Nelson: Mr. Campbell, would you like to answer?

Mr. Campbell: Mr. Chairman, first of all we would concur that there is a great deal more that could be done in keeping some of these streams—especially the coastal streams, the short ones—in better shape. However, I think it would be a hard question to answer whether you could spend \$8 million on this in the first place. Secondly, if you did, and as you know these streams are very steep and some of them are quite short and they are subject to heavy rainfall and therefore the fluctuations are very great, so just keeping them clear might not produce the kind of survival

rates that we would want. In fact, I think it is pretty safe to say that it would not unless you put those under control and, of course, not every stream lends itself to this sort of thing.

Mr. Nelson: Mr. Durante, I do not know if I could add one more . . .

Mr. Campbell: With the new organization of the Department, with fisheries and forestry, possibly the Minister will have more influence on these provincial fisheries ministers and perhaps there will be an opportunity there to improve some of these practices.

The Chairman: We have approximately 10 minutes left and I still have Mr. Noble, Mr. McQuaid, Mr. Moores and Mr. Hogarth. I would ask you to be as brief as possible to give everybody a chance.

Mr. Noble: Mr. Chairman, I will be very brief. I would like to join the others in extending a welcome to the Council and to compliment them on the presentation. I am from the Great Lakes area and I bring greetings from Ontario.

Mr. Chairman, my questions respecting the proposed freshwater fish marketing board and related questions have all been answered to my satisfaction. However, being interested primarily in the Great Lakes fisheries and in view of the fact the brief mentions the success of the Americans in production of coho salmon, does the Council recommend that our government, in co-operation with the provincial government, introduce coho salmon to the Great Lakes?

Mr. O'Brien: Mr. Chairman, perhaps this is a good time to mention that we are a little handicapped today in that we expected to have one of our vice-presidents from the freshwater fisheries here, Mr. Omstead. He telephoned last night and said, "I may have a strike in the plant tomorrow and I think I will have to stay at home", so unfortunately we are without any direct representation today from the freshwater area. To answer your question, sir, we have not considered it but it sounds like an interesting proposition.

Mr. Noble: Thank you.

The Chairman: Is that all, Mr. Noble?

Mr. Noble: Yes, Mr. Chairman.

The Chairman: Mr. McQuaid,

Mr. McQuaid: Mr. Chairman, I only have one question. I noticed that the brief, while it is very comprehensive and one which we all appreciate, does not mention the lobster fishing branch of the industry at all. In the Atlantic area, of course, this is a very important branch of fisheries, one that is very productive so far as money is concerned, and just a few days ago in his opening statement the Minister, in commenting on the lobster fishing industry, said:

• 1050

. . . it is a case of too much effort and capital expended on harvesting a crop that is too small to make it a profitable venture for the more than twenty-thousand people engaged in it.

That is a rather frightening statement to me because apparently it indicates that either some people have got to move out of the lobster fishing industry or something has got to be done to conserve the industry. I am wondering if the Fisheries Council has made any detailed study of this problem, and is it prepared to make any recommendations which may tend to sustain this branch of fisheries?

Mr. O'Brien: Perhaps I should explain, sir, something of the way in which the Council operates. As you are aware, we are really a federation of 17 associations across Canada. When a problem arises, for instance, in the lobster industry we are guided pretty well by the submissions we get from the associations in that area—in other words, they put forward their problems, their suggestions and ask for Council's support. We have not actually had anything in recent years along this line from our lobster industry to consider. To make myself clear, the way we operate is from bottom to top and not from the top down.

Mr. McQuaid: And you say that there have been no representations made at all to the Fisheries Council of Canada with respect to the preservation of the lobster industry?

Mr. O'Brien: I thought you were speaking specifically, sir, again on sort of licence limitation.

Mr. McQuaid: No, not necessarily. This is one of the means suggested by the government, and of course it is already in effect, of conserving the industry. My question is whether the Fisheries Council studied this problem and, if so, has it any other recommendations to make? I am thinking particularly of a recommendation I heard made by some of the fishermen—I do not

know whether it is feasible or not—to the effect that the industry has now reached the point where female lobster should not be taken from the water at all—buried lobsters of course cannot be taken. As I said, some people have gone to the point of suggesting now that female lobster must not be taken from the water—at least for a period of time. Has your Council made any study of this or would you be prepared to make any recommendations on it?

Mr. O'Brien: There again, sir, we are not prepared at the moment to make any recommendations because we have not had anything brought to our attention by our own people in the area.

Mr. McQuaid: That is all, Mr. Chairman.

The Chairman: Mr. Moores?

Mr. Moores (Bonavista-Trinity-Conception): I have just one double-barrelled but brief question for Mr. Monroe.

In view of the very critical situation the East Coast fishery is in presently, could you tell us briefly if there are any prospects for improvement in 1969 prices to fishermen vis-à-vis the American market situation. Also, what was the effect on the industry of the cancellation of the deficiency program which was made retroactive to the end of September two days after it was announced at the end of October.

Mr. Monroe: Mr. Chairman, due to the re-allocation in European fish we expect that the heavy pressures of over-supply will continue on the U.S. market and while the situation seems to have bottomed out the prices it is not expected to improve substantially. Under existing circumstances the processors in the Atlantic Provinces are not able to pay the kind of prices to fishermen that they must have.

In answer to the second part of your question, the industry was given the assurance that when the deficiency payment scheme was cut off we would be covered to the cut-off date, and of course it was terminated some three weeks retroactively.

Mr. Moores (Bonavista-Trinity-Conception): Mr. Chairman, I have just one further question on that. You say it was the understanding. Was it an understanding in writing that when the cut-off date came that deficiency payments would end at that time, and was it done retroactively without that happening?

• 1055

Mr. Monroe: Mr. Chairman, we were given assurance by Mr. Robichaud in Newfoundland when the scheme was finalized. We were not sure at the time, and nobody else was, how long the amount of money available would last but we were told that we would be covered definitely to the cut-off date, and I believe this statement is in writing.

Mr. Hogarth: Mr. Nelson, I would like to refer to such paragraphs (a) and (b) on page 4 of your brief. First of all, dealing with the problem of the intervention of international fishermen in our coastal waters, has the industry any opinion on whether or not the methods being used in Queen Charlotte Sound and other waters affected are contrary to our conservation regime?

Mr. Nelson: Mr. Harrison, would you like to reply to that?

Mr. Harrison: That is a difficult question to answer specifically because it is a matter of opinion. Our opinion would be that their methods of fishing are less selective than ours would be and, as you know, their type of equipment is much larger.

Mr. Hogarth: Is there anything in our conservation regime to prevent fishermen from fishing in the same way in the same area?

Mr. Harrison: Nothing in terms of regulation because it is outside what is now Canadian waters, but the economics over there are such that we do not have the size of equipment that they have. So it is really an economic question that you are asking.

Mr. Hogarth: In any event, it is not the suggestion of the industry that foreign fishermen be prohibited from fishing within the 12 mile headland to headland limit.

Mr. Harrison: Yes, it is.

Mr. Hogarth: Subsection (a) reads:

... that coastal states own and control the fishery resources on and above the continental shelf and that the nationals of other countries would be subjected to the conservation regime...

Now I read in there that they would be entitled to fish there but would be subjected to the national regulations of the coastal state. Is that to be interpreted that they are not allowed to fish there at all?

Mr. Harrison: Well there are two questions here. One is that we were talking about drawing the baseline and in the case of the West Coast and Queen Charlotte Sound this would make Queen Charlotte Sound Canadian waters, and in that case we would control the regulation and conservation of the fisheries in that area.

Mr. Hogarth: But would you control the nationals that fish there?

Mr. Harrison: Yes.

Mr. Hogarth: I have just one further question. Have you any problem concerning the International Convention on the fishing of salmon? Has the industry any problems with respect to infractions of that

treaty? In short, are the Japanese fishing easterly of the 175th west longitude meridian?

Mr. Harrison: No, not to our knowledge.

Mr. Hogarth: Thank you.

The Chairman: I regret to say that we will have to bring this meeting to a close. I want to thank Mr. O'Brien, Mr. Nelson and other members of the Council for being here today. Is it agreed to enter Mr. Nelson's brief as an exhibit.

Some hon. Members: Agreed.

The Chairman: Is it agreed that we adjourn?

Some hon. Members: Agreed.

OFFICIAL REPORT OF MINUTES
OF
PROCEEDINGS AND EVIDENCE

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE
ON
FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 4

TUESDAY, NOVEMBER, 5, 1968

Respecting

Revised Main Estimates (1968-69) of Fisheries and Forestry

APPEARING:

The Honourable Jack Davis, Minister of Fisheries.

WITNESS:

Dr. A. W. H. Needler, Deputy Minister of Fisheries.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante
and Messrs.

Anderson,
Breau,
Comeau,
Crouse,
Cyr,
Dionne,
Goode,

Hogarth,
Lundrigan,
Mather,
McQuaid,
Moores (*Bonavista-
Trinity-Conception*),
Noble,

Rose,
St. Pierre,
Smith (*Northumberland-
Miramichi*),
Smith (*Saint-Jean*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

MINUTES OF PROCEEDINGS

TUESDAY, November 5, 1968.

(4)

The Standing Committee on Fisheries and Forestry met this day at 9:35 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Anderson, Breau, Crossman, Crouse, Cyr, Durante, Good, Hogarth, Lundrigan, Mather, McQuaid, Moores (*Bonavista-Trinity-Conception*), Rose, Smith (*Saint-Jean*), St-Pierre, Whelan — (16).

Also present: The Honourable Jack Davis, Minister of Fisheries; and Messrs. Howard (*Skeena*) and McGrath.

In attendance: From the Department of Fisheries; Dr. A. W. H. Needler, Deputy Minister; and Departmental officials.

The Chairman announced that the next meeting of the Committee would be at 9:30 a.m. on Friday, November 8, 1968.

The Chairman called:

Item 1—Revised Main Estimates, Departmental Administration.

The Committee resumed questioning of the Minister of Fisheries and the Deputy Minister.

The Chairman announced a meeting of the Subcommittee on Agenda and Procedure at 6:00 p.m. today in his office.

At 11:00 o'clock the meeting adjourned until 9:30 a.m. on Friday, November 8, 1968.

J. H. Bennett,

Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, November 5, 1968.

● 0935

The Chairman: I see a quorum.

I wish to announce that our next meeting will be on this coming Friday at 9.30 a.m. The co-ordinating committee now provides a room for us on Tuesdays and Fridays, which is subject to change. We hope in the future that we may be able to find a meeting place on Thursdays instead of Fridays, but for the time being it will have to be on Fridays.

I will call Item 1 on the Revised Estimates and I will ask the Minister and the Deputy Minister to sit at the table.

When we adjourned our last meeting Mr. Rose was questioning, and he may now resume.

Mr. Rose: Thank you very much, Mr. Chairman. I have a number of questions. I have forgotten what we decided about the length of the questions period for each member.

The Chairman: Ten minutes.

Mr. Rose: Very well. Perhaps if I keep my questions short the answers will similarly be kept short.

When I last spoke I was on the topic of the problem vis-à-vis the licensing of boats versus the licensing of fishermen, and the Minister was saying that the licensing of fishermen would create a select club and that this would tend to downgrade the value of boats. I said earlier that I felt the boat values would be kited.

The problem here is one of emphasis and it appears to me that this is the crux of the real issue as far as the fishermen are concerned. The downgrading of the boat values tends to—if this in fact does happen—be at variance with what some of the fishermen seem to believe, and they feel, because of the way the proposals are now outlined, that this year there is going to be more investment in gear and boats than ever before, especially to

make certain that Class A boats remain Class A. I wonder if you would comment on that.

Hon. Jack Davis (Minister of Fisheries): First as to desirability, with the exception of the Prince Rupert Co-operative all of the organizations on the West Coast wanted licence limitation in some form. The union wanted license limitation in the sense of limiting the number of fishermen and the other people, the vessel owners, the fisheries association, and so on, preferred—but with varying degrees of emphasis—the limitation of licences on vessels. I think I said that a system which creates a closed club—the criteria being vessels—that puts the emphasis on vessels, tends to enhance the value of the vessels. A system which creates a closed club but puts the emphasis on people, namely, the fishermen themselves, does not have the effect of raising the price or putting the emphasis on vessels and the value of vessels. A system which limits the number of fishermen naturally does not provide a fisherman who is retiring with a value at the end of his life as an effective fisherman. However, a system which puts the emphasis on boats gives him a residual value in the boat and even if he is retiring from the industry he has something of value which other people want.

Mr. Rose: I think essentially what you are saying is that it is the question of how rather than what. Why cannot the union's suggestion of a five-year moratorium on the issuing of licences accomplish the same thing and then perhaps some arrangement could be considered for the granting of fishing licenses through an impartial board made up of various people.

● 0940

Mr. Davis: The system we have instituted on the West Coast—and we are dealing with the West Coast exclusively in this discussion—is a moratorium on the number of boats. In other words, no additional boats, in the sense of additional numbers, will be permitted in the fleet but it is possible to build a new vessel and get it into the fleet if you

retire an old one. So, the system we have is one of moratorium. Now, the device for reducing the number of boats has yet to be firmly established. For example, I think the best and most effective device would be for the government to buy boats through some fund out of this limited number of vessels.

Mr. Rose: Somebody is going to buy them.

Mr. Davis: It is a long-term program.

Mr. Rose: Somebody is going to buy those old boats, probably those people with money able to buy. What they are buying really is a licence, not a boat.

Mr. Davis: There is no such thing as a licence distinct from a boat.

Mr. Rose: Except that an old Class A boat that is going to be scrapped or retired becomes a licence, in effect. Is that not so?

Mr. Davis: Well, in a sense, I think you can interpret it that way but basically what we have is a register of boat names and opposite the name of the boat, the owner, and opposite that again the catch, and so on. What you are buying is, in effect, a position on this register and the boat and licence and entry on the register are all one and the same thing.

Mr. Rose: Do any of the members of your staff have at hand the number of boats owned by fishermen—actually owned by people active in fishing—as opposed to those boats that are fishing and are rented or leased, and owned by the fishing companies?

Mr. Davis: Yes, we have that data. Whether we can produce it immediately I am not too certain, but we can produce it within an hour.

Mr. Rose: All right. I will go on to another question. What is the concern of the...

Mr. Davis: Excuse me. We have a tabulation here which I can perhaps itemize. You are concerned about the boats owned by individuals, distinct from companies?

Mr. Rose: Yes, fishing companies particularly.

Mr. Davis: The total is 8,524 on the regional register out in Vancouver. The number owned by individuals as distinct from companies or mortgages with companies is 6,966. Those owned outright by fishing companies number 869 and those vessels on which the fishing companies hold mortgages, but which will

end up in the hands of individuals number 689.

In other words to repeat, individuals own 6,966, the companies own 869, and 689 are in the process of being bought by fishermen but the financing is by companies, making a total of 8,524.

Mr. Rose: Thank you. Do you have any information about the value of these various boats? I was wondering whether perhaps the little river boats bearing a licence for chasing salmon up and down the Fraser perhaps might be owned independently by the local fishermen whereas the large ones, the deep sea boats, would probably be owned by companies.

Mr. Davis: I am sure we can obtain general information of this character. I think what you are saying, in general, would be true.

Mr. Rose: Yes.

Mr. Davis: The smallest boats would probably be owned by individuals and, while individuals own many of the bigger boats too, I think a good many of the large boats are owned by corporations.

Mr. Rose: The concern of many people, and these people include other than fishermen, is for a tendency towards vertical integration, is it not, such as we have seen in the logging industry? This is of particular concern and I think the Minister recognized this concern at one time in either a speech or a letter or in some published material, where he said that he felt that the productivity of a particular vessel probably would have been improved by independent or self-ownership. I do not know whether I could completely go along with this because it sort of flies in the face of the factory and the corporate farm, and all the rest of it, but this is a particular concern anyway.

• 0945

I have probably had just about all except a minute or two of my time and I am conscious of this, Mr. Chairman. I wanted to ask a question about the Indian loans and grants that have been announced recently. It seems to me that the Department is doing two things at once in the opposite direction. On the one hand it is attempting to cut down the number of boats chasing salmon, as the Minister said, and yet this \$4.5 million to Indians for training, for grants and loans in

vessel construction is increasing the number of boats.

Mr. Davis: Yes. Well, the native people, the Indians, are a privileged group. They have to conform to licence limitation, but the manner in which they can enter vessels is unique in a limited sense. The Department of Indian Affairs, in effect, will finance certain Indians, certain native people, assuming they have shown an ability to fish or an intent which is acceptable to this special board. They can be financed and can, in effect, spring a new licence.

In the majority of cases I think they would be financed to purchase one of the A vessels, for example, which would not really break the system we are discussing, but to the extent that a brand new vessel was built using this money, and a distinct and new licence was created to make that vessel operative on the West Coast seeking for salmon commercially, the system would have been expanded in numbers.

Now, we are not talking about hundreds of licences. We are perhaps talking about—well a few dozen licences per annum. To that extent the native people are unique; they have a unique advantage; they have a unique manner of entry into this limited fishery.

Mr. Rose: I believe my time is up. Thank you, very much.

The Chairman: Mr. Mather?

Mr. Mather: Mr. Chairman, following up very briefly the questions of my colleague, I want to say that this matter of licence limitation in the West Coast area is of very far-reaching concern to a great many people in the fishing industry. I think it is true to say that the Minister has been regarded favourably on the West Coast for taking quick action on a very long-standing and deep-rooted problem, that is, the number of boats or fisherman catching the number of fish which he has explained.

However, in saying that I should add, and I think he would agree, that there is no real unanimity in the Minister's proposal concerning fishing licence limitation. My concern is that before the regulations are implemented there should be consultation between this Committee and those groups in the industry that are concerned, particularly on the West Coast, so that they can put their views forward.

I think we should gain the advice and counsel of the groups in the industry who have had experience over many years with this issue and I think I am right in saying that the Minister has already expressed approval of the general idea that representations should be made if desired to this committee by different groups in the B.C. fishing industry on this particular point. Is that right, Mr. Minister?

Mr. Davis: Yes. As you know, Mr. Mather, the interested groups have been consulted and indeed have submitted briefs voluntarily on this subject on, I would say, numerous occasions over the last 10 years. Their positions in the main have not changed but now that we have announced a specific scheme I think it would be useful to get their reactions to that scheme.

Mr. Mather: I am glad to hear that reiterated. This Committee, as we may recall, has already passed a motion to the effect that when and if necessary the Committee should go to the areas where fishing issues are concerned. I do not know whether this is an occasion when we should consider moving to the West Coast to hear the submissions of the groups in the industry there concerning fishing licence limitations. On the other hand, I think it is within the power of the Committee, Mr. Chairman, to invite representatives from the groups to come here before this Committee.

• 0950

In any event, the only thing I wish to try to leave with the Committee this morning and with the Minister is that, in my view, it would be not only fair but to our advantage and to the advantage of the industry if we could hear from the different groups in the fishing industry in British Columbia, particularly concerning their ideas on licence limitation. This is the only submission I want to make, Mr. Chairman.

Mr. Durante: Mr. Chairman, may I ask Mr. Mather a question on this? He has made reference to groups, meeting with delegations or groups or going out to the Coast to meet with groups. What groups is he referring to?

Mr. Mather: I had in mind mainly the United Fishermen and Allied Workers Union of British Columbia which represents, in the main, the fishermen there but I do believe that some other segments of the industry would also welcome an opportunity to be heard by the Committee.

The Chairman: Could you give some indication, Mr. Mather, how many groups this would entail?

Mr. Mather: Well, there is the union, there is the Trollers Association and there is the Fishermen's Co-operative Association which might be interested. I cannot speak for all these groups. I do know that there is live interest and by no means unanimous agreement on all points of what is proposed. I think the union has already submitted a request that it be heard by this Committee.

Mr. Davis: I think there would be four or five groups: The Fishing Vessel Owners' Association, The Fisheries Association, The Fishermen's Co-operative, the Trollers Association, the unions, and the Native Brotherhood.

Mr. Mather: So it would be a matter of concern to the Committee to hear from them.

Mr. Davis: The Chairman is asking me whether it would be possible for these groups to combine. I am sure they would express different points of view, and I doubt whether you could hear them in one morning's sitting. I would imagine they would take two full mornings.

Mr. Mather: I do not think it would be possible for them to present a joint submission.

The Chairman: Is that all, Mr. Mather?

Mr. Mather: That is all, Mr. Chairman.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: Thank you, Mr. Chairman. I was very interested in the Minister's statement last Tuesday, I believe it was, especially the review he gave of last year's activities.

I was most interested in the statements the Minister made on the resettlement program on the East Coast of Canada. I believe the Minister indicated that there had been 7,000 people moved in the last three years—I believe it was instituted in 1965—and the plan was for the mobilization, if I can use that phrase, of something like 50,000 to 60,000 people under the Federal-Provincial Household Resettlement Program. I imagine the Minister and his Department is quite aware of the tremendous controversy surrounding the Resettlement Program in the Province of Newfoundland which, I imagine, stems in part from the way the Resettlement Program has been carried out. As a matter of fact, there

have been a number of books written on it, and I believe there is a young Scandinavian writer presently doing some research and compiling information for another book which will be coming out later on this year.

I am wondering if the Department conducted any studies into the feasibility of moving these people before they were moved and the possibility of employment after?

Mr. Davis: Dr. Needler, would you comment on that because while I have had the program explained to me and I have seen first hand several of these communities I cannot pretend to be fully familiar with all the details.

• 0955

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Mr. Chairman, there were of course a number of investigations before this program was put into effect. I think that one point should be made. People are always saying these people were moved. The program was essentially a voluntary one. It replaces the program or enlarges a program which had been in effect for many years previously and which was carried out by the province itself.

There have been some studies conducted on the results of the moves—in other words the subsequent history of people who did move—through the co-operation of Memorial University. There were of course many economic studies preceding the initiation of this policy—many economic studies on the incomes of fishermen, the distribution of fishermen, and the income opportunities.

Mr. Lundrigan: Would you say that the Department is happy with what has happened in respect of resettlement?

Dr. Needler: In general, yes. There have been some complaints and there have been a great many rumours about what has happened, but in general, I do not think there is any doubt that the people who have moved have moved from extremely isolated places where educational facilities and other facilities were not available in all cases to places where schooling was available and where they were connected as it were with the roads and a communication system. I think that the greatest advantage is the one that accrues to the next generation. Left in some of these isolated places there would be a new generation come up without education and without a number of these or other facilities adequate public health facilities and so forth. Those

families which have moved are bringing up children who will have the opportunity of education. I think that another advantage is a certain degree of centralization which makes the fishery more economic.

Mr. Davis: Mr. Chairman, if I could add a few words, which give some additional information, essentially this program is to assist in the shift from a declining inshore fishery to an expanding offshore fishery in Newfoundland, make up for the lack of educational facilities, medical services, communications and commercial centres and to reduce the heavy federal and provincial expenditures in maintaining hundreds of small uneconomic fishing communities. During the first two years of the programme 8,000 people were moved and almost 100 communities evacuated. The total cost of the program up to March 31, 1968 has been \$3,205,045 of which the federal share has been two-thirds or \$2,136,000 and the provincial share one-third or \$1,068,000. The number of families moved, 1,494; the number of people moved, 7,695; the average cost per household, \$2,145, and the average cost per person \$417. The Centralization Programme is accelerating. Over the next two years it is thought that a further 10,000 people will be assisted to resettle and an additional 100 communities evacuated at a projected federal-provincial cost of \$6 million. From the period 1970 to 1980, it is possible that a further 400 to 500 communities may be evacuated with a total of between 50,000 and 60,000 people being resettled.

In answer to your specific question about surveys, at the present time a detailed inventory of every outlying community in Newfoundland is being taken to establish its population, degree of isolation, and so on.

• 1000

Mr. Lundrigan: What I would be most interested in would be some kind of study or studies by the Department to ascertain the economic and social advantages which have accrued to people who have moved. Now there has been quite a bit of controversy, as I have indicated, one of the points of controversy being the fact that these people were moved from isolated areas where Dr. Needler indicated they did not enjoy any of the amenities of life. They were isolated in every sense of the word and nobody has to justify the advantages of moving people from that kind of environment to an environment where they can earn a livelihood, and enjoy some of the

amenities of our modern society, but the fact is, from the knowledge which has reached me in many cases, perhaps much of it rumour, but nevertheless it is almost a consensus that these people have been moved from isolated communities and sometimes, as Dr. Needler indicated, voluntarily but nevertheless in many cases it was impossible to provide services or in some cases it has been claimed that services which would normally have been provided were not provided, therefore making the move a little more necessary. They have moved to these communities and the result is that they are now on social assistance. The substandard living conditions that they formerly had to endure are now even worse because there is no chance of them making even half a livelihood. This has been the biggest complaint.

For example, I know of a number of communities in one part of the east coast of Newfoundland where it is granted the people were living under conditions that I suppose some people might call futile. Nevertheless they moved into more modern towns and they are now not able to do anything because their profession was fishing and they have now moved inland where that is impossible. Granted they now have a somewhat better school, electricity and a few things of that nature. This is why I say there is controversy and I wonder if the Department has carried out any studies in an attempt to first of all see what has happened to these people. I would be happier if the Department could plan ahead and see what is going to happen to the people. Before you comment I would also ask what control the federal government has over these kinds of programs? There is a particular person on the East Coast of Canada and if he could get an extra \$1 million from the federal government for any of these programs it would not matter a damn what kind of an effect it would have on the people. So, I am wondering if the federal government does have control and if it can determine some of the socioeconomic effects of these kinds of moves.

Mr. Davis: I think we must first concern ourselves not merely with the statistics of the movement of people but what is happening to people and what their opportunities will be in the future. I think Dr. Needler has already mentioned this survey being carried out by Memorial University. I might mention that it will cover a 50 per cent sample. In other words, in effect half of the people who have been moved are being interviewed and their

cases studied. A 50 per cent sample of all the people moved in the first year of the program is being conducted by Memorial University of Newfoundland to ascertain the economic and cultural advantages or disadvantages accruing to these people who were moved during this period. So, one specific study is under way but we will have to do more, and certainly we will have to look at more than half of the people moved in the first year of the program. We will have to look at, say, half of all the people moved and ascertain whether in fact their condition has been improved and certainly whether they are still productive. From your account of this development my main misgiving is that perhaps some of them have been moved from a situation where they were at least productive, if not very productive, to a situation where they are non-producers.

Mr. Lundrigan: Yes.

Mr. Davis: This is too bad from an over-all economy point of view and I think it is too bad from the point of view of their self-respect, purpose, and so on.

Mr. Lundrigan: Yes. When you talk about moving 50,000 or 60,000 people I think it is imperative that we know this. When you deal with people you have to have some knowledge of what effect these kinds of programs are going to have on them before they do move. You face the urbanization and de-urbanization of people in England, for example, where great ten-year plans have sometimes been drawn up before people moved at all. It is no good to move people out of the frying pan into the fire. This has been one of the big problems.

For example, on Fogo Island there are 5,000 people—it is a fishing community, it is an island right out in the Atlantic—and the services have been cut off from these people for the last ten years. They do not know they are in Confederation yet. The problem is that the people are not getting the services because they are being encouraged to move. If they move I cannot see what great benefits will be brought to them unless they are moved into an area where they can be productive. There is the big problem.

• 1005

I would like to ask who is financing the study at Memorial University? It is my understanding that the federal government is putting some money into it. The provincial

government was unwilling to finance it in any way because they were a little afraid of what facts might turn up.

Mr. Davis: Dr. Needler, is that the Fisheries Department?

Dr. Needler: I think, Mr. Chairman, the Fisheries Department is financing it. I would not make any comment on the reasons.

Mr. Davis: I would like to make another comment following along the general line of your discussion, Mr. Lundrigan.

The total number of job opportunities in the fishing industry, particularly Newfoundland, is declining. We do not know at what rate, but it is declining. It is not expanding. Now, simply to move people does not answer this fundamental problem of what to do with the people whose vocation can no longer be productive fishing and therefore the fisheries end of things does not have the complete answer. It has to be developing in other industries as a result of opportunities in the forest industry, in manufacturing, and so on. This is one of the reasons the Department of Fisheries and Forestry cannot be expected to have the whole answer and why the new Department of Regional Development is so important. Presumably it looks at the whole economy and tries to bring in new types of activity which can provide jobs for people who are surplus, for example, to the fisheries.

Mr. Lundrigan: I have one further very short question. Dr. Needler said something to the effect that the Fisheries Department was financing it but he could not give the reasons. The provincial government apparently has taken a hands-off attitude on it. They seem to be a little afraid of what is going to turn up in the study and they have been discouraging it. Could you elaborate on your statement, Dr. Needler?

Dr. Needler: The reason I said I did not want to comment is that I am not aware of any such attitude on the part of the provincial government, Mr. Chairman.

The Chairman: Mr. Cyr?

[Interpretation]

Mr. Cyr: Mr. Chairman, I am particularly interested in crab fishing. I think that research on crab fishing was started, near Cape Breton, around 1966, and research went on in 1967 and 1968 in the Gulf of St. Lawrence and Baie des Chaleurs.

Right now, there is no rule with respect to the size of traps, nets, covering the traps, or crabs. Well, together with some crab fishermen from the Gaspé area, I went to visit your ship, the Straight Shore, of which, Mr. Imbault, I believe, is the technical officer. I saw traps which belonged to the Department of Fisheries. Fishermen are wondering if these traps will soon, be recommended for Atlantic crab fishing.

As I said last week, Mr. Chairman, there is some amateur crab fishing, in the Atlantic. I would go so far as to say fishing by poachers, because crabs which are four inches or even shorter are delivered to the processing plant. Moreover, the catch regularly remains more than 60 hours on board ship before being delivered to the processing plant. I do not think that your Department can find this desirable, because it harms the value of the fish.

When do you think that there will be some rules for commercial crab fishermen in the Atlantic, as a result of inquiries made since 1966 by your Department regarding data on the sea bed, on the traps that are supposed to be used, and also regarding any other service which might be of use to fishermen?

• 1010

My second question: Will you pursue your research in 1969 and the following years?

[English]

Mr. Davis: Yes. I am certain, Mr. Chairman, that the Department is concerned both with the quality of the product and with conservation. Perhaps I can ask Dr. Needler, or through him one or two of our officials, to comment on the extent of this interest and the extent to which conservation is being practised, and so on.

Dr. Needler: Mr. Chairman, I would first like to say that the remarks that I have to make pertain only to the queen crab and the crab which is now coming into use on the Atlantic Coast. This is in general a deepwater crab. The maximum catches are deeper than 40 fathoms, and it is not related to the crab which has been taken, incidentally, by lobster fishermen, or which is commonly taken by inshore people in small boats. We started this, as Mr. Cyr says, in 1966 and in co-operation with the provinces. These were, in general, cost-sharing projects for exploration and we are continuing an exploration for the stocks right on into 1969, not only in the southern

Gulf of St. Lawrence but also in Newfoundland.

It is one of the dangerous things in my experience in developing fisheries to start regulating the kind of gear to be used too soon. You may very well then have regulations which require a kind of gear which is not as efficient as it might be, and a certain amount of experience is needed first. We have enlisted the experience of the most expert people engaged in the king crab fishery in the Pacific to advise us, and the gear that has been used experimentally is similar to the gear used for that related species. We are not yet able to estimate the size of the population and the need for conservation because this depends on an existing fishery. However, this is one of our high priority programs for the Fisheries Research Board to study these crab stocks and to recommend conservation measures, and our inspection service is already looking very closely at the rules for handling these crabs to ensure good quality in the frozen or canned crab meat. In general, they require about the same care as lobsters.

[Interpretation]

Mr. Cyr: Mr. Chairman, I would like to make a suggestion to the Department to the effect that it is urgent to set up rules, not only to protect crabs, but also for other fishermen.

When a crab trap is lowered to a depth of 150 fathoms and it is full of crabs, it may weigh about 1000 lbs. And, when trawlers fishing for cod drag their nets through the area, they pick up these traps and damage their nets. These damages may amount to \$400 or \$500. I saw a cod trawler to which this happened, twice in the same week.

It also seems that crab fishermen don't weight the cables that support the traps. Therefore, the cable is sometimes loose on the surface of the water for about 300 feet. And the small boats, navigating the area, have their propellers cut into these cables and have to be towed to the nearest harbour for repairs.

This causes great harm to mackerel cod and other kinds of fishing, as no rules have ever been set. As the Deputy Minister said earlier, "You cannot set any kind of rules before you know where you are going." But, I think, there should be some provisional code, as for other types of fishing. This is my last question.

[English]

• 1015

Mr. Davis: It sounds like a very good observation of yours. I am certain that our officers will take it into account. I know that we also have a problem in respect of setting limits for the trawlers' operations on the East Coast. I hope we can deal effectively with that in the next few months as well.

Perhaps Dr. Needler might comment as well because I think he has some information for Mr. Cyr.

Dr. Needler: I just wanted to say, Mr. Chairman, that we have under consideration now a set of rules for the marking of anchored gear which we hope will remove some of this problem. There is a general law, at the moment of course, that draggers must stay away from anchored gear. It is usual whenever there is a new fishery to have a lot of trouble, but after two or three years the fishermen, both the fishermen conducting the new fishery and the old fishermen, learn one another's habits and the trouble declines. You always have maximum trouble when you have a new fishery. However, we will certainly watch it very closely.

Mr. Hogarth: Mr. Minister, I am interested in hearing some of your views and certainly learning some of your knowledge with respect to this headland-to-headland problem on the West Coast. I am confining my remarks to the West Coast because the East Coast problem is obviously much more complex. But can you tell me, sir, to what extent the Department is concerned with regard to the taking of fish on the West Coast by foreign vessels? Is there a substantial depreciation in our catch because of it?

Mr. Davis: Subject to comment from the staff here I would say, first, that the Department is concerned about the taking of any quantity of fish by foreign fishermen near our shores. I have been told that the taking of salmon by foreign fishermen, other than American fishermen—by foreign I mean overseas fishermen, Japanese and Russian—is not substantial. But obviously groundfish, for example, are being taken in very large quantities by these large fleets, particularly the Russian fishing fleet, off our shores. We must be concerned, at least to the extent of conservation. By conservation I mean the good management over a long period of the stocks of all types of fish off the West Coast.

You started by making a reference to our own exclusive fishing zones, zones within which we have the exclusive right to fish. As you know, legislation was passed in 1964 establishing a 12-mile limit. In our case, the 12 miles was qualified. We would first draw lines from headland-to-headland and measure the 12 miles outside of those particular baselines. We have not as yet published the maps showing precisely where those limits are on the West Coast. This is something which we must do and, speaking personally, if I may speak personally, we must do it very soon.

The main problem here is not so much whether it is 12 miles. This is established in most countries now as being the desirable limit, and in many countries it is not whether it is a baseline from which to measure the 12 miles, but how long the baselines can be. I think without creating international precedent we can draw baselines of varying length, starting with the Strait of Juan de Fuca all the way up the West Coast to Vancouver Island. We can draw baselines all the way along the Queen Charlotte Islands and up to and across the Canadian waters in Dixon Entrance. There is a gap in between, the gap from the north end of Vancouver Island to the south end of the Queen Charlottes, of approximately 100 miles. I am told that to draw a baseline of that length is to draw a longer baseline and claim a larger body of water than has been claimed internationally by other countries. When I use the word "internationally" I begin to get into an area which is the preserve of the Department of External Affairs. It is a matter of external relations, and our external relations have to be weighed in a decision as to whether or not to draw that particular baseline. But with the exception of that line from the north end of Vancouver Island to the south end of the Queen Charlottes, I do not think there is any international problem at all in drawing the lines, and I hope we can draw them soon and publish the maps.

• 1020

Mr. Crouse: A supplementary question, Mr. Chairman. Does the Minister not agree that these lines are already in the established legislation and that it is just a matter of implementing them?

Mr. Davis: In a general way, that is true.

Mr. Hogarth: Does that mean by a proclamation by the Governor in Council?

Mr. Davis: Yes; the legislation, in effect, says that the government of the day is empowered, when it sees fit, to publish these maps. Until the maps are published it is a little difficult for us to say specifically to the Russians, or to any other foreign national, exactly where our limits are.

Mr. Hogarth: Has there been any official indication to your Department, or, to your knowledge, to the Department of External Affairs, of the reaction of the Russian Government to the drawing of such baselines?

Mr. Davis: I would have to leave that to the Department of External Affairs.

I obviously cannot speak for the Russian Government, but I suggest that almost universally there would be some objection—perhaps more than some objection; considerable objection—from some quarters to drawing baselines to the length of 100 miles.

We are entering into an area of conjecture when we talk about drawing that one long baseline, but so far as I can determine there is nothing to prevent our drawing the other baselines with the exception of the 100-mile link, and, in effect, publishing the maps for all to see.

Mr. Hogarth: It is within that 100-mile link, however, that the substantial amount of Russian fishing is taking place; is that not so?

Mr. Davis: Part of it is taking place there. We talk rather loosely about the Continental Shelf. The baselines plus twelve miles that I have been talking about, if I include for a moment the 100-mile link, would cover most of our Continental Shelf on the West Coast; in other words, it is outside our Continental Shelf. But the Continental Shelf, in the odd spot, has a peak out beyond those lines, and certainly as you come down towards the United States it does definitely drift out westward of the 12-mile limit.

But the Russians have been fishing, generally speaking—is this not correct, Dr. Needler?—on the edge of the Continental Shelf, and certainly they have been fishing down, in effect, off the U.S. and off Juan de Fuca Strait.

Mr. Hogarth: Have the Russians used methods that our fishermen are prohibited from using?

Mr. Davis: I had better refer that to Dr. Needler. I have heard comments to the effect

that they use smaller nets, and so on, but I would like to be certain of that.

Dr. Needler: I do not believe so, Mr. Chairman. The Russian fishery in the whole Gulf of Alaska and right down the Alaskan Coast and the British Columbia Coast has been specializing on catching ocean perch, and I do not think that we have a mesh regulation about an ocean perch fishery.

Mr. Hogarth: Have we any catch on ocean perch at all?

Dr. Needler: Very little; but there is some.

Mr. Hogarth: Therefore, in that sense, they are not substantially interfering with our fishing industry?

Dr. Needler: Actually, the degree of competition is not too great so long as they stick to the ocean perch. What concerns our fishery, however, is that we do have a growing fishery for ocean perch and that they are reducing the potential, which I believe to be quite true. They tend to reduce the abundance, and they reduce the ease with which we can get into that fishery.

• 1025

Mr. Davis: Mr. Chairman, a general comment may be appropriate.

Particularly on this continent the demand for fish does not include, for example, ocean perch in any large amount. It is a demand for salmon and for halibut, and so on. But we believe, and the the industry certainly hopes and believes, that the demand for fish will progressively include these other species as the years go by.

Therefore, looking ahead, our industry is concerned about the harvesting of species of fish which we do not yet harvest in large quantities but which are there in considerable quantity, and which other people are taking and marketing on other continents.

We want to be sure, firstly, that they manage their affairs in such a way as to conserve this fishery, or at least maintain it over a long period; and, secondly, that they do not establish what might be referred to as traditional rights to fish in certain areas that later we would like to regard as possible exclusive zones or zones managed by us.

Mr. Hogarth: Mr. Minister, I have only one more question. This headland-to-headland problem seems to have been plaguing us for at least a decade now. What action has to be

taken to clear it up? We do not seem to be making much progress. What must be done to clear this matter up and establish these baselines?

Mr. Davis: The Government has to decide what maps it is going to publish. As I said, on the West Coast there is no problem in drawing the lines, with the exception of the 100-mile jump between Vancouver Island and Queen Charlotte Sound.

The Government, in law, has the power, if Parliament gives approval, to draw baselines of any length. There is no mention of length in the legislation; in other words, it is an open question. However, it becomes a matter of international relations, matter, in some degree, of territorial water precedents around the world, and so on, and therefore is a matter that rests now with the Department of External Affairs.

But the government of the day can decide whether or not to draw that 100-mile line. The legislation permits it, and no reference back to the House of Commons, for example, is required.

Mr. Mather: Mr. Chairman, may I ask a supplementary?

The Chairman: Mr. Hogarth's time has expired, but we will allow one short supplementary.

Mr. Mather: Because I come from the West Coast I was very interested in what the Minister said about the 12-mile fishing limits in legislation. I want to be very clear that I understand what the situation is. I gather that for some years, Canada has had legislation to the effect that we have a 12-mile fishing limit?

Mr. Davis: Outside of baselines.

Mr. Mather: Outside of baselines; but that we have never spelled out the component parts, headland-to-headland, on—

Mr. Davis: We have never spelled out the baselines.

Mr. Mather: As I understand it, what you are now saying is that it is your intention to spell out these baselines, at least in the areas you have indicated, and that you hope to do that soon?

Mr. Davis: Yes.

Mr. Mather: Possibly this year?

Mr. Davis: This is what I would like to see happen.

Mr. Mather: And when it does happen Canada will be in a position to have people come and negotiate if they wish to make representations on what they think about our baselines?

Mr. Davis: That is reasonable.

The Chairman: Members have been taking rather more than their allotted time and there are quite a few more who have indicated that they wish to question. Any supplementary question will be on the time of the questioner.

Mr. Moores:

Mr. Moores: Mr. Davis, I wish to follow through very quickly on the matter of the 12-mile limit. Although it is important it is perhaps even more important, once it is implemented, that it be patrolled. This would be a yeoman task but it is exceedingly important to its success.

Even as a theory, the most significant comment I have heard for a long while was the one you made on the management of our marine resources on the Continental Shelf, when one considers that, from a Canadian point of view, we probably can have adequate conservation by the limiting of licences to ships, and this sort of thing.

Of course, in the case of the ground fish industry on the East Coast this is not a feasible approach at all, when one considers that for every one ton of deep-sea fishing fleet from Canada there are already 80 tons of European ships fishing in Eastern Canada or the Northwest Atlantic.

• 1030

With this very important, potentially-feasible project of managing our own marine resources over the Continental Shelf—one which would have such tremendous effect on our Canadian industry—do you intend, sir, in the not too distant future, to call a conference on the law of the sea to discuss the practicality of this being achieved in the foreseeable future?

Mr. Davis: Canada being a country with a very lengthy coastline, with a real interest in the fishery and with an extensive Continental Shelf, particularly off the East Coast, we have everything to gain and nothing to lose by the development of international understanding which would lead to the better management, and certainly the conservation, of all fish

resources over continental shelves around the world.

Mr. Davis: That is right. We have everything to gain and nothing to lose by establishing an international understanding, one which, over the years, becomes more and more binding on all participants as fishing nations and which preserves the resources for their long-term use.

Our limit as defined, let us say, by base lines plus 12 miles does not extend out, obviously, over the Grand Banks in any great fashion. The Grand Banks, as I understand it, extend to places out as far as 400 miles from our coast. Personally, I do not think it is realistic to assume that we will be the exclusive fishing nation out over our continental shelf areas, particularly on the East Coast, but certainly we must do everything we can to establish the sort of understanding, the consensus, of good fishing practice among all participating nations that will protect those resources for all time, and the calling of another law of the sea conference would fit in with this general concept and concern about the lasting effective use of those resources.

Mr. Moores (Bonavista-Trinity-Conception): I realize, Mr. Minister, that this would not be a solely Canadian fishing reserve but do you visualize that it would be a Canadian responsibility to license internationally, so to speak, how and who actually used the resources over the Canadian shelf?

Mr. Davis: Possibly; we are reaching out into some conjecture as to how what you might loosely refer to as international waters are policed and managed. There are those who believe that the high seas—however you define the high seas—should become an ambit exclusively for the United Nations and that the United Nations, through some agency, would be the authority responsible for measuring the resource and ensuring that the resource is preserved and not over-harvested.

It may take a long time for the United Nations to have this power in effect. Perhaps the United Nations might never include the continental shelf areas, I do not know. In the meantime, we have had ad hoc arrangements, interim arrangements, where certain nations entered into treaties. Always there was the prospect of new entrants, additional nations coming into that area and fishing who were not bound by the Treaty so that is an imperfect device.

There is also the possibility that by general consensus developed through law of the sea conferences and generally within the ambit of the United Nations, authority would be given to the nation whose continental shelf is adjoining to carry out some of the management functions that the United Nations might have in the high seas themselves.

This is a possibility; it is certainly one that appeals to me as something that might come off sooner than some general understanding with universal acclaim which could be enforced by the United Nations.

Mr. Moores (Bonavista-Trinity-Conception): Thank you very much, sir. Certainly, I would like to go on record as saying, the sooner the better, because I think it is very, very important for our industry in the future.

I have one other question which is more specific in nature regarding the Fisheries Inspection Service. I might say before I ask the question that I think they have done an absolutely first-class job from first-hand knowledge of it. However, the Fisheries Inspection Service—and you can correct me if I am wrong, sir—at the present time pretty well initiates in the factories. The product is inspected to make sure it is of good quality when it goes out.

• 1035

They do a good job on this; I know they cooperate with management, but my complaint is that it does not go back far enough. There have been a great many instances where fish has been landed from the boat or even taken out of the water, but from that point until the time it gets to the factory there is a tremendous gap where terrific spoilage occurs. Is it possible or is it feasible for this service to be moved back one notch farther to the head of the wharf, so to speak, before trans-shipment to factories rather than being in a location where 20 per cent of the spoilage has occurred before it even gets there?

Mr. Davis: I am sure it is possible; I believe it is being done. Perhaps I could defer to Dr. Needler on the specifics but my understanding is that our studies in respect of productivity, for example, go directly to this type of thing, the loss of quantity of fish from the moment it leaves the water until the time it leaves the factory. If there is a 20 per cent loss between the time it leaves the water and the time it enters the plant for freezing or otherwise processing the product, then that is

where we have to look and that is where, in fact, I believe we are looking with considerable effort.

Mr. Moores (Bonavista-Trinity-Conception): It is the inshore fisheries primarily I am talking about in the Newfoundland area.

Mr. Davis: Perhaps Dr. Needler might comment specifically on the onshore fisheries.

Dr. Needler: Mr. Chairman, as Mr. Moores well realizes, this is a very big field but in the last few years we have been moving in this direction, attempting to get enough background to set some standards for the handling of fish in order to maintain quality and indeed, to some minor degree, such standards are in force. However, we have a very long way to go. I can only say that it is our intention to concentrate in moving in that direction as fast as we can.

Mr. Moores (Bonavista-Trinity-Conception): Is my time up yet, Mr. Chairman?

The Chairman: That is right, sir. Mr. Goode?

Mr. Goode: Thank you, Mr. Chairman. I would like to talk a few minutes about the same items that Mr. Rose and Mr. Mather brought up concerning the licensing of individual salmon fishermen rather than the licensing of the boats as we are doing now. It has been mentioned by Mr. Rose particularly that the Union's point of view at the Coast is that we should license the individuals and we should have an impartial board to control this.

Personally, I have never met an impartial board but nevertheless, considering the fact that we can have one, we do not need one for five years because I take it that we are going to have a moratorium on anybody entering the fish business for five years. This means that at the end of five years we would be allowing a certain number of people into the industry. Perhaps 30 or 40 spaces would be available at that time.

I cannot understand how this board would select those people to enter the industry. Would they be allowed to select anyone at large or would they be allowed to take the fishermen's sons only, or their brothers, or would they be allowed to take someone at random from the public? Consequently, we would have a situation where sons of fishermen, sons of Suzukis and Gundersons and Iversons who have been fishing in my riding

for years in Delta and Steveston and Richmond would not be allowed to enter the industry for five years and then, perhaps, would have to wait another five years to get in.

Under the present system of licensing boats, these men can still get into the industry by going out and earning a down payment on a boat with, perhaps, a little help from Dad. The question I would like to ask the Minister is this: has any other country ever brought in controls on the number of fishermen that have been allowed in the industry or the boats and, if so, what methods have they employed?

Mr. Davis: I believe that our scheme of licence limitation on vessels is unique but perhaps there are schemes, Dr. Needler, in which there has been limitation on fishermen as distinct from vessels?

Dr. Needler: I think, Mr. Chairman, there have been a number of cases of limitation of entry into the fishing industry. In Australia they have tried a limitation on the number of fishermen based on the proportion of the income they get from fishing, too, and they have found the administration of this very difficult. Actually, in the inshore fishery in Japan which, as you might guess, is perhaps the most intensive fishing anywhere in the world, they have used our scheme to some degree, limiting the number of vessels with transferable licenses—you know, the license goes with the vessel—and have gone farther, I think, in that the Japanese Government has, in some cases, in some inshore areas, bought up vessels and destroyed them. This is the only case I know of where a scheme similar to ours has been attempted.

• 1040

Mr. Goode: There is one other item that I wanted to deal with and that is the fact that we have Grade A licences and Grade B licences, and unfortunately the major problem, the major complaint, I would think, of the local fishermen is the moonlighter. Some of the moonlighters have worked their way into a Grade A licence because you did not discriminate against who was a real fisherman and who was an amateur. For instance, we have a public school principal making \$16,000 a year out in his pleasure boat catching fish every summer, and he has a Class A boat now.

Is there any thought of changing the \$1,200 limit per year upwards to eliminate more of

these Class A licences that perhaps should not be in that category?

Mr. Davis: When we set up this system, which will be operative from now on, we were faced with the high degree of probability of boats, some of them worth very little and which are now in the B category, being purchasable by anyone who wanted to bring a great big new vessel into the industry. They would buy up one of these small boats owned by a moonlighter, for example, and this would permit them then to scrap that boat and bring in a \$100,000 or \$200,000-vessel.

In order to reduce the number of low-priced ineffective fishing vessels that were available for upgrading, we created a B category. That was the main reason for the creation of the B category. We arbitrarily chose ten thousand pounds of salmon as the criteria because our records by boat show us what the catch has been in weight terms, so the boats were divided as between those which had caught a peak of more than ten thousand pounds and those that had never caught more than ten thousand pounds.

You asked whether we might change this criteria of establishing what a B boat is, a boat, in other words, whose licence dies when the boat dies, and the A category, whose licence can be put on a new boat when the boat dies. We could revise this upward at any time. We do not intend to revise the scheme or indeed review it in depth until 1970. In other words, we will give it a two-year run. But in 1970, obviously we could do what we did this fall. We could arbitrarily draw another line, and while I certainly do not think much of arbitrary acts, I think a case might be made in 1970 for the exclusion, for example, of boats which have an A category licence, but which in fact were simply held in storage and did not report any catch for the next two years. They are not in the bona fide fishery perhaps, and could perhaps be excluded.

The Chairman: We still have Mr. Whelan, Mr. St. Pierre, Mr. McQuaid and Mr. Crouse, and we have 15 minutes before we vacate to another committee.

Mr. Whelan: I just had one question on the salmon licensing for these fishermen. Is there an appeal board if you are turned down?

Mr. Davis: Yes, there is an appeal board.

Mr. Whelan: Who makes up the appeal board?

Mr. Davis: Three members of the staff of the Department at the Regional Office in Vancouver. However, they have several advisers who are drawn from the industry.

Mr. Whelan: Are these the same people who refuse the licence in the first place, who are going to sit on the appeal board?

Mr. Davis: Yes, I would say simply they are. We have declared, arbitrarily looking at a list of 8,500 vessels, which ones are category A and can be renewed by a replacement and which ones are category B and die with the boat. That is an arbitrary decision. The appeal committee takes appeals, and beyond the appeal committee is the opportunity to appeal to the Minister.

• 1045

Mr. Whelan: But do you not think that an appeal committee should be made up of—I am not saying departmental officials are not capable—independents that would handle this and have the power to make a decision, not a recommendation? I know of other appeal boards that we have set up and one is the Farm Credit Corporation. As far as I am concerned, they are not made up actually of departmental people, but they have no power to really make a decision. They can have power to recommend, but very rarely do they override the departmental people.

I can think of another appeal board that I think is excellent and that is the Immigration Appeal Board where these people are independent of the Department and make decisions that are binding. I do not think anyone can overrule their decisions as far as that goes, and they actually do an excellent job. So this is the only thing that I want to comment on regarding licensing.

Mr. Davis: Just one point there. This appeal committee has not itself rendered a decision on anything prior to the appeal being made to it, so it hears the case for the first time. It has no vested interest.

Mr. Whelan: If they are departmental people, you do not think that the departmental people on the appeal board could consult the other departmental people, and that there is not that great union of opinion among them?

If they do that it would be different in that regard from any other department that I have had anything to do with.

Mr. Davis: Well, the government has made an arbitrary decision based on a record of catch. There is a question of whether or not a boat was in existence at the time of the announcement. Evidence of its being under construction is sufficient to allow it to enter. This appeal committee reviews the information to see whether there was evidence of its being under construction and this type of thing, so it is not really being asked to second-guess or review its own previous decision. It is making a first decision, but there is an appeal beyond that committee to the Minister.

Mr. Whelan: Are there going to be any limitations on the sale price of an A craft licence?

Mr. Davis: No. You do not separate the licence from the boat. There is a limitation on the price of the vessel.

Mr. Whelan: That is what I mean. I have seen it—I do not know how these run—in tobacco marketing boards. I have seen it in dairy quotes, and another perfect example is a hotel licence; the hotel may not be worth \$25,000 but sells for \$150,000 because it happens to have a licence. Is this what we are going to expect in the licensing of these fishing craft?

Mr. Davis: I certainly hope not. I know that the value of vessels which are believed to be A category vessels and been inflated by an expectation that this system is not only a good one, but will be really successful in the sense of reducing the size of the fleet somewhat and increasing the earning power of the fisherman and the vessel. Therefore, the price of vessels is being bid upwards at the moment. If this system only slowly comes into effect, current expectations are inflated. The fishing vessel owners, or those who have a vessel to sell, have an inflated idea of the value of this A category licence on the boat.

But I have no doubt that as the system develops, and to the extent it is successful, the cost of entry will rise and this intangible value attached to a Class A licence will be substantial.

Mr. Whelan: I am a strong advocate of licensing. I think this is most important, but I am just concerned about what I have seen in other forms of licensing of other businesses. I have seen what has happened to the price of them and the limitations on who could get in this club afterwards.

The other thing I wanted to ask perhaps Dr. Needler could answer. I have seen some crab fishing traps in Prince Edward Island, and I did not think you could—you would have to stuff—I do not know how in the world—I heard Mr. Cyr say you can get a thousand pounds of crabs in a trap. Are there different kinds of traps that they are experimenting with?

Dr. Needler: Mr. Chairman, I think the traps we have been experimenting with are mainly the traps which are in use in the king crab fishery, or a very slight variation of these—some variation—and they do catch 700 pounds of crabs per trap.

Mr. Whelan: This is a metal frame with the mesh on the outside.

Dr. Needler: Yes. This sort of thing, of course, could not be handled by a small boat. It has to be handled by what we call a vessel.

The Chairman: Next is Mr. St. Pierre, and I will have to interrupt you along the line due to the hour.

• 1050

Mr. St. Pierre: Thank you, Mr. Chairman. There have been statements made that there is \$1.00 of government money going into the fishing industry for every \$3.00 in gross sales which, if so, is a rather alarming figure—I am sure it would not apply to forestry, mining or agriculture. I wonder if the Minister could expand on this a little bit for us. If the figure is correct, what figure would be supportable in this area? Also could any breakdown be made available to the Committee later perhaps to show how different sections of the fishing industry are operating as distinct for species—salmon, halibut and cod, or as distinct by regions—West Coast, East Coast, freshwater?

Mr. Davis: I have not any detailed statistics in front of me. I have seen reports prepared in the Department on the commercial salmon fishery on the West Coast which showed at the time—this is a couple of years ago—that the expenditures within the Department of Fisheries, say, in 1966, when allocated to the West Coast and narrowed down to the salmon fishery, amounted to roughly \$15 million and, as I recall, in that same year the gross sale of salmon was of the order of \$45 million. Now there is in addition to the \$15 million on the one hand, payments in respect of unemployment insurance to fishermen and certain other

benefits which are not administered by the Department of Fisheries. I think I must also add that in addition to the \$45 million there is the value of processing. But in very rough and round terms the ratio of federal government expenditure related to fishermen who are in the commercial salmon fishery on the West Coast has been \$1.00 versus \$3.00 of gross revenue to the industry.

Mr. St. Pierre: Do you think this is tolerable? Does it not seem extremely heavy?

Mr. Davis: I am not sure. I really have not made up my own mind on this. There is a by-product—an increasing by-product in the long run, the sports fishery. It has not been large in dollar value in the past but the gross in the sports fishery, if you include not only the gear the fisherman uses to catch fish but his pleasure craft and so on, is very large. Also, I think if one is looking out through the years at the prospect of increasing the salmon resource, in the Babine proposal for example where we have invested roughly \$9 million in increasing the return of salmon to the sea, we may be able to produce a dividend in the future which is very much larger than the gross value of the catch today. So I would want to assess it both in terms of the sports fishery and the prospect of a much larger catch in the future before I make up my own mind as to whether the order of magnitude of assistance is too large or too small.

Mr. St. Pierre: Would it be possible for us to get later on in the course of this Committee's meetings some estimates for other fisheries and for regions prepared by the Department?

Mr. Davis: Yes, I have asked for this sort of information but it takes a little while to prepare. I would be very glad to look at your question in depth and endeavour to answer it

in some detail. I do not know whether we will be able in all cases to separate the return in respect of specific species of fish but certainly, in areas, we might answer your question of how many dollars are being invested by the federal taxpayer and what is the current gross value of the production to the fishery.

Mr. St. Pierre: Basically, I am wondering if there are fisheries that we should abandon.

• 1055

Mr. Davis: Well, you are talking not only about the fish and the hard figures on finances relating to the fishery, you are talking about people, about periods of time, and perhaps the phasing out of a particular fishery. You are talking about moving people to other sources of employment, for example, and this means that we could only move in stages towards another pattern. But there could not be a dramatic change.

Mr. St. Pierre: I guess my time is up.

The Chairman: I would like to announce a meeting of the sub-committee this evening at six o'clock in my office, Room 246.

The Minister tells me that he will be unable to be here on Friday morning but we could continue with the examination of the estimates at the next meeting.

Mr. Davis: I am sorry about that, Mr. Chairman. I can be available any day next week and I can be available tomorrow or Thursday but I gather you have no meetings scheduled.

The Chairman: No, we have no available space tomorrow.

Is it agreed that we adjourn?

Some hon. Members: Agreed.

The Clerk of the House.

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE

ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 5

FRIDAY, NOVEMBER 8, 1968

Respecting

Revised Main Estimates (1968-69) of Fisheries and Forestry

WITNESSES:

From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister of Fisheries; and Mr. L. S. Bradbury, Director, Industrial Development Service.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and Messrs.

Anderson,
Breau,
Comeau,
Crouse,
Cyr,
Dionne,
Howard (*Skeena*),

Goode,
Hogarth,
Lundrigan,
Mather,
McQuaid,
Moores (*Bonavista-
Trinity-Conception*),

Noble,
St. Pierre,
Smith (*Northumberland-
Miramichi*),
Smith (*Saint-Jean*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

¹ Replaced Mr. Rose on November 6, 1968.

ORDER OF REFERENCE

WEDNESDAY, November 6, 1968.

Ordered,—That the name of Mr. Howard (*Skeena*) be substituted for that of Mr. Rose on the Standing Committee on Fisheries and Forestry.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

MINUTES OF PROCEEDINGS

FRIDAY, November 8, 1968.
(5)

The Standing Committee on Fisheries and Forestry met this day at 9:45 a.m. The Chairman, Mr. Crossman, presiding.

Members present: Messrs. Anderson, Breau, Comeau, Crossman, Crouse, Goode, Howard (*Skeena*), Lundrigan, Mather, Noble, Smith (*Saint-Jean*), St-Pierre, Whelan—(13).

Also present: Messrs. Carter, Deachman and Ritchie.

In attendance: From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister; Mr. L. S. Bradbury, Director, Industrial Development Service; and departmental officials.

The Chairman called the meeting to order and read,—the Third Report of the Subcommittee on Agenda and Procedure.

Your Subcommittee met Tuesday, November 5 with the following members present: Messrs. Crossman, Durante, Whelan and Crouse.

Also present: Mr. Howard (*Skeena*).

Your subcommittee recommends:

1. That Item 1—Revised Main Estimates—Departmental Administration, be allowed to stand.
2. That the Committee consider the other Items in the order of their appearance in the Revised Main Estimates.

It was unanimously agreed,—

That the Third Report of the Subcommittee be adopted.

The Committee discussed the problem of sitting while the House is sitting.

After debate, on motion of Mr. Comeau, it was

Resolved,—That the Committee seek permission to sit while the House is sitting, only for the purpose of hearing “out of town” witnesses (or at the discretion of the Co-ordinating Committee).

Item 1—Revised Main Estimates (1968-69)—Departmental Administration, was allowed to stand.

The Chairman called,—

Item 5—Revised Main Estimates (1968-69), Operation and Maintenance.

The Committee questioned the Deputy Minister of Fisheries and his associates.

Mr. Goode raised a point of order respecting the number of Departmental officials present.

At 11:00 a.m., questioning continuing, the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, November 8, 1968.

The Chairman: I see a quorum. I call the meeting to order. I will read the Third Report of the Subcommittee on Agenda and Procedure: (*See Minutes of Proceedings*).

I ask for a formal motion to approve this report.

Mr. Crouse: I so move.

Motion agreed to.

The Chairman: The matter of sitting while the House is sitting was discussed again by the Subcommittee. I wonder if the Committee could consider this once more. We do not wish to abuse this privilege, but we think that at times it may be necessary to have the privilege.

Mr. Crouse: Mr. Chairman, is it your intention at the moment to discuss this particular item?

The Chairman: If we could dispense with this in not too long a time.

Mr. Crouse: Yes, Mr. Chairman, I have only a brief comment to make with reference to your statement that the Committee sit while the House is sitting. We have discussed this matter and we feel now that it would be advisable to sit while the House is sitting only when an emergency arises. In this regard I am referring to a situation whereby witnesses may well be called to appear before this Committee from distant points as far away as British Columbia or Newfoundland. It would undoubtedly be unfair to them not to hear them, and in order to do this we would have to sit while the House is in session. However, we would point out that we feel the Committee should not abuse this privilege, but should sit only when an emergency arises. On that basis, we are prepared to concur with this suggestion.

• 0950

The Chairman: Well, Mr. Crouse, in the case of the co-ordinating committee thinking that it was absolutely necessary for the allocation of space or time, would you consider this?

Mr. Crouse: Mr. Chairman, this, of course, is something that would come under the emergency heading. I presume that you, as Chairman, would bring this request to the co-ordinating committee and we could then debate it. At the moment, that type of question is almost hypothetical. As I understand it, you are seeking to get permission to sit while the House is in session and we are prepared to grant this, with that one caveat that we refer these emergency sittings to the Steering Committee for agreement.

Mr. Mather: Mr. Chairman, at the previous meeting when this was considered, I expressed the idea that the Committee should not seek the over-riding right to have the Committee sit at all times while the House was in session, but rather to have it be able to sit as occasion demanded. I think that is pretty well what we have come to now. I would certainly support that. I make the suggestion that in the report which will be made to the House that this be stressed, that it be made clear that we are seeking the right to have the Committee sit in an emergency situation, or as the occasion demands, and not leave it to the House to think that we are asking to sit at all times, because I think we might run into difficulty there if that were the impression.

The Chairman: With this stipulation, if the co-ordinating committee decided perhaps along the line that it was necessary without an extreme emergency due to time or space. Would that be acceptable?

Mr. Mather: I would be agreeable to that. The only thought I wish to leave, though, is that in seeking this authority we should make it quite clear that we do so in such a way that we get the authority we want, because I can visualize a situation in the House where it might be objected to otherwise.

The Chairman: The motion is that we sit while the House is sitting only when out-of-town witnesses are present or at the discretion of the co-ordinating committee.

Mr. Crouse: I have no objection to that motion, Mr. Chairman.

The Chairman: We need a motion on that.

Mr. Comeau: I so move.

Motion agreed to.

The Chairman: Gentlemen, I shall now call Item 5.

We will now resume questioning of the departmental officials. I believe when we rose at the last meeting Mr. St. Pierre was questioning.

• 0955

Mr. St. Pierre: I received an answer to my question.

The Chairman: Very well, Mr. Crouse?

Mr. Crouse: While I realize the Minister is not with us this morning, we are pleased to see the Deputy Minister in attendance. With respect to Item 5, I would refer the Deputy Minister to the Minister's statement of Tuesday, October 29, when he stated that Canada is now a party to nine international conservation conventions, three with the United States and six with a number of states, varying from three in the case of the International North Pacific Fisheries Convention to seventeen in the case of the Whaling Convention. Each of these conventions established commissions which, on the basis of studies of scientific investigations, recommend to the participating governments any necessary conservation measures. Could the Deputy Minister today give this Committee some idea of the recommendations on conservation proposals made by these commissions to our fisheries branch, and could he also tell us about some of the conservation recommendations that have not been accepted by the government.

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): I do not believe, Mr. Chairman, there have been any conservation recommendations by these international commissions that have not been accepted by the government. It would take up too much time of the Committee to go through the details of the recommendations of these commissions, but I could make some general remarks. They vary a bit in their effectiveness.

In the case of the Pacific Halibut and Salmon Commissions, which are with the United States, there are very detailed and effective conservation measures which are accepted by both governments without any difficulty. On the other hand, in the case of the International Whaling Commission I think it is generally known that this Commission did not bring con-

servation measures into effect on Antarctic whaling until the stocks were pretty badly decimated, and only after this have they brought in regulations which will lead to some restoration of the stocks, which is sort of shutting the stable door after the horse has been stolen. These recommendations do not affect Canada very much but they do have some weight, such as general closure of the Atlantic to mother ship operations, which has been accepted by all the member governments and which is quite valuable to us.

The International Commission for the Northwest Atlantic Fisheries is a commission in which we have a great deal of interest. It has only been in recent years that the groundfish stocks have reached the stage where conservation measures appear to be necessary. The Commission has brought in a number of minimum mesh regulations, which are regulations that require a certain minimum size in the mesh of otter trawls and which are in effect throughout the convention area, and they have been accepted by our government. At the present time the Commission is considering the question of whether other regulations are needed. The other regulations that are being discussed are quota regulations, limitations on the total catch. Actually there is still a good bit of disagreement within the Commission as to what such regulations should be and how they might be implemented. So, the mesh regulations are the only effective regulations that have been passed.

• 1000

The International North Pacific Fisheries Commission—which is a commission between Japan, the United States and Canada—is the commission under which Japan has agreed to abstain from fishing certain stocks of fish, especially salmon and halibut, in the northeastern Pacific on the basis of what is called the abstention principle. That is, that the country is already exploiting these stocks, we are using them to the full and have them under scientific investigation and regulation. Actually, there have been no changes in the regulations under that Commission for three or four years, except in the case of halibut fisheries in the Bering Sea, which were judged not to qualify for abstention by Japan. There are a number of different regulations on the halibut fishery there.

To my knowledge the Great Lakes Fishery Commission—and this is a commission between Canada and the United States—has not recommended any fishery regulations, but it is under this commission that the Lamprey Control Program is carried out. This has been successful to a large degree in Lake Superior and this operation is being extended in Lake Huron. In this

case it is the Canadian view that the Commission should take a broad view of the general regulation of fisheries including, for example, such matters as the introduction of exotic species which might have a big influence on the Fishery. Under the International North Pacific Fur Seals Commission (Japan, USSR, United States and Canada) the taking of fur seals on the two sets of breeding islands, the Pribilof which are the United States and the Komandorskiye Ostrova—and I cannot remember the other ones—which are USSR, is regulated. As a compensation for not taking seals on the high seas as they go past our coasts Canada and Japan are both given a certain proportion of the seals taken on the fur seal islands. These operations have been quite successful in maintaining the fur seal herds at I believe fairly close to a maximum level.

The International Council for the Exploration of the Sea is really a research body. It is the oldest fisheries research body in the world, having been established at the turn of the century, and the benefits to Canada from that are simply in the interchange of scientific information both on fisheries and on oceanography.

The Interamerican Tropical Tuna Commission is one which we joined only a year ago. We became members in 1967. Now this Commission has had over-all quotas on the take of the Yellow Fin Tuna in the convention area which is in the eastern Pacific. I think it has been a successful conservation Commission. We have been developing a tuna fishery even in that area, and Canada has accepted the recommendations of the Commission. They appear to have the habit of having the annual meeting in a country which accedes to the Commission and the next meeting will be in Ottawa next summer.

There is another commission, the Atlantic Tuna Commission—I do not know the exact status of it at this moment—to which I believe Canada will be adhering. There will be a period of time set aside for a study of Atlantic tuna to lay the basis for conservation, with no likelihood of regulations in the near future.

• 1005

Mr. Lundrigan: Mr. Chairman, if I may ask a supplementary, does the federal Department of Fisheries have any jurisdiction at all in the field of, say, Atlantic tuna as far as conservation or anything else is concerned? I ask that question because right now the sports fishery of the Atlantic region has reached such proportions that I think there is grave danger of the depletion of the tuna fishery. I know that giant blue fins, weighing from 500 to 800 pounds, are being

landed by the hundreds and, in actual fact, they are dumped after being taken aboard and no use is being made of the fish.

The Chairman: Excuse me, Mr. Lundrigan. I have you number four on the list. Mr. Crouse is before you. Would you mind waiting your turn?

Mr. Lundrigan: It was a supplementary question, Mr. Chairman. I might as well leave for 40 minutes. There is no advantage in being here if you cannot ask a supplementary question.

The Chairman: Well, it is up to Mr. Crouse.

Dr. Needler: Mr. Chairman, to answer Mr. Lundrigan's actual question, the government of Canada has control over the operation of its own tuna fishermen but its only control of the catching of tuna other than in Canadian waters or by Canadian fishermen would be through a commission such as this new Atlantic Tuna Commission.

Mr. Crouse: I thank the Deputy Minister for his resume of the various commissions that exist. It is evident that conservation is of prime concern to everyone in the fishing industry.

The Deputy Minister made a most interesting statement this morning wherein he informed this Committee that The International Whaling Commission, for example, which made recommendations to those countries interested in whaling did not find that the countries concerned were sufficiently interested in the maintenance of sufficient stocks to carry out the conservation measures recommended with the result that some of the species are now almost extinct—if I heard the Deputy Minister correctly. Does this same attitude towards conservation exist with regard to groundfish stocks and, if so, what measures are being taken by Canada to police the recommendations that are being made by these various commissions before our groundfish stocks reach such disastrous low levels that there is no return for anyone. Could you amplify that part of your previous statement, please?

Dr. Needler: Well, Mr. Chairman, this is a fairly complicated question. In the first place I am not at all sure that this difficulty with whaling was a failure of the countries to agree to the recommendations of the Whaling Commission; it was in part the failure of the Whaling Commission with representatives from various countries with various interests failing to agree on measures to recommend.

• 1010

The big difficulty in a fishery like that of the north-west Atlantic is that the countries have quite different interests and there are quite different economic regimes in these countries. As far as the groundfish are concerned, there is no question at all of any danger of depletion in the sense that the cod would be fished out and would not bounce back if you stopped fishing them. Actually, the kind of depletion that we suffer is what you might call an economic depletion. If a fishery gets too intensive the fish may become scarce enough so that it does not pay to fish them, even before you reach the maximum yield that that stock can sustain. Our problem in the northwest Atlantic is basically, I think, that some countries with a bigger demand for fish and lower costs would feel that fishing should not be curtailed as soon as we, with relatively higher costs—or the United States, or any of the countries with high costs—and a somewhat different economic regime, would curtail it. They readily accept something like a mesh regulation applicable to everybody, but the difficulty in getting all of the countries—even the members of the Commission, their representatives on the Commission—to agree to a particular quota level is a different matter.

As far as enforcement is concerned, I believe that this Commission is moving towards a recognition for a scheme of joint enforcement. In other words, enforcement by the patrol vessels on one nation applied to the operations of another nation. That has also been, as one might guess, a contentious matter, but progress is being made.

The Chairman: Mr. Noble?

Mr. Noble: Mr. Chairman, being from the Great Lakes area and, of course, primarily interested in the welfare of the fisheries in those waters, I would like to ask the Deputy Minister if any definite and notable progress is being made in lamprey control, or are we just maintaining a certain level of control?

Dr. Needler: This is a technical question and I do not believe there is anybody here who could give you the ultimate answer. My understanding is that we have reduced the lampreys in Lake Superior to a level at which the lake trout, which were the main prey of the lamprey and valuable to us, are increasing again. This is a relatively small percentage of their peak abundance. This is generally regarded as successful although there may be some doubt as to whether the cost is justified by the result in the long run, because it seems that it will be necessary to continue these

operations. We can never get rid of the lampreys entirely, apparently. That means we will have to continue control measures. It is a little too early to know whether the long-term costs of the control will be entirely justified by the result.

Mr. Noble: Then, Mr. Chairman, I would like to ask this question. Are any plans under consideration with a view to giving greater impetus to the lamprey control programs?

Dr. Needler: The lamprey control program is in the course of being expanded to areas other than Lake Superior. However, this is subject to the limitations of funds available, and this is just as much the funds available from the United States side as from the Canadian.

Mr. Noble: Mr. Chairman, there is one other thing that I am interested in. I will put this question. Has any consideration been given to creating or constructing an electric barrier somewhere on the east end of the Seaway to stop the migration of lampreys from the ocean to the Great Lakes? It seems to me, Mr. Chairman, that we are spending a lot of money in trying to control them, but we have not done anything to stop them coming in. I would like to know if the Department has given any consideration to this matter.

• 1015

I might say, Dr. Needler, that on questioning the Seaway authorities in the Public Accounts Committee in the previous session, I was advised by the Chairman of the Board that they would be quite willing to co-operate with the Fisheries Department on such a project.

Dr. Needler: I think, Mr. Chairman, that I am not in a position to answer the question. I do not know whether it has been considered. However, we would be glad to bring this suggestion to the attention of the Commission and to our people working on lamprey control.

It is possible that the numbers of lampreys migrating through the canal are insignificant compared with the populations that have been built up in the upper lakes.

Mr. Goode: Mr. Chairman, could I have a point of order, please?

The Chairman: Point of order, Mr. Goode.

Mr. Goode: Being a businessman before being a Member of Parliament, it bothers me to no end to see

these eight gentlemen sitting here doing nothing when it appears that Dr. Needler is quite capable of answering all our questions. Do you think it is necessary to keep them here?

Mr. Noble: Mr. Chairman, I have not finished my questioning. I have not used my 10 minutes yet.

Are any plans under consideration for introducing lake trout in Georgian Bay and Lake Huron? Do you think conditions are such that they could be introduced at this time?

Dr. Needler: Introducing lake trout?

Mr. Noble: Well, we do not have any there now. I think you know that. They were quite plentiful at one time, but the lamprey, of course, helped to clean them out. Now that this lamprey control program is under way, my fishermen up there are saying to me continually, "When are you going to start to put some lake trout back in the lake?"

Dr. Needler: I think this is true. I am not an authority on this because it is the Ontario Government that has the responsibility of the fish culture operations in the Great Lakes, not the federal government; but I believe that they are planting some lake trout in the Great Lakes. I think there is also some natural reproduction and there are some lake trout there. Yet, some fishermen always say there are none—and quite understandably when there are not enough to pay to fish. I believe that the biological opinion is that the lamprey problem is the important thing, not the source of the small stock.

Mr. Noble: Mr. Chairman, I thought there would be some co-operation between the federal government and the provincial government in this matter, and that they would surely get together when the time was right to introduce lake trout and we would be able to have some information on it. However, I have one last question.

Does the government have any control or jurisdiction over the pot-head whales on the Atlantic Coast?

Dr. Needler: Yes.

Mr. Noble: The reason I am asking that question is because there was a time when mink ranches throughout Canada depended to quite some large extent on the red meat from pot-head whales and now they have become almost extinct, from the information I have. I am wondering if the government is doing anything about it.

Dr. Needler: Mr. Chairman, there has been a study of the pot-head populations for some time, but there is not, as far as I know, any regulation. Pot-head whales are notable for fluctuations in abundance in most parts of the world. I do not know whether there is as yet any basis for a regulation.

• 1020

Mr. Noble: Mr. Chairman, the reason I am asking that question is the fact that pot-heads reproduce one at a time and there is a grave danger, when they are taken in great numbers, that reproduction could really be hampered to quite a dangerous extent.

The Chairman: Mr. Anderson?

Mr. Anderson: First of all, Mr. Chairman, I am new to committees and if I understand this correctly, do we just ask questions on any aspect of fisheries or forestry, or do we try and restrict ourselves to the items listed?

The Chairman: We restrict ourselves to the items.

Mr. Anderson: I have a few questions stored up from last time. Do I have your indulgence to ask those first? They are with respect to the West Coast salmon fishing restrictions.

The Chairman: There will be an occasion to ask them later on.

Mr. Anderson: Fine. Well, if we are back on Item 5, there is a fair bit here for "development and demonstration of vessels, gear and related equipment", \$800,000. I wonder if it could be explained in a little more detail.

Dr. Needler: Mr. Chairman, under the Industrial Development Service, the Department is attempting in some cases to develop, test and demonstrate a better fishing vessel. This activity is very closely linked with exploration for fish stocks which are not caught by existing methods. That is what this item is, Mr. Chairman.

Mr. Anderson: Could you give some indication of what sort of development is taking place? There is a fair difference between 1967-68 and 1968-69—a difference of over \$200,000. Could you give any reason for this decline in the amount of money spent in this field?

Dr. Needler: I think, Mr. Chairman, you would have to ask the Minister of Finance about that one. We

would like, actually, to have more funds to spend in this service in general.

Mr. Anderson: Perhaps my question might be better phrased. Is this money being spent now on developing new equipment and boats for the queen crab that we heard something about earlier on, which is a new industry? Is it being spent on programs on the West Coast for herring, or perhaps some other fishery of which we hope to go further off shore, and thus might need new gear? Is there any change in the general pattern of your expenditures, and what you are trying to develop here?

Dr. Needler: No, there has not been any change in the pattern. Actually this is a very complicated field which involves a great many individual projects. We could provide the Committee with a list of such projects if you wished—our current projects. Among the important ones have been the development of the herring fishery on the Atlantic Coast, the development of the queen crab fishery, the development of the shrimp fishery now which is a viable fishery in the Atlantic. We are exploring for other stocks that we can fish profitably. There are a great number.

Mr. Anderson: Could you indicate where the cut-back of almost \$250,000 will be? In what area are you chopping out a project? Is this a thing of firing naval architects?

Dr. Needler: No, we are not reducing staff. One of the reasons for not reducing staff is that at the present time one of our limiting factors is to have good skilled men who can supervise these projects and see that their results are properly reported. So we are not reducing staff; we would, indeed, like to increase it when the opportunity comes.

You have to consider in all of these items together, that the reduction in that particular item—from \$800,000 down to \$567,000—means that in 1968-69 we were doing less on the development and demonstration of vessels and gear by ourselves. There is another item, “programs and projects shared by provinces”, which you see is for all intents and purposes the same this year as last year. These are projects in which the provinces contribute either 50 per cent if it is a matter of local importance, or 25 per cent if it has general importance.

• 1025

We have increased our professional and special services because this has been one of the most advantageous activities. Under that money we bring experts

from one part of the country to another or from other countries, or even other continents, who have actually introduced better fishing methods in Canada; this has been very successful. With this item, we have even taught the Newfoundlanders how to jig squid better.

Mr. Anderson: Sir, there are two other items at page 164, which I just cannot understand at all. You have “Community Fishing Stages” which is reduced by over a half from \$500,000 to \$240,000; and you managed to cut back your light, heat and power, from \$18,000 to \$3,600. Could you give any indication of why there are these tremendous discrepancies between two years for something which, I would have thought, would be fairly standard from year to year?

Dr. Needler: I am taking your items one at a time. At the moment there is a program to provide community stages—these are buildings in which fishermen can salt fish, mainly. This program is being reduced for two or three reasons. One of them is shortage of funds; another one is the difficulty in proper supervision and the fact that many of the greatest demands have been satisfied. We do have some applications on hand, but the program in this case has been reduced.

The light, heat and power item, I think, so Mr. Bradbury points out to me, is largely a matter of our having leased the Valleyfield plant, which was our plant, to a commercial operator.

Mr. Anderson: So it is the increase in efficiency of private enterprise which has reduced it to one quarter of what it was before. Is that a fair assumption?

Dr. Needler: Well, we do not pay for it when they do.

The Chairman: Mr. Anderson’s time is drawing to a close in half a minute. Mr. Lundrigan will be next. Did you wish to say something, Mr. Schreyer?

Mr. Schreyer: I have a very brief question. Where is this \$240,000 being spent? In Newfoundland?

Dr. Needler: This is entirely in Newfoundland. Oh, I am sorry, there is \$180,000 in Newfoundland and \$60,000 in northern New Brunswick.

Mr. Schreyer: Mr. Chairman, I wonder if the Deputy Minister could tell us where in Newfoundland? I do not wish to impose on Mr. Anderson’s time.

Mr. Anderson: Go ahead.

Mr. L. S. Bradbury (Director, Industrial Development Service, Department of Fisheries and Forestry): It is the completion of a program that was decided on about 2½ years ago and the program involved a number of locations. I can recall only one or two of these places from memory, but I know that one location is Ferryland.

An hon. Member: Aquaforte and Ferryland, in that area?

Mr. Bradbury: That is correct, on the southern shore. There are one or two locations in the Bonavista bays.

Mr. Schreyer: That is fine.

Mr. Bradbury: We can let you have this information shortly if you would care to have it.

Mr. Schreyer: Thank you very much, Mr. Chairman.

Mr. Anderson: In my final 30 seconds I have no question, but I do hope we will have the opportunity of looking at the new salmon regulations on the West Coast. I have a great number of questions which date now from two meetings back, and I would like to have an early opportunity of finding out what actually will take place when these new regulations go into effect.

• 1030

The Chairman: You will have that opportunity. Mr. Anderson's time has expired. Mr. Lundrigan?

Mr. Lundrigan: Thank you, sir. Did Dr. Needler mention that the need for community stages had pretty well come to an end because the provision of same had met the demand?

Dr. Needler: Mr. Chairman, there still is some unsatisfied demand, but the most demanding locations have been taken care of, and there has been a tendency recently to change from the building of stages. I do not think that "stage" is a very descriptive name; these are buildings sitting on fairly substantial wharves in which the fishermen can salt their fish. There has been a tendency under this program to build some things we call fresh fish collection centres. There are two questions, I think, arising in this program and one of them is whether or not that latter activity should not really be taken care of by industry as it is everywhere else except in Newfoundland. There is another major problem in seeing that these community stages are used most efficiently.

Mr. Lundrigan: There is quite a bit of doubt about whether some of them were economical ventures in the first place. Mr. Chairman, I was wondering about the estimates under Item 5, Charter of Aircraft on page 166, \$179,000. Could we be given some indication of what this amount of money means or how it was spent?

Dr. Needler: Mr. Chairman, this is under the Conservation and Protection Service and it is really a patrol service for the enforcement of regulations—this applies to both coasts—concerning where our own people are allowed to fish and also enforcement of our 12-mile limit, for example.

Mr. Lundrigan: In that respect was the amount adequate? Perhaps I should question whether the amount was adequate when we realize, for example, that in particular parts of the coast of Newfoundland there are tremendous indications that the 12-mile limit is not being adhered to and the policing is not adequate because, as you know Mr. Chairman, last year several thousands of pieces of fishing gear were destroyed by fishing craft inside the 12-mile limit. I am wondering now if the amount was adequate and if this was its purpose.

Dr. Needler: I do not know whether that particular thing could be helped by aircraft very well. I would say this item is very nearly adequate, but we feel that the costs of these services are cut pretty well to the bone considering what they are asked to do.

Mr. Lundrigan: Were the contracts awarded by public tender?

Dr. Needler: Oh, I think always, yes.

Mr. Lundrigan: All of them were awarded by public tender?

Dr. Needler: Yes.

Mr. Lundrigan: Right. On page 168 under the Resource Development Service the number of persons employed is 377. Is that what it means, the same numbers in 1967-68 and 1968-69?

Dr. Needler: Under Resource Development Service, the figures I have are 339.

Mr. Lundrigan: The reason I made that observation is because there is quite a bit of talk about improving the quality of fish by inspection, and so on. Could you give any indication of whether there is an increased

number of persons employed in the Inspection Service?

• 1035

Dr. Needler: Oh, I see. I am sorry. This is under Inspection, not under Resource Development.

Mr. Lundrigan: Yes it is; I am sorry.

Dr. Needler: We are trying to upgrade the qualifications of inspectors; we are making a determined effort in that direction. At the moment we do not feel that there is an inadequate number.

Mr. Lundrigan: Will the inspection be extended to the fresh water fish aspect of the industry?

Dr. Needler: Mr. Chairman, we conduct quite a large inspection operation on the fresh water fisheries. Under the inspection act and in accordance with the general federal jurisdiction, we inspect fish that enter into interprovincial or export trade and we inspect fish which enter the country from other countries. This is one responsibility that is not at the moment delegated to the provinces anywhere. It was once delegated to one province and they preferred to turn it back to us as it is not an activity, I guess, that is very popular.

Mr. Lundrigan: On page 169, under the Fishermen's Indemnity Plan which is being curtailed this particular year—this is my understanding—I notice \$900 was spent in Publication of Reports and Other Materials. Now, one of the problems with a number of federal plans is that fishermen never seem to find out what is going on.

I am sure you can talk to most of the fishermen of the Atlantic and perhaps the Pacific region and there are a number of government programs they know nothing about. In other words, my observation is that I do not think the federal Department perhaps has done enough to enlighten people concerning the various programs under its jurisdiction. Is this an indication of the lack of effort on the part of the Department, right here, by having only \$900 spent in what I consider public relations?

Dr. Needler: I think the main public relations are through the field service but I doubt whether this includes press releases and that sort of thing. I am told that this is to pay for the publication of an informative pamphlet. This is an additional amount. In general, there is a lot of difference of opinion regarding

government information services but this does not cover such things as press releases and that kind of thing.

Mr. Lundrigan: Is the Department satisfied with its efforts to enlighten the ordinary fishermen concerning various government programs?

Dr. Needler: I would say there is room for a lot of improvement.

Mr. Lundrigan: On page 171 under the Bait Service I notice the estimates call for an expenditure of almost \$1 million—\$819,600—as compared with \$755,000 for last year which is an increase of \$70,000; yet the purchase of bait is down by \$10,000. In actual fact last year there was \$115,000 expended on the Purchase of Bait with a total cost of administering the program of \$755,000, a ratio of 7 to 1 between the purchase of bait and the administration of the total program.

• 1040

This year we have a ratio of 8 to 1, \$105,000 to \$819,000. The cost of the total program is increased yet the actual money to be expended, as I would think to the fisherman, has gone down. Is the price of federal administrators increased or is the price of that becoming cheaper?

Dr. Needler: I think very little of this goes to what you might call administrators. The big difficulty in the bait service is storage and distribution and this is where these costs are. We have to maintain in the bait service a vessel capable of carrying frozen bait—a large vessel—and they have a smaller one as well. We have storages for bait, we have smaller bait units which are distribution centres, and this is where the costs really arise.

Mr. Lundrigan: It does not amount to much money anyway so the service is perhaps being curtailed a little bit in one sense by looking at the total amount to be expended in one direction. I have one last question, Mr. Chairman, which is a question perhaps that we could spend quite some time on. Under the Fisheries Prices Support Act, the administration of same, I notice a total expenditure of \$64,000. The Price Support Board and the administration of this part of the federal Department of Fisheries perhaps should be one of the most important aspects of the total Department, and certainly this is not all that is being spent under the Fisheries Prices Support, but I notice under that administration, \$64,000. Does it mean that the Fisheries Prices Support is not a very active part of the federal organization?

Dr. Needler: Well, it certainly has been an active part in the last year. There have been years when there has been very little activity. And it is rather difficult—this makes a difficult position regarding staff. So actually the administration has key people associated with Fisheries Prices Support Administration, and they receive assistance from time to time from other parts of administration as required. If we had a staff that was sufficiently large to meet the peak requirements there would be a lot of waste.

Mr. Lundrigan: Is the price support actually being used to the extent that it could be, and for the purposes for which it was originally designed?

Dr. Needler: Well, the first part of your question of course is—the answer is pretty obviously, no. You could use it more, but this does not mean that you could use it to more advantage. I think that it has been used for the purposes for which it was intended. I was not there during the early negotiations of this, but my understanding of the purpose was to cushion sudden changes in prices.

The Chairman: Mr. Lundrigan, your time is up. I know that the members of the Committee have first priority but the last on my list who indicates that he wants to question is Mr. Comeau.

Mr. Comeau: The "Fishermen's Indemnity Plan" on page 169. On October 25, as you know, the Minister announced or the Department announced immediate discontinuance of experimental low-cost federal insurance plan to fishermen which gave them coverage for loss of their fixed fishing gear, such as weirs, fish traps, et cetera. This does not include the fishing boats, right?

Dr. Needler: No.

Mr. Comeau: This is just the fishing gear, fixed fishing gear. The reason given for the abandonment of this plan was insufficient participation by fishermen. Is there a reason for this? Have fishermen given a reason why they are not participating? Is it because of the interest rates, or is it because they do not know about it?

• 1045

Dr. Needler: I am sorry I really could not answer the question as to why there is a lack of participation. Just as in the case of the lobster trap insurance, the participation is at such a low level that I think this is not worthwhile either.

Mr. Comeau: That is quite an interesting statement because I thought that everybody would want to participate. Another question then. Up to now, the insurance limits on the fishing boats is \$25,000, right? The maximum? Is there any chance of this being increased do you think and has this been considered? Some fishermen feel that this is not adequate, that this covers only the price of boats the way it is now. They feel that this is not adequate, that this should be increased a lot more.

Dr. Needler: Well, Mr. Chairman, I would point out that the level was increased. It was increased this year from \$15,000 to \$25,000. The difficulty here is that it is a general principle of government, I believe—at least it is my understanding—that we do not compete with private enterprise any more than we can help, and there has been some opposition even to this increase from private insurance agencies. However, I would advise the Committee that the question of a further increase in the upper limit is under active consideration, and this is because in recent years the insurance rates have increased very rapidly so that they have become almost prohibitive sometimes. So this question is being examined, but it is too early to say what action would be taken.

Mr. Comeau: The rates I presume are lower than the prevailing insurance rates?

Dr. Needler: Very much lower.

Mr. Comeau: Yes.

Dr. Needler: As regards the rates, I might say that an attempt is made to make the insurance plan self-supporting, except that we contribute some administrative costs. Recently the rates were increased at the same time as the level was increased. We had been offering insurance on vessels at a rate of one per cent, as low as one per cent. We recently changed—on the basis of loss ratios—we raised this rate on even the smaller boats in certain areas where the loss ratio is high, and between \$15,000 and \$25,000 the rate is two per cent, but the rates quoted by private agencies are perhaps several times that.

Mr. Comeau: Yes, but this, up to now, has been self-supporting, right?

Dr. Needler: Not entirely. We have tried to do this but it takes some time to develop a background of knowledge of the risks on which to base an accurate adjustment of rates to the risks. We believe that the

insurance on fishing boats as now revised would be self-supporting.

Mr. Comeau: Are there any circulars being distributed to the fishermen, I mean on these things?

Dr. Needler: Yes. This is the \$900 that was discussed a little earlier.

Mr. Comeau: Another thing that interests me is this enforcement of the laws. I am talking especially about the lobster industry. It appears, from what I have been hearing lately, that these regulations are not enforced, or we need to have much stricter control of these regulations. I am talking about controlling for example the small lobsters, so that these are protected. It appears that, for example in my area, the people are catching these small lobsters year round, and in some cases the law is not enforced strictly enough. Scuba divers, et cetera, are after this and I am wondering if this could be stopped.

• 1050

Dr. Needler: Mr. Chairman, we do our best and we have some ups and downs. And one of the difficulties has been the support of the courts. I am glad to say that recently the support of the courts in these cases has been very much better than it used to be. If the courts will not back up action with penalties that mean something, why then, of course, the deterrent is not there.

In your district I would have thought that a great volume of small lobsters would not be taken because the main market is live lobsters to the United States and they will not accept them there. They get dumped there so that the buyers do not have an incentive to buy small lobsters for export but I would think that the enforcement is fairly good on the whole but, as I say, it has its ups and downs.

Mr. Comeau: Do I have time for one more question, Mr. Chairman?

The Chairman: Yes.

Mr. Comeau: I say this because this year the trap limitation regulations are coming into effect and again this is to protect the industry, and I think there is a lot more to be done in this field than in the limiting of traps; perhaps faster patrol boats—I do not know. I do not think the courts are stiff enough. There is even talk that for the first lobster there should be a \$5 fine and for the second one, \$25 and so on, and this is what the fishermen themselves are saying. I am wondering if this could not be . . .

Dr. Needler: All I can say is that we do our best with what we have. We do not prevent all infractions but I believe that we keep the infractions to a fairly low level and, I might say, especially in western Nova Scotia.

Mr. Comeau: Mr. Chairman, I am not saying that the buyers are after this but on a lower scale maybe with individuals. This is happening. Even this summer I went into a boat and they offered some small lobsters and I ate them and they were good but still . . .

The Chairman: Talking about the protection, if I may, a supplementary comes to mind and this applies to the female lobster. Is it possible to identify legally the difference between the male and female lobster?

Dr. Needler: Yes.

The Chairman: The scraping of a berried lobster—after they are scraped, is it possible to identify the fact that they have been or . . .

Dr. Needler: Yes, and we prosecute people for that.

The Chairman: And if they find a lobster with no berries left on the lobster itself, is it possible to prosecute in court?

Dr. Needler: Yes, we have prosecuted people. You can identify lobsters which have been scrubbed.

The Chairman: In that case would it be possible or would it be helpful in the conservation of the lobster to discontinue the fishing of all female lobsters?

Dr. Needler: This subject has been studied to a great degree and the biologists who have done so do not believe that this would be a desirable thing. When you prohibit the taking of half the lobsters that are there, you have to get a pretty big benefit in return and the indications that we have are not that the number of eggs produced is really the important limiting factor, and it is not believed that the prohibition of the taking of all female lobsters would actually increase the catch. You have lost about half your catch to start with and you would not increase the abundance enough to make up for it.

• 1055

Mr. Breau: Mr. Chairman, may I ask one supplementary?

The Chairman: Yes.

Mr. Breau: On the question of protection and conservation, I think it is a practice of your officers that if they find some gear, some lobster traps, for example, which are there and it is out of season, they can bring the gear in, seize it and then if the fisherman does not claim it they will destroy it after a certain time. I know this has happened in some cases; some fishermen have lost some gear and, of course, they do not want to go and claim it because automatically they are going to be guilty.

Now, I understand that you have to apply the law but do you not think that in some cases destroying gear to the amount of \$250 or \$300 could be quite a heavy fine? I think this is quite a penalty. Could there not be another practice where your officers would make an effort to find out who the gear belongs to and if the man is not smart enough to figure out that he is going to lose more money, they can go and prosecute him. Do not wait for him to come and say, "This is my gear", and then prosecute him. Why do they not go and prosecute him?

Dr. Needler: It is my understanding, Mr. Chairman, that the officers always try to find out who had been setting the traps.

Mr. Breau: Very often it happens that they just destroy the gear and the man loses quite a bit of money; what it amounts to is quite a penalty.

The Chairman: Is that all, Mr. Breau? I would like to go to Mr. Carter now.

Mr. Carter: Mr. Chairman, I think our time has pretty well run out but I do have one or two brief questions I would like to ask. First of all, I would like to thank Mr. Anderson for yielding the floor to me and asking a supplementary question. I appreciate it.

The amount voted, sir, this year for community stages is of extreme importance in my riding, 40 per cent of which is fishing. I notice the Vote this year is less than half of that of last year and I believe the Deputy Minister mentioned that it was the government's policy, as it were, to discontinue providing additional stages around our coast.

I would like to point out to him it is a big disappointment to me that this amount has been cut by more than half, because there are places in my riding where, under the resettlement program sponsored by the federal and provincial governments, there were large numbers of fishermen brought in and, to use an old expression, they were like fish out of water in that they have been moved from places and from islands

and, I grant you, remote areas where they had adequate fishing equipment and gear, and so on, and now they find themselves in settlements where there are no facilities.

Consequently, these people who want to make a living from the fisheries and who are fishermen by nature, by birth and by right, are now being deprived of that right to fish. I can name one place in my riding—Placentia Bay—where we have, I think, in excess of 120 fishermen who were moved in from the islands, from the smaller areas, and no facilities whatever are available. Now, a community stage would be the answer and this is why I say I am extremely disappointed that the government has not seen fit to appropriate more money this year for this phase of the fishery because, while they might not have been utilized to their fullest, I think this is the answer to a large extent where fishermen are given a very sanitary means of processing their fish. Am I right in assuming that the community stage program is now being phased out pretty well?

Dr. Needler: Mr. Chairman, I think at the moment it is temporarily being phased out, at least partly, because this is a matter of financing and partly because there is a need for a review of this whole program to be sure that it is directed in the best way, a review in co-operation with the provincial government authorities.

• 1100

Mr. Carter: Our time is running out, Mr. Chairman, and I will not delay it but the other point was one raised by my colleague about publicity being given various programs of the Department of Fisheries and I think a case in point is the Fisheries Improvement Loans Act. I find there have been 2,300 loans since its inception and in my province, which is predominantly fishing, there have been 18 loans out of a total expenditure of six million and some odd thousand dollars. I think in Newfoundland there were \$23,000 loaned to the fishermen.

I am wondering; is this perhaps a result of lack of adequate publicity being given to this program? Could some thought be given to increasing the vote on advertising and publicity, and so on?

Dr. Needler: It could be, Mr. Chairman. This program is not really administered by this Department but there are also some differences between provinces in the contacts with banks. These loans are made through banks and it is believed that some of the differences relate to the contacts that fishermen have

with banks. There are, however, some differences between areas and we find it very difficult to understand. This is really another department's business.

The Chairman: Have you some comments, Mr. Needler?

Dr. Needler: Mr. Chairman, I just wanted to comment about Mr. Anderson's remark about the number of people wasting their time here.

Mr. Anderson: It was not mine.

Dr. Needler: Oh, I am sorry. I just wanted to say that to save time it is easier for the Deputy Minister to answer if he can. However, he needs some back-up in

case there are questions he cannot remember the answer to.

The other thing is that it actually helps the Department to serve Parliament to have people listening to discussions of this sort. This kind of contact actually helps the Department to do what is wanted of it.

Mr. Crouse: I concur with the Deputy Minister's remarks. I think we could put this down to public relations between the representatives of the people and the hired public servants of the Government of Canada.

The Chairman: Before the meeting adjourns I would like to announce that the next meeting will be scheduled for 9.30 a.m. Thursday, November 14.

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE
ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 6

THURSDAY, NOVEMBER 14, 1968

Respecting

Revised Main Estimates (1968-69) of Fisheries and Forestry.

WITNESSES:

From the Department of Fisheries: Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); Mr. E. W. Burrige, Assistant Director, Resource Development Service; Mr. D. MacKinnon, Chief Biologist; Mr. L. S. Bradbury, Director, Industrial Development Service; *From the Fisheries Research Board of Canada:* Dr. F. R. Hayes, Chairman; Dr. W. R. Martin, Assistant Chairman; and Dr. K. S. Ketchen, Biological Consultant.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and Messrs.

Anderson,

Breau,

Comeau,

Crouse,

Cyr,

Dionne,

Howard (*Skeena*),

Goode,

Hogarth,

Lundrigan,

Mather,

McQuaid,

Moore (Bonavista-

Trinity-Conception)

Noble,

St. Pierre,

Smith (*Northumberland-*

Miramichi),

Smith (*Saint-Jean*),

Whelan—(20).

(Quorum 11)

J. H. Bennett,

Clerk of the Committee.

(Text)

MINUTES OF PROCEEDINGS

THURSDAY, November 14, 1968.

(6)

The Standing Committee on Fisheries and Forestry met this day at 9.45 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Anderson, Breau, Comeau, Crossman, Cyr, Durrante, Goode, Hogarth, Howard (*Skeena*), Lundrigan, Mather, McQuaid, Noble, St. Pierre, Whelan—(15).

Also present: Mr. Corbin.

In attendance: From the Department of Fisheries: Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); Mr. E. W. Burrige, Assistant Director, Resource Development Service; Mr. D. MacKinnon, Chief Biologist; Mr. L. S. Bradbury, Director Industrial Development Service; *From the Fisheries Research Board of Canada:* Dr. F. R. Hayes, Chairman; Dr. W. R. Martin, Assistant Chairman; and Dr. K. S. Ketchen, Biological Consultant.

The Chairman advised the Committee that if it was agreeable, the Minister of Fisheries would be available for a meeting on Friday morning, November 15, 1968.

The Committee so agreed.

Item 5—Revised Main Estimates (1968-69); Fisheries Management and Development; Operation and Maintenance was called and the departmental officials were questioned.

Because of the presence of officials from the Fisheries Research Board of Canada, the Committee agreed to allow Item 5 to stand and call

Item 20, Fisheries Research Board of Canada; Administration, Operation and Maintenance.

The Chairman introduced Dr. F. R. Hayes, Chairman and Dr. W. R. Martin, Assistant Chairman of the Fisheries Research Board of Canada.

Dr. Hayes addressed the Committee, and assisted by Dr. Martin and Dr. Ketchen, was questioned.

At 11.35 a.m. the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 14, 1968

The Chairman: Gentlemen, I see a quorum. I have been told by the Minister's officials that he can be available tomorrow, Friday, November 15. We have arranged with the Co-Ordinating Committee for a room and if the Committee is agreeable we could sit tomorrow morning at 9.30. Is that agreeable to the Committee?

Some hon. Members: Agreed.

The Chairman: We will now resume questioning on the estimates. At the last meeting we questioned the departmental officials on Item 5—Operation and Maintenance, which appears on page 158 of the estimates.

Shall Item 5 carry?

Mr. Noble: Mr. Chairman, I would like to ask one question before we pass this item, if we have the people here who can answer it, and it is in respect to pollution. I might say that I asked a question in the House of Commons in respect to pollution from thermonuclear plants.

The Chairman: Excuse me. Will Mr. Ozere please come to the front of the room.

Mr. S. V. Ozere (Assistant Deputy Minister, International & Jurisdictional, Department of Fisheries): What is the question, please?

Mr. Noble: The question is to what extent are the lakes being polluted by thermonuclear plants disposing of the water they use for cooling into the Great Lakes, and how wide an area would be affected if pollution results from this?

Mr. Ozere: Perhaps Mr. Burrridge could answer that question.

Mr. E. W. Burrridge (Assistant Director, Resource Development Service, Department of Fisheries): I think this is something that the Ontario Department of Lands and Forests is probably looking into. They are responsible for the administration of fisheries in the Province of Ontario. I have not actually

heard that there is any serious pollution problem from these plants.

Mr. Noble: I have an article here which I clipped from the *Fundy Fisherman*, and they go on to quite some extent about the problem this creates. The people who wrote this article seem to think this constitutes quite a danger. I wonder if we have any information on it?

Mr. Burrridge: No. It is probably chiefly from the temperature change in the area. This is about the only change there is in conditions. There are no toxic components contained in the cooling waters from these plants. These matters have been investigated quite thoroughly in the United States and also to some degree in Canada, I believe.

The Chairman: Mr. Mather, do you have a supplementary?

Mr. Mather: Mr. Chairman, I wonder if I could ask a supplementary in connection with water pollution in regard to fisheries. I have received several representations—and I also imagine other members from British Columbia have—from the United Fishermen and Allied Workers Union and other groups complaining about industrial waste and other types of water pollution affecting the lower Fraser River. I wonder if any of the officials have any information on the present situation in that regard?

Mr. Burrridge: Pollution in the lower Fraser is in the hands of the Pollution Control Board. I understand this is a provincial body that has associations with our Department. The problems are being studied by scientists from our Department and from the International North Pacific Salmon Fisheries Commission. There are always problems with sewage disposal, and one thing or another, but these are continually under investigation.

Mr. Goode: Mr. Chairman, I have a supplementary. During the dispute over the new sewer system that was to go into Richmond—if you are familiar with that particular situation—the fisheries people were asked whether this extra sewage would affect the fish in the

Fraser River, and the Department of Fisheries came out and said that it definitely would not. Does sewage pollution in a river such as the Fraser River not affect the fishing when the fish are going up to spawn?

Mr. Burrige: Mr. McKinnon from our Vancouver office is here. Perhaps he could field this question.

Mr. Dixon MacKinnon (Chief Biologist, Vancouver): This is true. Sewage acts as a detractor of oxygen and it is a question of dilution. So, from a fisheries standpoint we are not actually polluting the water because with the good dilution rate the oxygen reduction is not anywhere near what it would have to be to be critical. We really cannot say that you are polluting the water when you are dumping in an oxygen-demanding substance unless it is brought down to possibly 6 parts per million, or to such a critical level. In a river the size of the Fraser there would be a negligible reduction in oxygen from whatever sewage Richmond would put in. We do not like to see it but we cannot say that it is. . .

Mr. Goode: So your level of tolerance is a great deal different from that of people who wish to swim or use it for recreational purposes?

Mr. MacKinnon: Yes. I think the fishermen complain about the physical appearance of their nets in handling it, and such things as this, and esthetically they are correct.

Mr. Noble: Mr. Chairman, while we are on the subject I would like to ask one further question. Do the men who are going to answer this question not think there is great danger from pesticides being washed into our various waterways from sprays on orchards and in various other ways. A report was received that DDT was found in penguins in the Antarctic, so it seems to me this is very widespread and covers a wide area. Perhaps someone could tell me something about that.

Mr. Burrige: Yes, there is no question about it. We in fisheries are very concerned about pesticides washing from orchards or from forest spray programs, and the like. There is an interdepartmental committee on the use of pesticides which meets several times during the year. This committee is made up of representatives from the departments of agriculture, forestry, wildlife, fisheries, and so on. These pesticide problems are discussed and the departments responsible for fisheries resources, wildlife, and so on,

are continually negotiating with other departments in an attempt to get the treatment reduced and the types of chemicals modified in order to improve the situation and reduce this pollution problem in our waters and in the air.

Mr. Noble: Thank you.

Mr. MacKinnon: Excuse me. Rather than mislead Mr. Goode, I should point out that this sewage effluent has an oxygen demand but not enough to be serious. The thing that we worry about is toxic substances finding their way into sewage, which always happens, and yet we are almost powerless to treat it as an expectation or as a definite fact.

Mr. Durante: What does "almost powerless" mean?

Mr. MacKinnon: It would have to be detected, and charges could certainly be laid under the Fisheries Act, but if you have a sewage system for sewage wastes we can guess that there will be some toxic elements discharged by the very nature of human beings, although we cannot say definitely that this will happen. You can monitor but you would have to be right at the site and you would have to trace it in order to lay a charge. So, there is a good possibility of toxic effluence. We have to support the health of people on things like this, and for human health, swimming and esthetics we give all the support we can from the fisheries standpoint.

The Chairman: Mr. Whelan?

Mr. Whelan: I just wanted to ask, Mr. Chairman, if you had seen the recent release—I think it was on Tuesday of this week—by the International Joint Commission on pollution of the Saint Clair River, the Detroit River and the Great Lakes system. Have any of the officials. . .

Mr. Burrige: I saw the newspaper article last night.

Mr. Whelan: You have not seen the document?

Mr. Burrige: I have not seen the complete document.

Mr. Whelan: It is quite a detailed document and, as Mr. Noble was mentioning, there is an awful lot of stuff going in there. I think that is the simplest short form to use for what is going into those waterways. It certainly is not

good for any kind of marine life. One other question was the matter of inspection service, which is under item 5, for the chartering of boats and part-time inspectors. Do these part-time people who are on patrol have the authority to arrest people for violations?

Mr. Burrridge: Yes, Mr. Chairman, they have that authority.

Mr. Whelan: I just have one further short question. How extensive is the research that you do on the building of ships for fishing? Do you do any research on the type of fishing craft that should be used?

Mr. Burrridge: Mr. Bradbury will answer that question.

Mr. L. S. Bradbury (Director, Industrial Development Service, Department of Fisheries): Mr. Chairman, I am not quite sure of the question. We do a good deal of research into the...

Mr. Whelan: I think you recently held a conference in Montreal where you invited all the builders of different types of fishing craft and other types of craft, and I think all the fisheries people from across Canada were invited to hear these people present their views on the different types of craft such as plastic boats, cement boats, and so on. I saw a document on that.

Mr. Bradbury: Yes, Mr. Chairman. This is quite correct. This was the second conference that was held on fishing vessels. The first conference was held in Montreal in 1966. This mainly had to do with the design of larger vessels, offshore fishing vessels. The conference that Mr. Whelan refers to was held last month in Montreal and this had to do with the materials used in the construction of fishing vessels. The papers presented at these conferences came from several of the leading fishing countries of the world, as well as Canada, and it resulted in a great deal of very useful information for the Canadian fishing industry and indeed for the Canadian shipbuilding industry, as well as other related industries. In addition, in the Industrial Development Service the Department employs a naval architect, a vessel technologist, a marine engineer, an electronics engineer and fishing operations people, and collectively these men carry out continual research into the construction of more efficient fishing vessels, vessels with greater comfort for the men and, of course, what is uppermost in our minds is the safety factor.

Mr. Whelan: Was this conference in Montreal sponsored by the federal Department?

Mr. Bradbury: This conference was sponsored by the federal Department with the five Atlantic coast provinces. These five provinces were Quebec, New Brunswick, Prince Edward Island, Nova Scotia and Newfoundland, and with the federal Department they make up the Federal-Provincial Atlantic Fisheries Committee, the sponsor of both conferences to which I made reference.

Mr. Whelan: So you have any idea what our proportion would be of the cost of that?

Mr. Bradbury: Thus far four of these conferences have been sponsored by the Federal-Provincial Atlantic Fisheries Committee. A fifth conference is being held in 1970, which will be a conference on automation and mechanization in the fishing industry. I can say that these conferences are largely self-supporting other than, of course, the input of expertise, the personnel of the federal Department of Fisheries and, indeed, of the provinces. I think the cost to the federal Department, sir, would be the actual printing of the reports. These reports are printed by the Queen's Printer and are issued under the fisheries reports series of the federal Department. They become a highly valuable technical document.

Mr. Whelan: Do you not think it would be a good idea if members of this Committee in particular were to act as observers at some of these conferences, because many times they are asked to pass legislation on shipbuilding subsidies, et cetera, and in this way they might be better informed and understand more of what they are doing when they vote on such estimates.

Mr. Bradbury: I am sure that the members of the Federal-Provincial Atlantic Fisheries Committee are not officers of this Committee. However, I am closely associated with the secretariat that looks after these conferences and I am sure that the members of this Committee would be welcome. We would like to see all of the members present. As I mentioned earlier, the next conference is in February of 1970 in Montreal and we will make a point of sending the information about this conference along to the members and, indeed, if members are interested in any of the past conferences, publications are available and can be sent to them with despatch.

Mr. Whelan: Thank you.

The Chairman: Gentlemen, I see that the people who have indicated they want to continue questioning on Item 5 are adding up, and I think I will tell you what the situation is now. We have with us Dr. Hayes, Chairman, and Dr. Martin, Assistant Chairman, of the Fisheries Research Board. The reason they are here this morning is that Dr. Needler indicated he could not attend this meeting and we thought if we had finished with Item 5 that perhaps we would go on to fisheries research. However, I see that we are continuing on Item 5, so I will now call on Mr. Anderson.

Mr. Anderson: Mr. Chairman, I do not want to interrupt. Perhaps we should pass Item 5. We can always come back to it. I have questions which arise out of the pollution of the Fraser River and I would like to follow this up, but as we have some special witnesses here can we not pass Item 5 and get on with these special witnesses?

The Chairman: This is up to the meeting.

Mr. McQuaid: I also have further questions on the Fraser River.

Mr. Hogarth: I have, too.

Mr. Anderson: I do not think they have to come under Item 5.

The Chairman: Do you suggest we go on to fisheries research or remain on this subject?

Mr. Hogarth: Is the Vancouver director going to stay for a while or...

Mr. Burrige: He will be in Ottawa for the next few weeks.

Mr. Anderson: I would like to suggest that we get on with our special witnesses. These men have come here specifically for this reason. We can always ask questions on pollution at a later date.

The Chairman: Is that the decision of the meeting?

Some hon. Members: Agreed.

The Chairman: Then I will ask Dr. Hayes and Dr. Martin to come to the table.

Dr. F. R. Hayes (Chairman, Fisheries Research Board, Department of Fisheries): Mr. Chairman, we have some copies of a pamphlet with us which was put out this

year. If it is acceptable I could pass these out to the members.

Mr. McQuaid: Mr. Chairman, before Dr. Hayes commences his evidence I wonder whether I might make a suggestion? In future if there is any information like this to be circulated, would it be possible for the members of the Committee to have it in advance so that we can have a look at it?

The Chairman: Yes, I think that is a good idea, but this material came at such a late hour that it was not possible.

Mr. Lundrigan: Mr. Chairman, it is very unfortunate that we did not have time to prepare for the present situation. As capable as the members of the Fisheries Committee are, I do not think under present circumstances they are going to be able to probe and investigate to the extent they would like to as a result of the rather abrupt and short notice, if any.

The Chairman: You will have occasion later on the same...

Mr. Lundrigan: I am not thinking of No. 5; I am thinking of the present situation with the very capable gentlemen we have before us.

The Chairman: As I said before, you will have an opportunity later as well. This will not be their only day.

Mr. Lundrigan: I know that, Mr. Chairman, but there is no reason why we should not be well prepared today.

An hon. Member: Well, let us not waste any more time. Let us get on with the witnesses.

The Chairman: I now call upon Dr. Hayes, to give his opening remarks.

Dr. Hayes: Thank you, Mr. Chairman. I agree that these documents should have been circulated. We ourselves did not know this situation was coming up until yesterday when it became evident that Dr. Needler was going to have to be present at a Science Council because of matters connected with both fisheries and oceanography which were coming up this morning. That is why this particular arrangement was suggested in such a hurry. Perhaps I might speak to this document.

Let us look first at Roman numeral III at the beginning where there is a foreword

indicating the fields of research that are covered by the Fisheries Research Board and how many scientists and what proportion of our budget is involved in each of these in 1967-68. We are interested for one thing in studying the environment with a view to understanding changes in aquatic productivity. This is concerned with the changing structure of the fishery under which at the present time the big fish such as haddock and cod have been caught off and people are tending to fish smaller specimens. This requires a different type of gear and will also change the balance since the new fisheries that are coming in such as herring represent the food of some of the former fisheries and we are not quite sure what will happen when we change the environment in this way.

We would also like to know, under the environment, the conditions of the boundaries of water masses in the ocean along which fish accumulate so that we can eventually predict where fish can be expected to be caught. This problem of understanding underwater weather is very much akin to be problem the navy has in hunting submarines and we are engaged in joint activities that are useful both to Defence and Fisheries in understanding the movements and boundaries of water. It is a kind of weather map under the ocean. This takes up 19 per cent of our budget at the present time.

Our second field of research is on the resource in which we have been examining the body chemistry and the production of economically valuable species of fish. This was formerly a very large part of our work, simply trying to find out where the populations of fish were located. As we acquire this knowledge this is tending to diminish as a fraction of our total activity. It now represents 29 per cent and in the future is likely to become less rather than more.

We are also interested, as a third major problem, in increasing the resource, particularly with reference to other fish and shellfish which give promise of being capable of manipulation by processes leading towards farming instead of hunting such as salmon, lobsters, the holding of lobsters under live conditions after they have been caught, oyster culture, and so on.

Along with and close to this comes the problem of harvesting and management in which we are close to the problems that Mr. Bradbury mentioned a little while ago. We are studying the behaviour of fish in relation to gear as new fisheries develop and we

have to try to catch smaller specimens—large numbers of little fish—and obtain information about the behaviour of fish in relation to gear as well as the behaviour of fish in relation to other objects such as obstructions in rivers, and so on. This takes up 24 per cent of our budget at the present time.

The matter of understanding the behaviour of fish so gear can be designed that will catch them is a matter we think will have great importance within the next 10 years or so and we hope to increase our efforts in these directions.

Finally there is the study of commercial products in which we collaborate with industry and, of course, as in all these works, with the development agencies of the ministry to upgrade the existing fishery products and develop improved handling; also to develop new products from fish other than food products such as medicinal products, and so on, and to make use of all possible knowledge to see that an acceptable product is placed on the shelves of the supermarkets where it can be bought with confidence by the housewife.

Mr. Chairman, may I go from the front to the back of the book and turn back two pages from the back page. The distribution of our efforts among our various biological and technological stations and our offices is given in a pie diagram. Our effort for 1967, as can be seen, ranges from 26 per cent of our budget spent in the Nanaimo station to small amounts of 3 per cent spent in the Office of the Chairman here in Ottawa and for university support. We are a totally dispersed organization so far as our laboratories are concerned. We have no laboratories in the Ottawa area.

There is a list of our establishments on pages 17 and 18. Some of them, which have been marked with an asterisk, are scientifically programmed through other major stations. For example, the Grande-Rivière station and the technological unit in St. John's, Newfoundland, are scientifically programmed in conjunction with the Halifax laboratory and similarly we have other substations—one on oysters and so on. So these stations are placed across the country, and from them our field operations are carried out.

It will be noticed that we have one laboratory in the Montreal area. There a study is made of sea mammals from all our three oceans—the Atlantic, Pacific and Arctic; also, investigations are carried out on the productivity of Northern seas. This is a field operation. Some people ask why we have a Fisher-

ies Laboratory in the Montreal area. Usually the expeditions move out from there by air.

This, Mr. Chairman, is a very brief account of what we are doing, and perhaps I should stop at this point.

The Chairman: Thank you, Doctor.

Mr. Anderson: You mentioned, sir, that there is going to be more emphasis in the next ten years on new types of gear. Could you give us some indication what direction this is going. I would like to know for instance whether on the east coast we can expect larger vessels rather than a fair number of smaller ones, and more concentration of the industry in the urban centres rather than the number of small centres that there are now.

Dr. Hayes: I think we can expect larger vessels. However, I think the particular phase of this that our Board will be concerned with will be the behaviour of the fish in relation to capturing apparatus. There are very well-developed and very expensive centres for gear study in some other parts of the world—in Hamburg for example, and if we were to set up an organization in Canada to develop gear to rival the work of the Norwegians and Germans it would take a very large budget indeed. Also, it is somewhat doubtful whether we could exceed the quality of work which we can pick up by keeping track of their efforts.

What does not appear to be understood is the way in which fish are captured. When a net approaches a fish, fish have an escape reaction. People in Britain have gone to a great deal of trouble to redesign gear on aerodynamic lines. Soon after the War they got some aircraft companies working on this. They came up with much more efficient gear from an engineering standpoint but discovered they did not catch any more fish because of their ability to escape. Now the colour, the dimensions and the swimming speed of the fish all have to be taken into consideration, and this is one aspect on which our understanding is very poor. However, we would like to develop this, particularly in our east coast Biological Centre in St. Andrews.

So I think it is a holding operation and a question of understanding, on the engineering side, and an active attempt to assume leadership in acquiring information on the behaviour of fish under capturing conditions.

Mr. Anderson: Do you have any trouble at all in obtaining this information from other

countries which are doing more basic research than we are? Is there free exchange of information in the fisheries field, or do you feel perhaps that they are holding back on some of their newer developments?

Dr. Hayes: I do not feel that they are holding back. Industrial Development is the service within the Ministry responsible for bringing to Canadians the best engineering discoveries from other countries and applying them. Perhaps Mr. Bradbury would say if he thinks there are secrets that are being held out.

Mr. Bradbury: Mr. Chairman, as Dr. Hayes mentioned, we are very active on this field of activity, which is a very important one.

It has been a policy right along to take the ideas of others rather than to get into any long-term development project. We are taking ideas from other countries and we do this by several means. We send some of our specialists to other countries. One example was mentioned by the Minister at an earlier Committee meeting when he referred to the off-bottom trawl that was actually developed in Germany but is being refined and adapted to Canadian conditions by one of our very outstanding specialists in fishing gear—particularly trawling operations, Wes Johnson, originally from British Columbia, Vancouver. We have had two meetings with the U.S. Fish and Wildlife people and the U.K. White Fish Authority. Between the U.S. and Canada there has been quite an exchange of information. Also, men from the office responsible for our fishing operations have travelled extensively, and we have quite an exchange of information between the French fisheries people and ourselves.

To be more specific, I would say that there is a fairly free exchange of information. I could also mention that we have brought out people from Japan over the past five years. In our technical assistance to the fishing industry we engage people under contract, bringing them from the West Coast, the East Coast, from the Great Lakes to the Atlantic Coast—all within Canada, but we also have brought in what we consider some of the best fishermen from countries such as Japan, Norway, France, the U.K., the United States, and West Germany.

The Chairman: Thank you, Mr. Bradbury. Mr. McQuaid?

Mr. McQuaid: Dr. Hayes, has your Department done any experimental work on the

Irish Moss industry, which of course is very closely connected to the fishing industry. This of course is a very important industry as far as the Atlantic area is concerned—last year it was north something over \$2 million to our fishermen—and I am wondering if your Department has done anything to determine whether or not the present methods of harvesting Irish Moss are detrimental to the industry. There has been some suggestion that dragging the moss off of the rocks by means of drags might interfere with the roots and destroy future growth.

Dr. Hayes: Well, sir, there are several agencies in the East investigating this but I do not think we in the Fisheries Research Board have been particularly active in this line. There are others of course who are actively interested. The Research Foundation of Nova Scotia, from its outset, has interested itself in this, and the Halifax Laboratory of the National Research Council has also been interested in Irish Moss. Within the fisheries ministry, the Industrial Development Service has been working in this area. It has attempted to improve the Prince Edward Island development of this industry.

Perhaps, again, I might ask somebody from the Industrial Development Service to say what they have been doing. The answer, as are as the Fisheries Research Board is concerned, is that we do not employ research people on Irish Moss at the present time.

Mr. McQuaid: There is a very important by-product of Irish Moss called caragoin, which runs as high as \$2.00 a pound. I understand that there is not in Canada an extraction plant to extract that by-product from the Moss, that the Moss gathered here has to be sent to the United States or Denmark or somewhere where this very valuable by-product can be extracted. I understand too that a supply of roughly 16 million pounds would warrant the setting up of an extraction plant. Has any consideration been given to the setting up of a plant like this in the Atlantic areas. It would provide another industry for us down there and at the same time be a considerable help to our people.

• 1025

Dr. Hayes: I do not know of any plans to construct a plant. As far as research goes, if anyone else does, I am sure...

Mr. McQuaid: Would there be anybody here who would know anything about that?

Mr. Bradbury: Mr. Chairman, we have established in Prince Edward Island at

Miminegash what we call a marine plants experimental station. It is dealing primarily with Irish moss, and while it is located in Prince Edward Island, which is a very large centre for the so-called Irish moss, this plant is for the benefit of Canada, and indeed the manager of that plant has been doing some very useful work for the Pacific Coast development in kelp. There is every reason for an extraction plant to be established somewhere in that region, an extraction plant for Irish moss. The member is quite correct here. While we have been working in our experimental plant with such problems as the improved harvesting methods and a successful attempt to produce a good clean product, I think this has all been very beneficial to the industry generally. The production has increased considerably over the past three or four years, and indeed where in Prince Edward Island there was no drying plant, there are now three commercial plants. Again, to be more specific, in reply to the question, yes, there is plenty of room for an extraction plant in Canada. The two largest extraction plants at present are in Denmark and the United States. These are capable of large quantities of Irish moss. We in the Industrial Development Service of the Department of Fisheries, with the Departments of Trade and Commerce and Industry, have been carrying out in-depth investigations in the hope that there can be an extraction plant set up somewhere in the Atlantic region.

Dr. Hayes: Could I add, Mr. Chairman, that the National Research Council laboratory in Halifax has a field station for investigating the culture of seaweeds, and this is perhaps the main program out of their Halifax laboratory. So there is quite an amount of research going on in this field, although we are not duplicating it in our particular area.

Mr. McQuaid: The second part of my question, Mr. Chairman. I wonder if the witness could give us any indication as to whether the present method of harvesting this moss is dangerous to the industry; that is, raking it from the rocks, rather than waiting for the storm to break it off and drift it into shore.

Dr. Hayes: I think it is possible to destroy the holdfast and in fact kill the plant if care is not exercised. This is mining a resource instead of harvesting it; we certainly have to be careful not to destroy the roots in the course of harvesting, and this does require some care. Of course, when the material drifts ashore it may not be in as good a condition

for extraction and sale. This depends, I suppose, on the time of the year.

Mr. McQuaid: Your studies so far would then indicate that the raking of moss from the rocks could be harmful to the holdfast and could be harmful to the industry as a whole?

• 1030

Dr. Hayes: If the holdfasts are damaged, yes.

Mr. Whelan: They do take a loss in harvesting it from the storms; when it comes up on the beach it can be lost through covering by sand, and so forth. Is that not true?

Dr. Hayes: Yes, it gets into a condition where the buyers will not pay much for it, and are not very much interested in it if it is dirty.

Mr. McQuaid: It does not stay that long, Mr. Whelan. The fishermen are right after it.

Mr. Whelan: When I was at Prince Edward Island, a whole bunch of it had been lost by a bad storm.

The Chairman: Order.

Mr. Howard (Skeena): Mr. Chairman, I want to ask Dr. Hayes about what I gather is a research or experimental type of shrimp fishery that operates out of the Nanaimo biological station. If there is such a project—I understand there was one some years ago—it may not be possible to provide any of the statistical information now, but could I obtain from you, over some period of years in the past that this has been going on, what expenditures had been involved and the number of people involved in it, and what have been the results. As I understand from talking with some people at the station a few years ago, it was hoped to amass a sufficient amount of information about shrimp that a commercial shrimp fishery could be founded upon it.

Dr. Hayes: We have been doing this out of Nanaimo. We have with us this morning the assistant Director of the Nanaimo laboratory, Dr. Ketchen, who would probably tell you better than I could how much work is being done at the moment. This work is being done.

Dr. K. D. Ketchen (Fisheries Research Board): Mr. Chairman, in the last two years the Nanaimo station has been doing two kinds of research on shrimps. One of the projects

has been exploration for new fishing grounds along the West Coast of Canada, and this work has been funded by the Industrial Development Service. The Fisheries Research Board has carried out the research for the Industrial Development Service. Reports of the results of the two surveys that have been conducted have been published and distributed to people in the fishing industry and to fishermen.

Aside from the exploratory work on shrimp, the station has been engaged for several years in the special study of the population dynamics or the natural ups and downs of shrimp populations in the Comox area, to try to determine whether or not some form of regulation would assist in stabilizing the yield from the shrimp fishery.

There are shrimp fisheries in many of the inlets and bays of the West Coast of Canada, and quite a few of these have developed as a result of the work done by the Fisheries Research Board for the Industrial Development Service.

Mr. Howard (Skeena): Mr. Chairman, I wonder if, in addition to that, I could contact somebody in the Fisheries Research Board for the cost item that has been involved.

Mr. Hayes: We would be delighted. I do not think I could pull this out at this moment, but we can certainly provide it. You would like to know about the annual expenditure in Nanaimo on this particular investigation over the past few years.

Mr. Howard (Skeena): Yes, that is right.

Mr. Hayes: How much is being spent.

Mr. Howard (Skeena): This may be in the two reports to which Dr. Ketchen made reference.

Dr. Hayes: We can certainly look this up and send it to you. I do not know if all members of the Committee would like this information.

Mr. Howard (Skeena): I do not know that either. I do not want to intrude upon the time of the Committee, for something that may be of particular interest to myself.

Dr. Hayes: We will look this up.

The Chairman: Would all the members want these figures?

Mr. Howard (Skeena): It may be just as well to table them.

I wonder if I could raise one other matter, Mr. Chairman. In looking at the Annual Report of the Fisheries Research Board for 1967, perhaps I could read from page five of it. In the second paragraph it says:

For many years the physical facilities of the FRB have failed to keep pace with scientific growth. In many areas, buildings put up for other purposes many years ago are found increasingly unsuitable. In most areas staff are crowded substantially beyond DPW standards. Fisheries research also requires ships, and although chartered vessels can be used for some purposes, they will not serve continuous specialized operations. For 1967 the following capital projects may be mentioned:

and then they enumerate some of them. I do not know whether I should interpret this to be a general comment or criticism about the ability of the Fisheries Research Board to obtain adequate facilities or not, but it certainly reads that way to me, that there is a failure somewhere in the scheme of things, especially if it is extended over many years as this item says. I would like to know, if I could, what the situation is at the moment; what prospects exist into the future in terms of facilities and ships and the like and whether there is any expectation, if it has not already been accomplished, of overcoming the difficulties that are pronounced here.

Dr. Hayes: The Department of Public Works, Mr. Chairman, has set up standards of the number of square feet which a scientist should occupy and I think we have only one laboratory in the country which meets those standards and that is our Arctic Biological Station which was opened about three or four years ago. All our other laboratories, under these standards, are overcrowded. We have some quite shocking-looking situations. I think on the waterfront in St. John's, Newfoundland our technological unit is in pretty shabby-looking quarters, although you can fix things up so you can work there.

Under a plan of construction which was approved in principle by the Treasury Board we were to have spent an average of \$7 million a year for 10 years which would have recovered this situation mentioned in the paragraph that you read. The present expectation is that there will be about half of that sum available for capital, about \$3.5 million, so we will not overcome this difficulty at the rate that was indicated.

Concerning our actual plans, we are now finishing a new extension to the Nanaimo laboratory which will be opened next summer. Our next major construction will be in Winnipeg where we are concerned with the pollution effort in the centre of the country. We had hoped contemporaneously to start a laboratory in St. John's, Newfoundland. This will now have to be delayed under the financial conditions. We will place St. John's, Newfoundland next on the list after Winnipeg and then we have at equal priority some improvement in our laboratory situation in Dartmouth, Nova Scotia and to construct some permanent quarters for pollution studies on the West Coast in the west Vancouver laboratory but this, however, will be some years in the future.

Our shipping program also has been somewhat moved ahead, so I think the paragraph was correctly written and correctly understood.

Mr. Howard (Skeena): I take it then, looking ahead this 10 years that you are talking about, if it is a 10-year period into the future, you could write a similar paragraph each year for the next 10 years because you are not going to be able to meet the overcrowding situation as I see it. If you have a hope of a \$7 million capital expenditure program annually and it is only in the nature of half of that, you are just running like blazes to stay in the same place.

Dr. Hayes: Unless you also get a declining manpower requirement so that you do not need as much space.

Mr. Mather: Mr. Chairman, may I ask a supplementary here?

The Chairman: A short one, sir, yes.

Mr. Mather: Supplementary to Mr. Howard's question, and it is a general question, how does the effort of Canada in this field of fisheries research financially and support-wise compare with that of other countries with which we exchange information such as Japan, Norway, or the United States?

The Chairman: Can you answer that, Doctor?

Dr. Hayes: Perhaps Dr. Martin might answer that, Mr. Chairman. I think we are reasonably well up as a fraction of the value of the industry if this is the standard, but I could not quote the comparison with Japan or Norway at the moment. Could you?

Dr. W. R. Martin (Assistant Chairman, Fisheries Research Board): Mr. Chairman, I do not have these expenditures by other countries at hand. I think it is fair to say that the reputation of Canadian fisheries research stands high in world circles. We have one of the outstanding series of fisheries research publications in the world and in all of our involvement in international activities, whether it be international commissions or, say, the International Council for the Exploration of the Sea, FAO, the fisheries research reputation of Canada does stand very high indeed.

Mr. Mather: I appreciate that it stands high, Mr. Chairman, but I just wonder whether our country is giving enough attention to, or is spending enough money on, the fisheries research effort in general. I gather by the Chairman's answer that he thinks we rate fairly well up that way with some of the other countries. Is that right?

Dr. Hayes: I would have to look up our percentages. It is rather hard to calculate since we have, as indicated in this blue book, several other areas to which we are responsible besides the ministry of fisheries. On page three of this booklet these are listed. We have a responsibility to the Department of Fisheries and, of course, to the fishing industry. We are also doing work which is relevant to the needs of the National Defence Department in oceanography, primarily on the Pacific coast. We used to do it on the Atlantic but are phasing it out.

We are doing work in the North for the Department of Indian Affairs and Northern Development with relation to improving the living conditions of Eskimos and Indian settlements in the North. We are working for international joint commissions related to Great Lakes pollution and the Passamaquoddy tidal projects.

We are making our laboratories available to universities so that university professors are able to work under conditions where they can get running sea water, and so on, in the summer. We are doing work in all the provinces on product research and in the east and west provinces, of course, in the whole of fisheries research, although the central ones have taken over their management, and we have a heavy part in the Canadian Committee on Oceanography which is a multi-discipline group.

If you take the total responsibilities of the Board on that basis I do not think we are

spending very much. I think some great national requirement such as pollution is going to come in which will override and enlarge on actual fisheries in the strict sense of the word, and which we should be looking after more effectively than we are.

The Chairman: We will now go to Mr. Comeau.

Mr. Comeau: Thank you, Mr. Chairman. I am wondering, sir, whether any research has been done in relation to herring stocks in the Bay of Fundy, for example.

Dr. Hayes: Yes, we have an active program in this direction. Dr. Martin perhaps could give details about the Bay of Fundy herring.

Dr. Martin: Mr. Chairman, we have had a very active program on Atlantic herring for a great many years. The major base for this herring program has been at St. Andrews, New Brunswick, and perhaps because of this the primary interest has been in the bay of Fundy herring fishery, the sardine fishery there, and the relationship of this to the development of an international fishery in the Bay of Fundy and the George's Bank area. The studies have shown a great deal about the relationship of the stocks of herring off the Maine coast to those taken by Canadians, and the relationship of both of these stocks to the fish on George's Bank. The general conclusion is that in this area we feel that the resources are fairly fully exploited, much more so than is the case say, with the Gulf of St. Lawrence or along the southern coast of Newfoundland. The work has been intensified in the last two or three years as a result of the expansion of the fishery in this area. We have, for example, constructed a new research vessel, the *E.E. Prince*, which is largely concerned with pelagic fisheries and herring in particular, and this vessel based on St. Andrews, together with the employment of more scientists concerned with herring, is enabling us to keep pace with the expanding fishery. I think we are keeping well informed on the developments.

Mr. Comeau: Do you think, sir, that the stocks are declining in the Bay of Fundy? Do you think that there are fewer or do you think that the herring has reached its maximum? I say this because this summer, going around the herring plants, the amount of herring caught seems to have been very small, and I was wondering whether the stocks are not really increasing in proportion to what we catch.

Dr. Martin: We feel that the fishery at the mouth of the Bay of Fundy is closer to an optimum sustained yield than is the case with herring fisheries elsewhere on the Atlantic coast. We cannot say that this resource is over-exploited. It is clear that the George's Bank fishery, which has been intensively fished by the USSR during the past few years, has shown a drop in catch per unit effort, and has lead to a greater diversification of the USSR fishery to other species and other resources. I would say that there is no evidence to date that the Bay of Fundy herring are overfished.

Mr. Comeau: Do you think, sir, that due to these large herring catches, this would tend to reduce the numbers of other types of fish. I say this because some fish feed on herring. Do you think that there is any validity to the statement that the food is declining by these catches?

Dr. Martin: The evidence is really the reverse of that suggested by you. As the fishing has become more intensive for predator species such as cod, the sizes of cod caught and landed are much smaller than they were a few years ago. This has meant that a species such as cod are no longer as dependent on food fish such as herring and capelin as they were in the past, and we interpret this to mean that we now have greater resources of herring and capelin available for human consumption. There is nothing to suggest that leaving these resources such as capelin and herring in the water would result in a greater production of predatory species.

Mr. Comeau: Has any work or research been done in the lobster industry, investigating the lobster population, et cetera, whether this is declining or not? I am speaking again of the Bay of Fundy.

Dr. Hayes: Perhaps Dr. Martin would answer that.

Dr. Martin: Mr. Chairman, we have had intensive investigations of the lobster fishery on the Atlantic Coast for a good many decades. Here again the primary investigation is based on St. Andrews, New Brunswick. The work has been related in general to the importance of lobster fisheries so that we do have more work going on in the Gulf of St. Lawrence than we do in the Bay of Fundy area, but we have followed the lobster fishery in the Bay of Fundy very carefully. As you

are undoubtedly aware, all the lobster fisheries on the Atlantic Coast are very intensively fished and must be subject to careful regulation in order to maintain the resources. It is quite clear that the present catch could be taken with much less fishing effort than that now applied to the fisheries. We have on the Atlantic Coast a program of reduction of fishing effort through trap limitation, and this is being followed carefully both in the Economics Service of the Department of Fisheries and by the biologists of the Fisheries Research Board, in order to assess the effects of these various methods of control, including the trap limitation, in order to advise on ways and means of improving the situation still further.

Mr. Comeau: Do you think that if there was regulation of the female lobster, so that they would not be allowed to be caught, do you think that this would help? Have you given any thought to that?

Dr. Martin: Mr. Chairman, there is very little evidence that this type of regulation would be as effective as the other schemes we have in mind, such as limiting total effort. A great deal of work has been done on the subject of trying to establish the relationship between the production of larval lobsters and the eventual production of adults, and there appears to be no good relationship here, so that the best opportunity for improvement in the lobster fishery is through control of the fishing effort applied to the fishery rather than some selective approach.

• 1055

Mr. Breau: I have a short question about the oyster-fishing in New Brunswick. As you know, all the oysters there were destroyed by a disease about 10 years ago. Some have been transplanted. Are any measures being taken to prevent the disease from hitting the oysters again? Have you any progress report on how the new stock is taking in the area?

Dr. Hayes: The history of the disease problem in Prince Edward Island and also in Europe has been fairly uniform.

There is a small residual stock of disease-resistant oysters, and from this stock the new disease-resistant group has built up. I do not think the question of infection will arise again. You simply start with the survivors, as after a plague of any kind.

The same thing happened in Prince Edward Island, and then it went along the New Bruns-

wick coast. Its progress along the New Brunswick coast has followed the pattern of Prince Edward Island and Europe. We can get these resistant oysters in and they will gradually take hold, I think.

It has been suggested by certain people that the original outbreak in Prince Edward Island followed the importation of a small number of European oysters a long time ago. This has not been proven.

Once the disease is there all one can do is work, at ones' present level of knowledge, with the resistant stock.

Mr. Breau: Are the new stocks taking well in the area? Sometimes some difficulty arises in that. What is the situation with the new oysters transplanted in New Brunswick, for example? There has been some fishing in some places this year, has there?

Dr. Hayes: My impression is that after the like period of a few years they are moving in, as they did in Prince Edward Island.

Perhaps someone closer to the area might wish to comment. Mr. Burridge?

Mr. Burridge: Yes, Mr. Chairman. Following the disease referred to by Mr. Breau there was a rehabilitation program—a transplant of disease-resistant stock from Prince Edward Island. This disease-resistant stock had developed following a disease outbreak in Prince Edward Island, I believe, prior to the 1920s. The transplant program took about five to six years and the major oyster-producing areas of New Brunswick and Nova Scotia received stock mainly from Summerside Harbour.

In a good many of the areas that received these transplants natural reproduction has now taken place and fairly successful fisheries are again going on.

Perhaps the best example is in the estuary of the Miramichi River. This at one time was probably the major oyster-production area of New Brunswick. This has again increased. It is not up to its previous level, but it is at a pretty respectable level now.

The Chairman: Mr. Goode?

Mr. Goode: Yes, Mr. Chairman. One of my major concerns is that in British Columbia the herring fisheries have almost disappeared. In general, only small herrings are now found. The Department does not feel that these small herrings should be fished, and neither, I understand, do the commercial fishermen. I wish to ask you a series of ques-

tions on this. I will put them to you, and you can answer them all together.

Has your Department done any research in this field? Do you foresee any improvement in these conditions? From your comments earlier on I gather that the Georgian Bay herring has been depleted by the Russian fleet. Do you feel that they, or the Japanese fleet, have caused any depletion in the British Columbia herring fisheries?

Dr. Hayes: I will answer your third question, and perhaps, then, Mr. Chairman, I can ask Dr. Ketchen, who is in charge of this work on the Pacific Coast, to answer the first two, about research and whether there can be improvement.

The Russian fleet activities on Georges Bank may be affecting Atlantic herring but could not, I think, have any bearing on the Pacific stock.

• 1100

Mr. Goode: No; I meant that we have a big Russian fishery in British Columbia, too. Will that cause a depletion?

Dr. Hayes: I see. I will ask Dr. Ketchen, if I may, Mr. Chairman, through you.

The Chairman: Dr. Ketchen?

Dr. K. S. Ketchen (Fisheries Research Board, Department of Fisheries): Mr. Chairman, to answer the first question, yes, the Nanaimo Station is engaged in a study of the herring fishery of British Columbia, and, in particular, is directing attention to investigation of the causes of the recent decline in abundance.

We believe that two factors may be involved. One, that a great increase in the fishing efficiency of the fleet reduced the number of spawners, possibly to a level where it affects the number of resulting recruits; and the other factor is that due to natural causes there has been a series of very poor year classes—poor for reasons unrelated to the fishery.

To answer your second question, at the moment we are not too sure what the future holds, but we are not as alarmed as are certain people in the industry. We think that the herring stock will return to its original level of abundance.

In answer to your third question, as far as we know the Soviet fleet off British Columbia is not engaging in fishing for herring; and we know that the Japanese, of course, are not

fishing there because the species is one that Japan is at present abstaining from fishing, under the terms of the International North Pacific Fisheries Convention.

Mr. Goode: Thank you. Mr. Chairman, I now go on to the pollution aspect.

In your first item, called "Environment", you say that you are investigating aquatic productivity and pollution; that you are spending 19 per cent of your budget on these two matters; and that you have 50 scientists working in the field.

The questions I have are these: Is there basic research of, and how many scientists do you have working on, the fact that sewage pollution is a factor? Also, what progress is being made in this field? Do you work with provincial pollution boards? When a new plant is set up as a commercial endeavour are they able to come and consult with your Department about the effect they will have on the fisheries in the area? And, my final question, have you done any study on the effects of pulp mills on fisheries? Do you have any control on whether or not a pulp mill will enter a river or an ocean? Am I going too fast for you?

Dr. Hayes: No; I have notes on your questions. I would say that they constitute a series of questions for the Ministry rather than for the Fisheries Research Board, although we are involved in pollution-research. Other agencies in the Ministry are involved in development, such as the control of effluents; and still other agencies of the Ministry are involved in policing and prosecution after offenses. Therefore, the Fisheries Research Board part is a fraction of the Ministry's activities in pollution.

We are actively studying pollution as it affects fish, and at St. Andrews, New Brunswick, we have a program in this direction.

We also have a marine program in our Dartmouth laboratory, and we are studying the chemistry of the process in our Halifax laboratory.

At Nanaimo in British Columbia we are engaged in an active effort, as I mentioned in my introductory remarks, and the major part of the West Vancouver laboratory, when it is constructed, will be devoted to research and development activities in the field of anti-pollution. However, our largest increase in this field has been in our central laboratory freshwater institute located in Winnipeg. This program has been developed because of pollution in the Great Lakes at the present time and,

particularly, the decline of Lake Erie and Lake Ontario. We have divided the responsibilities in this area between the Fisheries Research Board, which is concerned with living aspects of the subject, and the Department of Energy, Mines and Resources, which is concerned with the chemistry and physical aspects, and the geological process. It seems that the particular function of the Board is to understand pollution abatement through biological controls, and to this end, by arrangement with the Government of Ontario, we have taken over a series of lakes—about 50 or 100 in the Kenora District close to the Manitoba border. We are setting up there a field station in conjunction with our Winnipeg laboratory and we propose to use these lakes as pilot plants to artificially introduce pollution of various kinds and see what control measures we can develop for it. Control measures then, hopefully, can be applied in the Great Lakes. The purpose of this large experiment is to understand the basis of biological pollution which removes oxygen and is responsible for nuisance growth's of blue-green algae and other kinds of plants which are not easily utilized, decompose and make these bad smells.

Mr. Goode: Have you studied effects of pulp mills at all?

Dr. Hayes: In our West Coast effort out in Nanaimo there is, under Dr. Waldichuk out there, an active effort to study pulp mill effluents on the British Columbia Coast.

I think the third question, regarding plant consultation, would be one which would not normally reach the Board but, rather, some other agency of the Department, namely the resource development group. I would think that perhaps the law regarding plant consultation could be discussed with Mr. Ozere, and the actual development of consultations with Mr. Burrige. Since we are beyond the research angle when we come to actual controls, perhaps I better pass to these people in that field who are responsible.

I have not answered your question on how many scientists are at work. However, I have broken down this number of 50 and in round figures I would say perhaps 20 scientists would be working on pollution with a support staff bringing them up to 50.

The Chairman: Mr. Goode, your time has expired. I would like to say that questions directed to other than the Fisheries Research Board could be asked at some other meeting.

Mr. Whelan, you are next.

Mr. Durante: Excuse me, Mr. Chairman, but would you review the names of those questioners you have on the list?

The Chairman: Mr. Whelan, Mr. Durante, Mr. Lundrigan and Mr. Howard.

Mr. Whelan: Some of the questions that I had in mind have been asked by other members.

What research, if any, are you yourselves doing on the placing of salmon in the Great Lakes? I understand coho has been placed there by the American authorities? Have any been placed there by the Canadian authorities?

Dr. Hayes: We have not placed any of these coho in the Great Lakes. As I understand it, this is a Lake Michigan effort by the Americans. I believe kokanee have been introduced in Georgian Bay and Lake Huron in the past. But this recent great expansion of the salmon fishery has spread from, I think, American introductions.

Mr. Whelan: Do you get reports from the American authorities on how this is advancing?

Dr. Hayes: I Yes. I think there was a spectacular success. Then I heard the hatchery results were not too encouraging—they thought that possibly DDT or something was getting into the fat of the embryos and possibly killing them. As to whether this has been scientifically established, I would defer to Mr. Burridge.

Mr. Burridge: The coho program on the Great Lakes, as Dr. Hayes has indicated, has been undertaken by the Americans—the State of Michigan to be exact. To date, this has been a very successful program. Their 1967 returns from the introduction of yearling coho was something like 30 per cent adult salmon.

The Michigan authorities reported last spring the presence of DDT, as mentioned by Dr. Hayes. They found that they had unusual losses in their hatcheries following the hatching of eggs. In the very tiny dry stage something like 20 per cent of these young fry died. Analyses showed that they contained quite unusually high concentrations of DDT and they suspect that this was responsible.

Mr. Whelan: I think I saw a report on that. Did they not think that some of them built up

sort of an immunity to it and the strong ones lived and the weaker ones died?

Mr. Burridge: Well that is quite true. There was this large die-off; then the ones that did survive were completely healthy and apparently had nothing at all wrong with them. So obviously the ones that could take it, took it very well, and became strong fish.

Mr. Whelan: I was told on Monday that they are now putting into Lake Michigan chinook salmon. Are you aware of that?

Mr. Burridge: Yes, they are putting chinooks mainly into Lake Superior. They have put some coho and chinooks in Lake Superior and this year Michigan authorities released coho into their side of Lake Huron.

Mr. Whelan: I know that we are catching some of them as far down as Lake Erie.

I visited your oyster research establishment in Prince Edward Island and was quite impressed with it. Are you as optimistic as all the other people are that are associated with this program?

Dr. Hayes: Do you want the answer in one word? I am afraid I have been disappointed too many times in my life by prospects of breakthroughs in biological matters which are just around the corner. I take a rather reserved view of the oyster future on this particular point you ask about.

Mr. Whelan: Reserved, not conservative.

Two or three times I visited reduction plants, and I also visited the reduction plants in Peru when I had the opportunity. I think Barry Mather visited them too when he was in Peru. What is the potential of these in Canada? I have had a man in the office twice in the last month telling me that there is an American firm ready to establish in Canada if it gets the co-operation of all people concerned. I do not know if he means he is not getting it now or not.

Dr. Hayes: To establish a herring reduction plant?

Mr. Whelan: Yes.

Dr. Hayes: I may be getting a little outside my research beat but again I think the view of the Ministry is conservative and is rather one to discourage these things as we may find that we have more reduction plants than we are able to deliver herring to. But I am not really in my own field when I talk about Ministry policy on this sort of thing.

Mr. Whelan: You have done research on fish protein for human consumption. What future do you think this has?

Dr. Hayes: There is a fish protein concentrate that can be made and shipped anywhere. A very small amount of it will give an Asiatic or an African the amount of animal protein he requires to keep him alive and this may be the way to get this small amount of animal protein, which is only 10 grams or so a day or a teaspoonful, and which would probably give the essentials on a diet that was otherwise carbohydrate. This is possible.

We can make a successful product that does not smell much and looks pretty white and is a fish flour in a rather acceptable form, I think. There are still some problems concerned with baking this into bread to get, let us say, a high protein concentration into something like bread because it tends to fractionate. Possibly some further work on the physical chemistry is required to manipulate the structure of the fish protein so that it can be melded more effectively with carbohydrate in a cooking recipe. We can get in 5 per cent without any trouble and 10 per cent with more, and then it begins to separate; so that there are some cooking problems in making mixtures of this.

Also, there are a great many people in the world who need it most who have religious scruples about eating it and so there is a problem there.

Mr. Whelan: Thank you.

The Chairman: Mr. Durante.

Mr. Durante: Mr. Chairman, I do not want to use up any of my time for questioning in discussing this topic, and let me say that it is not my intention to school you, but I think it is most unfortunate that members of this Committee should lose approximately 20 or 30 minutes prior to the beginning of the meeting because we are waiting to get a quorum. Some of us have other committees scheduled right at 11 o'clock and I would urge therefore that the members of this Committee make an effort to get here on time. It may well be that the efficiency—the inefficiency, pardon me—that is being displayed by the members of this Committee is also what is wrong with the resource of fisheries—because we are late. And in this regard I would like to ask: are there other causes of differences in aquatic productivity besides pollution of one description or another?

Dr. Hayes: You mean variation from year to year?

Mr. Durante: No, in aquatic productivity which is a part of your program.

Dr. Hayes: Aquatic productivity depends finally on the supply of nutrients available—phosphate and nitrate—in the plants which the small animals and eventually the fish eat; and the productive parts of the ocean are those in which there is a current system which brings a renewed supply up to the surface. It is the same problem as adding fertilizer to land. Highly productive areas such as the Antarctic, where the whales flourish, and an area between Greenland and Newfoundland and so on, have this upwelling which gives them a supply of fertilizer. The basic difference in parts of the ocean, I think, would be the supply of fertilizer which is brought up from the depths. We cannot manipulate this at the present time. The only way we could would be perhaps through nuclear energy in creating a stream of warm water in some way. This is a pipe dream at the moment but it may not always be. It is really the same problem as in farming—the difference in quality of land for farming.

Mr. Durante: I hope Mr. Chairman, that we will not overemphasize this aspect of aquatic productivity and de-emphasize the effects that pollution is having on this particular resource. I do not know whether you could classify me as a naturalist or not but I am sure that when Jacques Cartier came out here in 1534 the cycle was moving along normally, and although the productivity in one year may have been less than it was in the next, eventually things balanced out. I have the sincere feeling that pollution is having a very detrimental effect on our resource.

Sir, has any research been conducted by your Board, for example on the effects of removing the natural growth along the banks of our producing streams? At the present time in British Columbia we are logging right down to the banks of our rivers and creeks and the run-off is very rapid. Does this have a detrimental effect on our natural spawning channels?

Dr. Hayes: I do not think there is any doubt that if you cut the trees and allow an alternation of freshets and dry periods to intervene instead of a regularly flowing stream it will be detrimental to salmon fisheries. Similarly if you cut off the brush shelter over brooks it is also detrimental to the sur-

vival of the young fish. There has been a lot of work done on this and it is well established, I think.

I should say about pollution that you have to define the kind of pollution that you are mentioning. Pollution, if it is caused by the addition of organic material, may change the kind of fish that is there but result in the same amount or a greater amount of fish protein. For example in Lake Erie, which is very polluted, they are getting just about as much fish protein as they ever did, but they are not getting it out of the same species of fish; so that one has to distinguish between, let us say, adding human and animal excrement from farms as against putting in tailings from mines and heavy metals and things which are actually killing fish. Pollutants of human feces do not kill fish. In relatively limited amounts they probably do not even reduce the amount that is there but will probably change the species and knock out things like trout in favour of things like carp and sheephead and so on.

Mr. Durante: Do I have time for another question? I agree with you that there are various aspects of pollution and I consider anything that may affect our water resources as being a form of pollution. Once again I would like to make reference to our natural spawning streams that are being left in a mess by the forest industry in the Province of British Columbia. How serious is the effect on our natural spawning resources of artificial alterations of stream channels, for example, whether these be intentional or unintentional?

Dr. Hayes: Do you mean artificial for the purpose of increasing the fishery; that is the development of spawning channels for fish and so on?

Mr. Durante: No, I make specific reference to natural spawning channels. When the creek bed is disturbed in any way at all or the channel itself is altered, does this have a serious effect on the natural spawning?

Dr. Hayes: Yes, I think when you cut off the trees and clear the banks and change the stream from a regular flow to a rapidly alternating freshet and dry-up, the fish will be adversely affected.

Mr. Durante: So then our fisheries department should—

Dr. Hayes: On the other hand, of course, the removal of obstructions has improved the chances of the salmon to get up.

The Chairman: We have one more questioner on the list. We have already sat for half an hour past our regular time, so I think Mr. Howard will be the last questioner.

Mr. Howard (Skeena): Before I start, may I express my appreciation to Mr. Durante for his lecture on tardiness. I will extract it from the record and read it to other committee members who are friends of the hon. gentlemen and who are tardy, as usual themselves. Apart from that, I would like to ask Dr. Hayes—

Mr. Durante: That was not nice.

Mr. Howard (Skeena): But I think it was apropos of the comment, nice or not.

If I may, Mr. Chairman, I would like to ask Dr. Hayes this question. In your introductory remarks you made reference to "farming" of fish as distinct from "hunting", as I understand it. Has the Board prepared any reports or documents around the theme of the promotion of fish farming? It seems to me that this is one aspect of fisheries that as time goes on we should become more and more involved in to ensure a more efficient exploitation of any fish resource.

Dr. Hayes: This is what we look to in the future. I do not know if at the moment we have enough information to pull it together into any sort of reasonable-looking treatise. We could begin with expensive luxury products, such as oysters, on which work might be done in this direction. Also, there is the initial holding of lobsters after they are caught because of the seasonal restrictions in catch in the lobster industry. A whole year's supply may be caught in a month and they are kept in pounds, and there is a heavy death rate there. This is maintaining them. Of course, salmon is another area, and it is freshwater life. I think this would be where one could begin. Also, on the west coast the Alaska black cod has been successfully grown on an artificial diet and this of course, is another luxury product.

In Britain they are attempting to grow fish in warmed bays, where the water is brought up to approximately tropical temperature. This means introducing an exotic species and then trying to grow them in order to obtain a high price. I again take a conservative view of the success of this in Britain. Of course, this is being done in Japan, where they grow shrimp and other things that we do not seem to be able to handle the labour costs of. I think this is a thing of the future but I

believe initially it will come with luxury products rather than cheap protein.

Mr. Howard (Skeena): Yes. This is taking place in the production of oysters, but I was thinking now of—

Dr. Hayes: The Japanese can look after an individual oyster in order to produce a pearl. They put a little seed in the oyster to start the pearl, they look after it and then dive down and pick out that oyster. This is because a valuable product is involved. I do not think you could do that at the price at which you can sell an oyster to eat.

Mr. Howard (Skeena): No, but I was thinking more in terms of an extension of the less mobile type of fish to the non-luxury type of food, and at some time in the future I would appreciate some information on that. I just wondered if the Board had any reports or documents or written material about it.

Dr. Hayes: Of course, there has been a great deal done along this line in countries which have a scarcity of food. They are growing eels, carp, and so on, in Israel. Of course, carp have been grown for a very long time and there is a very small fish grown in the East, but you require a fairly long season of warm water to produce a crop. If you want to produce them like broiler chicks you have to have a long warm water season. We do not really have that kind of situation in many waters in Canada.

Mr. Howard (Skeena): I have one other question, if I may, Mr. Chairman. When the Committee was discussing the estimates of the Fisheries Research Board on a previous occasion they posed the suggestion to Dr. Hayes, who was a witness then as well, establishing some facility of the Fisheries Research Board in Prince Rupert which might be appropriate to the area. As I recall, the reply that we received at that time was that it was something that would be looked into in order to search out the possibilities, and so on. I wonder if we could find out what has occurred as a result of this searching, because I have not noticed any new buildings being built there.

Dr. Hayes: Our problem, to speak quite candidly, is in getting scientists of the quality that we must employ if we are going to do

this work to live away from some sort of academic centre. We are intending to put our main laboratories in areas where there is a university, or something like that, close by and in a scientific community where there are both seminars on the one hand and such things as computer facilities, and so on, on the other hand that are available for their research. I think we can and should extend our field laboratories to areas where work has to be done. However, I would hesitate at this stage to advocate that we set up a major laboratory in this country in a centre where there is not a rather good chance of attracting first class scientists to live there. Perhaps I am prejudiced but I would not put Prince Rupert in that class at the moment.

Mr. Howard (Skeena): It is true there is no university there but I was not speaking about a full-scale biological station or lab, such as exists at Nanaimo or in conjunction with the university of British Columbia. I was speaking of some facility appropriate to the area in which field work could be done. The fishermen and a lot of other people in Prince Rupert feel this way. It is a fairly major centre of fisheries products and they feel that some advantage could be gained by having people on the spot doing research in certain fisheries.

Dr. Hayes: I agree. We have field stations where people go and spend part of the year, and I do not see why we should not develop this sort of thing in Prince Rupert. I still feel that this is something that ought to be done when we have the financial opportunity to do it.

Mr. Howard (Skeena): I think that is also what you said in 1965.

Dr. Hayes: Yes, Mr. Howard.

Mr. Howard (Skeena): I am not saying that unkindly to you. I know you do not have control of the purse strings. Thank you very much, Mr. Chairman.

The Chairman: As usual, Mr. Whelan wants to get in the last question and the last word!

We will now adjourn. I wish to thank Dr. Hayes, Dr. Martin and the other officials for the time they have spent with us this morning. It has been very informative. On your next visit we will not impose on you and ask you to sit extra time.

STANDING COMMITTEE
ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE

No. 7

FRIDAY, NOVEMBER 15, 1968

Respecting

Revised Main Estimates (1968-1969) of Fisheries and Forestry.

APPEARING:

The Honourable Jack Davis, Minister of Fisheries.

WITNESSES:

From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister; Mr. W. C. MacKenzie, Director, Economic Services; and Dr. W. R. Martin, Assistant Chairman, Fisheries Research Board of Canada.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and Messrs.

Anderson,
Breau,
Comeau,
Crouse,
Cyr,
Dionne,

Goode,
Hogarth,
Howard (*Skeena*),
Lundrigan,
Mather,
McQuaid,

Moore (Bonavista-
Trinity-Conception),
Noble,
St-Pierre,
Smith (*Northumberland-
Miramichi*),
Smith (*Saint-Jean*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

(Text)

MINUTES OF PROCEEDINGS

FRIDAY, November 15, 1968

(7)

The Standing Committee on Fisheries and Forestry met this day at 9.37 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Breau, Comeau, Crossman, Cyr, Durante, Goode, Hogarth, Howard (*Skeena*), McQuaid, Moores (*Bonaville-Trinity-Conception*), Noble, Smith (*Northumberland-Miramichi*), Smith (*Saint-Jean*)—(13).

Also present: The Honourable Jack Davis, Minister of Fisheries.

In attendance: From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister; Mr. W. C. MacKenzie, Director, Economics Service; and Dr. W. R. Martin, Assistant Chairman, Fisheries Research Board of Canada.

By unanimous consent, Mr. Comeau was granted permission to withdraw his motion reading,—“That the Committee seek permission to sit while the House is sitting, only for the purpose of hearing “out of town” witnesses (or at the discretion of the Co-ordinating Committee).” (*See Minutes of Proceedings, November 8, 1968*).

Moved by Mr. Hogarth,

That the Committee seek permission to sit while the House is sitting,
And debate arising thereon, the question being put on the said motion,
And it was resolved in the affirmative: YEAS 11, NAYS 1.

The Chairman was ordered to report thereon as the Committee's Second Report to the House.

The following items in the Revised Main Estimates 1968-69—Fisheries and Forestry—having been considered previously were approved:

Fisheries Management and Development

Item 5—Operation and Maintenance	\$22,602,500
Item 10—Construction or Acquisition of Buildings, Works, Land and Equipment	5,378,600
Item 15—Grants, contributions and subsidies	3,820,000

The Committee reverted to Item 1: Departmental Administration and resumed questioning of the Honourable Jack Davis, Minister of Fisheries and the departmental officials.

The Chairman announced that the Minister of Fisheries had stated he would be available for questioning at the next meeting on Thursday, November 21, 1968.

At 11.00 a.m., discussion continuing, the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Friday, November 15, 1968

● 0936

The Chairman: I see a quorum.

Respecting Motion—*re Sitting while the House is sitting*

I wish to draw the Committee's attention to Mr. Comeau's motion at our last meeting, on Friday, November 8, 1968, pertaining to the motion to sit while the House is sitting.

I am advised that the last phrase of this motion "or at the discretion of the Co-ordinating Committee" is out of order, as it refers to a committee which has no official status.

Beauchesne's, 4th edition, Para 199, states:

Any irregularity of any portion of a motion shall render the whole motion irregular.

We cannot present a report to the House asking consent to something which is irregular, in whole or in part, and I ask the Committee's unanimous consent that the mover have unanimous consent to withdraw his motion.

Is it so agreed?

Mr. Hogarth: Would you read the motion again, sir?

Resolved,—That the Committee seek permission to sit while the House is sitting, only for the purpose of hearing "out of town" witnesses (or at the discretion of the Co-ordinating Committee).

Mr. Howard (Skeena): Mr. Chairman, it seems to me that if you have determined that the motion is out of order, there is no need for anybody to withdraw it.

Mr. Comeau: I withdraw the motion.

The Chairman: It is agreed, then, that the motion be withdrawn. In place of that do you wish to—

Mr. Hogarth: I move that we seek permission to sit at any time that we find it necessary during the ordinary sittings of the House.

Mr. Howard (Skeena): The motion is before us, Mr. Chairman?

The Chairman: Yes.

Mr. Howard (Skeena): I do not want to take up the time of the Committee now when we have people from the Department of Fisheries here just marking time, but it seems to me that there is a bit of an irregularity involved here partly because there was a meeting of the Steering Committee not too long ago in your office that dealt with this matter but not completely. It was held off at your suggestion until Mr. Crouse, who was on the Steering Committee, could check with members of the Conservative Party as to what their view was and so far as I know nothing further has developed from that. Are we trying to do two different things at once?

● 0940

The Chairman: No, Mr. Howard. Mr. Crouse told me that he would give me a yes or a no, and that if it was a yes we would not need to have another meeting. He stated that he would be either in favour or against a motion, and he indicated to me that he was not against it. That was the understanding. I should think that the Committee would be open to a motion now.

Mr. Durante: Mr. Chairman, Mr. Crouse indicated this to you following our last subcommittee meeting?

The Chairman: The last subcommittee meeting at which you were present.

Mr. Durante: Yes.

The Chairman: And he told me he would see me in the afternoon and tell me if he would propose it or not. He told me at that time he would not.

Mr. Smith (Northumberland): Mr. Chairman, do you think the motion is properly worded now?

The Chairman: What is the exact wording of the motion, Mr. Hogarth?

Mr. Hogarth: That we seek leave to sit while the House is sitting.

Mr. Goode: There is no reason why another motion cannot be passed after this one saying that we shall only meet at the discretion of the Steering Committee as long as it does not go to the House of Commons. There is no reason why we cannot still control ourselves.

The Chairman: Well, it stands to reason that we have to get permission of the Coordinating Committee at all times for rooms in which to sit; it is going to be impossible to sit without their co-operation on that account. We will not be able to sit unless the Coordinating Committee gives us a room.

Mr. Hogarth: I appreciate that, sir, but I think that is a matter of mechanics. The point that I am trying to establish is the substantive motion that we have leave to sit while the House is sitting and we will worry about rooms and steering committees later.

I do not want to see any member of the Committee embarrassed because he has to be in the House. I should think that the Chair would then exercise discretion against sitting at that time; but I think we should have the power to do it as early as possible if it is necessary and agreeable.

The Chairman: If it is the wish of the Committee.

Mr. Howard (Skeena): Mr. Chairman, I wonder if I could reiterate what we said in the Steering Committee as it is valid in connection with some aspect of this anyway.

At our first and organizational meeting, I think it was Mr. Hogarth who moved the motion, and the Committee agreed to it unanimously, that we recommend to the House that the Committee have authority to travel from place to place, the purpose of it being to be able to visit particular communities and see at first hand what takes place and to provide the people in those communities a better opportunity than they otherwise might have of getting their views about fisheries matters to the Committee. In fact, Mr. Hogarth mentioned a number of places—

St. John's, I think, and Halifax and New Westminster and Prince Rupert. In any event, the Committee unanimously agreed with this.

At some subsequent time—I do not recall the exact lapse of time, but there was a lapse of time—you, as Chairman of the Committee, reported this to the House; that the Committee recommends it have authority to travel from place to place. But that motion was never put to the House. The motion was never moved; you did not take the next logical step of moving the motion to endorse that report of the Committee. As a consequence, we find ourselves somewhat in limbo.

The thing that disturbs me is that the view of the Committee, which was unanimous, should have been put to the House and that you, as Chairman and the only one able to do this, did not move the motion to endorse and adopt the recommendation of the Committee. Otherwise, our thoughts and our expectations are so far subverted. Now, why?

• 0945

In addition to that, we proceed to say, without dealing with the matter of travelling from place to place, that we are now going to sit while the House is sitting, as the expression was put by one of the gentlemen opposite, to accommodate out-of-town witnesses. Now, we are either going to do one or the other. It seems to me, Mr. Chairman, that until we clear up the question as to what the Committee intends or desires to do in terms of travelling, we are really going in another direction in asking to sit while the House is sitting here in Ottawa, to an extent for the purpose of accommodating out-of-town witnesses, when the intention of the Committee was to travel to some of these other communities.

It seems to me that we should not proceed now to do this in the face of what we have already done unless, of course, there is some explanation that the Committee does not know of and unless, of course, the Minister or the government or the Minister of Finance has frowned upon this activity of committees travelling and seeking out information in communities where fisheries are a problem, or that there is some other behind-the-scenes activity that has destroyed the original intent of the Committee.

Mr. Hogarth: Mr. Chairman, as I recall, the activity was hardly behind the scenes because there were three or four committees that filed like reports. I think it was the

honourable member for Timiskaming who refused to accept unanimously those reports and they will now be put into debate when the occasion arises.

I would take it that our Chairman has not pressed this motion in the House awaiting the outcome of that debate and with regard to these other committees. I see nothing inconsistent in our position at all. We are certainly not going to travel all over Canada to hear one witness; at the same time we would hardly expect a witness to accommodate the House and the Committee when the Committee could sit during sittings of the House. I think that both these motions should go before the House, and if they are held in limbo at that stage they could be dealt with when the general debate comes up.

Mr. Howard (Skeena): I think there are a couple of errors. From what he says now, Mr. Hogarth was obviously pulling the Committee's leg and was not serious when he moved the original motion that the Committee have the authority to travel and visit these communities—in the light of what he says now.

Mr. Hogarth: I have never pulled the leg of a committee in my life.

Mr. Howard (Skeena): Well, we cannot extend ourselves any further in that conversation; surely we would be out of order. As I recall it, there is one outstanding committee listed for consideration by the House that has not been moved, and it does not have to do with the situation of sitting while the House is sitting. I think if Mr. Hogarth looks at the record he will find that the objection which Mr. Peters raised was not an objection to sitting while the House was sitting, and those motions to which he objected were subsequently proceeded with and the House dealt with them.

Mr. Hogarth: Well, that may be so.

Mr. Howard (Skeena): Yes, within a matter of a couple of days. What Mr. Peters was objecting to was the unanimous consent to move a motion to adopt a committee's report on the same day that it was presented. That requires unanimous consent and he objected there and did not give unanimous consent.

Mr. Hogarth: Yes.

Mr. Howard (Skeena): But this did not prevent the chairmen of those committees from

giving the appropriate notice of 48 hours to endorse the committees' reports.

The Chairman: I did not hesitate to bring this motion to the House, but I was of the opinion—and I mentioned it to the House Leader at the time—and he gave me to understand that when permission to travel from place to place was needed there would be ample time to ask for this permission. He did not in any way refuse or tell me not to ask for it, but indicated that for the time being there was no need to ask for something that would only be needed in the future.

Mr. Howard (Skeena): Which is exactly what applies to the motion before us now.

The Chairman: This is a question that would be more pressing; it could come up at any time. I am not pressing it. It is up to the Committee if they wish to adopt it or not.

Mr. Howard (Skeena): Well, it is obvious that the Committee is going to adopt it, Mr. Chairman. There is no argument about that. But I still think it is an incorrect way of proceeding, and it has certainly been misleading to many people on the West Coast with respect to the operations of this Committee. As a result of the original motion of the Committee, people at home have some expectation and hope that the Committee will announce its intention of travelling and visiting certain areas so that they can then govern themselves accordingly, and nothing so far has happened.

The Chairman: We can do that at any time if the Committee so wishes.

Mr. McQuaid: Mr. Chairman, we have wasted 20 minutes already. We will be sitting all winter if we do not get under way. I suggest that you put the motion.

The Chairman: Well, we will, then.

• 0950

Mr. Howard (Skeena): Well, apropos of that remark, Mr. Chairman, may I point out that I said at the outset that it was not my hope or desire to delay the proceedings of the Committee, but that I thought we were proceeding in the wrong way because this matter had been dealt with before going to the Steering Committee which, I think, is the proper place to deal with it in any event. That is one of the reasons the Steering Committee was set up. If there is any delay, it is a delay of

yours, Mr. Chairman, in bringing the matter here when the Steering Committee could have dealt with it.

The Chairman: The matter of this motion's being out of order was something that we had to bring to the Committee here, to have it withdrawn or dealt with. If it is the Committee's wish to put in another motion, I do not think I have the power to ignore it.

Mr. Hogarth: Well, I am ready for the question, Mr. Chairman.

The Chairman: Are you ready for the question? In favour? Are there any opposed?

Mr. Howard (Skeena): I am opposed, Mr. Chairman.

Mr. Goode: Mr. Chairman, I would just like to go on record as favouring Mr. Howard's suggestion of moving from place to place. Because I voted for this motion I was not voting against the idea of visiting the East and West Coasts.

The Chairman: Well, that is fine. I will call Item 1.

DEPARTMENT OF FISHERIES AND FORESTRY

1: Departmental Administration, including grants and contributions as detailed in the Estimates3,509,175

I invite the Honourable the Minister of Fisheries and Dr. Needler to the witness chairs.

At our last meeting with the Minister we dealt with Item 5. Are there further questions?

Items 5, 10 and 15 agreed to.

The Chairman: Shall Item 20 carry? We were dealing with it yesterday. That is the Fisheries Research Board.

Mr. Hogarth: Is this the last Fisheries item, Mr. Chairman?

Mr. Comeau: I have a few questions on that.

The Chairman: We could revert to Item 1. I do not think we are prepared here to answer too many questions on research on this Item 20, so could we revert to Item 1 which was stood for questions of the Minister? Would that be acceptable?

• 0955

Mr. Hogarth: We are beginning debate on Item 1 now, sir?

The Chairman: Yes, Mr. Hogarth.

Mr. Hogarth: Mr. Minister, I am concerned with a report which came to me yesterday that a large chain store operation on the West Coast of Canada is marketing on the West Coast the species sometimes known as Greenland halibut. I think this is a deceptive practice, particularly on the West Coast where the Pacific Coast halibut is in such popular demand. I would be very pleased if you would tell me whether your Department is aware of what is happening and what steps have been taken. Could you give us some history concerning Greenland halibut so far as your Department is aware?

Hon. Jack Davis (Minister of Fisheries): There certainly is a problem here. A species of fish is now being caught in increasing quantities—and in one sense this is quite a success story—off the coast of Newfoundland, essentially in the bays of Newfoundland, and, as I said, has been marketed in the United States in increasing quantities under the name "Greenland halibut".

My understanding is that in 1946 the U.S. authorities decreed that this name "Greenland halibut" be used and indeed as recently as last spring—that is the spring of 1968—reaffirmed this designation of "Greenland halibut". However, as the year progressed and as pressure from the Pacific Coast halibut fisheries—U.S., Alaskan and Canadian—mounted and certain prominent Americans from the West Coast also added their weight to the case for a redesignation of this species, the U.S. Food and Drug Administration changed its mind.

It changed its mind in August, tentatively suggested that the name "Northern flounder" be used but, however, scheduled hearings for October 2 in Washington. At the hearings various parties presented their points of view. The Pacific Coast halibut fishery, Canadian and American, was adamant that the word "halibut" not be used.

There now appears to be a consensus including, I might say, a viewpoint now held generally in Newfoundland—the source of this fish—that the word "halibut" will not be used, but the problem now is a designation of

a term by the U.S. Food and Drug Administration with is scientifically acceptable and certainly commercially useful to the Newfoundland fishery in terms of getting rid of errors.

Now, I am focusing on the U.S. authorities because more than 90 per cent of this Newfoundland production is marketed in the United States. A comparatively small quantity has been sold in Canada. It has been a success story in the sense that this trade has really developed in volume in the last half-dozen years. The problem of naming this fish in the United States is the central one. The halibut fishery on the West Coast in a sense has won its case. This Newfoundland product will no longer be called "halibut".

The Newfoundland fishery now is recommending—and I must say that I am supporting this—the use of the term "Greenland turbot". This would be for the marketing of the 1969 catch, not only in the United States but in Canada. However, use of the term "turbot" is opposed by the British and by the Danes who sell some turbot in the United States. It is a gourmet item. It is a high-price item and they contend, as the Pacific halibut people have done, that use of the word "turbot" in the case of marketing Newfoundland fish would undermine their trade.

So there is opposition to the word "turbot". The opposition to the words "Northern flounder" comes largely from the East Coast U.S. fishery. So, there is a problem there. This species of fish which we are now catching in the Newfoundland Bay and marketing in the United States is not a turbot, in the strict, scientific sense of the word. It is certainly different from the Pacific halibut; it has been sold for decades in Northern Europe as a black halibut, or a blue halibut, but it is not a true halibut, I gather; it is a flounder species.

• 1000

As I say, the Newfoundland fishermen, the Newfoundland fish trade, the Minister of Fisheries of Newfoundland and certainly my office have recommended the use of the term "Greenland turbot" in the United States. But there is opposition and there is uncertainty; and there will very soon be a further hearing by the United States food and drug administration to determine a term commercially acceptable in the United States.

We are recommending the name "Greenland turbot", but although the Department of Fisheries can require such labelling as goes on in Canada to be any name we designate, I feel that I would be in a very poor position were I now to require the fishery in Newfoundland to label this fish "Greenland turbot", and then, in a few weeks, have the U.S. authorities decree another name. Someone would be liable for that mistake, and I assume it would be the Canadian Government, or the people of Canada. Therefore, I am certainly not prepared at this moment to require a different designation. We are recommending "Greenland turbot".

Meanwhile a small percentage of this fish is being sold in Canada as "Greenland halibut", a name which was acceptable until very recently in the United States.

Mr. Hogarth: Is this fish packaged in the United States or in Canada?

Mr. Davis: It is a mixture. Some of the packaging is done in Canada and some in the United States.

What really "tore it", as I understand it, was that in some cases the fish that went to the United States was not, in fact, packaged but was sold, under the counter, with a label or card on top of the counter, not as "Greenland halibut" but as "halibut". This is what really brought the matter to a head.

It is not all labelled at the source, or even en route. It may, on occasion, merely be labelled by the store at the point of sale.

That presents rather a problem, but if the United States food and drug administration would make up its mind the problem would disappear.

That problem will not exist in the West Coast fishery next year. The term "halibut" will not be used at all.

Mr. Hogarth: Do you expect that by the time the fish is marketed in 1969 the Department of Fisheries will have designated the exact trade name under which it is to be marketed in Canada?

Mr. Davis: Yes, certainly. I do not like to be tagging along behind the United States in this matter, but we really have no choice. With more than 90 per cent of the fish being sold in the United States, its designation really has to be determined by what their

authorities will accept as the proper term for marketing it.

Mr. Hogarth: Apart from the marketing, from what I have learned I gather that this fish does not have the protein content of the Pacific Coast halibut. Is that correct?

Mr. Davis: It certainly has not been fetching the price, and that is my understanding also.

Perhaps I should refer to Dr. Needler, or the experts from the Department, who know a good deal more about the species and its quality.

Dr. A. W. H. Needler (Deputy Minister of Fisheries): Mr. Chairman, I am afraid we do not have data on the protein content. All fish fillets are mainly protein, apart from the water.

Mr. Hogarth: Is it by any stretch of the imagination a species of halibut, or is it an altogether different species?

Dr. Needler: If I were to speak as a biologist I would say that it could only be called *Reinhardtius hippoglossoides*, which probably would not be too good.

Mr. Hogarth: What would you call halibut?

Dr. Needler: Halibut is *Hippoglossus hippoglossus*. The Latin name means that it is a fish named by a taxonomist called Reinhardt and is like a halibut.

Mr. Davis: A halibut-like fish?

• 1005

Dr. Needler: A halibut-like fish, named by Reinhardt.

Mr. Hogarth: But to market it under the name of "halibut" would be deceptive, would it not, even in a biological sense?

Dr. Needler: Yes, just as "halibut", unqualified; but to market it as "Greenland halibut" would be acceptable to the biologists in North America, because the American Fisheries Society, in a review of the common names of various species, listed "Greenland halibut" as the common name; and this has been the case also in some general scientific publications on fish.

The danger is the one that the Minister has pointed out, that when it comes to be retailed people may forget the "Greenland," or may

print it in very small print, so that the public is led to believe that it is halibut. This would be misleading.

Mr. Davis: If I may interject here, there are two problems. One is that a new source of fish, a halibut-like fish, is emerging on the continent and it has put the Newfoundland fishermen in some degree in competition with the West Coast fishermen.

However, I gather that if you cook this fish the taste is somewhat different from that of the West Coast halibut, and that the texture is also somewhat different. Therefore, the consumer has a good case for a different label.

Therefore, if one were being quite technical about it—certainly technical from the consumer's point of view—it would be proper to have a different designation. I do not believe it would be correct to use for this fish the same term as is used for halibut, and particularly Pacific halibut.

The problem now for the East Coast fishery is to arrive quickly at a new name that has more appeal than a word such as "flounder", that will allow them to mount an effective merchandising campaign and get this fish of different quality really moving in the United States market.

Essentially our Pacific fishery is aimed at the United States market, and certainly this one is. The naming problem is basically one for the United States, but it has spilled back into Canada. We are anxious that the Americans make up their minds. We are, in effect, saying that they can call it "Greenland turbot". There is some opposition to that, but we hope that we will prevail in this, and prevail soon, so that we can get the new merchandising effort under way to help the Newfoundland fishermen without hurting the Pacific West Coast halibut fishermen.

Mr. Hogarth: I gather from your remarks that the marketing of this fish, particularly on the eastern seaboard of the United States, has damaged the marketing of Pacific Coast halibut?

Mr. Davis: The two have been competitive, partly because of the same label, or much the same label, having been used. In those cases where the word "halibut" has appeared on a card on the top of the counter, and the fish have been displayed underneath, to the consumer they have been directly competitive;

and the Newfoundland product, at least traditionally, has been sold at a lower price than the Pacific Coast product.

The Chairman: Mr. Hogarth, I am sorry; your time has expired.

Mr. Hogarth: I have had all I required.

The Chairman: Mr. Goode?

Mr. Goode: Thank you, Mr. Chairman. The item I wish to discuss with the Minister is in Vote 1, under Economics Service, including \$10,000 for grants to Canadian Universities for Research in Social Sciences. You may have to ask one of your research men about this, but what universities are receiving these grants and what studies are being carried on? Are there, for instance, any studies in pollution as it affects salmon and fish generally?

Mr. Davis: Dr. Needler, perhaps someone could comment in some depth on that item?

Dr. Needler: Mr. Chairman, perhaps Mr. MacKenzie could answer this question on the grants that were made in 1968-69, and to whom and on what subjects, and so forth.

Mr. W. C. MacKenzie (Director, Economic Resource Management, Department of Fisheries): Mr. Chairman, in the current fiscal year our sole grant was to Dalhousie University in Halifax. It was to support a general program of research in the economy of the fisheries.

● 1010

The staff in the Economics Department at Dalhousie has a long-term interest in building up what may eventually be an institute of fisheries economic research, and we are supporting this to the most modest extent possible. Dalhousie University is located in a city where facilities for interdisciplinary research into fisheries are available in a greater concentration than in most other parts of the country, with the possible exception of Vancouver.

There is located in and around Halifax, the headquarters of the International Commission for the Northeast Atlantic Fisheries, the technological research station of the Fisheries Research Board and the Eastern institutions engaged in oceanographic research. As I said, this provides a grouping of disciplines for research into fisheries that is almost unique in Canada. In the past, of course, we have also provided—again out of this sum of \$10,-

000—grants for specific research projects at Memorial University in Newfoundland and at the University of British Columbia. At the present time we are also providing assistance for research in a number of economic aspects of fisheries at the University of Victoria and at Memorial University.

We do not have any plans for the use of this grant for the coming fiscal year, except that we expect we will continue to support the work at Dalhousie University, and if appropriate projects are presented to us by other universities we will also—so far as these funds will permit us—support those through our grants.

Mr. Goode: As you can see, Mr. Chairman, many of the new members of Parliament are very concerned about pollution as it affects rivers, our fishing industry and every other aspect of our social and economical life. I take it that the only money being spent on research into pollution is being spent by the Fisheries Research Board and none of this \$647,777 is being spent on the economic aspect of fisheries?

Mr. MacKenzie: This sum that you mention, sir, is the total expenditure for the economic service. Only \$10,000 of that is used for research, plus our special services, and when I say "special services" I should point out that some of that is also used for work that could be described as research on an ad hoc basis.

Unquestionably there are economic aspects to pollution as it affects fisheries but up to the present time we have not mounted a program which is related to that from the economic service.

Mr. Goode: One aspect of pollution that must affect fisheries occurs on the West Coast on the Fraser River at New Westminster, where the factories of New Westminster are indeed polluting the river and the rest of the municipalities are not doing so to any extent. This to me is an outstanding example of the need for a project of this kind, but perhaps we could pursue that later.

Mr. Davis: My impression, Mr. Chairman, is that this item as it is headed deals with the economic service, and the \$10,000 is for a specific grant to a specific university under the general heading of economic studies. The broader subject of pollution, of course, comes under several other votes, headings, branches

and divisions of the Department and including the Fisheries Research Board, but not exclusively.

• 1015

Mr. Goode: I have been vigorously pursuing this matter since we have been meeting and I have not found it anywhere else except under the Fisheries Research Board.

Mr. Davis: When I have asked questions about pollution in the lower Fraser River the people who normally provided me with the answers have been the regional office of the Department of Fisheries as distinct from the Fisheries Research Board, and I know that they have been testing and following the conditions and possible developments in the lower Fraser. So, my experience has been that there are some people outside the Fisheries Research Board who have been looking at this problem. Perhaps Dr. Needler could elaborate on that.

Dr. Needler: Mr. Chairman, the major activity in the Department in following actual pollution and its affects, in combatting pollution and in bringing pressure or insistence that industry observe proper waste disposal is carried on mainly by the Resource Development Service. The reason for that is not that this is resource development, this is resource protection of course, but the same kinds of abilities are needed. You need people who are biologists and engineers to look at the problems of waste disposal. There is a great deal of activity in this field and especially, I might say, on the Pacific Coast.

Mr. Goode: I think I asked Dr. Martin yesterday about consultation with industries. If, for instance, Dow Chemical decided to set up a new plant on the Fraser River would they have to come to you first for approval of their pollution control or would they be allowed to build and then be controlled afterwards?

Dr. Needler: Mr. Chairman, I think this was touched on in one of the earlier meetings of this Committee. The Fisheries Act gives the Department of Fisheries power to insist that bad conditions be remedied but it does not give the Department of Fisheries licensing power in the sense that they could say the industry must not be established unless it does such and such. However, the industry is increasingly realizing that if they establish a pulp mill, for example, and do not provide

adequate waste disposal, that under the Fisheries Act they may be in trouble. In British Columbia it is usual for people, if they are establishing a new pulp mill, to consult with our people and see that the proposed facilities are satisfactory before they built that mill. This is not true of all industries because I do not think all industries are as aware as the pulp and paper industry is of this sort of thing, but we try to encourage an advance consultation regarding waste disposal.

Mr. Davis: Mr. Chairman, may I say something which is quite general in this connection. Federal powers to prevent the pollution of water seem to me to be largely concentrated under the headings of fisheries and navigation. The federal government does not have substantial powers with regard to property and industrial development locally within the provinces, but it certainly can move on the fisheries front and if something affects navigation it can move in respect of that. Large logs and other debris could affect navigation, so pollution of such a large scale type as this could be stopped by federal legislation in the area of, let us say, the Navigable Waters Protection Act, and so on. But if you want to get down to more minute physical particles or dissolved materials, and so on, it seems to me that the clearest avenue is fisheries. The Fisheries Act was not framed with rigorous pollution control in mind. It seems to me that if we desire to tighten up federal control over pollution—at least the pollution of waters—that we can tighten up the Fisheries Act. I also think something might well be said for anticipating problems before they occur rather than simply trying to tidy up after the damage has been done.

As Dr. Needler says, after some hard lessons the pulp and paper industry on the West Coast has begun to consult experts generally, and certainly the Department of Fisheries, as to their designs and the effectiveness of the processes they are going to use, and so on. We have had two recent announcements on the West Coast covering several millions of dollars in magnitude about a new pulp mill being installed for cleanup with new facilities. We also have a few cases on the West Coast which will have to be dealt with—and at least one of them shortly—where a mill has been built and the facilities are not adequate, and we may have to move because a lot of fish are killed. This is too bad. We

should not be going around trying to tidy up after the event. I personally would like to see the Act tightened up so that we can move ahead of time rather than consult after the event and involve others in greater expenditure in the long run than might otherwise have been involved.

• 1020

The Chairman: Your time is up, Mr. Goode.

Mr. Goode: Thank you.

Mr. Comeau: Is it correct that this new method of netting fish results in the fish being drowned in the net?

Dr. Needler: It depends on how long they are left in the net. If the gill-netting operation is a really good one quite often the fish are taken out of the net alive.

Mr. Comeau: Some have said that this method results in the fish not being as tasty as fish caught by other methods of netting. Have you a comment on that?

Dr. Needler: Mr. Chairman, the great majority of salmon, for example, are caught by gill netting and they are generally regarded as being in quite good condition. I think that if gill nets are poorly used—in other words if the fish are left too long in the nets so that they die and maybe are left dead in the nets for some time—then quality can deteriorate, but if you are thinking in general terms of gill netting all species, it is a perfectly good method of catching high quality fish. For example, the highest quality herring that bring a good price in Europe are caught mainly in gill nets.

Mr. Comeau: I have a question on the tuna population—and I am speaking specifically of the Wedgeport area end of the province of Nova Scotia. Has any research been done on currents and so on to see if they affect the tuna population? Some years tuna fishing is good and other years it is not. Do you know the reason for this?

Dr. Needler: That area is on the northern limit of the range where the fish are large, swim long distances, sometimes quite fast, and of course under these conditions you can expect a good bit of variation in the appearance of such fish at any particular point.

Some general research has been done on this. I could not give details of recent

research, but if you are interested possibly Dr. Martin could give you more information on what is going on right now.

Dr. W. K. Martin (Assistant Chairman, Fisheries Research Board): Mr. Chairman, our laboratory at St. Andrews, New Brunswick is investigating the large pelagic fisheries on the Atlantic Coast, including the tuna fisheries. There is a direct relationship between the distribution of swordfish and temperature conditions. In general, they are found along the edge of the Continental Shelf. The relationship is not as precise for tuna but there is a relationship between temperature conditions, variations in these from year to year, and the distribution of tuna. This is being investigated carefully by the St. Andrews station and I think in the long run this investigation will prove to be useful in the development of the tuna fishery on the Atlantic Coast.

• 1025

Mr. Comeau: Is any research or work being done to control the quality of fish that end up on supermarket shelves?

Dr. Needler: Mr. Chairman, a great deal of research on the factors that control the quality of fish has been done by the Fisheries Research Board and some practical research has been done by the Inspection Service. There is no doubt that quality has greatly improved as a result of this research. However, we have concentrated our efforts at the producing end rather than at the retailing end, indeed we exercise more control at the producing end than we do at the retailing end. However, we do co-operate with other agencies regarding the quality of fish retailed.

Mr. Comeau: The Department issued a release, I believe, that referred to the granting of loans to the Indians of British Columbia. I asked a question in the House on this. Has there been a change in policy as far as subsidies on boats is concerned, or is the situation being handled differently in our area, where subsidies were reduced? I understand that these subsidies will create new subsidies—grants and loans to the Indians of British Columbia. Would you comment on that, Mr. Minister?

Mr. Davis: I think you are correct in interpreting this as a new program. It is new in two respects: it is beamed at the native peo-

ple—the Indians, as distinct from the whole community, and it is new in the sense that the money comes out of the Department of Indian Affairs and Northern Development rather than the Department of Fisheries directly. The money is voted to enable native people, on the West Coast of British Columbia in this particular case, to get into the fishery either by buying an existing vessel and equipping it or by building a new vessel. They can also be assisted with re-equipping and so on. Substantially it is designed to enable native fishermen or Indians who may make good fishermen to get into the fishery and fish effectively with up to date equipment. But, in the main, it is a Department of Indian Affairs program. It is being supervised in large measure by the Department of Fisheries people because, of course, they have a closer and better knowledge of the fishery, but the money comes from Indian Affairs and the supervision is largely within the Fisheries Department competence.

Mr. Comeau: But is money the problem in this? I thought that the reason for reducing the subsidy was that there were too many boats for too few fish. Is money the problem or is it the fish?

Mr. Davis: Money is always a problem but this is a program designed to help native fishermen to be more effective and to permit new entrants from the Indian population into the fishery. It is akin to moneys enabling Indians to do other things—manufacture a new product and so on. It is not going to have a very substantial effect, certainly on the West Coast fishery, in terms of new vessels entering the fishery, but from the point of view of the Indians it is a significant program. On the East Coast, for example, we had a very large program of construction in recent years. In some areas at least there was, if not a surplus of vessels, a near-surplus for a time. We caught up, we re-equipped much of our Canadian fishery. It is a better equipped fishery now than the American fishery as far as boats are concerned. No doubt, we have got to do a good deal more in this direction, but this new program is designed to help the Indians specifically and not the fishery generally.

• 1030

Mr. Comeau: On the East Coast, is it a money problem, or a problem of too many boats for too few fish?

Mr. Davis: Well, I am sure we can always do with better boats. Certainly, we can replace a number of the existing vessels we have, so I would say that it is a money problem to a degree. But I gather in talking to people in the fishery and certainly to departmental officials that there was, in Nova Scotia for example, a surplus situation for a time, though perhaps I could ask Dr. Needler to comment on that.

Dr. Needler: Mr. Chairman, I think it was brought to the attention of the House by Mr. Crouse that this situation seemed to be developing in Nova Scotia two years ago. I do not think that this situation exists any longer, because new uses have been found for boats of the sizes of which he was talking, that is wooden vessels around 80 to 100 feet. We do not believe that except in certain particular fisheries on the East Coast there are too many boats catching too few fish. I think this is true of the lobster fishery; it seems to be somewhat akin to the salmon fishery in this regard.

If I might revert to this program in British Columbia, when the problem of restricting entry to the salmon fishery was discussed by the principal fishery organizations on the Pacific Coast, the great majority believed some kind of restriction was necessary because they thought there were too many salmon boats. But they all were of the opinion that some special consideration should be given to the native people who, for various reasons, had not been able to finance as good boats as the other people have, in general. I think the effect of this program to which you referred will be to equalize this a little bit.

Mr. Davis: I might add perhaps that the program for helping the native fishermen on the West Coast was first announced last spring and reference to it was made when, in September, we announced the license limitation of salmon commercial fishing vessels generally. So the two are on all fours, but I think one can also say that the native fisherman has a special position in the overall scheme of things up there.

The Chairman: Mr. Howard.

Mr. Howard (Skeena): Mr. Chairman, I think it was Mr. Davis who touched upon and dealt with the matter of pollution which is, perhaps, above all other general problems, the most important one, not only in respect to

fisheries which we are dealing with here but the process of air and water pollution, clean water and the like in the whole North American continent. I was interested to hear Mr. Davis say that he hoped—at least this is what I understood him to intimate anyway—sometime we might be able to get the Fisheries Act tightened up so that we can really embark on this “ounce of prevention” concept instead of the “pound of cure” afterwards. It is something, incidentally which we have been talking about or urging action on for some years now. I wonder if I could inquire, if the restriction on Cabinet leaks permits this sort of thing, whether you have any thoughts of a timetable as to when we might move towards this advance in the Fisheries Act to give the Department more authority to deal with pollution control?

• 1035

Mr. Davis: Looking at the timetable, I do not think it is reasonable or right to assume that the Fisheries Act would come before Parliament during the current session, but I would hope very early in the next session we would have a real opportunity to overhaul the Fisheries Act, particularly in respect to pollution.

Mr. Howard (Skeena): This is more valuable than has been the situation in the past, anyhow, when we have only talked about it in an academic way, without any real determination to do something about it.

Mr. Davis: I think you probably agree with me that it is under the heading of “fisheries” that we are best able to get at this problem from a federal point of view.

Mr. Howard (Skeena): Right. Well, we flounder—excuse the word—regularly in this morass of federal-provincial controversy over whose jurisdiction it is to deal with many of these matters, and in the matter of pollution control, there is a divided jurisdiction. I am partial to taking every step we can under the authority in fisheries to control it to the ultimate extent, and knowing that it will have a spill-over to other areas, too.

Mr. Davis: Yes, we must not try to conceal the fact that several departments are interested in water and water quality. The Department of Fisheries is concerned about living organisms, and this includes algae, incidentally; animals in the sense of fish; vegetable

matter in the sense of algae; and so on. The Department of Energy, Mines and Resources is concerned about the amounts of flows of water and the quality of water in the mineral sense, the chemical contents, and so on. The Department of Transport is concerned about debris in the water that affects navigation, and this is a form of pollution, on occasion. So there are at least three departments, possibly four, including the Department of National Health and Welfare, that are involved. But the problem is to have a clear-cut division of labour between them. As I understand it, at the Canada Water Centre which is being developed near Hamilton, the division is clear cut. The living substances in the water are under the Department of Fisheries, and the mineral aspects are under the Department of Energy, Mines and Resources.

Mr. Howard (Skeena): Mr. Goode raised the point earlier about being unable to find in the Estimates any clear indications of activity in the pollution control field. Has the Department anything in written form, in terms of a report or documentation, about this matter, or could it be prepared so the members of the Committee might have something all in one piece about what is taking place now in this field, and even extending into the hopes as to what should take place. Do you think this would be possible?

Mr. Davis: I think this would be very useful, certainly, let us say, for the next session of Parliament. Perhaps I should ask Dr. Needler whether we could have some summary document which might be tabled at a later sitting of this Committee in this session. Is that possible?

Dr. Needler: Mr. Chairman, it depends, of course, on how long the Committee sits. But I would think that a summary of our activities in the pollution field—a brief summary of a few pages—could be prepared in a few days, in a week or 10 days.

Mr. Howard (Skeena): And perhaps as an addendum to it, a bibliography about other material, so that persons who may want to look further, could look it up themselves. Would this be possible to do?

Dr. Needler: It might be more useful, in the long run to do this job more thoroughly and take a little bit longer time. But for the benefit of this Committee I would think that a summary of the pollution activities of the

Department at the moment, and of any firm plans we have, could be put together.

• 1040

Mr. Davis: It would be very useful to me, and I am sure to others.

Mr. Howard (Skeena): I am thinking of the two-fold aspect, Mr. Chairman, of the Committee's immediate or semi-immediate information, and also as a rather extensive prelude to the anticipated changes to the Act that the Minister is speaking about for, hopefully, the next session. We need something to generate, to an extent, a public conversation and understanding about what it is hoped to accomplish. There is no sense in our operating in a vacuum. The more people we can involve in what we are trying to do, the better off we are.

Mr. Davis: Yes, I think it would be useful for us to take, in effect, a cut across all these items as they appear in the Estimates and produce a descriptive paper of 10 pages in length, for example, and attach a few numbers as to the estimated dollar outlays under the several branches and divisions and, of course, the Fisheries Research Board, so that we all have a little better idea of how much of the taxpayers' money is going through this Department to combat pollution.

Mr. Howard (Skeena): Mr. Chairman, I wonder whether I have a sufficient amount of time to at least start another subject that relates to the matter of straight base lines the Minister mentioned at an earlier meeting and, incidentally, in the process commend the Minister for his openness and candour in this field which has not been evident so far as his predecessors are concerned. The other day was the first time that I have heard anyone make any definitive reference to the extent of a base line or to say as the Minister did that the 100-mile distance between Cape Scott and Cape St. James on the West Coast is considered to be too long a distance so far as international acceptance of a base line is concerned.

I think on some other occasion the Minister has mentioned 44 miles as being about the extent of some sort of international acceptance of a straight base line, but is it possible to have any more clear definition of where the base lines might be on the West Coast, taking into account this 100 mile—44 mile

attitude, especially in Queen Charlotte Sound? What the Minister was saying, as I understood it, is that the base of the Territorial Sea and Fishing Zones Act in 1964 was the submission of the Fisheries Council of Canada and persistently Mr. Martin, as Secretary of State for External Affairs and Mr. Robichaud, as Minister of Fisheries, said that this was the basis of their concern and this was what the base lines were going to be determined on, and so on.

Everything reverted to that submission of the Fisheries Council of Canada which had delineated on a map the base line drawn from Cape Scott, the northern tip of Vancouver Island, up to Cape St. James the southern tip of the Queen Charlottes and then, of course, northward to the international border of Alaska which I gather is not a factor in any event. This is a departure; the declarations now are a departure from that. In other words, the base line probably is not going to be drawn to enclose Queen Charlotte Sound but will have an indentation in there somewhere.

Mr. Davis: The legislation passed in 1964 was important in two respects; first, it declared firmly that the Parliament of Canada supported the 12 mile-concept as distinct from a 3-mile concept or 9 or 6, but 12 miles out from something. The other feature in addition to the 12-mile feature was the drawing of base lines from headland to headland beyond which the 12 miles would be measured.

Now, the legislation does not say how long a base line can be, and really the important point of your question is, I think, how long in a sense dare we draw these lines? The 44-mile figure is one that everyone latches on to merely because in a case with the British the Norwegians managed to get 44 miles to stick back in 1951, I think it was, before the International Court in The Hague, so that one country has drawn a base line as long as 44 miles.

• 1045

Looking at the West Coast of Canada, for example, nature has provided us with headlands, the majority of which are closer together than 44 miles so we can, without much trepidation, draw base lines all along with west coast of Vancouver Island, all along the west coast to the Queen Charlottes.

Base lines, incidentally, in the case of the Charlottes are beyond the Continental Shelf and much of Vancouver Island would be on the Continental Shelf, or take the 12 miles beyond the Continental Shelf, but the hang-up, at least in terms of what we could predictably get away with if you like, is the 100-mile gap from Vancouver Island and the Queen Charlottes.

Let us assume that Cabinet authorizes the Department of Energy, Mines and Resources which draws our maps for Canada to publish maps showing this line 12 miles out from all headlands running all along the West Coast of British Columbia, including the 100 miles between Vancouver Island and the Queen Charlottes. We may—and this would happen promptly—be taken to Court as a nation. Our case would be heard eventually before the International Court at The Hague, and we may be able to appeal it and stall it, and so on, but for some indefinite period the 100-mile base line, which would be the only part attacked really, would be indefinite. We could not enforce it as existing in international law until we had a favourable decision, so to draw the 100-mile line does not necessarily mean that we can police it.

Now, I am very much opposed to chicken-ing-out on this and, say, drawing lines which went in towards the coast of British Columbia and out again; in from the Northern tip of Vancouver Island, up our coast a distance, out to the Charlottes, and up to the Queen Charlotte west coast. That would publish for all the world to see that we had no intention of ever claiming Queen Charlotte Sound. So long as I am Minister of Fisheries we are not going to publish a map that swings in and, in a sense, excludes Queen Charlotte Sound or part of it as Canadian fishing waters.

The choice really is between going ahead now and drawing the 100-mile line as part of our limits, or merely drawing lines up the West Coast to Vancouver Island and the West Coast to the Queen Charlottes and leaving a gap in the minds of everyone, dotting-in this 100-mile straight base line.

I know the industry and certainly all the fishermen are very much in favour of our taking the strong line and I think 90 per cent of the Canadian population would say, why not? What we are weighing here really is the reaction of other countries and, more important, how effective they could be in stalling the enforcement of that 100-mile base line.

Now, I am very much aware and I know fishermen on the West Coast are very aware of the fact that since we passed the Act giving the government power to establish exclusive fishing zones the Russians have moved into Queen Charlotte Sound and have been fishing there and are beginning to develop an historic right. You cannot delay these things too long, and the time has come for us to make up our minds whether boldly to draw the line and take the consequences or in some other fashion stall off these countries, including the Russians, from fishing in an area which, in the fullness of time, surely will be exclusive Canadian waters in any case.

The Chairman: Mr. Howard, I am sorry but your time is up.

Mr. Howard (Skeena): Yes, I can appreciate that.

Mr. Davis: Obviously this is a matter this Committee must discuss with the Minister of External Affairs to get his assessment of the positions of other countries and his assessment of how effective we might be in getting away with the drawing of a 100-mile base line and designating Queen Charlotte Sound as a special body of water for Canada.

This is not the only problem area; there is the Gulf of St. Lawrence and Hudson Bay and those three special areas—at least, Canada would claim they were special areas—just might be acceptable to other nations as special cases. It would have to be our plea, I think, that these are special cases.

Mr. Howard (Skeena): May I just ask a question apropos that, Mr. Chairman? We inquired of the Secretary of State for External Affairs whether he would be prepared to come to the Committee to deal with this matter and he said in effect, as I took it, that he would be happy to appear at any time so this is something I had in mind to follow up in any event, but anyway I cannot proceed further.

The Chairman: Mr. Durante?

Mr. Durante: Thank you, Mr. Chairman. Mr. Minister, in our deliberations to date we have discussed various limitations on certain types of commercial fishermen and I should like to ask one or two questions about a type of commercial fisherman that is not licensed and, in fact, is not a resident of Canada; he goes under the guise of a sports fisherman

from the United States. In my riding, especially in the Campbell River area, large groups of American people come in there and establish a campsite or a trailer site, and this is referred to by the local residents as "Little America". These people established themselves there and stay from early May until the end of September—they are there throughout the whole summer season. Presumably, they are sports fishing. They have their own home canners and I suspect they return to the United States with large amounts of fish. I am not saying that they market these fish; they may be giving them away. Is there any indication what effect this sort of operation is having on our marketing of this produce and on our fisheries in general?

• 1050

Mr. Davis: I will have to turn your question over to others to answer in depth. I have asked many questions about it; I asked one person in particular to follow this up and to give me, and eventually I hope this Committee, a clear picture of what is happening.

My general impression is that the quantity of fish, certainly in commercial terms, is not large, that it really does not affect our commercial fishery very much. But certainly in the eyes of the Canadian sports fisherman something is being done which they as Canadians cannot do—they cannot take large quantities of west coast salmon into the United States. So American citizens enjoy one privilege at least that Canadian sports fishermen do not enjoy.

To the extent that these people are in fact engaging in a form of manufacturing and exporting to the United States, I think we must do something. We must limit it—to the extent that it is a commercial activity because there may be some tinges of commercialism in these operations. I assume, but I will have to ask for advice here, that they are obeying our limits as to catch.

Mr. Durante: Yes, daily catch, I expect.

Mr. Davis: Yes. However, this is a rather impressive operation which has become highly localized and certainly very noticeable to the rest of the Canadian public. Perhaps we have to license them, perhaps we have to tax them in effect in some way, but I would like to know more about the commercial aspects

here before we did something. Something has to be done. I agree that this is an untidy situation.

On the other hand I would not like to think that we were going to do something that caused U.S. sports fishermen to stay away from the west coast of British Columbia. We are going to have a growing sports fishery out there and if we can produce more fish, particularly salmon, as a result of these big investments we are making in the Babine, the Qualicum Rivers and so on, then hopefully there will be enough fish to go around.

I do not want to harm the sports fishery in the sense of attracting people from all over to the west coast, but the possibility of commercialism bothers me.

• 1055

Mr. Durante: I would agree, Mr. Minister, that we have to be very careful because certainly the sports fishery is an inducement to the tourist trade in our country and we have to weigh one against the other.

Has any consideration been given to the possibility of compensating for any loss that may result by licensing the salt water sports fisherman—not only the American but salt water sports fishermen, period.

Mr. Davis: There has been a good deal of thought given to the licensing of all sports fishermen on the west coast. Personally I am against the licensing of sports fishermen fishing in salt water to the extent that they are Canadians. Now whether we can in some fashion focus on these Americans who are not fishing occasionally but all summer in Canadian waters and then going back to the U.S. for the winter months, I am not sure, but we certainly have to look at this and perhaps move on it.

Mr. Durante: Mr. Minister, you indicated in a recent release that the west coast Dog-fish was very suitable as a feed for Black Alaska Cod. Is that correct?

Mr. Davis: There is an interesting experiment going on at Nanaimo. It certainly has been successful on a small scale. Basically the operation would be like this, if it were carried out commercially. As I understand it the so-called Black Alaska Cod schools up something like herring when they are small and they can be caught, like herring, in very

large quantities fairly readily. Later, when they are larger, they are dispersed. Therefore they can be caught more efficiently and more cheaply when they are small. Because they are tough, because you can toss them around in large quantities in bulk, and because they can survive rough treatment it is possible to bring them inshore, put them in pens—I understand that not all fish species will stand this rough treatment—and then feed them up to a much larger size. They will eat a variety of flesh and other food substances. I gather that shredded up Dog-fish is appetizing to Black Alaska Cod, that they put on weight rapidly and that the ratio of weight of Dog-fish to weight of Black Alaska Cod is such that the economics of this operation might be quite attractive to industry. I should add a cautionary note: these experiments have been going on for a period of several years but on an increasing scale, they are very interesting but no commercial operation has as yet been undertaken.

The Chairman: Mr. McQuaid?

Mr. McQuaid: I do not know whether I have time, Mr. Chairman, because it is just about 11 o'clock. Are we going to sit after 11 o'clock?

The Chairman: Just perhaps a minute or two, if you like.

Mr. McQuaid: I will delay my questioning until the next sitting because it is just about one minute to 11 now.

I move we adjourn.

The Chairman: The Minister has indicated that he will be able to attend our next meeting on Thursday at 9.30 in Room 208, at which time he will be prepared to give us a statement on forestry.

Mr. McQuaid: Mr. Chairman, will we be permitted to continue our questioning on fisheries on Thursday?

The Chairman: Yes.

Mr. Davis: That is up to you. I am in your hands.

OFFICIAL REPORT OF MINUTES
OF
PROCEEDINGS AND EVIDENCE

This edition contains the English deliberations and/or a translation into English of the French.

Copies and complete sets are available to the public by subscription to the Queen's Printer. Cost varies according to Committees.

Translations under the direction of the Bureau for Translations, Secretary of State.

ALISTAIR FRASER,
The Clerk of the House.

STANDING COMMITTEE
ON
FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE
No. 8

THURSDAY, NOVEMBER 21, 1968

Respecting
Revised Main Estimates (1968-69) of Fisheries and Forestry

APPEARING:
The Honourable Jack Davis, Minister of Fisheries

WITNESSES:
Dr. A. W. H. Needler, Deputy Minister of Fisheries; and Dr.
M. L. Prebble, Assistant Deputy Minister, Forestry.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and Messrs.

Anderson,
Breau,
Comeau,
Crouse,
Cyr,
Dionne,

Goode,
¹ Harding,
Hogarth,
Lundrigan,
Mather,
McQuaid,

Moores (*Bonavista-
Trinity-Conception*),
Noble,
St-Pierre,
Smith (*Northumber-
land-Miramichi*),
Smith (*Saint-Jean*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

¹ Replaced Mr. Howard (*Skeena*) on November 20, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS
WEDNESDAY, November 20, 1968.

Ordered,—That the name of Mr. Harding be substituted for that of Mr. Howard (*Skeena*) on the Standing Committee on Fisheries and Forestry.

THURSDAY, November 21, 1968.

Ordered,—That the Standing Committee on Fisheries and Forestry be granted leave to adjourn from place to place within Canada, accompanied by the Clerk of the Committee and necessary supporting staff.

Ordered,—That the Standing Committee on Fisheries and Forestry be authorized to sit while the House is sitting.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

REPORT TO THE HOUSE

TUESDAY, November 19, 1968

The Standing Committee on Fisheries and Forestry has the honour to present its

SECOND REPORT

Your Committee recommends that it be authorized to sit while the House is sitting.

Respectfully submitted,

GUY CROSSMAN,
Chairman.

(Concurred in on November 21, 1968)

(Text)

MINUTES OF PROCEEDINGS

THURSDAY, November 21, 1968.

(8)

The Standing Committee on Fisheries and Forestry met this day at 9.40 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Anderson, Breau, Comeau, Crossman, Crouse, Cyr, Goode, Harding, Hogarth, Lundrigan, Mather, McQuaid, Noble, Smith (Northumberland-Miramichi), Smith (Saint-Jean) and St. Pierre—(16).

Also present: The Honourable Jack Davis, Minister of Fisheries and Mr. Corbin.

In attendance: Dr. A. W. H. Needler, Deputy Minister of Fisheries; and Dr. M. Prebble, Assistant Deputy Minister, Forestry.

The Chairman called Items 30, 35 and 40 of the Revised Main Estimates relating to Forestry and invited The Honourable Jack Davis, Minister of Fisheries to address the Committee.

The Minister of Fisheries read a prepared statement.

It was agreed that the Statistical Tables relating to his statement be attached to today's Minutes of Proceedings and Evidence. (*See Appendix "C"*)

The Minister of Fisheries assisted by Dr. Needler and Dr. Prebble was questioned.

At 11.15 a.m. the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday November 21, 1968.

● 0939

The Chairman: I see a quorum. As I mentioned at our last meeting on November 15 the Minister, the Honourable Jack Davis, is here with us this morning and he is prepared to address the Committee on matters relating to Forestry. If the Committee is in favour I shall ask the Minister to give this report.

Mr. Mather: Mr. Chairman, I agree to that, but this does not preclude our going back to Fisheries, I suppose.

The Chairman: No, it does not.

● 0940

Hon. Jack Davis (Minister of Fisheries): Mr. Chairman, I have an opening statement here which runs to 11 pages. Copies are being distributed and I believe they are available in both English and French. I will go through it as fast as I can.

In previous sessions of this Committee I described the Department's programs concerned with fisheries problems. Today I wish to refer to forestry problems and the Department's related programs.

The only direct reference to forestry in the British North America Act is contained in paragraph 5 of section 92, which assigns to the provinces exclusive legislative rights regarding "the management and sale of the public lands belonging to the province and of the timber and wood thereon". Municipal and privately owned forests, which amount to about 10 per cent of the provincial total, are also held to be within the legislative competence of the provinces under section 92 of the Act. It is thus clear that the management of Canadian forests, other than those in the Territories and on federally administered lands within provincial boundaries, is under the jurisdiction of the provincial governments.

The forest-based industries, however, constitute a major segment of the Canadian economy, particularly with respect to international trade. Their welfare is thus a matter of prime concern to Canada as a whole. In these

circumstances, and by virtue of section 91 of the BNA Act, the Government of Canada has legislative authority and indeed a definite interest and responsibility in a number of matters affecting the forest industries. Thus it may influence indirectly the use and management of the forest resources on which those industries are based. These areas of jurisdiction include trade and commerce, financial matters such as taxation and incentives to industrial development, weights and measures and interprovincial and international transportation. Federal action is also needed to deal, in close co-operation with the provinces, with the increasing involvement of Canadians in the work of international forestry organizations and other aspects of world forestry.

Scientific forestry was unknown in Canada at the time of Confederation. It is thus not surprising that the BNA Act makes no reference to responsibility for forest research. The Act does, of course, vest residual powers in the federal government. Moreover it excludes from provincial jurisdiction works "for the general advantage of Canada" even though wholly carried out within a province.

With the full co-operation of the provinces and industry and for their benefit the federal government has, in fact, conducted research in forestry and forest products for many years. Although the scale of the program is still far from adequate, the work is undoubtedly for the advantage of Canada as a whole. This applies not only to research projects as such but to assembling information and disseminating results. The Forestry Branch, which carries out research and other activities under the Forestry Development and Research Act, also constitutes a federal reservoir of technical and scientific experts who are available to advise on the forestry implications of present and proposed developments in many related fields.

I would now like to refer briefly to the relative importance of forestry and forest-based manufacturing to the Canadian economy. Forestry refers to the primary production from Canada's forests while forest-based

manufacturing refers to the output from our wood and paper products industries.

Prior to World War II, the gross output from forestry was about \$44 million. Today, it is \$563 million or 13 times greater. During the pre-war period, forestry contributed slightly more than one per cent to Canada's gross domestic product. Following the war, when major emphasis was placed on the production of goods rather than services, forestry's contribution to the gross domestic product rose to almost two per cent. While the gross output from forestry has continued to grow, the proportionate contribution of forestry to Canada's total output has declined to its pre-war level of one per cent as a result of the greater importance of service producing industries now than in earlier years. Service producing industries now contribute about 60 per cent to the gross domestic product in comparison with 47 per cent.

This preceding paragraph which I have just covered relates to forestry in the primary sense and not sawmills or pulp and paper mills.

For forest-based manufacturing of the sawmills and the pulp and paper mills the contribution to Canada's gross output amounted to 3.6 per cent in pre-war years. Today, it contributes 3.8 per cent. In total, forestry and forest-based manufacturing now make up 4.8 per cent of Canada's gross domestic product and has been as high as 6.6 per cent in the early years following World War II.

• 0945

Over-all trends in employment for forestry and forest-based manufacturing in relation to the nation's total labour force show that at present there is 1 per cent of our total labour force employed in each of the three sectors, 1 per cent in forestry, 1 per cent in pulp and paper industries, and 1 per cent in the wood product industries. In other words, 3 per cent of the total labour force in forestry and forest-based manufacturing products produce 4.8 per cent of the gross domestic product. In contrast, in the earlier post-war years the proportion of the total labour force and the relationship of forestry and forest-based manufacturing to the gross product were about equal, namely 4.6 per cent.

I might say in parentheses that if 3 per cent of the labour force produces nearly 5 per cent of the gross domestic product, the efficiency of the industry over all is obviously above the national average.

Very little precise information is available for measuring trends in productivity in the primary industries, particularly forestry. It is estimated by departmental staff, using preliminary data from the Dominion Bureau of Statistics, that the average annual increase in productivity per worker in the last 20 years has been in the order of 4.5 to 5 per cent for forestry. This is an impressive increase in efficiency and much credit is due to the provincial governments and the forest industries who have brought it about by implementing new technological developments. The federal government has also contributed substantially to improved technology, application and promotion. Federal expenditures relating to forests, forest industries and the utilization of forest products are made by a number of federal agencies including the Forestry Branch of this Department, ARDA, ADA, ADB, Department of Industry (PAIT), the Department of Trade and Commerce, and the NRC. In total, these expenditures or commitments averaged \$46 million in the fiscal years 1965-66 to 1967-68. On the other hand, federal income derived from corporation taxes on the forest industries amounts to about \$125 million, and income from other taxes, excluding personal income taxes of persons employed in the industry, amounts to over \$100 million. I do not know what the sales tax collected on new investments in the forest industry is, but Federal Sales Taxes would have to be added to those amounts.

Average federal expenditures in support of forestry and the forest-based industries therefore represents, I would say, less than one-fifth of federal income from the same sources.

Research and development, being basic to technological improvements, has played and will continue to play an important role in the production and use of our wood. The most recent estimates of research expenditures in Canada on forestry and forest products, exclusive of capital outlays, amount to \$43 million annually. Of this, the industry contributes 51 per cent, mostly in the pulp and paper field; the federal government 42 per cent; provincial governments—all 10 of them—4 per cent and universities 3 per cent. The total expenditure on research is less than one per cent of the gross value of the woods operations and factory sales from wood-based industries. Generally it has been the experience of other industries and in other countries that economic benefits continue to

increase with research expenditures up to 2 or 3 per cent of the total gross values derived from such industries.

I might say again, also in parentheses, that the federal expenditure through the Department of Fisheries and Forestry is close to the expenditures on research by the industries, and obviously it is of the order of ten times as great on research as that of all of the provinces combined.

The Department's main contribution to forestry is in the field of research, which in the current year amounts to some \$18.7 million. The basic objective of this program is to provide the scientific, technological and economic information and services required by federal and provincial government agencies and by private industry, to assure the maximum contribution from the forestry sector to the industrial development and the economic growth of the country. The means taken to achieve this objective may be grouped conveniently under Research and Development, which includes surveys, research, pilot-scale operational trials and demonstrations of research findings, associated programs for the dissemination of technical information, and extensive consultative and advisory services; Economic Studies and Operational Programs.

• 0950

These closely interrelated program activities are directed towards the two essential components of the forestry sector, that is, the forest resources of the country and the forest products industries. The objective of program activities relating to the forest resources is improved efficiency in management, protection and productivity. Through investigations on forest land classification, soils, tree biology, inventory and mensuration technology, and silviculture, a sound technical basis is established for land management decisions and increased forest productivity. Intensive research on forest fire behaviour and on insects and diseases is essential to the development of reliable means of control and reduction of losses to tolerable levels.

To be effective, such programs of research and development on the forest resources must be developed and carried out in the closest cooperation with the provincial forestry departments and the forest industries. Therefore, our work in this field is highly decentralized and is conducted from seven regional research establishments with appropriate territorial responsibilities, covering the entire forested area of Canada. Complementing and

extending the work of the regional research establishments, there are seven research institutes whose efforts are directed toward the development of basic and unifying principles of wide general applicability in special subject matter fields; for example, insect pathology and toxicology, genetics, tree physiology and biochemistry, photogrammetry and forest inventory technology, physics and chemistry of fire forest economics, and so on.

In the forest products field, the objective of the Department's programs is increased efficiency and maximum utilization in timber harvesting and in conversion of wood to saleable products. Program activities include wood production that is, harvesting, sawmilling, seasoning, secondary conversion; wood engineering and structural applications; protection of wood in service against weathering and injury by insects, fungi and fire, and wood products such as veneer and plywood, composite and chemical extractives. Efforts in forest products research and development are concentrated in the laboratories at Ottawa and Vancouver, and there is very close cooperation with the industry in developing and executing the program. Research on paper products is carried out by the Pulp and Paper Research Institute of Canada and by research laboratories of individual firms, and is not duplicated by the Department's program.

The Department's program in forest economics has only recently been developed on a reasonably comprehensive basis. The objective is to provide economic data, information and analysis to aid in policy definition and decision making, not only with reference to management of the forest resource and manufacture and distribution of forest products, but also as a guide to orientation and degree of emphasis in the Department's research and development programs in general. Areas of investigation include forest policy and legislation, resource analysis, economics of forest management, industry sector studies, market and demand studies, and statistical investigations and services.

The constitution limits to a considerable degree the operational programs that can be undertaken by a federal agency, but there are several of a national nature that can be developed in co-operation with provinces and the forest industry. For some, federal input may be through technical co-ordination and provision of various financial incentives, but oth-

ers, because of practical reasons, can be undertaken only by the federal government either because they relate essentially to national rather than provincial matters, or because personnel and facilities are available only at the federal level. It is my intention to direct a greater proportion of the Department's efforts to operational programs that can directly benefit large sectors of the Canadian forest economy. A few examples follow.

If Canada is to rationalize and optimize either the development of the total forest resource or opportunities for its improvement and protection, it will need an inventory that is not only a summation of the provincial data on wood volumes but also a reflection of the quality and marketability of wood fiber. This requires long-term planning based on integrated information on wood capital, its rate of growth and utilization, and the magnitude of losses. This program would use much of the valuable research and development already completed and would exploit new developments, such as the proposed EROS satellite program being undertaken in the United States. Satellite evaluation of natural resources through remote sensing would facilitate a continuous forest inventory on a national scale, beyond the means of individual provinces but of substantial benefit to them.

• 0955

I might say as an aside that it has been rather difficult, for me at least, to identify areas where there was genuine proper national concern in the development of our forest resources which, as has been noted earlier, are largely if not entirely owned by the Provinces. What are the programs which can only be properly or efficiently carried out on a national scale? This is the question I put to myself which I found hard to answer, but when one thinks of the possibilities of surveying our resources, not only on a more or less continuous basis, but on a unique basis from satellites, for example, this is clearly something which is not within the financial capability of individual Provinces—certainly not many of them—and it is not within their competence when it comes to satellites as a form of communication.

In other words, you also get into a federal area of responsibility, I would say, under the British North America Act and so on, so that here would seem to me to be a genuine area

of federal involvement in inventory taking. I think in a limited sense on the ground, inventory taking might well be a matter for the Provinces because they own the resource, but the nation clearly can help in this regard and indeed in the case of satellite communications they have the only vehicle for carrying out this type of survey work. So here is one example of what can well be a national program which could never really be carried out adequately by the provinces and certainly not by individual firms or industry.

In addition to containing a vast reserve of wood fiber, Canada's forest lands and wild-lands encompass one-third of the world's fresh water and the largest area that can be developed for the outdoor recreation of the millions of North America and Western Europe. Management of these lands for all these uses require their classification with respect to their potential to produce more than one or all of these products. The Forestry Branch has the country-wide organization and trained personnel necessary to plan, coordinate and supervise such an inventory. Several other departments have expressed an interest in such a venture.

Wood will be the main crop from much of this land in the near future, but it is estimated that more than 75 million acres of forest land in Canada now supports no useable tree growth. This is enough to provide more than one-half of our present volume of wood harvested, and it is imperative to bring it back into production. At one time it did produce forest growth. It is one of the main problems facing Canadian forestry and can be solved only by a co-operative approach on a broad front. This is one of the topics I wish to discuss with provincial ministers in the hope of launching a realistic operational and developmental program.

Protection of the forest resource is also of national importance. For instance, destructive outbreaks of insects or diseases may be transitory in any one province but across the country as a whole there are always several troublesome outbreaks at any point in time. Consequently, it is more difficult for the provinces than for the federal government to maintain an effective pest control organization. I plan to improve the mechanism for providing information and guidance for control methods and for developing more effective input of our scientific and technical knowledge into pest control programs.

Fire protection likewise presents problems of national importance. The Department of Transport provides periodic weather forecasts for all of Canada. Their usefulness can be greatly increased if they are specifically tailored to fire control needs and disseminated in terms of fire danger ratings. We have developed such a system to serve the Maritimes and Quebec, and with provincial co-operation we hope to cover all of Canada.

The provinces have water-dropping aircraft for control of forest fires but most cannot afford a fleet large enough to handle the abnormal outbreaks that occur periodically. We are now analysing the needs for establishment of a highly mobile fleet of water-dropping aircraft that could be placed on standby during the fire season to serve whatever area of Canada might need them to supplement local resources. This program depends upon the full co-operation of the provinces.

Harvesting is a major area for reducing wood costs and thereby improving the competitive position of Canada's forest industries. The Department, in co-operation with the provinces, industry and federal programs such as PAIT, and Manpower's woods labour project, will carry research and development forward into pilot-scale operations. This involves technical evaluation and development of new and improved systems such as the balloon logging program now under way in British Columbia, or the large mechanical harvesters now commonly used in Eastern Canada.

Another example of an operational program is associated with the utilization of wood, especially in developing standards and specifications. Our Forest Products Laboratories actively participate in developing the National Building Code and the standards of the Canadian Standards Association relevant to wood. They also assist in the work of the Canadian Government Specifications Board and in drawing up grading rules and other standards of the wood industry. Both laboratories have programs in timber engineering to assure the safe and economical use of Canadian woods in structural applications.

• 1000

Forestry, like fisheries, is a renewable natural resource and it is significant that these have been brought together into one Department at this time.

Despite the constitutional limitations on the federal government in over all forestry devel-

opment, there are obvious advantages in having a unified policy approach to the federal government's programs in these resource fields. Both present problems in management and harvesting that require improved technology based on research and economic analysis. The time required for substantial improvement in the forestry resource base is much longer than in the case of fisheries. In any event, we can no longer view our forests solely as sources of wood and fibre and we must apply the multiple-use concept to cope with the rapidly increasing and diverse demands placed on forest land.

Forest management within a river basin can influence profoundly the quality and quantity of water yield, as well as the flow characteristics of streams and rivers and the condition of lakes. These, in turn, may have a pronounced effect on the fish inhabiting these waters. Important interactions between forestry and the fisheries may occur when pest control programs are undertaken in forest areas penetrated by fish-producing streams, or when large mills are established without due concern for control of harmful effluents. Because of such complex interactions, it is important that fisheries scientists and forestry scientists work side by side toward the solution of problems of mutual concern to these two basic resource fields, fisheries and forestry.

There are some tables appended to these remarks, Mr. Chairman, and perhaps you might wish to have them included in the record, but that is entirely up to you. Perhaps I could let you have them as a set; they merely support the statistics to which reference was made earlier in my discussion.

The Chairman: Is it the wish of the Committee to have them attached as appendices to our Proceedings?

Some hon. Members: Agreed.

The Chairman: Thank you, Mr. Minister. When we adjourned last week we had Mr. McQuaid who indicated that he wished to ask questions on Fisheries and Mr. Crouse so indicated this morning. Due to the fact that we are on Forestry, would you be willing to continue the questioning on Forestry and then return to Fisheries? Is that acceptable to you gentlemen?

Mr. McQuaid: We shall return to Fisheries, though?

The Chairman: That is right.

Mr. McQuaid: That is quite all right, Mr. Chairman.

The Chairman: I have Mr. Breau who has indicated he wishes to ask questions. Mr. Breau?

Mr. Breau: Yes, Mr. Chairman. Northern New Brunswick, it seems, is a very good land to grow fir and consequently the Christmas tree industry has been very good in that area. A lot of people have a lot of fir on their land, and on the government land which is a provincial responsibility, but to what extent does your Department have any activity concerning the protection of fir for that area or for the Christmas tree industry, and is anything being done right now to control the market?

Mr. Davis: I am sure that our people have a good knowledge of the extent of the resource and perhaps they have a fair idea of the extent to which it is being utilized, but on the trade side it is a matter for Trade and Commerce. No doubt we have some information on the subject and I would ask Dr. Prebble to comment on your questions.

• 1005

Dr. M. L. Prebble (Assistant Deputy Minister, Department of Forestry and Rural Development): We have, as a matter of fact, some members of our staff at Fredericton, New Brunswick, who are specifically concerned with the growing of Christmas trees in the Maritime region, and who have been co-operating with the growers in the best silvicultural techniques to get good Christmas tree production. Balsam fir, of course, in a Christmas tree size is subject also, in cases where it is adjacent to large mature stands, to injury by defoliating insects, and that has been a matter of some concern. Any young stands that occur at present in the vicinity of the large bud worm outbreaks would be in need of special protection to keep the foliage on at the time of sale. We have been working very closely with the provincial and the industry people in New Brunswick over the last number of years on programs designed to reduce losses from bud worm. As a matter of fact, we have a meeting going on right now with the people from New Brunswick and the Maritime region on that problem.

In the matter of trade, we have been involved primarily in providing advice on control methods that will eliminate some of the damage in the season in which the trees

are to be sold and we have been involved in the inspection and certification, especially with regard to export to the United States. Quite commonly, if American producers have some indication there might be a problem in the Maritimes that does not occur in the States, they will raise questions about the importation of trees which are expected, in their judgment, to carry infestations and we have been quite active in that on a number of occasions and have been able to satisfy, through the Inspection Service and through the appropriate American authorities, that either they have the same pest or that the material in question does not carry the pest they anticipate it is carrying. We have been of considerable help in the movement of Christmas trees across the international border in such cases.

Mr. Breau: Mr. Chairman, I have just one more question. Perhaps this is not within federal jurisdiction, but is there any incentive for farmers? There is a lot of interest, especially in Northeastern New Brunswick and some associations have been formed. Is there any incentive to help these people to protect the trees on their own land? I mean direct financial assistance.

Dr. Prebble: Quite possibly there would be assistance available under the Regional Development Program of what is known at the present time as Forestry and Rural Development. They have quite extensive programs of support for woodland owners and things of that kind under the Regional Development Program, but that does not fall within the present Department of Fisheries and Forestry.

Mr. Davis: May I comment in this regard? Considerable federal financial support has been given to carry out the spruce bud worm spraying program that has been going on in New Brunswick since the early 1950's. This program has been confined substantially to New Brunswick, largely because the infestation has been there, although there have been outbreaks in some other provinces on a lesser scale.

This has not, in actual application, been a nation-wide program. It is one of the programs that I believe should be carried on, but on a specific regional basis, and as far as the money is concerned I have been telling the government people in New Brunswick that they should really look to Regional Development for this special type of assistance which

has not been available on a nation-wide basis, and which presumably would be made available in a region such as the Atlantic Region as a special deal, so to speak, under Regional Development.

We do not have an allowance in our budget for next year for spraying for spruce budworm in New Brunswick. However, I am hopeful that the one-third federal contribution may be forthcoming through Regional Development. This is a matter of genuine concern to the government in New Brunswick because they are budgeting for one-third of a much larger program for next year and, of course, industry pays the other third. However, they cannot look to this Department for the one-third contribution which has been made in the past under the general heading of Forestry.

Mr. Breau: That is all, Mr. Chairman.

The Chairman: Mr. Mather?

Mr. Mather: Mr. Chairman, I had one question I wanted to ask the Minister. Like several here, he comes from British Columbia, and it seems to me that even considering his limited powers constitutionally, as Minister of Forestry he still occupies a pretty strategic position, being both Canada's Minister of Fisheries and of Forestry.

As the Minister knows, we have had in British Columbia in the last year or two—at least, a year or two ago—a contentious situation regarding the degree of forest exploitation permitted by the British Columbia government to the detriment of the fisheries resources in the Stellako River area where many protests have been made to the provincial and federal governments by wildlife groups and fishermen about the log run which was permitted to go on in that area and which resulted, it was alleged, in water pollution and the handicapping of the fisheries resource.

• 1010

I am putting it in the form of a question, but actually I am urging the Minister to consider this. Will he, in his new strategic position of being Minister both of Forestry and Fisheries and knowing the British Columbia situation well, undertake to make it a particular matter of concern to him to try, as far as he can, to prevent a repetition of what happened in the Stellako River area, which had such a detrimental effect on the fisheries?

Mr. Davis: Definitely, Mr. Chairman. This, as Mr. Mather has implied, is a matter for co-operation between government and industry. More particularly, in the Stellako case it was also a matter of relationships between the federal and provincial levels of government.

On Monday morning I have an appointment in Victoria with the Hon. Ray Williston. This is the sort of thing I will be discussing with him.

We have to do more in informing the provinces of our concern in these matters, particularly those falling under the general heading of pollution. In the main I think the provinces are anxious to co-operate if only to get the most out of all the resources of their particular areas.

I do not know all the history of the Stellako case, but I know this much about it, that had there been more open lines of communication between Victoria and Ottawa perhaps it would have been less of a matter of concern to everyone.

Under the Fisheries Act we have very substantial powers. Unfortunately the powers, as they now exist under the Act, are essentially retroactive. We can only move in after an event, and cause a mill to be shut down, or stop a logging operation or a drive such as on the Stellako. We must change the Act so that we can anticipate events.

Anticipation, however, can take various forms. For example, a new pulp mill may be built on the Fraser River in the general vicinity of Ashcroft. There is already some public concern about the effects of the effluents from this mill on the spawning of salmon in the lower Fraser. I have been in touch with the Honourable Ray Williston about this and he has assured me that when the provincial government has received a definitive proposal, or proposals, from those promoting this mill he will immediately have his chief forester get in touch with our fisheries and forestry people and will sit down and talk about pollution and possible alternative locations which would avoid any harmful effect on the other resources, including the fisheries.

It is this sort of thing we have seen in the Alberni Canal. MacMillan Bloedel is putting in a multi-million dollar pollution treatment plant in the next 18 months, the design of which has been developed in close co-opera-

tion with the fisheries department in Vancouver.

It is a matter of anticipating problems, comparing notes and then co-operating. We need more of this. We will have problems, I am sure, but a great deal is to be said for, and to be gained from, keeping the lines of communication open with the provincial governments and with industry.

Mr. Mather: Mr. Chairman, I thank the Minister for his answer. I have one further question.

I understand him to say that he would consider proposals to amend existing fisheries legislation to enable forward-looking action to protect in advance the resource rather than as it is now, have fishery legislation which permits action, but it is after the event.

Is consideration being given to amending the fisheries legislation?

• 1015

Mr. Davis: Yes, very definitely; I do not expect that legislation to come forward in the current session, but I would hope, very early in the next session.

Mr. Mather: Thank you.

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, there are a number of questions that one could pose to the Minister of Fisheries after such an interesting statement. It would take me much longer than my 10 minutes to develop some that I have in mind, but one simple one occurs to me as the result of quite a few people working on a problem of which I have no great knowledge but to which I wish to know if the federal government has ever given any consideration.

In my part of Canada, and probably in many other provinces, especially New Brunswick, there are quite a few people whom I would call individual croppers of logs and forest raw materials. They sell their produce to some small producers such as a sawmill operator and so on. Is there any provision right now, or has any consideration been given to trying to give these people some kind of unemployment insurance benefits on their sale of produce similar to what has been done, for example, in fisheries? There a person can receive benefits under the Act as a result of a certain amount of fisheries produce at the end of the year.

Mr. Davis: I am no authority on the unemployment insurance legislation, which, of course comes under another department.

My understanding is that in the last few years virtually all of the seasonal activities, including logging, have been brought under the Act.

Now, how long one would have to work at logging to accumulate a sufficient number of stamps, and so on, I am not sure; I am not sure of the extent of the coverage of people engaged in primary forestry under unemployment insurance.

Perhaps, Dr. Prebble, you have some idea of this.

Dr. Prebble: Mr. Chairman, if I understand the question, this is related to a person who is self-employed. I am afraid I can make no sensible contribution to the discussion.

Mr. Davis: Many of the fishermen are self-employed, but special arrangements to bring them in were made under the Unemployment Insurance Act.

I am afraid I cannot answer the question specifically, but I am sure we can get an answer. You could get that information from the Unemployment Insurance Commission.

Mr. Lundrigan: It is an interesting thing to consider, even if there is no provision right now.

For example, I own a small mill, and I produce perhaps one-half million feet of lumber per year. There are perhaps 20 people cutting logs and selling to me, but in actual fact I have nothing to do with their employment.

Mr. Davis: There would have to be a double contribution. They would make a contribution as an employer and as an employee, because they are self-employed. I would think that, having made the double contribution, they would be able to draw unemployment insurance.

Mr. Lundrigan: Yes; but the point is that there is no employer. They are actually selling their logs to a manufacturer who is not, in actual fact, an employer.

It is a concept, or a thought, to which perhaps some consideration could be given.

Mr. Breau: If I may interject, Mr. Chairman, I have had some experience of this. I know that in New Brunswick they do obtain stamps for selling pulpwood.

Mr. Lundrigan: Last week a statement came to us from the office of the Minister of Fisheries on stationery from the Department of Forestry and Rural Development. It had me a little confused for a while.

Mr. Davis: I was proposing to save money by using up old paper.

Mr. Lundrigan: It was relative to an inquiry to be made into the use of mechanized equipment and automation in the forestry industry. In the House sometime later I posed a question on what terms of reference were given this inquiry in its actual work.

• 1020

Mr. Davis: I will ask Dr. Prebble to follow up on that, but I might say that one of the main activities, other than basic research, carried out by the forestry section is that of trying to improve efficiency and productivity in the forest industries. That particular press release which was drafted in Dr. Prebble's branch had to do with efforts in the direction of improved productivity, but perhaps he should comment on what is planned there.

Dr. Prebble: Mr. Chairman, for a number of years, there have been, I would say, relatively unco-ordinated contributions in connection with mechanization in the forest industry. There has been quite a drastic change in the last 15 to 20 years, and the whole question of woods productivity and the use of large mechanized equipment is coming in more and more. The per man-day productivity has gone up, but the costs have not gone down because of the cost of the equipment.

Not all equipment is designed primarily for the place in which it is used. Some of the equipment has evidence of compacting influence on the soil about which we are quite concerned in reference to the re-establishment of regeneration.

There are many questions that have to do with the influence of the forest itself, both the typography and the soil conditions, and the distribution of trees that have an influence on the efficiency of various harvesting equipment and the various harvesting systems. So we have tried to co-ordinate a program that will look at all these aspects simultaneously and provide analyses that will be of assistance to the equipment manufacturers so that the equipment can be designed by them and produced by them to meet the specific need of

the place where timber is being produced, to provide information on the forest itself that would have an influence on such equipment, the economics of it, and also particularly the ecological and silvicultural implications on the next crop.

Mr. Lundrigan: Mr. Chairman, actually I was more concerned about efficiency. I have heard this word a number of times. I believe the Minister made reference to a 5 per cent increase in efficiency each year, which is significant and certainly gives me the impression that the industry is coming along well in that respect.

This pertains specifically to industry. I am wondering about the labour aspect. I know, for example, one part of the industry in my province where there has been a tremendous increase in the industry and an equal decrease in the labour needed.

Dr. Prebble: That is so, Mr. Chairman. The labour force has tended to decrease progressively in the last 10 or 15 years as a result of the greater use of mechanization. The industry claims that they are just barely keeping pace with the rising costs, and that to remain competitive on world markets—that, of course, is where Canada's forest products are sold, in world markets—they have to reduce costs of the raw material in order to remain in business. It is quite likely that the labour force used in the forest industry will not rise even though production will increase. The labour force has been going down over the last 10 to 15 years—I think something like a 25 or 30 per cent reduction in that period of time right across Canada.

Mr. Davis: I think in general the picture is this. Total employment of loggers in the woods in Canada has been drifting downward, certainly in the last 20 years. Regionally it is varied. In British Columbia it has remained roughly constant but this has mostly been as a result of the new mills and much more extensive woods operations. I would think that, say, in Newfoundland, if a new mill were to go in you would have an over-all increase. But in each established mill area, forest management area, the tendency would be for the employment in the woods to drift downwards.

Mr. Lundrigan: When you talk about a new mill in Newfoundland, it strikes me as peculiar because I have heard that phrase for

about the last 20 years—it is a provincial matter. I wonder is there a...

• 1025

Mr. Davis: Well, it is provincial. But there is a fair amount of federal support that goes into it.

Mr. Lundrigan: Well, what I am saying is that this has been something we have talked about for quite some time, Mr. Minister.

Is there any co-operation between your Department and the Department of Manpower and Immigration to try and re-locate and re-train, and whatever the case might be, people who are undergoing unemployment as a result of the increased efficiency in mechanization of those operations?

Mr. Davis: I would say that our people are looking at ways and means of improving the efficiency of the industry, but this Department is not itself primarily concerned with the development of employment in other industries. It is the Department of Manpower that has to concern itself with the re-training of surplus labour in one area and its re-employment in other industries. But certainly Manpower comes to this Department for advice as to projections, as to how many people are required in a given woods operation, and so forth. This Department, or the forestry section of it, is a source of information but does not directly involve itself in the re-employment of people.

Mr. Lundrigan: Thank you.

The Chairman: Mr. McQuaid.

Mr. McQuaid: Mr. Chairman, my questions are directed entirely to fisheries. I do not want to confuse the two subjects. I am prepared to wait.

The Chairman: Mr. Crouse.

Mr. Crouse: Mr. Chairman, I want to thank the Minister for his analysis of forestry problems. This evokes a number of questions and my first one will deal with the very last words in his statement which concern both fisheries and forestry.

It is evident from the questions asked here this morning that this Committee has been a good wedding of two subjects, because the problems of both fisheries and forestry products are interrelated. I would like to ask the Minister what efforts are being made to co-ordinate the research and development pro-

grams between the fishery and forestry officials. For example, it is now known that the spraying of trees with DDT preparations, for example in New Brunswick and other provinces, to kill spruce budworm has resulted in killing off the salmon and trout populations in some of our lakes and rivers. This brings up the whole problem of pollution. As you are aware, this has been most serious in the Saint John River for example, where almost all the fish were destroyed. They were floating bottom up, and it was necessary for people in the area to erect a dam by their own action in order to prevent further contamination.

First, what efforts are being made to control pollution? There seems to be so much over-lapping here between Fisheries, Forestry and other departments, and I am wondering if this over-lapping may prevent the proper action being taken which is absolutely necessary.

In areas of regional disparity, what efforts are being made by the federal government to help establish new forest growth—this is almost related to Mr. Lundrigan's question—to provide not only employment but some new forestry resources?

Third and last, how far along are we progressing in establishing federal water bombers to come to the assistance of our provincial people when a forest fire breaks out? We in Nova Scotia from time to time have had serious outbreaks of forest fires. Thankfully, we have been able to get assistance from water bombers stationed in Newfoundland and in other provinces. But I cannot stress too strongly the necessity of the federal government providing this type of service to protect our forests when there is an outbreak that is beyond the resources of the provincial people to control. I believe this Committee would like to have some information on just how far we have progressed in providing water bombers for our provinces' protection.

• 1030

Mr. Davis: I will leave the water bomber question to Dr. Prebble and perhaps the matter of co-ordination, which is between Forestry and Fisheries, to Dr. Needler.

May I say that in New Brunswick, particularly in the Saint John River basin, there have been a number of examples of federal involvement and certainly of co-operation between Fisheries and Forestry. The spruce budworm problem, which really began to be recognized on a major scale in the early

1950's, was tackled with financial assistance from Ottawa. As you undoubtedly know, there were some disastrous effects on fish and, within a very short time, there was a good deal of co-operation, even though they were in separate departments, between the Forestry people and the Fisheries people to resolve that problem. I am not sure that it is entirely resolved, but it has been largely resolved because of the technical work done here in Ottawa and the technical support given to the spraying program down there.

Also, remaining with the Saint John River, we have a mill at Edmunston which is about to be rebuilt to use a different process. There will be some federal support, and we will require that the treatment of the effluent is such as not to damage the fisheries. So here is a mill treating forest products about which our forestry people know a good deal—a new design involving toxic substances which our Fisheries people are assessing, and our Fisheries people will be setting standards for the requirements which will have to be met in design or redesign of this mill.

Under the regional development program a second mill is proposed downstream of the existing mill at Edmundston. Again, our fisheries people will be writing certain specifications, our forestry people looking at the designs and so on. So that, in co-operation with regional development, we will have a fair say in the degree of pollution of the upper Saint John River from not only the existing mill which is being redeveloped but a brand new mill. Through federal power over fisheries and because the federal treasury is putting up a fair amount of the money in this disadvantaged area, which is going to get support through the FRED program, federal departments collectively will have considerable say in the utilization of forest resource there and in the degree of pollution of the upper Saint John River. This is an example of the sort of thing that is going on in one sizeable area in the Atlantic region.

Perhaps Dr. Needler might want to say a word about co-ordination as between Forestry and Fisheries, and Dr. Prebble a word on the water bombers studies that have been going on.

• 1035

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Mr. Chairman, I am sure the Committee will realize that the new department combining Fisheries and

Forestry has not really been set up yet. We have been working on the organization of the combined department. I can only say that even now, before the legislation has come before the House, we have planned an organization in which there will be common planning and some common economic studies of a relative importance. We expect to have the machinery to effect good co-ordination in programming.

The Minister has already mentioned the sort of thing that has been going along. There have been joint research projects on this budworm problem which have led to adjustments of the spraying techniques to reduce damage to fisheries.

Mr. Crouse: I have a supplementary on that. Would you be of the opinion that the delay in getting these departments established is delaying pollution control in some areas where something should be done at the present time?

Dr. Needler: I do not think so. I think it is rather in the future planning of positive things that we will get into new activities.

Dr. Prebble: Mr. Chairman, if I could just amplify one or two of the remarks made by Dr. Needler on this question of the collaboration between Fisheries and Forestry people, I think it might be reassuring to you to know that this has actually been going on for 10 years. Yesterday and today there have been meetings of representatives from the various provinces that have pest control problems now and will have them again next year, and that includes Newfoundland, New Brunswick, British Columbia and Ontario. Tentative proposals have been advanced for programs next year, and we had a solid assurance from the Fisheries and the wildlife people yesterday that the proposal to force protection had their full support and they were not concerned about any damage to fish or wildlife. I think that, in a nut shell, is an indication of how far we have moved in the last 10 years on that score.

Turning to the question of water bombing, this activity has been developing quite rapidly in the last 10 years or more. Much of it was dependent on war surplus aircraft. These aircraft were not designed particularly for that purpose, although some of them have worked very well. The large Canso bomber is one that has worked well, the Beaver aircraft has been adapted to it, and the Twin Otter as

well. There are other very large pieces of equipment being built now by Canadair Limited which have been designed for that precise purpose. However, the cost has been exceedingly great and it is probably beyond the capacity of individual provinces to acquire a fleet of the size they need to supplement what they already have. We have been giving a lot of attention to that in the last few months. We have done a small review over the last 10 years which indicates in general terms that the incidence of fires in the very severe fire years is sufficiently different in different provinces in different parts of Canada to well justify further investigation on the concept of a mobile fleet, perhaps divided into two or three parts throughout Canada, that would be available for individual provinces in times of real hazard. We have had preliminary discussions on this with the provincial departments and we are now entering into a much more detailed study in an endeavour to assess the economics of the different provinces satisfying what you might call the demand for such aircraft province by province as against a Canada-wide fleet being available for allocation according to need. It will take some time to get the details worked out but we feel fairly confident from the preliminary work that has been done that the mobile fleet concept is probably much more economical and viable than each province trying individually to build up its own fleet to handle its own peak period. Practically all the provinces have arrangements now which are adequate for the average fire season but they fall down badly during a very critical season such as you periodically have in every province but not necessarily in the same year.

Mr. Crouse: Are these planes being built by the Department of Fisheries and Forestry, the Department of Transport, or the Department of National Defence.

Dr. Prebble: The planes themselves?

Mr. Crouse: Under what department will these planes operate?

Dr. Prebble: We think that the first stage, sir, is to assemble the facts. We have not at this stage resolved at all what you might call the financial or the jurisdictional aspects of this problem. At this stage we have to go much further than has been done so far in establishing the true economics of the concept of a mobile fleet against the segments of such a fleet in the individual provinces. Some of the provinces have already conceded that the means to acquire such fleets are beyond their

individual capacities to meet these demands in these extreme fire hazard years.

• 1040

Mr. Crouse: Mr. Chairman, I have one further question. I think this information is most interesting and informative to all of us and especially to the provinces. The statement has been made that these planes are being built at present. Is any thought being given to constructing them in such a manner that they can be utilized not only as water carriers in times of a catastrophe in our forestry industry but also as carriers of supplies to our far northern areas, for example, when they are not required for fire control?

The Chairman: I am sorry, Mr. Crouse, but you have gone beyond your time. Will this be your last question?

Mr. Crouse: Yes, I realize that.

Mr. Davis: May I make one comment?

Mr. Crouse: I think all the Committee would like an answer to that.

Mr. Davis: It is my understanding that the planes are not being built yet for federal account.

Dr. Prebble: I think I can answer his question, sir. Canadair has, in fact, designed a plane to do exactly that. It is a very expensive plane. Four or five of them have been built already and they are having trial runs. They are being built as a commercial venture and the company has been making very urgent attempts to sell them all around the world, as a matter of fact, in all countries as well as throughout Canada. The development of that aircraft is supported by the Department of Industry. There is a very substantial federal contribution to the design and building of that aircraft.

Mr. Davis: But this Department does not as yet have an order in for...

Dr. Prebble: No.

Mr. Crouse: Are we contemplating ordering some for this purpose, then?

Mr. Davis: We are contemplating ordering aircraft for this purpose. Canadair is pushing hard to sell us some; let me put it that way.

The Chairman: Do you wish to come back, Mr. Crouse?

Mr. Crouse: No, that is fine. Thank you, Mr. Chairman.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, my question has to do with the budworm spraying in New Brunswick. I notice under Vote 40 of the Revised Estimates the item:

Contribution to the province of New Brunswick for assistance in a program designed to combat the spruce budworm infestation...

and so forth. The amount is cut down from \$600,000 to \$100,000. This has been partly answered, but I am wondering if the budworm problem is not under control, whether the Minister can tell me if there is something in the estimates of some other department to make up this difference.

Mr. Davis: We have no provision, as yet anyway, in this Department's estimates for next year. There will be no entry. I have had discussions with the Minister of Regional Development. I have not as yet had any assurance from him nor any indication from his Department that they have made or contemplate making a provision in their estimates for next year, but this is still a matter which is open. I cannot say any more about the intentions of another department in this particular regard.

I had discussions with the Minister responsible for resources in New Brunswick in this connection and he, of course, is very anxious to see a federal contribution, again of the order of one third, to an increased program which the province of New Brunswick is contemplating for next year.

Perhaps Dr. Prebble might say a word about the scale of this program. It has risen and fallen over the years, but there have been times when the total program was of the order of magnitude of \$2 million and the federal contribution has been up in the order of \$600,000 to \$800,000.

Is there anything you would like to add about that, Dr. Prebble?

• 1045

Dr. Prebble: This is a very extensive program. It goes back to the early 50's, as a matter of fact. It can be divided roughly into two parts. One relates to the northern part of the province which was under program control activities from 1952 to 1958. That part has been quite successful and the infestation beside it and the forest came through that outbreak with the control action that was taken, I would say, in a very good condition. I

think it can also be stated categorically that had the program not been undertaken in northern New Brunswick there would be a vast area of millions of acres of dead timber.

In 1960 central New Brunswick became subject to what was, in effect, a new outbreak and that is where the program has been in the intervening years. The reason the current year's estimates are down is because on the basis of discussions of the infestation situation in the late summer of 1967 and the forecast by our own and the provincial and industrial people that a rather small area was actually under threat, the amount of money there represents the need for 1968.

Unfortunately, the weather of a particular season is a very influential factor in the rise and fall of the populations and this particular year, 1968, was much more favourable to the insects than it was to the trees and they have a situation now that is very substantially larger than it was a year ago.

The forecast is in the vicinity of 2.5 to 3 million acres requiring treatment next year and we had a very thorough discussion of this during the last two days, as a matter of fact. It seems that the program would have to be in the vicinity of 2.5 million acres, plus or minus a bit, to be effective.

Mr. Smith (Northumberland-Miramichi): How many dollars?

Dr. Prebble: You might almost equate a dollar with an acre; the total cost of the program will probably be in the vicinity of \$2 million or \$2.5 million. That kind of financing is quite impossible within the guidelines we have from the Treasury Board. The question of need is no less than it was at any time during the last few years; it is a question of where the funds can be found.

Mr. Smith (Northumberland-Miramichi): Thank you. I have one other question, Mr. Chairman. I am thinking of the northwest branch of the Miramichi river when I ask it. The Miramichi northwest and all branches of the Miramichi flow through my constituency. Some of the lumber companies have been known—and I have seen it—to cut their logs and pulp right down to the bank or shore of the rivers which are salmon spawning streams. This, I think we know, has the effect of raising the temperature of the water, lowering its level and destroying the shade. I am wondering whether the federal department has any control over, or any method of preventing, that type of cutting where it affects a salmon spawning stream.

Mr. Davis: My understanding is that it does have control and our fisheries wardens have a specific job to do in that connection. Perhaps Dr. Needler would like to comment on this.

Dr. Needler: I think, Mr. Chairman, we have some control through the legislation through the Fisheries Act on what is put into water, but we actually do not have control over the removal of trees from land. Consequently, these indirect effects we will have to work out co-operatively.

Mr. Smith: (Northumberland-Miramichi): Mr. Chairman, is there time for another question? My next question really deals more with fisheries, so perhaps I will pass.

The Chairman: Mr. Cyr is next, and may I say that this room is available if we wish to sit beyond the hour of 11 o'clock.

[Interpretation]

Mr. Cyr: Sir, you mention in your statement that the forestry branch must look after research and other forest activities. You referred particularly to silviculture. You also say that you intend to meet very soon, with the provincial ministers to launch a realistic program of expansion. I imagine you will also consider reforestation.

What I would like to ask, I would like to get some details of this program, since its beginning. Is the department satisfied with the results so far. I have four questions, I will ask them one after the other so you can take note of them, and then answer all together.

• 1050

Are you satisfied with the department's results so far? What province has most benefited from this shared program? And have you cost prices for the planting of trees per 1000 or hundred thousand? What province has the highest cost and which one has the lowest? And sir, do you think that this program will be expanded during the next few years, in cooperation with ARDA and other agencies? That is all.

[English]

Mr. Davis: You have raised a number of matters here. All of these questions deal with reforestation. First, is the Department and its officials satisfied as to the progress in reforestation across the country. I will just anticipate their answer. I am sure they are not. Reforestation is something which we in North America have not really done very well as compar-

ed to the people in Europe, and so on. There is a great deal to be done, but there has been considerable progress. I will leave each of these questions to Dr. Prebble. Perhaps, Dr. Prebble, you may wish to comment on that matter first, and then I will outline the second question.

Dr. Prebble: I have a record of the question, sir, and if you would like to carry on I will try to pick it up at the end.

Mr. Davis: Perhaps I will leave the rest to you. The second question is which province has benefited most? The third question relates to cost benefit data, which I imagine will be provided but cannot be provided this morning, but which province has the highest costs of reforestation and, generally speaking, will the program be expanded? We have had cost-sharing programs with the provinces but, generally speaking, they were terminated in 1966. We are continuing to support the provinces in the sense of technical advice, and so on, but my understanding is that the cost-sharing programs in this area have been terminated. Are we satisfied with the reforestation program?

Dr. Prebble: There are many aspects to this question, Mr. Chairman. I will do the best I can to answer.

I think the answer to the first question is that if there are 75 million acres of forested land in Canada at the present time not producing timber, nobody can be satisfied. That is the estimate we have, and it encompasses much of the land that was cleared in the first decades of logging activity in Canada. Some of them, of course, are valuable lands in the sense that they are close to sources of population, close to industry and, in many cases, close to tidewater. So, the answer is that nobody can really be satisfied with the present situation with regard to the reforestation program in Canada. That includes the industry in the provinces as well as ourselves. This was very thoroughly discussed at the conference in Montebello in February of 1966. Everyone is aware that there are many millions of acres of valuable forest land which are not producing trees at the present time. I might add that many of these acres are in scrub growth, which is very difficult to get rid of. It is going to be a costly program. It is much more difficult to reforest idle acres that are covered with scrub species than recently cut-over land. It is much more difficult indeed.

• 1055

The scale of the program was very substantially encouraged and aided by the shared-cost programs which, as Mr. Davis has said, came to a close on March 31, 1967. Under the shared-cost program, which had gone on since 1951, something like 470,000 acres were reforested in the various provinces. There were something like 350 million trees planted under the shared-cost program. The total area of plantation in Canada now would probably be in the vicinity of 1.5 million acres.

Of course, it does not necessarily follow that every acre that is cut for timber has to be artificially reforested. In much of Eastern Canada, for the sake of argument, nature does a very good job. In most of the Atlantic provinces in the balsam, fir and spruce types there has been very little reforesting of cut-over lands. There has been a fair amount of reforesting of abandoned agricultural land. The forest is quite able to renew itself in the Atlantic provinces. The same is true, of course, in much of the northern coastal area of British Columbia. The stands of western hemlock reforest very, very well indeed.

The cost varies quite a bit. I do not think I can answer the question on the cost of reforesting province by province and say which is the highest and which is the lowest. I might say that Ontario and British Columbia—and I believe Quebec—would stand among the provinces that have the largest programs in effect. Ontario and British Columbia in particular are doing a great deal of work. We are helping them in attempting to get away from the traditional method of reforesting, which is essentially a one-man and one-tree basis at each step, and it is very, very costly.

There has been a great deal of work done in attempting to improve the economics of reforestation by several devices. First of all this has been done through what is known as a container-planning program. Instead of putting out little trees in nurseries, which are transplanted after three or four years, through the design of facilities and equipment little seedlings are grown in tubes for a few weeks in soil and then these little tubes are put out. It is a semi-mechanization and it holds tremendous promise. It has been used for a year or two on quite a large basis in Ontario and it is being developed as a program that has departmental support in British Columbia as a means of getting around the high cost. It also has the advantage of extending the plantation season quite extensively.

With these little seedlings you are not quite so subject to the limitations imposed by weather and drought.

There has also been a lot of work done in connection with improving the site before planting through scarification and getting rid of some of the debris, and in many cases much of the litter, which prevents the roots from getting down into the mineral soil. All these things are going on and the costs are coming down, but they are still quite variable among provinces. The funds that were made available under the shared-cost program were \$1,500 per thousand trees planted. That was the federal contribution. However, it was only equivalent to roughly half the contribution, so you might say that it would cost—under the conditions that prevailed until March 31, 1967—possibly \$30, \$35 or \$40 per thousand trees or per acre. That is quite a high cost. That would be in sites where there was not a great deal of site preparation necessary first. That is essentially the reason for so many millions of acres being still idle after having been cut over and occupied by scrub growth.

• 1100

I think the programs will be expanded. The provinces are definitely expanding their programs of reforestation year by year.

Many of the large companies are actively engaged in expanding programs, and we are heavily involved with the provinces and with the companies in problems of site-classification and pest-control and things of that kind.

Mr. Davis: Yes. For clarification again, we are providing technical support. We are not financing the actual on-site operation on a routine basis of putting the seedlings into the ground.

The Chairman: I notice there are always ways of getting around any regulation. Quite adeptly, we are getting around the time-limit allotted to each questioner by asking four or five questions and sitting back and enjoying the answers. Would you please ask one question at a time and wait for the answer, until your time limit is up?

Mr. Goode: Thank you, Mr. Chairman.

Mr. Davis, you mentioned research into pulp mill technological improvements. Does this research cover the work being done by Dr. Don Whittle in the field of pulp mill processing? I believe he has been carrying on an investigation into the elimination of the

smells and air-pollution relating to the paper making industry. Do we have any other type of research into pulp mill air-pollution?

Mr. Davis: Generally speaking, air-pollution comes under the Department of Health and Welfare, but I am sure our Forestry Branch is consulted.

Again, I will ask Dr. Prebble to comment on that.

Dr. Prebble: I think the answer to that, Mr. Chairman, is that the Forestry Branch, *per se*, has been involved in the question of air-pollution not so much from the point of view of smells and so on, but on the effect of some of the air effluents on the condition of trees in the vicinity of large smelters and so on; and not so much from pulp mills as from smelters. We have been quite heavily involved in studies of the effect of sulphur fumes from smelters on tree-growth in the vicinity.

Mr. Davis: It sounds as though we protect trees but not people.

Dr. Prebble: If I may continue, I think the gentleman to whom you referred may very well be employed by the B.C. Research Council in Vancouver.

Mr. Goode: I think he is employed by Domtar industries, but I understood that he was under the sponsorship of the federal government. To what degree I did not know, but it sounded to me as though it might be covered under this program that you were talking about.

You mentioned that the forest laboratories were used to assist in the creation of the new National Building Code. This research undoubtedly covered number of grades, spans and these 20-inch and 24-inch centres that were brought in under the National Building Code. Is this continuing research or was it just done as a special project for the National Research Council?

Dr. Prebble: No; we have a continuing corporate arrangement with the division of building research of the National Research Council. We have exceedingly close co-operation with their division of building research, which is concerned with many materials other than wood, of course, and we collaborate with them very extensively on the specifications and design of trusses and things of that kind, and fire-protection and so on, in connection with the use of wood in buildings. That is a continuing program.

• 1105

Mr. Davis: I would imagine that the Forest Products Laboratory at the University of British Columbia would be very actively investigating beams—

Dr. Prebble: Oh, yes.

Mr. Davis: —and all types of products which can be made from wood, finding out their advantages and making these known to the National Research Council.

Mr. Goode: Thank you very much, Mr. Chairman. That is all.

Mr. Comeau: Sir, you mentioned a reduction in employment in the lumber industry. Has there been any decrease in our export of lumber, for example? I am referring specifically to the Atlantic area or, even more specifically, to Nova Scotia. Do you have any statistics?

Mr. Davis: Lumber exports, generally, from Canada have increased, but regionally I am not certain. Perhaps Dr. Prebble might answer that.

Mr. Comeau: I am saying this because in my area there used to be quite an extensive export trade. It seems to have dropped recently. Have you any statistics on this?

Mr. Davis: I would imagine there is a shift going on, particularly in the older areas, from lumber and other sized products to pulp-and-paper products of different kinds.

Mr. Comeau: Could you produce those statistics?

Mr. Davis: I am sure we can produce them, but is the Atlantic area, generally speaking, exporting more or less lumber?

Dr. Prebble: I cannot answer that question in detail. If they were exporting less than before it might be because of the availability of log size, or something of that kind, rather than any restriction on the market abroad.

Of course, much of the eastern sawmill industry is under pressure to get the log-size adequate for possible conversion into exportable lumber, but I am not aware of any significant change. We will get information for you on that.

Mr. Comeau: I would be interested to know the principal market areas to which we export.

Dr. Prebble: Yes.

Mr. Davis: The countries of destination?

Mr. Comeau: That is right.

Mr. Davis: Lumber exported from the Atlantic region?

Mr. Comeau: That is right.

I have another question. It is about timberland insurance. Fishermen, for example, have insurance protection on their traps. Is there any type of insurance to protect timberland? I am under the impression that there is not, and that there is no insurance whatsoever for a woodlot owner, for example, or even for a company that has certain amounts of land. If it burns down, it is just too bad. Is there any type of insurance program for this?

Mr. Davis: If I may comment first, fisheries come under the federal government; forests, as a resource, and like property come under the provinces.

Ottawa has some obligation to help insure fishermen and their gear and so on, but it has none in respect of insurance of forestry property, for example, within a province.

More specifically, perhaps, Dr. Prebble could comment about whether, in fact, under provincial jurisdiction, there is any insurance of any kind, public or private.

Dr. Prebble: First of all, I think it is necessary to remark that the great bulk of the forest lands of Canada are Crown-owned in the right of the provinces. Therefore, the answer is that, in effect, they self-insure. The annual losses covered are such that they can absorb them, although they are high in some cases.

As far as I know, no province has considered the matter of actually setting out to take an insurance policy on provincial Crown lands. The majority of the large companies are, of course, operating on provincial Crown lands. I do not actually know of any case of a large company operating on freehold having taken out insurance. It may be so, but I have not heard of any.

I would think that the private woodlot owner could take out insurance. It might be rather costly, depending on the kind of woodlot he had and where it was, but I do not know why a private woodlot owner would be deprived of insurance if he wanted to take out a policy which could be set in relation to some experience on which a large company could quote him.

Essentially, I think the actual answer is that forest land insurance is probably very little observed in Canada.

Mr. Comeau: I have one other short question. You mentioned in your report the word "PAIT" I do not have a clue to what that is.

Mr. Davis: Dr. Prebble will answer that.

• 1110

Dr. Prebble: It is a program supported by the Department of Industry. "PAIT"—P-A-I-T—stands for the Program of Assistance for Industrial Technology, the principle of which is, very briefly, that if a manufacturing firm has a concept of producing something that might be of great value and have a high market but is a very risky venture, the Department of Industry through this PAIT program will assist toward the financing of this venture. If the venture turns out to be a success, the money is refundable to the Department of Industry. If it turns out to be a failure, they have had it. The CL-215 aircraft that I spoke about, being manufactured by Canadair, is being supported under the PAIT program.

Mr. Davis: I mentioned balloon logging. This is a venture which could have important consequences for the high altitude timber in British Columbia. The Department of Industry is supporting that program. The technical advice and economic evaluation and so on is being done by this Department. But the vote of money is from the Department of Industry under the so-called PAIT program. If it is a success, then logging can be carried out economically using this process of lifting logs by balloon and bringing them down the mountainside, and the promoter will have to pay the federal government back. If it is a failure, the taxpayer loses as well as the promoter.

The Chairman: Mr. Harding?

Mr. Harding: What is the annual loss in volume from the non-reforestation of the 75 million acres? Do you have that total?

Dr. Prebble: It is estimated that if those 75 million acres were reforested, by the time they come into productivity they would be producing about half the present annual cuts of timber in Canada.

Mr. Harding: What is that?

Dr. Prebble: Something in the vicinity of four billion cubic feet.

Mr. Harding: Then we are losing about 2 billion cubic feet through . . .

Dr. Prebble: Not at this moment. I mean, it takes a few years for them to become producing.

Mr. Harding: What research, if any, is the federal government doing on species to suit

the present economy? For example, a number of years ago trees were used mainly for lumber. In British Columbia reforestation, the Douglas fir was one of the things that they went into very, very heavily and they still do. Now gradually we are getting into a pulp economy which requires basically a different type of tree. You can use Douglas fir, but I understand other species make better pulp. There might be species that grow faster and that have a shorter cycle. What type of research is being done in this regard by the federal government?

Dr. Prebble: The answer to that question is in several parts, and I will try to make it very brief. First of all, we have had for a number of years geneticists who have been working on a program of tree improvement, tree selection and so on. One has to admit that the premise on which much of their early work was based was on the question of trees of rapid growth, straight form, superior quality and so on, designed for the lumber and the veneer products industry. I think that work will still go on, because veneer of course is one of the highest value end products of trees.

More recently we have become quite conscious of the point you have made, and we have added an area of competence to our Vancouver forest products lab within the last two or three years on the question of pulping

characteristics. We were very fortunate to recruit a superior person and a number of well qualified associates who had long experience in the pulp and paper research field. Our interest is on the pulping side. This person is looking carefully into the pulpability of various so-called weed species and species that have not been used for lumber production or for plywood and things of that kind. He has an active program going on in the Vancouver lab at this time.

• 1115

We are quite concerned about the fact that the end product will not be the same in the year 2000 as it is now. It will probably change quite a bit. He is concerned not only with the inherent quality of the tree itself, but with things that are now thrown away, the tops, the branches, material that is left behind because of deterioration by fungi, or by rot, or by insect attack and things of that kind. He is looking quite heavily into that. He is also looking into the means of getting good grade pulp by chemical digesting processes other than those which have been used. He is doing research on the tree, and also the pulping processes.

An hon. Member: I move we adjourn, Mr. Chairman.

The Chairman: The next meeting will be at the call of the Chair.

APPENDIX "C"

FORESTRY BRANCH ESTIMATE REVIEW
1968-69

BRIEFING MATERIAL

(as requested by Mr. Davis)

PART I: Relative Importance of Forestry and Forest-Based Manufacturing in the Canadian Economy

PART II: Productivity (additional material to follow)

PART III: Updating of Tables 1 and 5 of the Publication: "A Plan for Development of Forest Research and Related Functions in the Department of Forestry, 1965-1971, Part I".

FORESTRY BRANCH

BRIEFING MATERIAL—PART I

Relative Importance of Forestry and Forest-Based Manufacturing in the Canadian Economy

(Prepared in response to Mr. Davis' request of October 29, 1968, addressed to M. L. Prebble)

Table 1—Gross Domestic Product from Forestry and its Relation to the G.D.P. for Canada, Ten Year Intervals, 1935-1965.

	Gross Domestic Product from Forestry	Relation to G.D.P., Canada
	million dollars	per cent
1935	44	1.15
1945	208	1.92
1955	445	1.84
1965	482	1.05

Source: National Accounts, Income and Expenditure, D.B.S. Cat. No. 13-001

Table 2—Estimated Gross Domestic Product from Forest-based Manufacturing and its Relation to the G.D.P. for Canada, Ten Year Intervals, 1935-1965.

	Gross Domestic Product from Forest-based Mfg. ¹	Relation to G.D.P., Canada
	million dollars	per cent
1935a)	136	3.55
1945b)	509	4.72
1955b)	1141	4.72
1965c)	1736	3.79

¹ Includes wood and paper products manufacturing.

a) b) c) See note below.

In the preparation of Table 2, the weights used for assessing the importance of wood and paper products manufacturing were obtained from the *Indexes of Real Domestic Product, by Industry*. These weights are as follows:

Manufacturing	1935-39a)	1949b)	1961c)
	% of G.D.P.		
Wood products	1.503	2.094	1.117
Paper products	2.048	2.631	2.675

Table 3—Estimated combined relationship of forestry and forest-based manufacturing output to Canada's G.D.P., ten year intervals, 1935-1965

	Proportion of Canada's Domestic Product Forest-based Manufacturinga)		
	Forestry	Manufacturinga)	Total
	per cent		
1935	1.15	3.55	4.70
1945	1.92	4.72	6.64
1955	1.84	4.72	6.56
1965	1.05	3.79	4.84

a) The gross output of wood product manufacturing to all forest-based manufacturing (wood and paper products) decreased from 42.6 per cent in 1935 to 29.4 per cent in 1965.

Table 4—Labour force employed in forestry and pulp and paper as a per cent of the total male employed labour force and the total labour force, ten year intervals, 1946-66

	Forestry			Pulp and Paper		
	1946	1956	1966	1946	1956	1966
Per cent of male employed labour force	4.3	2.4	1.5	1.3	1.5	1.5
Per cent of total Canadian labour force	3.4	1.8	1.0	1.0	1.2	1.0

No data are available from the Labour Force Survey of the estimated numbers in

the Canadian labour force employed in wood product manufacturing. The Labour Force survey is a relatively small sample of total employment and is not used to survey plants with 25 employees or less. Many sawmills, for example, would not be included in the sample for the Labour Force Survey and hence no data are available from this source. Using data from the Manufacturing and Primary Industries Division, D.B.S., it appears that about 2 per cent of the total labour force was employed in wood product manufacturing in 1946. This has since decreased to about one per cent for 1966.

BRIEFING MATERIAL—PART II

Productivity

Outside the data published on productivity in Agriculture by the D.B.S. and the Economic Council of Canada, there is no published material on productivity for the primary industries of Canada. The Economic Council of Canada purposely avoided showing estimates of productivity per worker per year in the chapter on "Manpower in the Primary Industries" and particularly with reference to Table 8-2 in the Fourth Annual Review. The main problem is related to using "reconciled employment" data. In the Economic Council's table referring to "Changes in Real Output and Employment in the Primary Industries" the Council used Labour Force data for employment. This is considered incorrect for estimating productivity since a "reconciled employment" is required.

The Dominion Bureau of Statistics does not publish its data on "reconciled employment" even when it publishes productivity trends. These data on employment come from a number of sources and the accuracy of the coverage for past years has been limited by the kind of information collected.

D.B.S. have preliminary internal data for computations of productivity per worker per year for forestry. Using these data, it has been estimated that over the past 20 years annual rate of increase in productivity has averaged 4.8 per cent in forestry. To achieve this level of productivity, new capital investment has increased at an average rate of 6.3 per cent per annum during the 20 year period. Although the labour input has gone down and productivity up, this does not necessarily mean that the cost of forest operations per unit of output has decreased. The added cost of capital could, in fact, have offset the advantages of increased productivity.

BRIEFING MATERIAL—PART III

Updating of Tables 1 and 5 of the Publication:

"A Plan for Development of Forest Research and Related Functions in the Department of Forestry, 1965-1971, Part I".

TABLE 1

COMPARATIVE DATA ON EMPLOYMENT, WAGES, NET VALUE OF PRODUCTION EXPORTS AND CAPITAL INVESTMENT IN FOUR MAJOR RESOURCE INDUSTRIES IN CANADA, 1951-1965

	Annual averages by periods				Percentage of total over period

STANDING COMMITTEE
ON

FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE
No. 9

THURSDAY, NOVEMBER 28, 1968

Respecting
Revised Main Estimates (1968-69) of Fisheries and Forestry

WITNESSES:

From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister;
Mr. C. R. Levelton, Director, Conservation and Protection Service; and
Dr. G. F. M. Smith, Biological Consultant, Fisheries Research Board of
Canada.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante

and Messrs.

Comeau,	¹ Howard (<i>Skeena</i>),	Noble,
Crouse,	² LeBlanc (<i>Rimouski</i>),	St-Pierre,
⁶ De Bané,	Lundrigan,	Smith (<i>Northumberland-</i>
Dionne,	McQuaid,	<i>Miramichi</i>),
Goode,	Moore (<i>Bonavista-</i>	⁴ Sulatycky,
³ Harding,	<i>Trinity-Conception</i>),	⁵ Turner (<i>London East</i>),
Hogarth,		Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

¹ Replaced Mr. Harding on November 22, 1968.

² Replaced Mr. Smith (*Saint-Jean*) on November 26, 1968.

³ Replaced Mr. Mather on November 27, 1968.

⁴ Replaced Mr. Breau on November 27, 1968.

⁵ Replaced Mr. Cyr on November 27, 1968.

⁶ Replaced Mr. Anderson on November 27, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS
FRIDAY, November 22, 1968.

Ordered,—That the name of Mr. Howard (*Skeena*) be substituted for that of Mr. Harding on the Standing Committee on Fisheries and Forestry.

TUESDAY, November 26, 1968.

Ordered,—That the name of Mr. LeBlanc (*Rimouski*) be substituted for that of Mr. Smith (*Saint-Jean*) on the Standing Committee on Fisheries and Forestry.

WEDNESDAY, November 27, 1968.

Ordered,—That the names of Messrs. Harding, Sulatycky, Turner (*London East*) and De Bané be substituted for those of Messrs. Mather, Breau, Cyr and Anderson on the Standing Committee on Fisheries and Forestry.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

(Text)

MINUTES OF PROCEEDINGS

THURSDAY, November 28, 1968.

(9)

The Standing Committee on Fisheries and Forestry met this day at 9.55 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Comeau, Crossman, Crouse, Goode, Harding, Hogarth, Howard (*Skeena*), LeBlanc (*Rimouski*), McQuaid, Noble, Smith (*Northumberland-Miramichi*), Turner (*London East*), St. Pierre, Whelan (14).

Also present: Mr. Smith (*Saint-Jean*).

In attendance: From the Department of Fisheries: Dr. A. W. H. Needler, Deputy Minister; Mr. C. R. Levelton, Director, Conservation and Protection Service; and Dr. G. F. M. Smith, Biological Consultant, Fisheries Research Board of Canada.

The following items relating to the Forestry Branch having been called by the Chairman were *approved unanimously*:

FORESTRY

Item 30—Administration, Operation and Maintenance ..	\$18,271,025
Item 35—Construction or Acquisition of Buildings, Works, etc.	\$ 3,697,000
Item 40—Grants and contributions, etc.	\$ 1,516,000

After further examination the following items were *approved unanimously*:

FISHERIES RESEARCH BOARD OF CANADA

Item 20—Administration, Operation and Maintenance, etc.	\$12,135,000
Item 25—Construction or Acquisition of Buildings, Works, etc.	\$ 4,000,000

The Committee resumed questioning on Item 1, Revised Main Estimates 1968-69 relating to Fisheries and Forestry and at 11.00 a.m., discussion continuing the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, November 28, 1968

● 0952

The Chairman: I see a quorum. Gentlemen, at our last meeting on Thursday, November 21 we examined the Department on Items 30, 35 and 40 of the Revised Estimates relating to the Forestry Branch.

Shall Items 30, 35 and 40 carry?

Items 30, 35 and 40 agreed to.

The Chairman: With the Committee's permission, I shall now call Items 20 and 25, page 158 of the Revised Estimates relating to the Fisheries Research Board of Canada which was examined at our meeting of November 14, 1968.

Shall Item 20 carry?

Mr. Crouse: Mr. Chairman, on Item 20 I am not too certain if the question I have in mind would apply to this item. It has to do with the tuna fishing fleet which presently operates out of St. Andrews. Undoubtedly some work has been done by the Fisheries Research Board prior to the establishment of that operation and I am wondering whether any of the departmental officials could give the Committee some idea of what progress is being made by this tuna fishing fleet. Specifically, has this operation passed the experimental stage? Are these ships meeting their financial commitments? I wonder if we could have some information on that? Would that question be in order on this particular vote?

The Chairman: I think so, yes.

Mr. C. R. Levelton (Director, Conservation and Protection Service, Department of Fisheries): All I can give is some very general information on this matter. When the tuna fleet initially commenced operation, it had some operating difficulties with refrigeration systems. In the matter of scouting tuna, the crews were not fully experienced in this type of fishery. They enlisted the aid of two American captains, one of whom is still with the company. It is my understanding that with these experienced men on board the vessels their catch has increased very sub-

stantially. In the spring they were operating in the Pacific ocean off the South American coast. They have now, I understand, moved to the vicinity of southwest Africa. I am not in a position to say what their catches are there.

I believe Mr. Crouse asked a question on the financial commitments and unfortunately I am not in a position to answer.

● 0955

Mr. Crouse: Mr. Chairman, now that we have the Deputy Minister, Dr. Needler, with us, perhaps I could rephrase my question and direct it to him.

Mr. Chairman, may I repeat my question with respect to the progress being made by one of our new fisheries, specifically the tuna fisheries, which is an entirely new operation on the Atlantic coast and which I believe only started last year.

I wonder whether you could enlarge upon the statement that has already been made on the progress being made by our new tuna fishing fleet. Specifically, has it passed the experimental stage? Could you inform us whether these ships operating in this new industry are meeting their financial commitments?

Dr. A. W. H. Needler (Deputy Minister, Department of Fisheries): Mr. Chairman, I am afraid I cannot answer this question because I do not have figures on their performance during 1968.

I understand, just from general statements made to me in an informal way by members of the company, that they feel now that the ships are being reasonably successful off the east coast of the Americas and the Western Pacific during the open season there and that they are meeting with some promising success. Whether or not they have yet had a profitable year, I could not say, because I do not have definite information yet.

Mr. Crouse: Mr. Chairman, there has been some information conveyed to the general public through the press which indicates that

the ships have been operating with considerable difficulty and as a result of their lack of earnings and inexperienced Canadian crews, they have found it necessary to secure crews from other countries.

As a result, the press statement indicated that Canadian nationals were not now being employed on these particular ships. In view of the large amount of subsidy supplied by the Canadian government initially to get this operation going, the basic idea being to provide employment for Canadians, could be Deputy Minister inform the Committee if there is any truth in the newspaper account and if these ships are now being manned, not by Canadians but by nationals from other countries?

Dr. Needler: Mr. Chairman, I do not have up to date information on this either. Our last information was that four of the five ships had Canadian captains. With regard to the crew members, we do not have details. I feel, however, that the company is making an honest attempt to have as many Canadian crew members as possible. From the point of view of employment, of course, these ships are contributing to the employment on shore at their plant at St. Andrews.

They have had difficulties. Indeed, it is quite common for fishing fleets, not only ours but in other countries, to have difficulties when they enter new fisheries.

Mr. Crouse: Thank you, Mr. Chairman.

In view of the amount presently being spent by the Fisheries Research Board, I wonder whether the Deputy Minister could tell the Committee whether it would be alarmist to say that there is a real danger of our fishery resources being depleted particularly off the Atlantic coast?

Dr. Needler: I would not wish to go into a definition of "depletion". Nevertheless, this is one of the difficulties.

The major offshore resource on the Atlantic coast that has been fished in the past and the only offshore resource that now is intensively fished is the ground fish resource. This is under study and to some degree regulated by the International Commission for the Northwest Atlantic Fisheries, the scientific work being done by the countries and the Commission co-ordinating their work.

The fishery has been so intensive, of course, as to reduce the abundance of fish

and increase the costs of catching fish. The scientific opinion at the moment is that at some stage it will be necessary to limit fishing effort if the stocks are to be maintained at their maximum productivity and especially for their maximum economic return. The Commission has not been able to reach agreement on this.

Some of the ground fish stocks appear to be exploited to their maximum and some of them do not yet appear to be exploited to their maximum. A very few might be exploited a little bit more intensively than would give the maximum continuing yield. I do not see any danger of a sudden change in this situation. I believe it is being studied and that there is a good future prospect of the resource being maintained.

Mr. Crouse: Mr. Chairman, this reply prompts another question on this vote. Recently the Department of Fisheries announced a change in the mesh size, I believe, as it applies to sole. Formerly the mesh size of four and a half inches on deep sea draggers applied only to cod and haddock. Possibly the Chairman could inform us whether other types of fish were added which are now prohibited to be caught with a four and a half inch mesh net. What prompted this change? Is there some indication that stocks of sole are being depleted? If so, what do your studies show with regard to the quantities of haddock, pollock, hake and other species of ground fish?

• 1000

Dr. Needler: Mr. Chairman, I really could not answer all of these questions in detail without some reference to written material or people who are specializing in this field. Thus far the only regulations which the Northwest Atlantic Commission has agreed on and put into effect are minimum mesh sizes designed to let the smaller fish escape and in that way to get as large as possible a return from what the biologists call the recruitment; that is, the number of young fish coming along.

Now, in general as a matter of practice, one cannot use a different mesh size for every species of fish. It is impossible to have boats use one mesh size for flat fish, one for cod and one for haddock, because they catch them all together. These minimum mesh sizes do not apply to other species which are caught separately, such as red fish.

In this case I think the Commission recently was able to overcome some of the technical obstacles to bringing these mesh sizes into force, such matters as ratification by other countries, and so forth. The recent action represents some advance in arriving at effective, tidy regulation. A mesh regulation such as this is always a compromise and so far the scientists associated with the Commission, I believe, consider that these mesh sizes are about as well as we can do for the fishery for these species, but in order to get the maximum yield, eventually it will be necessary to have some limitation of effort on the amount of fishing. This, of course, gets into some very touchy fields, to get international agreement on this sort of thing.

Mr. Crouse: I have one further question relating to that, Mr. Chairman.

The Chairman: Make it a short one, Mr. Crouse, because you are well over your time.

Mr. Crouse: Mr. Chairman, I thought we were going to study each one of these estimates. There is no other way we can do it.

The Chairman: I can put you down for another round.

Mr. Crouse: As Canadians it is possible for us to police these regulations but I would like to ask our witness, once having agreed to new mesh regulations as they apply to other species of ground fish, what control do we have over other countries that are party to this treaty with regard to maintaining the treaty? Is there any way we have of ascertaining whether they are acting in accordance with these new regulations or do they still continue to take every fish that comes into their nets?

• 1005

Dr. Needler: Mr. Chairman, under this Commission at the present time the responsibility for enforcement rests with each country with regard to their nationals. At the moment there is under negotiation, and I believe with every prospect of success within the next year, an amendment to the Convention which would provide for joint enforcement measures.

In the meantime, the Commission has arranged some exchanges between the enforcement officers of one country observing the enforcement by other countries.

The Chairman: Mr. St. Pierre?

Mr. St. Pierre: I have two or three questions related to the same subject which is the very drastic drop in the herring population in British Columbia waters. Dr. Needler, has the reason for this been found?

Dr. Needler: Mr. Chairman, I do not think there is general agreement on the reason. It is quite clear that the fishery and natural factors played some part in this. The situation is this: In the more heavily fished areas, the fishery was taking about 60 per cent of the herring every year and about half of those that remained were dying every year. This means there was a total mortality rate of about 80 per cent.

In recent years the use of lights to attract herring made this fishery somewhat more intensive because lights are able to attract herring and make it possible to catch them when they are scarcer. Without lights you have to find the concentrated school and put your seine around it. With lights you can attract smaller groups of herring, so I believe in the last few years the fishery became still more intensive.

The Department has prohibited the use of lights in this way, partly because of the danger to the herring stocks but also because when you use lights you attract other species. You attract about triple the number of young salmon that you catch incidentally. No one on the coast, fishermen or processors or anyone else, wants to see young salmon caught in the herring fishery. This factor that led to this increase in intensity has now been done away with and, I expect, for an indefinite period.

It was also clear from our studies that there were two or three years when reproduction was particularly unsuccessful. These, combined with the very heavy fishing, I think, are responsible for the decline in stocks. Now, up to this time it had not been possible to find any correlation between the size of the herring produced in any one year and the size of the spawning stocks. Some of the largest broods have been produced by very small stocks and vice versa, the meaning being that the natural factors were more important than the fishery.

I think this extra intensity, which lasted for two or three years and now has been done away with, combined with a couple of very

bad years, produced the present reduction in abundance. I think, however, that there are now signs of recovery.

Mr. St. Pierre: The union was suggesting a reduction in herring fishing some considerable time before the Department opposed it, were they not?

Dr. Needler: Yes, in certain parts of the fishery. I do not recall their proposals exactly. They have expressed concern.

Mr. St. Pierre: What is the effect on other fish of this depletion of the herring? They are part of the food chains; are they going to affect other stocks?

Dr. Needler: I suppose there may be some effects, but it is very difficult to predict this. As far as I know, none have been recognizable yet. I do not think that any species depends entirely on herring. Coho salmon, for example, eat herring but they also eat crustaceans such as shrimp and that sort of thing.

Mr. St. Pierre: I have a final question, Mr. Chairman. Do you know or have you some fairly firm beliefs about what the interruption in the natural spawning process was? Was pollution a feature?

Dr. Needler: No, I think that these were actual natural changes in such things as temperature or immediate food supply for the larvae. In every important stock of fish that we know of there is an early stage when things are very critical, when there is a high mortality. This may depend on simple factors such as temperature and so forth or, in the case of salmon, a flood washing the eggs out of the ground. It may also depend on extremely complicated factors which we do not altogether understand. One that I might mention as an example is that every year there is a progression of minute plant and animal growth. The proper food for young salmon might only be there for two or three weeks in good abundance and then that phase of the season is past. If the young salmon happens to get there at the right time it does well, if it gets there too soon or too late it does not do so well. That sort of complicated thing is very hard to understand. We are doing our best.

Mr. St. Pierre: Thank you, Mr. Chairman.

The Chairman: Mr. Smith, you are next.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, we from the Miramichi, which is one of the great salmon rivers of the world, are greatly concerned with the problem of pollution. I am wondering whether Dr. Needler could give us any information on the present state of pollution on the Miramichi, particularly the northwest branch; and also whether the department has any theory as to why this past season the sport, set net and drift net salmon fishing was down to about one-half of what it was the previous year.

Dr. Needler: I do not have the detailed situation now with regard to pollution, although we are monitoring this very carefully. I do not think that among us here we have a man who is specializing in this particular field. You made a mistake in saying that this was one of the greatest Atlantic salmon rivers; in terms of numbers I think it is the greatest.

Mr. Smith (Northumberland-Miramichi): I agree.

Dr. Needler: With regard to the low catch this year, this is, as far as we know, a natural variation. Do you have anything on this, Dr. Smith?

Dr. G. F. M. Smith (Biological Consultant, Fisheries Research Board, Department of Fisheries): Only to say, Mr. Chairman, that last year was especially good, not that this year was particularly bad. Last year was very high compared to previous years. This was the case all over the North Atlantic for catches of salmon. It apparently was a very good survival year. So this year is down compared with last year.

There were difficulties in the salmon coming up the rivers this past summer because of the very low water, and this hinders their appearance until later. I do not know what the latest is on that this fall.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, the Department has for some years operated a counting fence on the northwest branch of the Miramichi river. I am just wondering whether there are any figures available on the number of salmon which have gone up that river over the past ten years, and whether the numbers are increasing or decreasing?

Dr. Needler: Mr. Chairman, I think this information could easily be provided but we do not have it with us today.

Mr. Smith (Northumberland-Miramichi): I would like that information some time.

Dr. Needler: I might say that, in general, Atlantic salmon catches on the Atlantic coast have shown considerable variation, long term up and down and, as far as I know, the factor which has been most nearly correlated with these changes has been rainfall. In other words, Atlantic salmon which live in the rivers for two or more years of their early life do better when there is plenty of water in the rivers for these young salmon to live in. There are quite large variations which are correlated with rainfall. It is the most important factor.

Mr. Smith (Northumberland-Miramichi): I do agree that water temperatures were unusually high this past summer and the levels were low.

I understand, Mr. Chairman, that the Department has restricted the number of drift net licences in Miramichi Bay to, I think, 113. What is the policy with regard to the set net fishery in the Miramichi river? I think there have been some changes in the regulations and it appears that the purpose of this is to cut down on the number of set net licences. However, I am not sure about this and I would like to know what the policy is with regard to this.

Dr. Needler: Maybe I should ask Mr. Levelton to outline this briefly. I think he knows the details on this.

Mr. C. R. Levelton: Mr. Chairman, the number of drift nets on the Miramichi has remained the same over several years, at 113. When we come to the set nets, trap nets and gill nets in the estuary and the river itself, these are being reduced above the Morrissey bridge as the licences lapse—that is, as the current owners fail to take out the licences and to fish their stands the privilege of fishing them lapses. So it is only above the Morrissey bridge at the present time that there is a reduction taking place.

Mr. Smith (Northumberland-Miramichi): Thank you.

The Chairman: Mr. Harding.

Mr. Harding: Mr. Chairman, I do not know how much of this research has been covered in committee and I do not want to go over old ground, but I would like to ask a question or two about research being done on salmon,

particularly in the west. I have had a bit of information regarding the research work which has been done by the Americans on the lower Columbia and it appears that they have had fantastic success in raising coho salmon in hatcheries.

Now several years ago some of the fry from the hatcheries were brought out to Lake Michigan and they found that they could raise coho salmon to full maturity in fresh water. In fact, I believe that some of the sportsmen in Lake Michigan itself had a hey-day; they were catching them from 14, 16 and up to 22 pounds. It would seem to me that this would be a very, very interesting facet for the Department to check into. I was wondering whether we have similar experiments afoot in Canada or how closely the Department is checking on the experiment which are taking place, particularly along the lower Columbia, in this regard.

Dr. Needler: Mr. Chairman, the Department, partly through the office of the Regional Director but perhaps mainly through the research board, is watching developments in the United States very carefully in the artificial production of coho and spring salmon; in fact they have been engaged over the past two years in a co-operative effort with the United States authorities to really try to measure what are the effects.

Up until quite recently the United States authorities have been a bit doubtful as to whether or not these efforts actually are paying for themselves and consequently should be continued or expanded. I believe that while these studies are not completed there is some evidence of success in the production of coho. The Department has not yet started any hatcheries for coho. Coho are the ubiquitous salmon—they are present in every stream in British Columbia. The abundance of coho has maintained itself at an extraordinarily constant level, with some fluctuation, over the years, and there is indeed some evidence that our streams have the young coho which they are capable of rearing in probably a large proportion of the cases.

However, this is a subject which we would like to attack more vigorously in the future. So far the Department in British Columbia has led in the development of artificial spawning beds for better production of pink salmon and sockeye salmon, and their main efforts have gone in that direction. We are looking very carefully at these coho develop-

ments. As I said, we have been studying them jointly with the United States authorities.

Mr. Harding: Have you any experiments underway—I am thinking in terms of obtaining some of the fry and planting them in some Canadian fresh water lake where they can be observed by the Department.

Dr. Needler: I do not believe so. If this was done in one of the smaller lakes in Ontario, for example, it would come under the responsibility which has been delegated to Ontario for the administration of its fisheries. In the Great Lakes it is our belief that plans of this sort should be developed with the Great Lakes Fishery Commission. Of course we are also watching this coho development in Lake Michigan, which I believe is also spreading to other lakes.

Mr. Harding: I have just one further question, Mr. Chairman.

How closely is the federal Department tied in with research—I am thinking of research in connection with fresh water species. Is this a provincial responsibility or is the federal Department also concerned with this?

Dr. Needler: Mr. Chairman, in some provinces we do very little research on fresh water fisheries and the research we do is a good bit less than the provinces. However, the Board recently established a fresh water fisheries institute at Winnipeg which has a very broad and active program regarding fresh water fisheries which would be applicable to all fresh water fisheries, or some aspects of it would be. This has been one of the most active of the large biological stations and in the last two or three years it has been the one that has increased the most. One of its responsibilities is the study of productivity of lakes as related to pollution or fertilization. It also has been doing research on fresh water fisheries biological problems generally and on the processing of fresh water fish products. This is quite a major effort related to fresh water fisheries.

Mr. Harding: Mr. Chairman, there is just one more comment that I would like to make on this. I come from the Kootenay Lake area of British Columbia. It is quite a fishing area and we have a very large number of streams which produce the little kokanee. Now, they do not grow any larger than this normally. A number of years ago biologists introduced

fresh shimp into Kootenay Lake and now they are getting some of these kokanee up to six and eight pounds. Four and six pounds is quite common. Not all of them get to this size but quite a number of them do. The odd one has been found above that weight. I do not think there has been any proper research done along this line but I think it is well worth looking into. Perhaps a joint program between the federal and provincial governments should be initiated because this could have a fantastic result on fresh water fisheries.

The Chairman: Thank you, Mr. Harding. Mr. McQuaid?

Mr. McQuaid: Mr. Chairman, I have only one question and it concerns the oyster fishing industry in Prince Edward Island. Some people who have been engaged in this industry for some considerable number of years are finding it increasingly difficult to get sufficient oyster seed to stock their beds. One man, for example, whom I know has held a lease for the last four years and during these four years he has been able to get only about two barrels of oysters.

Now, I realize of course that our oyster stock was depleted in the early 1920's, or perhaps just prior to 1920, by disease which struck. I am wondering whether there are sufficient seed oysters now to meet the needs of our oyster fishermen, or what is being done to try to increase the amount of seed oyster to make more available to our fishermen?

The Chairman: Dr. Needler?

Dr. Needler: Mr. Chairman, it is nice to get back to oysters. I worked on oysters in Prince Edward Island for 13 years, from 1929 to 1941. The supply of small oysters for planting has always been a limiting factor in oyster farming. In the early days we developed some rather, shall I say, labour intensive techniques in the collection and rearing of spat. There was considerable development in this line which, however, petered out during the war when labour became quite scarce in Prince Edward Island, which I understand had one of the highest enlistment rates.

In recent years, however, there has been a great deal of attention given to this problem. There has been what might be termed a major breakthrough in oyster hatchery techniques by the Fisheries Research Board. They

have developed techniques by which oysters can be made to spawn under controlled conditions and the oyster larvae can be fed and spat can be made to settle earlier. Under controlled conditions the spat can be larger and in rather assured quantities.

I think this is a major breakthrough and, indeed, there are reports at the present time of some private efforts making use of these findings.

There will still be the need for the development of better economic techniques for rearing these oysters, rearing them safe from smothering or being eaten by starfish, and so forth, but I would say that very good progress has been taking place and a very intensive effort is being made.

Mr. McQuaid: Dr. Needler, is this alternative means of producing the seed meeting with a fair degree of success? I understand that this is one of the programs being conducted at the biological station at Ellerslie.

Dr. Needler: I would say, Mr. Chairman, that the development of techniques for the oyster hatchery, as it is called, has been meeting with a great deal of success, but only in the last year or so has it reached the stage where one could apply these results. This is quite recent work and there are always "bugs", as it were, to be ironed out before you can apply this on a large scale. It is reaching that stage now and there is some private interest developing.

Mr. McQuaid: Then getting back, Mr. Chairman, to my original question, are there sufficient oysters now to meet the need?

Dr. Needler: Not yet, but we hope there will be.

The Chairman: Is that all you have, Mr. McQuaid?

Mr. McQuaid: Yes, Mr. Chairman.

The Chairman: If I may, I would like to ask, what would be the actual cost of getting these beds developed?

Dr. Needler: Mr. Chairman, these are so variable that you can hardly put a cost figure on them. How much is produced will depend on how much effort is put into them and from area to area rates of growth vary. I am afraid I cannot give you a general answer.

Mr. McQuaid: Mr. Chairman, I wonder if I could ask one supplementary question? Dr.

Needler, what system do you use to distribute these seeds that are available among those who apply for them? Is there any system of distribution?

Dr. Needler: Mr. Chairman, I do not know the details of this and I do not believe we have anyone here who could answer it. The quantities produced in this recent experimental operation have been very small. It is our hope that these techniques will be taken over by private individuals who can then produce small oysters as a commercial venture either for themselves or for sale to others.

Mr. McQuaid: I think it was Mr. Burrige who told us in Committee the other day that many of these oyster seeds that are being developed at Ellerslie are now being transplanted, for example, to the Miramichi to build up their stocks there which have been depleted because of this disease. Do you have any idea what quantity is taken from the Ellerslie station, for example, out of Prince Edward Island to the Miramichi?

Dr. Needler: I can get those figures, but I could not give them to you now, Mr. Chairman.

The main effort to re-establish oysters in those areas where the disease appeared recently and decimated the stocks in the New Brunswick inlets has not been by the transfer of this sort of specially produced small oyster seed, but rather by the transfer of larger oysters which would spawn and produce spat in those areas.

Mr. McQuaid: That is all, Mr. Chairman.

Mr. Howard (Skeena): Mr. Chairman, as Dr. Needler and others know, for some time we have had a pretty serious point of conflict in the northern British Columbia waters about the surf lines as they exist on the Pacific coast and in Alaska.

The accusation has been made on many occasions that because the Alaskan government, or United States government, has permitted net fishing of salmon in an area away from the actual coastline, as distinct from our process which is to move the surf line in close to the coastline, this has resulted in Alaskan or American fishermen catching, to a large extent, pink and coho salmon that are home-bound to the Skeena River, or British Columbia waters, through Alaskan waters.

Therefore, the Americans are, in effect, catching fish that spawn in our territory and for which we practice conservation. This has been a continuing problem for some time. We had at one time some pretty serious discussions or negotiations with the United States authorities, semi-threats of moving our surf lines seaward in order to retaliate, if that is the proper approach. We have had experimental or research type fishing, and last summer we had an area open to the West Coast seine fleet to seine for salmon in a certain area.

These latter two activities were designed to give us, I assume, some further information about the migration of fish so that we know what our position is scientifically and thus put us in a better position to negotiate with the United States or force the United States to comply with what we consider to be the spirit of the agreement about the surf lines in the first place.

The time limit may not permit us to explore this in any great detail, Mr. Chairman. It is a complicated matter and work has been conducted on it for many years. It is of such importance that this information would be very valuable to us. If we could not obtain this in absolute detail from Dr. Needler in the time available to us, perhaps we could obtain it by way of reports that the Department may have prepared. We would certainly like to know as much as we can at this stage about the situation.

Dr. Needler: Mr. Chairman, this involves quite a bit of discretion as to how lengthy I should be. I have been in the middle of these negotiations with the Americans now for a number of years. It is true that we had a disagreement with the United States over the so-called surf line in Alaska. This so-called surf line is an outer limit for net fishing, and that is a line outside fishing salmon with nets which is not permitted by Canada or the United States. This was put into effect through rather informal agreement at the official level between Canada and the United States. It was on the British Columbia coast and south of the border. This line in general follows the coast itself where it is exposed and then goes straight across the bays. We contended Alaska had established this line three miles farther out than it would have been according to the formula we applied. As a result, we said that we felt free to depart from this informal agreement and to move

our line out, if this would give us an equal share in the salmon.

However, Mr. Chairman, this is an extremely complicated question. The latest analysis suggests that if we look at the whole coast, and if we include the spring salmon and coho salmon which the United States are catching, we are catching about as many United States fish as they are catching our fish. I use the terms "our" fish and "their" fish to refer to fish that are bound for our rivers. We have done a good bit of research on this subject. We have discovered that in the North the pink salmon tend to move from south to north every second year and from north to south every other year. In the even years they tend to move from south to north. We tried to arrange for regulations this year which would help our fishermen catch salmon bound for Alaska. I am not quite sure how much success we have had.

Mr. Howard (Skeena): If I could interject just one question. Is that the same fleet you referred to in your program?

Dr. Needler: Yes, that was the purpose of it. Mr. Chairman, parts of the industry thought we did not go far enough, but there are a number of difficulties in this situation of a diplomatic nature. I do not want to infer any cloak and dagger activity, but there are a number of factors under the control of Canada and a number under the United States, and one simply has to do the best with the material one has.

In general our principle is to move step by step towards the situation where each country catches a minimum of salmon bound for rivers of the other country. Our reason for doing this is that this makes it possible for those who carry out positive fish culture or conservation measures to benefit from them, and consequently it encourages such measures. It also makes it possible to manage better because one knows more clearly what salmon are being caught from each run. This, Mr. Chairman, is the policy towards which we are moving when we can.

Mr. Howard (Skeena): Mr. Chairman, I wonder whether I could follow this up. The seine fleet was permitted to fish this year in a certain defined area because, as I understand it, it is an even-numbered year—I think the pinks and sockeyes are all we are interested in at this stage—and the fish were moving from the ocean in a south to north direction

and thus this would have permitted our seine fleet to catch United States bound salmon. I gather this is the theory of it. Fishermen who have fished that area for years, gill netters, trollers and others, claim that you picked the wrong area. That by circumscribing the area of Zayas Island, where the same fleet was permitted to fish, this was not in the mainstream of the movement of salmon stocks going northward from the United States. This is what I understand from people who have fished in this area for many years.

In any event, what do you expect will happen next year when it will be a north-south movement and we will again be faced with heavy Alaskan fishing off Noyes Island? They will be able to fish within their surf line. Apparently they are far more proficient at it than we are, and again they will perhaps catch larger numbers of British Columbia-bound salmon than we will. What do you expect might occur there?

Dr. Needler: Mr. Chairman, I do not expect a change in that situation, although we have urged the United States to control this fishery and have such things as closed periods each week, more or less of the same order as we have them.

However, I would like to make one point. It is only the pink salmon that go north in the even years and south in the odd years. The sockeye seem to follow the same course every year.

Mr. Howard (Skeena): Which is what?

Dr. Needler: Some of them tend to come more or less directly to the North. The biggest difficulty in this effort to maintain our share of the catch is that if one wants to catch more Alaskan-bound pink salmon one has to do this without over-fishing our sockeye stocks in the area. That sort of consideration has to be taken into account. However, Mr. Chairman, we are certainly keeping this situation very much in mind and we will take into account the views of those who think we could have had a better area and perhaps will have a better area in 1970.

Mr. Howard (Skeena): Mr. Chairman, Dr. Needler said we have been urging the Alaskan authorities to have closed fishing periods during the week similar to the ones we have. In other words, to have the same concern for conservation as ourselves. Have we had any success in influencing them by our urging?

Dr. Needler: Limited success, I would say. I think it is a little unfair to make this one-sided statement. It tends to paint the United States authorities black and ourselves as people dressed in white with wings. They have some problems too, such as supporting long-term fisheries which have supported communities, and so forth. We communicate with the United States and we have some respect for each another. We do our very best to get an equitable share of the stock. When you consider the coast as a whole we are not doing too badly. In the northern area I think they are catching more British Columbia-bound salmon than we are catching Alaska-bound salmon.

The Chairman: We are now drawing close to 11 o'clock, when we have to vacate this room for another committee.

Mr. Crouse: Mr. Chairman, I wonder if I could ask one related question before we leave that topic. Has any effort been made to secure international agreement not to catch salmon on the high seas? I am thinking of reports, for example, of excessive salmon fishing off the coast of Iceland, which some scientists have inferred could destroy the Atlantic salmon not only caught off our coast but caught off the coast of Scotland and other European ports as well. Has any effort been made to secure international agreement about not catching salmon on the high seas?

Dr. Needler: Mr. Chairman, on a number of occasions in the international sphere we have stated the principle that we do not believe in the high seas fishing of salmon for the two reasons I gave. That if one is to encourage proper management and effort to produce salmon, then the people who make those efforts should get the reward. Also, that management is more effective if you can manage one stock at a time. One stock may need to be reinstated while another one is in good shape.

We put these arguments forward in negotiations with the United States and Japan in connection with the North Pacific. In the most recent case we put these arguments forward to the International Commission for the Northwest Atlantic Fisheries in June of 1967 and again in June of 1968. In June of 1967 I would say we met with little or no success. In June of 1968 we had quite a measure of success in that the Commission asked the member countries to not only review this very carefully but to keep the growth of high seas fisheries in control.

Of course, Mr. Chairman, Iceland is outside the convention area, but this matter will be followed up. It is quite possible that a majority of the countries in the International Commission for the Northwest Atlantic Fisheries will support a prevention of growth of high seas fisheries. We would prefer prohibition, because support for this among the member nations of the Commission has been increasing. We will certainly put this forward just as vigorously as we can.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: I wonder if Mr. Howard is returning. We are one member short of a quorum.

Mr. Harding: He went out to make a telephone call, Mr. Chairman.

The Chairman: I would ask the indulgence of the committee, if he does return, that we get items 20 and 25 passed. We can always return to item 1 for further questions, if the committee so wishes.

Mr. Crouse: It is my understanding that the committees were to sit all day today. What arrangements have you as Chairman made for this committee? I understood you to say we must vacate this room by 11 o'clock. Have arrangements been made for further sittings of this committee today?

The Chairman: Not today.

Mr. Crouse: I see. Before we adjourn, I would like to say that I think the statement just made by our witness with regard to the control of the salmon in the North Atlantic is a most important one, especially in view of the announcement yesterday that another firm in Norway has now found it necessary for economic reasons to curtail its whaling fishing, and this situation has been brought about by lack of control in conservation measures in connection with the whales which

exist in our oceans. In my opinion, unless some effort is made to preserve the salmon the same situation in the North Atlantic will prevail.

However, the witness did state that Iceland was not a party to this convention.

Dr. Needler: I am sorry.

Mr. Crouse: Does this mean that other countries will possibly restrict their salmon fishing in the North Atlantic but Iceland will not be a party to that convention?

Dr. Needler: Mr. Chairman, I would like to correct this. I did not say that Iceland was not a party to the convention. I said that fishing in Icelandic, Norwegian or British waters is outside the area which is governed by the International Commission for the Northwest Atlantic fisheries. This would come under the commission which is known as NEAF, the Northeast Atlantic Fisheries Commission.

Mr. Crouse: Thank you.

The Chairman: May I ask the Committee if item 20 carries?

Item 20 agreed to.

The Chairman: Item 25?

Item 25 agreed to.

The Chairman: Item 1 is still open. Are there other questions which members would like to ask on this item when we meet again, or shall I ask if item 1 carries?

Mr. McQuaid: I have some questions to ask on item 1, Mr. Chairman.

The Chairman: We will now adjourn. No further meeting is scheduled this week. The co-ordinating committee has not indicated the date when we will meet next week, but it will be at the call of the Chair.

HOUSE OF COMMONS
First Session—Twenty-eighth Parliament
1968

STANDING COMMITTEE
ON
FISHERIES AND FORESTRY

Chairman: Mr. GUY CROSSMAN

MINUTES OF PROCEEDINGS AND EVIDENCE
No. 10

TUESDAY, DECEMBER 3, 1968

Respecting
Revised Main Estimates (1968-69) of Fisheries and Forestry

APPEARING:
The Honourable Jack Davis, Minister of Fisheries.

WITNESSES:

From the Department of Fisheries: Messrs. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); J. G. Hutchison, Assistant Director, Conservation and Protection Service; L. S. Bradbury, Director, Industrial Development Service; W. C. MacKenzie, Director, Economics Service; J. P. Parkinson, Chief Engineer, Resource Development Service; and G. L. Grant, Chairman, Fisheries Prices Support Board.

ROGER DUHAMEL, F.R.S.C.
QUEEN'S PRINTER AND CONTROLLER OF STATIONERY
OTTAWA, 1968

STANDING COMMITTEE ON FISHERIES AND FORESTRY

Chairman: Mr. Guy Crossman

Vice-Chairman: Mr. Richard Durante
and Messrs.

³ Anderson,
⁴ Borrie,
¹ Breau,
Comeau,
Crouse,
² Cyr,
Dionne,

Goode,
Harding,
Hogarth,
Howard (*Skeena*),
Lundrigan,
McQuaid,

Moores (*Bonavista-
Trinity-Conception*),
Noble,
⁶ Smith (*Saint-Jean*),
⁵ Turner (*London East*),
Whelan—(20).

(Quorum 11)

J. H. Bennett,
Clerk of the Committee.

¹ Replaced Mr. Sulatycky on November 29, 1968.

² Replaced Mr. Turner (*London East*) on November 29, 1968.

³ Replaced Mr. De Bané on November 29, 1968.

⁴ Replaced Mr. Smith (*Northumberland-Miramichi*) on December 2, 1968.

⁵ Replaced Mr. LeBlanc (*Rimouski*) on December 2, 1968.

⁶ Replaced Mr. St. Pierre on December 2, 1968.

ORDERS OF REFERENCE

HOUSE OF COMMONS
FRIDAY, November 29, 1968.

Ordered,—That the names of Messrs. Breau, Cyr and Anderson be substituted for those of Messrs. Sulatycky, Turner (*London East*) and De Bané on the Standing Committee on Fisheries and Forestry.

MONDAY, December 2, 1968.

Ordered,—That the names of Messrs. Borrie, Turner (*London East*) and Smith (*Saint-Jean*), be substituted for those of Messrs. Smith (*Northumberland-Miramichi*), LeBlanc (*Rimouski*) and St. Pierre on the Standing Committee on Fisheries and Forestry.

ATTEST:

ALISTAIR FRASER,
The Clerk of the House of Commons.

REPORT TO THE HOUSE

WEDNESDAY, December 4, 1968.

The Standing Committee on Fisheries and Forestry has the honour to present its

THIRD REPORT

Pursuant to its Order of Reference of Wednesday, October 16, 1968, your Committee has considered the items listed in the Revised Main Estimates 1968-69 relating to Fisheries and Forestry.

Your Committee commends them to the House.

A copy of the relevant Minutes of Proceedings and Evidence (*Issues Nos. 1 to 10*) is tabled.

Respectfully submitted,

GUY CROSSMAN,
Chairman.

MINUTES OF PROCEEDINGS

TUESDAY, December 3, 1968.
(10)

The Standing Committee on Fisheries and Forestry met this day at 11:10 a.m. The Chairman, Mr. Crossman, presided.

Members present: Messrs. Anderson, Borrie, Breau, Crossman, Crouse, Cyr, Dionne, Durante, Goode, Harding, Howard (*Skeena*), Lundrigan, Turner (*London East*), Whelan (14).

Also present: The Honourable Jack Davis, Minister of Fisheries.

In attendance: From the Department of Fisheries: Messrs. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); J. G. Hutchison, Assistant Director, Conservation and Protection Service; L. S. Bradbury, Director, Industrial Development Service; W. C. MacKenzie, Director, Economics Service; J. P. Parkinson, Chief Engineer, Resource Development Service; and G. L. Grant, Chairman, Fisheries Prices Support Board.

The Chairman called Item 1 of the Revised Main Estimates 1968-69 relating to Fisheries and Forestry and questioning of the Minister of Fisheries and departmental officials resumed.

Following questioning, the following Item was *approved unanimously*:

Item 1—Departmental Administration, including grants and contributions etc. \$3,509,175.

It was also agreed that the Chairman report the Revised Main Estimates 1968-69 relating to Fisheries and Forestry as a Third Report.

The Chairman read a letter from Prince Rupert Local No. 37 of the United Fishermen and Allied Workers' Union.

The Chairman thanked the members of the Committee for their assistance and at 1:00 p.m., the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, December 3, 1968.

The Chairman: I see a quorum. I would like to invite the Minister of Fisheries, the Hon. Jack Davis, to the table. We will resume questioning on item 1. Before we begin, Mr. Howard has indicated that he would like to speak on a procedural matter.

Mr. Howard (Skeena): Mr. Chairman, I think we should be concerned about whether or not we are going to be able to accomplish the proposition that the Committee endorsed at its first meeting about travelling from one place to another in the country and visiting communities, listening to fishermen on the spot, and so on. As I understand the announcement made by Mr. Macdonald, the House leader, there is a desire to have these estimates reported back to the House within a week or two. If that is the case and we are required to do that, then this leaves us without any vehicle to meet, let alone travel.

I understand that a few people have written to the Committee, and I received a copy of one of the letters from the fishermen's union in Prince Rupert in relation to the earlier decision which was made asking us to let them know when we were going to be there. I think it is something on which we should make a decision. We should either wipe that original motion off the books and decide that we are not going to be able to travel because of the time limit, or deal with it in another way. Perhaps we should consider referring the annual report of the Department so we can use that as a means of getting us into a position where we can study and examine these matters, and also meet the requests which have been submitted about our visiting communities on the spot.

The Chairman: As you know, Mr. Howard, the House concurred that we could travel from place to place. I gathered from the House leader that we would have permission, I should think, in the new year to travel from

place to place. I think he took it for granted that this would be contained in the estimates after the new year. It would not apply to present estimates, because there would not be sufficient time for us to travel from place to place and also meet the deadline for the estimates go to the House.

Mr. Howard (Skeena): Has this information been communicated to those people who have made inquiries?

• 1115

Mr. Chairman: No. I received this morning—I was going to mention it at this meeting—a letter from the United Fishermen and Allied Workers' Union. I intend to ask that this letter be attached as an appendix to today's meeting. This letter will be acknowledged today.

Mr. Howard (Skeena): Then I guess there is nothing we can do about it at this stage.

The Chairman: I think it is a matter of timing.

Mr. Howard (Skeena): I think the organizations which have written to us should certainly be advised that we are not going to be able to accomplish this visitation now, and perhaps not until next year. It will depend on what the government thinks about it, what Mr. Macdonald thinks about it, if the estimates are referred to the Committee, and a lot of other things. I think we should be polite enough to advise them of the situation.

The Chairman: The letters will certainly be acknowledged but it is difficult to give them a definite date. When the logistics of this visit have been planned, notices will be published in the press. I think that perhaps we should write to the people who have corresponded with us in the past and advise them that we will be at certain places at certain times, if that would be acceptable to the Committee.

Hon. Jack Davis (Minister of Fisheries): Mr. Chairman, may I make a comment? I would certainly think this Committee will be

reconvened quite early in the new year. We have a deadline in respect to the estimates for the current year, and it is desirable to have them all passed by the committees and by the House before Christmas. It would be a shame if that particular deadline prevented this Committee from examining matters which fall within the purview of this Department. It would be a shame if the Committee was prevented from travelling, and certainly it would be too bad from my point of view if some groups to which I have made a commitment, or a near commitment, that they would be heard were now denied that opportunity. I think that would present some difficulties.

I hope in the spring, for example, the Committee will be able to visit around. I am certainly going to invite as many members of Parliament as possible and I would like the Committee to come down and take a good look at the harp seal fishery and arrive at its own conclusions as to whether or not it is desirable that that fishery should be allowed to continue. There is widespread public interest in the employment side, the income side and the human interest side of that matter especially in so far as it relates to those fishermen whose livelihood partly depends on that fishery. It has never really been explored by the public media. For example the television networks have certainly not presented that side of the case. I think the members should be given the opportunity early in the new year to travel and examine the seal fishery industry, and any other matters that come within the jurisdiction of the Department. I cannot make a commitment in this regard, but this is my particular preference in this matter.

Mr. Howard (Skeena): That is precisely the reason I raised it, Mr. Chairman, so that we could perhaps get some public declaration about intent, if nothing else, at this stage.

The Chairman: Are there any other comments on this matter?

Mr. Crouse: As I understand it, Mr. Chairman, the Committee cannot make any plans to travel to any part of Canada to investigate conditions in the fisheries between now and Christmas. That is self-evident from the time factor. However, it would appear from the Minister's statement that when the Committee reconvenes in 1969 this matter will be raised again. The question in my mind is do we have a motion that is redundant and which

will again have to be raised when the Committee reconvenes in 1969?

• 1120

The Chairman: It will be the same Committee, unless there is a new session. It is sufficient for this session.

Mr. Howard (Skeena): If it is a new session it will have to be done over again.

The Chairman: But not if it is the same session. Are there any other comments? We will now proceed with questioning on item 1.

Mr. Crouse: Mr. Chairman, the reports of early catches by our lobster fishermen are encouraging. This will be helpful to our in-shore fishermen. However, I believe we must still pursue every possible avenue in order to increase the quantity of this valuable resource. I believe Dr. Martin made a suggestion when he appeared before this Committee for the control of the lobster fishing industry. Has the department given any consideration to increasing the carapace measure of lobsters, thus allowing the lobsters to remain in the water one year longer so that the reproductive process could increase the number of seed lobsters?

Mr. Davis: Mr. Crouse, I am certain that the answer is yes, but I had better ask someone in the Department to comment in depth on that. Is Mr. Hutchison here?

The Chairman: Mr. Hutchison.

Mr. J. G. Hutchison (Assistant Director, Conservation and Protection Service, Department of Fisheries): Yes, this matter is under review at all times. We are considering this, sir.

Mr. Crouse: Is there any indication, Mr. Chairman, that some action will be taken in the near future about increasing the carapace measurement of lobsters before they are permitted to be caught?

Mr. Hutchison: We still have to make our report. We have not as yet come to any firm conclusions on it.

Mr. Crouse: But the matter is now under observation and consideration?

Mr. Hutchison: Yes, sir.

Mr. Crouse: Thank you, Mr. Chairman. It is my understanding that a new fish protein plant—a f.p.c. plant—is to be built at Canso.

Will the federal government be participating, financially or otherwise in this development and if so, to what extent?

Mr. Davis: I am sure the federal government will give it various forms of support. In particular there has been a good deal of research carried out by the Fisheries Research Board in respect to fish protein concentrate, but as you know, there are also various devices under various departments for financial assistance. I am sure financial assistance will be given with respect to construction of the plant, for example.

Perhaps I should ask for a comment from either the Fisheries Research Board or the development people as to what else has been discussed with the company concerned.

The Chairman: Mr. Bradbury?

Mr. Bradbury: Mr. Chairman, while we have been approached by the principals of this company, we have been approached in such a manner that we are only aware of certain proposals. There was a press release which I think originated from New York city. There has been no approach made to the Department of Fisheries for any assistance. I presume if this company goes ahead with its announced proposals that it will be looking for the assistance to which the Minister referred under the area development agency, for example.

Mr. Crouse: At the present time there is no definite request for assistance?

Mr. Bradbury: Not to the Department of Fisheries.

Mr. Crouse: Thank you, Mr. Chairman. The recent announcement by the Minister with regard to the price paid for salt codfish for aid to Biafra in Nigeria was to the effect that the spread on the quotation would indicate that the various companies that tendered offered the government a wide variance in quality of fish for this purpose. This raises a question with regard to the inspection of salt fish. Is the Department giving any consideration to more rigid inspection of this product, not only at the factory but, more importantly, when the fish are landed and cured by the fishermen?

• 1125

Mr. Davis: I am sure this is a matter which has been foremost in the minds of the Department for many, many years. Mr. Bradbury, would you like to comment on this?

Mr. Bradbury: Mr. Chairman, this is not in my particular field. However, I think the members are well aware that the present inspection regulations refer to inspection for export, and if I understand Mr. Crouse's question correctly he is referring to the movement of salted codfish from the fishermen to the buyer. There are no regulations as such. However, from the point of view of quality generally—that is, sanitation procedures—it is my understanding that regulations in this regard are being drafted.

Mr. Crouse: It is evident, Mr. Chairman, that in those parts of Canada where salt fish is produced that the fisherman automatically becomes the person who not only catches the fish but cures it as well. Unless there is some form of quality control at this level, in my opinion we are closing the door after the horse has escaped from the barn. The inspection of fish when it is ready for export in no way determines the quality of that fish at the time it was packed. I wonder if one of the departmental officials could indicate just what steps are proposed to guard against poor quality fish being packed by fishermen. This seems to be the crux of the whole matter of quality control.

Mr. Davis: Mr. Chairman, this raises a very difficult problem. It is really one of restructuring the industry and trying to arrange for the delivery of fish in the round, so to speak, to a limited number of central locations, where the processing can not only be done efficiently but having regard to inspection.

In the limited time I have been Minister of Fisheries the restructuring of the industry, and the manner in which it could be brought about, has constantly been raised by departmental officials and also by people in the industry. As long as very large numbers of fishermen who are widely dispersed geographically are carrying out the processing phase in their private quarters, as well as catching the fish, there will obviously be difficulty in reinspection. This could be reduced if there was some centralization of the processing stage. This has been discussed in a number of reports. It has been a matter of active consideration. If we were to set up a salt fish development board or a salt fish marketing board, this is one of the matters that would certainly be reviewed and possibly acted upon.

• 1130

Mr. Crouse: Mr. Chairman, I just have one further question at the moment and then I will defer to others.

I wish to direct this question to the Minister. Are tenders called for the charter of boats and aircraft as they are required by the Department during the year?

Mr. Davis: Are tenders called?

Mr. Crouse: Is the Department securing boats and aircraft on a competitive basis, or are these contracts awarded by agreement with the companies concerned? For example, I see from the estimates that a considerable amount is expended each year on the charter of boats and aircraft. I would like to know if these are supplied by public tender.

Mr. Davis: Yes.

The Chairman: Mr. Sinclair.

Mr. Sinclair: By and large, Mr. Chairman, they are supplied by public tender through the Department of Defence Production.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Mr. Durante?

Mr. Durante: I have no questions at this time, Mr. Chairman.

The Chairman: Mr. Goode.

Mr. Goode: I just have one question, Mr. Chairman. Could the Minister give us some detail on the new licensing of halibut boats on the west coast.

Mr. Davis: Yes. When we first announced the limitation of entry into salmon fishery on the west coast, we only included those vessels which had a record of fishing for salmon. This automatically excluded a number of other vessels. Proportionately it was a relatively small number but nevertheless it covered some of the larger and more efficient vessels on the coast which had not fished for salmon. I am referring to those principally involved in halibut fishery, in some cases ground fishery, herring fishery, and so on. This left outside a group of roughly 100 vessels with what you might refer to as a special privilege. Because of applications by the owners of most of these vessels for inclusion in the salmon fishery—in other words, entry into a fishery with restricted access—

which is a privilege which they may or may not use because of the competence of the operations of those vessels and because they could have been used in the salmon fishery in the last two or three years, we decided to admit them. I doubt very much whether these vessels will in fact be used to fish salmon. Nevertheless, they are included in the limited group of vessels which can now fish salmon.

• 1135

Mr. Goode: Most of these would be large.

Mr. Davis: They would all be large ones.

Mr. Goode: Thank you, Mr. Chairman.

The Chairman: Mr. Anderson.

Mr. Anderson: Mr. Minister, I am interested in the number of company-owned seine boats on the west coast which have class A licences and which theoretically could be converted into very large and productive vessels.

I ask this because I understand there are about 700 or 800 company-owned seine boats, many of which are very old and now do not produce much fish per year, but the licences of which could be transferred to new boats which would increase production and materially increase the amount of fishing capacity on the west coast.

If I may elaborate on my question, although the new regulations were an excellent step in the right direction it may be 10 or even 15 years before there could be any material reduction in the number of boats, or, indeed, in the amount of gear used on the west coast fisheries.

I would like to hear your comments on how much, if any, these new regulations are actually going to reduce the amount of gear on the west coast and, if not, how much of an increase in gear will take place despite the new regulations.

Mr. Davis: Yes. We have set an upper limit on the number of vessels that can fish for salmon on the west coast. That is about all we have done so far. We have not, therefore in effect, set an upper limit—certainly no absolute upper limit—on the fishing capacity on the west coast, because the same number of vessels with a proportion of them upgraded, or rebuilt, or certain vessels withdrawn from the fleet and more capable ones introduced, could obviously catch more salmon and would result in further restriction of the number of days of fishing and the areas to be fished and

so on. We have only gone a very small way down the road towards making the system effective.

What we have done, though, is to indicate that the system to be used will be one based on vessels, a system which is essentially a limitation of numbers of vessels.

● 1140

Over a period of years—we are talking in terms of 10 years or longer—we have to reduce the number of vessels substantially. At the same time I would certainly hope there would be an upgrading of the vessels, an improvement of the vessels remaining in the fleet. So the total catching capacity may go down but it will not go down anything like the numbers of vessels will go down. So, we have to now come up with devices for reducing the numbers. One of the ways in which the numbers can be reduced is to raise the standards, seaworthiness, inspection and so on which would arbitrarily, in a sense, exclude certain vessels, possibly old vessels and so on. This type of device can be used to reduce the size of the fleet.

Another device, and for the longer run probably the only real effective one once all the reasonable standards are met, is that of the government itself buying into the fleet, presumably buying out of the fleet the oldest and most beat up vessels but paying the going market price for them, so that only those offered for sale would in fact be retired. And whoever sold the vessel would be selling to the government at a price he could otherwise have obtained from someone else.

Mr. Anderson: Well, I can see that if you buy at the going market price you are essentially only buying a licence. An old boat without a licence is useless. What worries me is that I do not yet know of any fund which is set up for purchasing these old boats off the market. Quite apart from that, I cannot see how increasing the safety standards is going to materially affect the number of boats because the licence can always be transferred to a new boat.

Mr. Davis: Just on that point, if the standards are raised and the boat does not meet the standards, presumably we could arbitrarily say that the boat is not seaworthy, that it just is not a class A boat.

Mr. Anderson: In other words, the licence would be withdrawn from it when it is not seaworthy.

Mr. Davis: It could happen. I am merely indicating one way in which numbers can be reduced. These are arbitrary measures. Presumably we would give some notice in this respect. I am told there is a sizable number of vessels on the west coast that are 30 and even 40 years old. I doubt if it is worth anyone's while to put several thousand dollars into some of those vessels.

Mr. Anderson: I can see that point but again the going market price for an old vessel of that nature would simply be the price of the licence, and that licence could be purchased either by the government or anyone else and switched to another boat. This is where I think the system has its weakness, and unless we set up some system whereby many boats are bought out of the fishing industry, while the number of boats might be reduced somewhat, certainly the amount of gear fishing salmon on the west coast will not decrease at all. Indeed it will probably increase.

Mr. Davis: No, it is not likely to decrease in the short run because there will be an upgrading process going on while the numbers of boats are being reduced. This has been happening. We will begin to modify the trend of increasing gear with no over-all increase in cash. This is what has been happening.

● 1145

Now you ask about financing. No arrangement is set up for the coming year for the federal government to buy vessels out of this fleet, but I would hope that by the year after next, that is by 1970, we would have machinery for this to take place, namely that a number of the poorest vessels would be bought off the market.

We have announced a system. We have identified vessels. We need twelve months for it to shake down and for the fishermen and the owners to understand the system before we begin to buy in. I would suggest that we could raise some if not all of the necessary moneys by progressively raising the licence fee and earmarking that or arranging through Treasury to have it earmarked for the purchase of vessels out of the fleet. Those in the fleet obviously are going to benefit from a restriction of numbers. So there is some logic, some equity even, in the government's charging an increasing fee for the privilege of being in the select club, the pro-

ceeds of which are used to retire vessels. This in a very rough way, is the manner in which the system would work.

Mr. Anderson: Thank you very much, sir, for those observations. Clearly much more has to be done in this area. I think you have made it clear that the licensing regulations as announced up to now are certainly not the final answer for this.

Mr. Davis: We have done several things which have reduced the numbers. We have struck off the registry, so to speak, 1500 vessels which carried commercial licences and could fish for salmon but which never reported, at least in recent years, any commercial sales. They had all the privileges of being in the commercial fleet until this system was introduced. There was no way in which they could be effectively struck off the registry. We got rid of a lot of excess baggage, so to speak. We also reduced the total number by declaring a "B" category which are not transferable, where it is not possible to upgrade the vessel. We have been reducing numbers, declaring the rules of the game. We have yet to proceed to really make the whole effort work.

Mr. Anderson: I can appreciate your reducing numbers but perhaps someone could comment. Could I just finish this one point and I will leave my other three points. Could someone perhaps comment on how much capacity has been cut out of the salmon industry by the "B" licensing system and by cutting out the 1500 boats that you mentioned? I have heard that only 2 per cent of the amount of salmon which is delivered to the canneries and the freezers in British Columbia comes from the "B" licensed boat and those others that you mentioned. In other words, the cutting down has not been very effective as far as the commercial fleet is concerned. It has had a negligible effect on the commercial salmon fleet in British Columbia. Does anyone know how much of the catch was caught by "B" class boats?

Mr. Davis: The figure is about 2 per cent.

Mr. Anderson: It is about 2 per cent.

Mr. Davis: Of "B" boats for those reporting less than a gross of \$1,250 in neither 1967 nor 1968. They are obviously small operators.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: Thank you, Mr. Chairman. First of all, Mr. Minister, could you indicate

to us whether you have had time to study the report received from the Atlantic fish trade or the trade of the Atlantic region growing out of the indication which was received about a month ago from Mr. Nelson and the Fisheries Council of Canada that they would present a brief. I think you have received it. Have you had a chance to study it and are you prepared to say whether the government is going to accede to any of the recommendations of the trades from the Atlantic region?

Mr. Davis: Yes, I have had an opportunity to study it. We have also had a meeting with the authors of the report, the principals involved. The report does not make any new suggestions. It ends up by recommending more of the seining. In effect it asks the federal government to continue to buy salt cod and give it away, and in effect it also asks in respect of fresh and frozen fish that the federal government continue the system of deficiency payments.

In respect of salt cod I hope the government will in some measure be able to continue to buy some portion of the salt cod catch and make it part of our external aid program.

In respect of deficiency payments, we cannot continue a system similar to the one we had in effect during the past year principally because this would invite action by the United States. We have to come up with a different scheme. We cannot be doing something which, in American eyes at least, amounts to a subsidy to the industry.

• 1150

Mr. Lundrigan: Mr. Chairman, I have a number of other questions in another area which I would like to develop. But since you have brought up the point about the attitude in Washington and when we recall the fact that, for example, we lost the subsidy on the salt rebate amounting to not more than \$300,000, when we realize that we have lost the subsidy on the fresh fish—I am using that phrase intentionally now—the deficiency payment of one point some-odd cents a pound, when we realize that the marketing board which is being suggested in the resolution for the fresh fish and presumably from reports from an informed source in Ottawa for the salt fish industry as well which is now being reported in papers across Canada, I am wondering whether the American government is not deciding on the fisheries policy for Canada and not the Canadian government. I also wonder whether this is not really the major

complication with the fisheries in Canada. This is something which you perhaps on for a moment, Mr. Minister.

Mr. Davis: Obviously the United States has very little, if anything, to do with the salt cod industry. We do not sell much salt cod in the United States so their requirements in that regard are negligible. Considerations are other than those of the United States market.

On the deficiency payment side—we are now talking about fresh and frozen fish—we sell, as you know very well, of the order of 80 per cent of our production in the United States. We are still the biggest supplier of the United States market. There is a modest United States industry which continues to try to insist that competition from outside the United States is not unduly subsidized. Our fishing industry receives considerable support from the Canadian government. Support in various forms is perhaps acceptable in international trade but the type of support which is easily identified and is clearly there, certainly in the eyes of an importing country, is in the nature of so many cents per pound on exports to that country.

It is a fact that the United States has instituted inquiries into types of support of this kind. It is a fact that the United States has been watching very carefully this deficiency program which we set up last spring. It is not as if it has been going on forever. We are just going to have to look at the industry and come to some other conclusion because we will invite compensating, offsetting tariff from the United States, which will completely annul the deficiency payment and we will be back where we started from.

There is no point in running head on into that one; it is a virtual certainty that we would do so.

Mr. Lundrigan: Even when we realize that we have a balance of trade we still have to sort of—I was going to say pussyfoot around with the business of the fisheries of Canada, but I will not say that. Literally in every sense of the word, we have to kowtow to every frown and every indication of this sort of thing from Washington, even though we realize we have a balance of trade to a large extent, and even though we realize that international...

Mr. Davis: What do you mean, we have a balance of trade? Do you mean we ship a lot of fish products to the United States?

Mr. Lundrigan: Not fish products, but in the total trade of Canada-United States relations and even though we realize that European countries are to a large extent, perhaps, in many ways being subsidized in their fishing endeavours as well.

Mr. Davis: This whole process appears to me to be a matter of governments competing in the extent of their subsidies, that is, the countries exporting to the United States.

Mr. Lundrigan: Mr. Chairman, I will get more involved in this at a later date when there is more time for developing a position.

• 1155

Mr. Crouse: Mr. Chairman, I would like to ask a supplementary question related to the question asked by Mr. Lundrigan and the reply given by the Minister.

The Minister has stated that any assistance provided in the form of supplementary payments to our fishermen would bring retaliation from the United States. I would like him to elaborate on this matter because it is evident now that our chief competition comes from European countries, for example, Norway and Iceland. What I would like the Minister to tell the Committee is in what way does the Norwegian government, for example, get around official Washington, because we know that the Norwegian government has passed in its parliament an amount in the nature of \$35 million U.S. for assistance to the Norwegian fishing fleet up to date in 1969.

I agree with you, sir, that this is placing the Canadian fishing industry in direct competition with the government of Norway as well as the government of Iceland which has initiated similar assistance. Then, to top it all off, Iceland has devalued its krona almost 50 per cent. I ask you, how can the Canadian fishing industry compete with the governments of Iceland and Norway unless we are prepared to recognize their regional disparities and their low incomes? Is there no program of assistance to be devised that will at least keep these people from starving?

Mr. Davis: Successive Canadian governments have done many things to try to keep the Canadian fishery competitive with those of these overseas countries. They have gone farther with each passing year in terms of support. We follow Iceland's course of devaluation. Their fishery is in difficulty and they have taken the exceptional step of deval-

luating the krona first by a third and recently by 25 per cent and, as you say, have now in effect reduced the purchasing value of the krona internationally to less than 50 per cent what it was 18 months ago.

• 1200

That gives them an exceptional advantage. At least, United States prices converted to krona in Iceland look more attractive to the fishermen in Iceland. We cannot do that sort of thing. In respect of Norway, I have asked the Department of Trade and Commerce—and perhaps we as a department will have to take steps ourselves—to give us a detailed account of the nature of the support to the fishery in Norway. The types of support that appear to be acceptable in importing countries such as the United States are just very difficult to sort out and assess and therefore do not invite these offsetting duties.

The types of support that are available in those countries include the equivalent, say, of our unemployment insurance, the equivalent of our Canada Assistance Plan, the equivalent of transfer payments, and so on, all that type of thing, which is not specifically aimed at number of pounds of product going to the importing country. They seemed to be glossed over and the United States does not really question this. We cannot repeat precisely the same deficiency payment we had last year because we were saying that we would pay up to a given price regardless of what the price was in Boston. We made that payment per pound of product from our industry. It was clearly identifiable as a type of support related to production and export.

There are those here from the Department who know more about it than I do, but I think it is clear that we cannot continue that type of specific support to production aimed at exports.

Mr. Crouse: Mr. Chairman, the Minister has not quite answered my question. My question, to put it simply, would be something like this: Why does the American government indicate that it may take action against us by imposing tariffs if we continue any form of assistance to our fishermen while, at the same time, they obviously are not taking this action against Norway and Iceland who, within the last month, have sold several hundred thousand pounds of cod fillets in Boston for 20 cents a pound?

This must be harmful to the American fishing industry too and yet you, sir, have indicated that if we assist our fishermen we can expect retaliatory action from the United

States which is supposed to be our best friend and we are actually her best customer and yet, when other nationals undermine our traditional markets there is no action taken against those governments.

Why are we being made the goat in this whole business and why is the Canadian fishing industry, the industry itself, expected to carry the whole load? They are not in a position to do this, either financially or in any other way. They cannot raise the finances and we find an industry located in the Atlantic provinces of Canada today that is literally fighting with its back to the wall.

As I look at these departmental estimates, every one, practically, with one exception shows an increase in the amount for continuing establishment. I am beginning to wonder what the Department of Fisheries is doing for the fishermen. You have a responsibility and you must do something to help these people before we find that the fishermen of Canada will be coming to Ottawa and camping on the lawn as did the farmers, and I am sure the Minister would not want that. Surely you can give us some indication why Ottawa takes a stand against Canada and does not take a similar stand against Norway and Iceland.

Mr. Davis: Well, Mr. Crouse, you said several things. You said, if and so on, and several things that are just not true. You implied that the fishing industry was being asked to "go it alone" in Canada. I do not know of another industry, and I am generalizing, that gets as much support from government as the fishing industry. Leave aside the deficiency payment program that you are really talking about.

• 1205

Now, on the deficiency payment program, which is a specific program geared in a specific way to assist the fresh and frozen fish industry, I said that that specific manner of assistance is opposed in Washington, we fear it will be opposed. Indeed, we have made a commitment that we will not use that specific form of assistance again. That specific form of assistance—and perhaps I will ask Mr. MacKenzie from the Department to comment on this—is contrary, as I understand it, to the General Agreement on Tariffs and Trade. We cannot go on doing it; it is a matter of international trade policy.

There are other things we can do but we cannot use that specific form of assistance. Other forms of support will have to be

devised to enable the industry to adjust, but we just cannot repeat that program in the form in which it was created last spring and carried out through to the end of October. It was a once and for all program, it was announced as such, it was terminated as such.

Mr. Crouse: Mr. Chairman, I must take exception to the Minister's statement that I made some remarks which are not true. Will you indicate one specific remark I made that is untrue?

Mr. Davis: You commented that the industry had to "go it alone" with no assistance from the Canadian government.

Mr. Crouse: At the present time, Mr. Chairman.

Mr. Davis: At the moment it is getting a lot of assistance from the Canadian government on the purchase of salt cod.

Mr. Crouse: You did not say that.

The Chairman: Order.

Mr. Davis: Perhaps Mr. MacKenzie could correct or qualify some of the things I said in this regard.

Mr. W. C. MacKenzie (Director, Economic Services, Department of Fisheries): Mr. Chairman, to my knowledge no correction to what the Minister said is required. As to qualification or modification, I am not sure what I could say that would be of use to the Committee.

I think perhaps it would be worth pointing out that the recent action of Iceland in devaluing its currency obviously is an act of great desperation in a foreign economy which is dependent to the extent of something like 90 per cent of its national product on the fishing industry.

A country such as Iceland which is supporting its fishing industry through subsidization is simply shifting around its economic resources without any real benefit to the fishing industry, except in a very short run. For example, I do not know to what extent imported products are included in the input to the fisheries in Iceland. If they are, it is obvious that production costs in Iceland will rise very soon and very steeply as a result of this devaluation. The benefit to the fisheries, I would guess, will be dissipated in very short order. That is why I say this is an act of desperation.

In the case of Norway perhaps it is not equally so but I believe it is generally known in the international field that the countries that are producing fish in considerable quantities for export to the United States are very much interested in some method of getting out of this bind they are in at the present time where all four or five countries involved are, in reality, subsidizing United States importers.

The obvious solution to this would be a commodity agreement of some kind. However, I must say I have no idea how practicable this would be or how long it would take to negotiate such an agreement. It seems clear to me, at least, that we are in a mug's game at the present time.

Mr. Lundrigan: There is just one question, though, that arises out of this.

The Chairman: It was decided by the steering committee and agreed to by the Committee that 10 minutes would be given to each questioner. Now, when Mr. Lundrigan's time was up, Mr. Crouse indicated he wanted to ask a supplementary that has lasted 20 minutes.

Mr. Lundrigan: Mr. Chairman, my time was not up. I beg to differ with you.

• 1210

The Chairman: Well, you had one minute left.

Mr. Lundrigan: No, Mr. Chairman, I had used four minutes. There was a diversion that I am sure was very important. I am sure the Minister was happy to be able to respond to this which seems to be the crucial problem facing the industry.

I would like to continue with the few minutes I do have left and ask the Minister, in view of his statement which rather—I suppose it did not shock me because I have been aware of it...

Mr. Goode: On a point of order, Mr. Chairman, I take strong offence to his being allowed to continue. I take strong offence to this. Another member of his party took the time up, and I think he should...

The Chairman: The understanding, Mr. Lundrigan, was that if you were allowed a supplementary it went on your time, and that is why I mentioned on the second round I had Mr. Anderson and Mr. Goode. If you so indicate, you can be on the second round as well.

Mr. Lundrigan: That is, Mr. Anderson, Mr. Goode and then I will be next?

The Chairman: Yes.

Mr. Lundrigan: Thank you, Mr. Chairman. I will bow to the member who took strong exception to my continuing.

The Chairman: Mr. Anderson.

Mr. Anderson: I have a suggestion for the better operation of this Committee. I think we perhaps should be a little more generous with supplementary questions. The only time I gave up the floor for a supplementary it was to a Conservative member. I see no reason for not having a little more friendliness. If 20 minutes was taken as part of your time, Mr. Lundrigan, I cannot see any real problem. Mr. Crouse did make some good points. Perhaps if we became less formal about this we could...

The Chairman: It is just a matter of being fair to each questioner.

Mr. Anderson: I agree with you, but I do not think we should perhaps do too much clockwatching.

Mr. Chairman, when I left off questioning I think the general impression was given that it may be some time before there is any real reduction of gear on the west coast. Indeed it may be 10 or 15 years. The alternative, as I see it...

Mr. Davis: I hope there will be some reduction of gear before 10 or 15 years. I think it will be 10 or 15 years before we get down to, let us say, one-half or one-third the number of vessels we now have.

Mr. Anderson: No matter how much we reduce the vessels, if the vessels increase in efficiency and the amount of gear on them. When I gave you the example of the company-owned seiners, the licences of which could be switched to modern and more efficient vessels, I think it will be some time before there is a reduction in gear fishing and before we can envisage any possibility of lengthening the periods when fishing could be allowed. In view of that, it seems to me very important to expand the actual resource itself. Perhaps you cannot reduce the amount of gear fishing, but if we could double the amount of salmon to be fished we would be doing something quite helpful to the fishing industry on that coast. I wonder if you could perhaps indicate to us what plans you have to

step up the artificial spawning channels, which have evidently been successful up to now, and in what other areas can we expect to have these artificial spawning beds created so that the numbers of salmon available for fishermen to catch could be expanded.

Mr. Davis: Yes. The system of limitation certainly has to be viewed as a whole. We are expanding the resource. At the same time we will be reducing the number of vessels. We must not have a system which prevents upgrading of the remaining vessels. I think the system which has been announced, as it is implemented by financial measures, will certainly upgrade the catch per vessel, hopefully increase the income of fishermen, in the long run expand the fishing season per vessel, and so on. As to the resource, the current investment by the federal taxpayer in new facilities—principally artificial spawning beds—is of the order of \$4 million a year for salmon on the west coast.

It is the government's intention and certainly the Department has planned to go to rivers other than the Babine and the big Qualicum. Perhaps I should again turn to the departmental people and ask them to amplify the program for further development in British Columbia.

• 1215

The Chairman: Mr. Parkinson.

Mr. J. P. Parkinson (Chief Engineer, Resource Development Service, Department of Fisheries): The Department has two large spawning channels, flow control projects, presently operating. At the present time we are just finishing up the largest one, the Babine. Generally speaking, our intentions for the next year are to assess the contribution that these are actually making to the fishery before we proceed.

Mr. Davis: I might say in this connection that quite careful cost benefit studies were made of the Babine project in its several stages. When I became the Minister I was agreeably surprised to find that the benefit cost ratios—benefits over costs—were in excess of three to one. From all the evidence these will be highly successful in similar channels in British Columbia, and within two to three years' time we will have physical evidence of their success.

If the benefit cost ratio is borne out in fact, this is a good investment and we should step up our investment in a big way.

Mr. Anderson: So, if the studies which have just been mentioned turn out to be favourable and bear out the initial earlier studies, we can then expect a program from the Department of Fisheries to carry out the maximum expansion on all British Columbia spawning streams. In other words, a long term project in the future to permit double the...

Mr. Davis: It is really a major breakthrough. The Babine is a \$10 million development. It is on a scale which is unprecedented in British Columbia. It is a follow-through on earlier results which were most encouraging and if the Babine is a success, then the value of the salmon resource in British Columbia is much greater in recent years than we thought it was.

Mr. Anderson: When will the initial favourable results of these studies be confirmed or rejected? Could you give us some indication whether it will be next year or the year after?

Mr. Parkinson: We should get the first real indications from big Qualicum this year. We have indications of the output from the channels. The real value of the endeavour comes about when the fisherman catches a fish. We will not get the results from this end of the studies until this year, and it will continue into the next few years. We feel it will take about two cycles to really get this in perspective.

Mr. Anderson: Thank you very much indeed; that is a very interesting statement. I certainly think the two things should go together. It is obviously no good to reduce the number of boats and the amount of gear if you are going to suddenly double the number of fish. Also, the licensing regulations must be tied in very closely with the resource.

Mr. Davis: We have on the order of \$15 million banked on the prospect of increasing the resource. This was clearly part of the calculation with regard to the limitations.

The Chairman: Mr. Anderson, would you allow Mr. Borrie to ask a supplementary?

Mr. Anderson: Yes, certainly.

Mr. Borrie: Mr. Chairman, this is in connection with sports fishing in the Babine area. I certainly apologize if this question has been asked before. This is my first time on the Committee. Has an agreement been reached

with the Province of British Columbia over log drives in and around the Babine area?

Mr. Davis: I spent some time a week ago Monday with the Hon. Ray Williston, Minister of Lands, Forests and Water Resources in Victoria, and my understanding is that for the indefinite future no log drives are planned on fish rivers. Perhaps I should qualify this. I think it is logical to assume that when you look at a river basin you look at all the resources. The time may come when the development of the forest industry plus the development of the fishery industry requires some compromise. However, at the moment we foresee no log drives in any fish river in British Columbia.

Mr. Borrie: If you recall, there was a dispute in that area.

Mr. Davis: The Stellako—

Mr. Borrie: The Stellako, yes.

Mr. Davis: —which drains into the Fraser, it does not drain directly into the ocean.

The Chairman: Mr. Anderson.

Mr. Anderson: I will pass.

The Chairman: Mr. Goode.

• 1220

Mr. Goode: Thank you, Mr. Chairman. Just to take light offence with my friend Mr. Anderson on his point about being friendly in committee, as last Wednesday was a full committee day I had the opportunity of attending a great number of committees—a few too many, as a matter of fact—and I noticed in these committees that without hesitation, they were enforcing the ten minute rule. Many of the members were seeing that it was being done. Mr. Crouse is an example of what I mean. He is an outstanding speaker and consequently he seems to take a little longer than some of us who are new at it. Consequently in the Fisheries and Forestry Committee we found in the past that we have had to go overtime several times. We also found that the members who did not get their names on the list early enough did not get an opportunity to bring up their points. This is why I took offence to this at the time.

I have noticed in British Columbia, as well as in some of the other provinces, that when there is trouble in agriculture, such as apples not selling or they have a big crop, they go

into a mass advertising program and the governments participate.

I foresee a great problem because of the fact that Greenland halibut goes under a different name in the United States. We may lose some of our market there because of the fact that they can only buy this product under a different name. Is there any plan to assist the industry by way of an advertising campaign in the United States?

Mr. Davis: You are referring to the difficulty that the Newfoundland industry will now have in having to market under another name what was previously sold as Greenland halibut. I understand that the Department of Trade and Commerce has agreed to help the industry to adjust to its marketing problem in the United States.

Mr. Goode: This has not necessarily been your problem other than—

Mr. Davis: It is our problem in the sense that the fishery is involved, but the Department of Trade and Commerce is the export department, if you like, and I think that assistance more properly comes out of their budget than ours.

Mr. Goode: I see. That is the point I want to make. I have had a great deal of correspondence from fishermen in my riding suggesting that if the fishing limit was the Pettello bridge rather than going up towards Mission there would be greater conservation. Do you agree or disagree with this point?

Mr. Davis: I am afraid, Mr. Goode, I do not know enough about the industry to have an opinion. I wonder if there is someone here who has an opinion. It is something which I would normally refer to the regional office in Vancouver, but perhaps Mr. Hutchison could answer.

Mr. Hutchison: If I understood the question correctly, it was should the Pettello bridge be the upper commercial boundary rather than Mission?

Mr. Goode: That is right.

Mr. Hutchison: I believe there are a number of good drifts between the Pettello and Mission bridge. There are fishermen who have traditionally fished in that area. From the conservation standpoint it was felt that Mission was proper, and if you shifted down you could deprive certain fishermen of their

traditional area. I think that is the best answer I can give at this time.

Mr. Goode: Thank you. Mr. Anderson brought up the point about class "A" and class "B" boats. I think he missed a major understanding here in that there now is a \$1,250 basis for having a class "A" licence. Consequently there are a number of boats in class "A" which are really "moonlighters", but because an arbitrary figure had to be set this is what it was. As I understand it, as time goes on this limit of \$1,250 may be raised, which would therefore take out some of these marginal boats and they would then go into class "B". Is my understanding correct on this?

Mr. Davis: This opportunity is obviously open to the government. The government quite arbitrarily drew a line at \$1,250. This was to cut off, in round numbers, 1,500 vessels from the group which are tradable. These 1,500 vessels will eventually disappear as they wear out.

• 1225

In 1970, when we are scheduled to review this program, we could again arbitrarily decide that the cut-off line was \$2,500 or \$5,000. In effect we would look at the catch record of all the vessels in the fleet and say that those which did not earn a decent livelihood for anyone are not class "A". So, there are such arbitrary ways of reducing the total number, but I am inclined to limit arbitrary action. I think we are going to have to look at the \$1,250 but I would not like to think that this was a device which we use time and again to reduce numbers. I would prefer the approach of buying vessels off the market because that is fair to all concerned whereas the other is quite arbitrary.

Mr. Goode: Although, as Mr. Anderson said, 2 percent under class "B" is not a very large amount, I would think that 2 per cent represents these 1,500 boats and these 1,500 boats are a real hindrance to legitimate professional fishermen. I think if nothing else if we do away with a number of these boats we will become friends of the professional fisherman who is losing his traditional fishing holds in places where he has been catching good fish because this boat has arrived there ahead of him.

Mr. Davis: Yes, I mentioned there are 1,500 in the "B" category. The "B" category is not

tradable. Mr. Anderson had a good point in that all the vessels in "A" category can be upgraded, but if we had allowed the "B" group to be part of "A" and had not drawn a line, we would have had 1,500 more that could have been traded off. That was the sole reason for trading a "B" category and is the reason why we may again raise the figure from \$1,250 to perhaps \$2,500 in a few years' time.

The Chairman: To follow up Mr. Goode's remarks, I wish to say that we will do our utmost to adhere to the ten-minute period in the future. I am asking for the co-operation of all members. Mr. Lundrigan.

Mr. Lundrigan: Mr. Chairman, since you raised the point—I was going to drop the ten-minute bit but I was in agreement with the disagreement of Mr. Goode because I am sure he had very pertinent remarks to make. This is why I am so much in agreement with him. I was also in agreement with Mr. Anderson. I raised this point before. I think the steering committee would do well to review the ten-minute situation especially as it pertains to supplementary questions and especially when you have such very competent people from the department and a very competent minister who could elaborate once in a while and take two or three minutes or even longer, as indeed they should. I think we should be a little bit more flexible and I think Mr. Anderson's point ought to be considered by the steering committee. Nevertheless, I will go on before my ten minutes are up.

I was rather—as I was saying when I was abruptly cut off earlier—shocked when the Minister did indicate that there was a commitment with Washington—I am hoping I am phrasing this statement correctly—that the type of subsidy or the deficiency payment, if I may use that phrase, now being paid would not be paid again as it was contrary to the GATT General Agreement. Mr. Chairman, I will just finish my statement.

In this respect can we see a further curtailment of assistance from the federal government to the industry in Canada bearing in mind that most of it can be classified generally under the heading of some kind of assistance which sometimes is called a subsidy?

Mr. Davis: First you referred to a commitment to Washington. Washington, in effect, has inquired whether the deficiency payment program in its precise form would be con-

tinued, and we, in the self-interest of Canada and I am sure in the self-interest of the fishing industry, have indicated that it would not be continued in precisely that form and that the program was a short-term one. We told them that when it was announced in April or May of last year. We told them then it would run until, at the latest, the end of November 1968. In fact it terminated at the end of October 1968.

• 1230

From the beginning this was deemed to be a short-run device to help the industry over a difficult period. In our own self-interest we have to protect our industry, to protect the exports and so on. I have indicated that that program was short-run and would be discontinued. This does not prevent us from doing something of a similar nature but without using the precise techniques. I am getting on to dangerous ground because there are a number of techniques and I am not sure which are acceptable and which are not under the General Agreement on Tariffs and Trade.

Mr. Lundrigan: Mr. Chairman, I am going to ask this question and I am trying to be careful in asking it so that the Minister does not have to say something—I know he will not—which has not been given full consideration. Can we very shortly get a statement as to what kinds of plans can replace what is now in existence? I am not so sure we should not say to the United States, and of course, I am just one of those greenhorns that Mr. Goode talks about in suggesting what we should say to the United States Government. Perhaps that is a bit presumptuous on my part but I am not sure we should not take a stand and go ahead from there and say that in view of the fact that we have all this trade going from here and there and everywhere, then this should not cause that much difficulty. But, nevertheless, in view of this and in view of the attitude from Washington, when are we going to get some kind of indication of plans to replace the present endeavours by the federal government of Canada? It is getting to the point now that every time we look and every time we listen and read a newspaper we find out about some kind of curtailment in the federal involvement in the so-called subsidy business.

I am waiting for some kind of a statement that will clarify this and give us an indication of some alternate plan envisaged by the Department of Fisheries.

Mr. Davis: In answer to Mr. Lundrigan's question, I have drafted a reply to the brief of the industry which he mentioned earlier. I have referred it to the officials for comment and I will revise it. I am going to clear it with several of my Cabinet colleagues as well. But I would hope to be able to reply to the industry's brief in the same terms as the brief was couched, certainly before Christmas.

Mr. Lundrigan: Thank you. Mr. Chairman, this is my last question. Recently there was an announcement—of course this is not the first time it has happened that several millions of pounds of fish would be shipped to the needy Biafran area of North Africa. I think this fish is going to be purchased by the government from the Atlantic fishermen, from the merchant, by contract which I think will be announced today, or maybe it has been announced—I am not sure.

Mr. Davis: It has to be cleared by Treasury Board, but the form of it has been decided.

Mr. Lundrigan: Now, I am wondering two things. First, does the federal government have any control of what prices will be paid to the fishermen? Secondly, could the Minister indicate whether the government can actually ask the merchant to contract for the lowest possible price he can get from the fisherman so that he will ensure getting his contract from the federal government? Is this not putting the fisherman in an uncompromising position so that in actual fact if I can sell the fish to the federal government for "X" number of dollars, the lower the better, I will get my contract? This puts me in a position of having to pay a low price to the fisherman.

I am wondering whether the Minister could give a brief reaction on this and also, in his reaction, indicate whether any consideration was given to saying to the merchant, "We want you to pay the fisherman a minimum price and you bargain with us for the price you will sell it for; you pay the fisherman \$20, then you negotiate with us as to what price you will sell it to us." Perhaps this is all in line with the business of subsidies.

Mr. Davis: This is a very difficult area. If the government is in the process of buying a substantial quantity of fish against a short deadline it is going to go to the industry as it is established and operates now. In other words, it buys the fish through normal commercial channels and pays the going market price.

One can certainly be critical of what is loosely referred to as normal commercial channels, perhaps even of the fish trades, and argue that whenever the government buys anything, the primary suppliers get a good "shake". This is really what you are saying.

I am going to ask Mr. Lorne Grant to say a word to the Committee in a moment and I am putting him on notice. But I do not see how this can be accomplished quickly in respect of salt cod. We did have the understanding through the deficiency payment program in respect of fresh and frozen fish that the fishermen would be paid the equivalent of last year's price. This has in fact happened. The federal government has made the trade whole; in other words, made up the Boston price to a price where the trade could turn around and pay the fishermen last year's price right through from May to the end of October. So in 1968, in the fresh and frozen fishery, the fishermen received last year's price despite the fact that the United States price had dropped towards 20 per cent.

• 1235

So we have, through the deficiency payment approach, been able to do the sort of thing you are recommending, and you are probably recommending it for salt cod. In the long term it would seem to me—and again I am just speaking off the top of my head, so to speak—the approach should be that of perhaps a government corporation similar to the Fresh Water Fish Marketing Corporation, whereby the government buys from the fishermen through channels which are contracted to process and contracted to deliver, but whose costs are definitely audited and so on.

We are exploring this very carefully, but it would be glib of me to try to say that we have solved the problem of ensuring a good price, or an equitable price, or a fair price, or a price that is attractive to the fishermen as the industry stands now. The machinery is not all there to do the job.

Mr. Lundrigan: Mr. Chairman, there are two questions I asked the Minister for which I did not receive answers. Perhaps this is for a good reason. Does the government have any control over what price the fishermen will get, and does the government give consideration to setting a certain price, the minimum of which the merchants could pay, and have the merchants take the loss as far as contracting with the government is concerned? I am

sure the Minister would like to clear this up, Mr. Chairman. This is the reason I raised it.

Mr. Davis: Perhaps I will ask Mr. Grant to simply describe the mechanics in terms of how we buy our salt cod for Biafra, for example.

Mr. Lorne Grant (Chairman, Fisheries Prices Support Board, Department of Fisheries): Mr. Chairman, this was a straight tender call for the provision of 2,000 metric tons of salt fish for Biafra. I think it is difficult to imagine why, when another buyer is going into an established field looking for 2,000 tons of this produce, this would tend to depress the price to the fishermen. I think what in fact happened was that it created a good deal of competition on the shore for the fishermen's supplies. If it did anything, it tended to increase the price to fishermen.

The Fisheries Prices Support Board has no facilities for buying direct from fishermen and handling this product. We could buy direct from fishermen but we require a 36 per cent moisture content product and this means it would have to go through commercial driers and it has to be packaged, strapped and placed in storages for export. I would think, however, that the Fisheries Prices Support Board as a buyer entering the field would tend to increase the prices paid the fishermen rather than to depress them.

The Chairman: Mr. Crouse.

Mr. Crouse: Mr. Chairman, I mention my concern over the Department's sense of priorities for a very definite reason. With one exception, in vote 5, the cost of the continuing establishment under every other vote in the department has gone up by hundreds of thousands of dollars; yet in Fisheries Management and Development, vote 15, assistance to producers of salted fish has dropped by \$400,000, assistance for the construction of fishing vessels has dropped by \$3,520,000 financial assistance in the construction and equipment of facilities for the storage of frozen fishery products has dropped by \$300,000.

There is nothing to be gained by argument over the amount of assistance provided by the Department to the fishing industry. However, when the fishermen of Canada are faced with international competition which, in effect, denies them the right to earn a livelihood, I think the government has a responsibility to come to their assistance.

I agree with the statement of the Minister that it is not easy to find a solution to this

problem which will be acceptable to the large customer we have to the south of us, the United States. The assistance I am thinking of could take the form of a payment of a fixed amount per day for every day our fishermen spend fishing at sea, and the payment could be made to the producers, who form a very important part of this chain, for the number of hours worked by shore employees in processing the catch. Obviously the fishing industry is the one industry in this country that at the moment is in the worst economic condition it has ever been in, worse than any other industry in Canada. Is the government or is the Department giving any thought to providing assistance along the lines I have just suggested?

• 1240

Mr. Davis: Yes, I would say that an effective policy, however, would be one which looked at the whole picture and among other things provided for an element of consolidation, the tightening up, in effect, of the over-all operation so that in the long run we are likely to be more rather than less competitive. We do not have to continue to increase assistance and call an increase in financial assistance "policy" because I think there is a distinction here that dollars often merely tide us over some interval and then we are into the same problem again in another couple of years. So, we need an over-all policy which includes one of rationalization of the industry in consolidation.

You suggested certain specific forms of assistance and certainly they are being considered. You implied in your remarks that the industry is in really bad shape. There are some areas in the country, certainly some sectors in the fishing industry which are in bad shape but I was interested to note that not only the catches but the over-all income in the fishing industry in 1968 is above that of 1967. We have inflation, costs are going up probably faster than income, so that the industry is in an increasing squeeze. However, it is not in quite as bad shape as some people paint it. The stocks generally in the Atlantic region, the inventories at the moment in Canada, are lower this year at this moment than they were a year ago. The industry has basically run into declining prices. This is what it has really encountered. I have been amazed at the extent to which the United States has absorbed this great increase in offshore sales—Norway, Iceland and so on—into the United States and an increased volume of Canadian fish as well in the last

twelve months. It is not all bad; the volume picture has been quite good, the price picture has been most disappointing. So, it is a mixed bag here. We have all sorts of programs and parts of programs going. We instituted this deficiency program which was an interim thing; it lasted for five months. We have to have programs with continuity and ones which will help to rationalize the industry. We really do not have a policy. I do not pretend we really have an over-all policy at the present time. We must develop one.

Mr. Crouse: Do I have time for one more question, Mr. Chairman? In commenting on the Minister's statement, I am sure that he has gone trout or salmon fishing, as have I, and always among the group there is a high liner. Someone comes in with a great deal of fish while we come back with an empty creel. This is what is happening in the fishing industry at present: the over-all figures are up but there are some high liner fishermen and some are making a good dollar in the fishing industry catching scallop. The figures of increased catches are related to the increased emphasis on catching herring at the present time. However, for a large majority of our fishermen the average income is well below the poverty line which has been set by the government and it is for these reasons that I cannot impress upon him too strongly the need for working out something as soon as possible. I recognize that he is a new minister trying to do his job in a new department. I think it was never more imperative that he get his shoulder to the wheel and work out a policy which will take care of those who are in the industry and who are literally fighting with their backs to the wall in order to make a living.

My question is this: is the government making any effort at present to initiate another international conference on the law of the sea which at the same time could propose certain marketing regulations for the disposal of surplus fish, which I believe was suggested by Mr. MacKenzie.

Mr. Davis: The answer to the question about an international conference on the law of the sea is "yes". We would like to see one soon. There are a number of other nations which are also pressing for a conference in the next year or two.

When you refer to marketing, however, you are edging over into the area of trade or trade and commerce. There you are talking about negotiations of the character of the General

Agreement on Tariffs and Trade and the Kennedy Round. Mr. Chairman, if it is possible before this meeting is over, I would like to ask Mr. MacKenzie to briefly review what the United States position is with regard to imports from Canada and what they look at when they are considering, say, our deficiency payment program. Why is it out of bounds, so to speak, under our general trade understandings with the United States and other countries? That is, a trade matter as distinct from a law of the sea matter.

• 1245

Mr. MacKenzie: I am not sure, Mr. Chairman, precisely what the question is.

Mr. Davis: Perhaps I could clarify it. The United States is a party to the General Agreement on Tariffs and Trade as is Canada. This is a world wide agreement. What types of assistance, particularly to exports, are admissible under the GATT and what are not?

Mr. MacKenzie: Mr. Chairman, offhand I would not be able to review this completely. If the committee is interested, it could be done, of course. It probably should be done by someone from the Department of Trade and Commerce. Very roughly the permissible forms of assistance are those related to improving productivity of an industry, its economic efficiency, and this sort of thing. What is likely to excite assistance or concern on the part of an importing country is a direct aid to an export that seems to result in a disadvantage to producers in the importing country. Of course, this is the origin of the present concern in the United States with reference to imports of certain kinds of frozen fish products from Canada and other countries. The New England groundfish industry is directly affected. As a matter of fact, as the Minister mentioned earlier, Canada's exports to the United States of frozen groundfish products increased in 1968 over any previous year although our relative position in the United States market dropped by about 50 per cent. The industry which was really hurt by the increase in competition from Iceland, Norway and Denmark was the New England groundfish industry. I think this is pretty obvious. I believe it is true to say the United States government up to the present is operating under countervailing legislation or dumping legislation that predates the agreement under the Kennedy Round, and when

these agreements under the Kennedy Round are implemented in the United States, the mechanism and the response to problems of dumping and this sort of thing will change somewhat.

Again, I regret that I am not up to date on this situation. In general, this is what I understand it to be.

Mr. Davis: Yes, and when the estimates of the Minister of Trade and Commerce are before the house this is the sort of question which should be directed to him because the Department of Fisheries really looks at production, perhaps productivity and so on. It does not get very far into the export side of things, certainly not into treaties or international agreements in respect of trade.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Do you have a question, Mr. Whelan?

Mr. Whelan: I just have one question, Mr. Chairman. When I was approached by several Canadian people concerned about the stocking of the Great Lakes with these salmon, they complained about the fishing regulations, which, of course, are run by the province. They said the United States, because they had stocked the Great Lakes with salmon, could fish in any Canadian waters because of the rights they received by stocking these lakes. The United States government is taking the initiative and the Canadian government is not doing anything.

Mr. Davis: Perhaps I could ask Mr. Ozere the question which is in effect, can Americans fish on the Canadian side of the international boundary line through the Great Lakes.

Mr. Whelan: Because they stock...

Mr. Davis: Because they stock their side of the Great Lakes.

Mr. Whelan: With salmon.

Mr. S. V. Ozere (Assistant Deputy Minister, International and Jurisdictional, Department of Fisheries): No, Mr. Chairman, there is a boundary to the Great Lakes and the fishermen of the United States can only fish on their side of the boundary. The Canadian fishermen can only fish on this side of the boundary.

Mr. Whelan: They have no rights whatsoever to fish in Canadian waters because they stocked the lakes with salmon?

Mr. Ozere: No, certainly not. We would be in the same position on the Pacific coast if we developed salmon resources. We could not follow it into United States waters, or vice versa.

The Chairman: We are back to Mr. Lundrigan.

• 1250

Mr. Lundrigan: Mr. Chairman, I almost feel like apologizing for being so persistent but I recently returned from the Atlantic region and, of course, having lived there most of my life, having been out west and a little aware of the western problems in fisheries, I am all too aware how serious the general situation is with respect its future, and consequently the need to get back to the questions I was pursuing. I concur with my colleague, Mr. Crouse, as to the task facing the new minister. I have found him to be most cooperative and I am encouraged in feeling that something is going to be done with the fisheries of the Atlantic region particularly, which is in the most serious straits at the present moment.

I do know too, that if I were to be given time here I could elaborate and say that many of the problems facing the fisheries of the Atlantic region are not the result of lack of interest on the part of the federal government. I have to be honest and say that in some of the provinces, at least the one I am familiar with, it is very much the result of a lack of interest and the attitude of the provincial government.

I could also say that one of the problems with the federal situation stems from the fact that I do not think the federal government down through the last 20 years—and we cannot expect the minister tomorrow morning to solve this problem—has treated the fisheries as something rather foreign and it has been treated like foreign aid programs. Fish was not thought of as something which contributed greatly to the economy of Canada. If we examine the statistics on the economic value of the fisheries to the economy of Canada, it is all the more reason why we should take the bull by the horns and come out with something which is going to make it contribute as well to the Canadian economy. We cannot have that happen tomorrow morning because it has to be kept alive. Therefore, I will not pursue some of the questions as to why the government did not guarantee the fishermen \$20 and ask the merchant to take the beating

if that were to be the case. I will not pursue these questions. Obviously, there are some reasons.

I will say that what concerns me most—and I will be asking the Minister a question on this when I have developed my point—is that there is a great tendency to talk in terms of long-term programs which are completely necessary; no-one who has an insight into the Canadian fisheries disagrees, but at the same time there seems to be a tendency to abandon any short-term aid. I am sure that this will be remedied with other forms of more substantial short-term aid. At the present moment there appears to be this policy of taking away the band-aid—I think it was the Minister of Defence Production, a friend of mine from Newfoundland, who made that statement originally—to take away the band-aid. My concern is that the industry is literally going to bleed to death with the band-aid removed while we are waiting for a long term policy. I have seen this situation. I personally know hundreds of fishermen who are giving it up; they are throwing it in. Whereas we can talk about \$4 million spent to subsidize the industry or provide deficiency payments, at the same time these benefits in many cases are not reaching the fishermen. At the same time, if I were to trace this, and I would have to give a speech to do it, with the cost of living and all kinds of other things literally ganging up on the fishermen, I am afraid they are just going to give it up, and we are going to lose an industry which is right now sustaining 25 or 30 per cent of the population of the Atlantic region, perhaps even more on the Pacific coast. Are we going to have in the very near future other band aids applied so that the thing is kept alive while we are waiting for this long-term plan which has to take time to evolve? That is my question, Mr. Chairman.

• 1255

Mr. Davis: Well, we are going to have to be well stocked not only with band-aids but with drug and surgical instruments as well. Basically I agree, we have to do some things which are short-run, or ad hoc if you like, but we must develop some longer-term programs.

You made one or two allusions to the west coast. The people in the west are far more mobile. Twenty years ago, certainly 30 years ago, there were in the order of 120 canneries along the west coast of British Columbia. There are now half-a-dozen fishing centres. That is what happened there. I gather in

Nova Scotia in the twenties and thirties there was a measure of consolidation as well. This has not happened to the same degree in Newfoundland. I am convinced that a long-term program include this matter of consolidation as well as merely providing incomes for people.

You inferred that the fishermen had not been looked after in respect of the deficiency program. The deficiency program of last summer, which was a short-term, ad hoc program, was geared to give him the same price as he received the year before regardless of what happened to the price. That program did preserve a price level for him. He is up against rising costs so per pound of fish, anyway, he is not as well off now as he was a year ago. He was protected to that degree. I do not want you to feel that the fisherman was not protected by the program of last summer; he was protected.

Mr. Lundrigan: Mr. Chairman, when I mention the fishermen, I am talking about all of the fishermen. We have a tendency sometimes to think that the bit of money paid in deficiency payments took care of all fishermen. This assisted some people but did not take care of them. I am thinking of the whole industry when I mention the fishermen.

The Minister indicated there was a need for a whole medicine cabinet: could you indicate in any way what kinds of band-aids are being contemplated in lieu of the band-aids which are being removed?

Mr. Davis: I think I should reserve this, first, to my letter in reply to the brief which was submitted several weeks ago. It should be a considered statement and one which has the backing and approval of other members of the cabinet.

Mr. Lundrigan: Could we get a copy of this at your very earliest convenience?

Mr. Davis: You can rest assured it will be available the moment I get it cleared.

Mr. Lundrigan: Thank you. That is all, Mr. Chairman.

The Chairman: Shall Item 1 carry?

Mr. Crouse: One further question, Mr. Chairman, on a related matter. What effort is being made to coordinate the work of pollution control between departments? It is evident that pollution of our rivers and lakes is destroying many of our game fish while the

dumping of oil at sea and river pollution is harmful to our shellfish at river mouths. Is the department giving any thought to preparing a paper on the pollution work it has done to date for the information of members of this committee?

Mr. Davis: The answer to the question as to whether or not the department is considering publication of a paper giving an account of its program and so on is, yes.

As to coordination between departments, in respect of air pollution it is fairly straightforward. We could say the Department of National Health and Welfare is the principal department involved, certainly from the coordination point of view. From the point of view of pollution of water, there is a division of labour. There is no one department designated as supreme in that area. The Department of Fisheries is concerned with living matter including algae, fish or other forms of animals and algae in water. The Department of Energy, Mines and Resources is concerned primarily with mineral and chemical types of pollutants and their control. The Department of Transport is concerned with debris and so on in water which affects navigation. The Department of National Health and Welfare is particularly concerned in respect of grants for municipalities for pollution aids and so on. The Department of Finance is concerned in respect of tax concessions for the installation of pollution-reducing equipment.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Shall Item 1 carry?

Agreed to.

The Chairman: Shall the estimates carry?

Agreed to.

The Chairman: Shall I report these estimates to the house?

Mr. Crouse: Just one more question before this finally is carried. For the interest of new members, perhaps the Minister or one of his officials could tell the committee where the \$160,000 statutory fishing bounty comes from and on what basis it is distributed.

Mr. Davis: I am sorry, could you phrase the question again?

Mr. Crouse: It is in regard to the \$160,000 which is in the estimates, the statutory fishing bounty. Where does this money come from and on what basis is it distributed?

Mr. Ozere: Mr. Chairman, the authority for the bounty is contained in the Deep Sea Fisheries Act which was passed very many years ago. Although this Act provides that the \$160,000 can be used for the betterment of fisheries, the bounty actually is instituted by an order-in-council and the Governor-in-Council is given authority to make regulations as to how the money is to be distributed. Under the regulations passed by order-in-Council this bounty has been instituted.

Mr. Crouse: On what basis did it originate, Mr. Chairman?

Mr. Ozere: The Deep Sea Fisheries Act is the authority for it. Why the Deep Sea Fisheries Act was passed is quite a long story.

Mr. Crouse: Could you give it to us briefly?

Mr. Ozere: There was a reciprocity treaty with the United States back in 1871 and at that time the Canadian section thought that the rights of fishing granted to the United States fishermen provided greater benefits to the United States than the reciprocal right of free entry of Canadian products into the United States. As a result, there was arbitration and something like \$5 million was awarded to the Canadian government in compensation for what was considered to be greater privileges or greater benefits obtained by the United States as a result of the treaty. As I understand it, this \$160,000 was the capitalized interest on this amount. Some of it went to Newfoundland at that time, but the part that went to the Atlantic provinces was capitalized and this \$160,000 represented the interest.

Mr. Crouse: Mr. Chairman, one final question. Is the payment of this amount of money back in the 1800's by the American government one of the arguments they use for not agreeing to our territorial sea and fishing zone limits in that they have rights in our waters granted by the payment of this sum?

Mr. Ozere: No, Mr. Chairman. I have never heard that argument advanced. The United States fishing rights in our territorial waters are based on another convention, the convention of 1818 under which the United States has fishing rights inside our territorial waters along the south coast of Newfoundland from Cape Ray to Ramea Island and along the west coast of Newfoundland, also around the Magdalen Islands. It is based on a separate treaty—the treaty of 1818.

Mr. Crouse: Thank you, Mr. Chairman.

The Chairman: Shall the estimates carry?
Agreed to.

The Chairman: Shall I report these estimates to the house?
Agreed to.

The Chairman: Gentlemen, I want to thank all members for the assistance which you gave me in examining these estimates. At no time did we have any difficulty in obtaining or maintaining a quorum. I want to thank you very much for your cooperation.

Mr. Crouse: Will these now be dealt with by the house?

The Chairman: That is right.

Mr. Crouse: Have you any indication when this might take place, Mr. Chairman?

The Chairman: I really could not say. I can make a report tomorrow to the house.

I have a letter here I received from the United Fishermen and Allied Workers' Union, dated November 25, 1968. It is short, if I may read it to the committee.

Dear Sir:-

Prince Rupert Local No. 37 of the United Fishermen and Allied Workers Union has noted that the Commons Committee

on Fisheries has agreed to request permission to visit different communities in Canada in the study of Department of Fisheries estimates.

Our organization would very much appreciate the opportunity to meet with the Committee to place our views before you. We hope that the House of Commons grants permission for a visit by the committee to Prince Rupert at an early date.

I have acknowledged that letter. May I have this letter attached as one appendix to today's proceedings?

Mr. Crouse: You have merely acknowledged receipt of the letter but you have indicated no action, is that correct?

The Chairman: No, not at this time. I think the Minister has a few remarks.

Mr. Davis: Thank you, Mr. Chairman. Next Wednesday we would welcome the attendance of any of the members of this committee, or indeed any other member of parliament, to lunch at the test kitchen out at the Department of Fisheries. You will receive a note to this effect as a reminder in any case, but please set aside one to 2.30 p.m. Wednesday next for lunch at the test kitchen.

The Chairman: I would ask for adjournment. The committee will meet at the call of the chair.

ORDERS OF REFERENCE

HOUSE OF COMMONS

THURSDAY, January 16, 1969.

Ordered,—That Bill C-148, An Act to regulate interprovincial and export trade in freshwater fish and to establish the Freshwater Fish Marketing Corporation, be referred to the Standing Committee on Fisheries and Forestry.

WEDNESDAY, January 22, 1969.

Ordered,—That Bill C-151, An Act to amend the Fisheries Improvement Loans Act be referred to the Standing Committee on Fisheries and Forestry.

ATTEST:

Le Greffier de la Chambre des communes,
ALISTAIR FRASER,
The Clerk of the House of Commons.

ORDRES DE RENVOI

CHAMBRE DES COMMUNES

Le JEUDI 16 janvier 1969.

Il est ordonné,—Que le Bill C-148, Loi réglementant le commerce interprovincial et le commerce d'exportation du poisson d'eau douce et créant l'Office de commercialisation du poisson d'eau douce, soit déferé au comité permanent des pêches et des forêts.

Le MERCREDI 22 janvier 1969.

Il est ordonné,—Que le Bill C-151, Loi modifiant la Loi sur les prêts aidant aux opérations de pêche soit déferé au comité permanent des pêches et des forêts.

ATTESTÉ:

REPORT TO THE HOUSE

THURSDAY, January 30, 1969.

The Standing Committee on Fisheries and Forestry has the honour to present the following as its

FOURTH REPORT

Your Committee considered Bill C-148, An Act to regulate interprovincial and export trade in freshwater fish and to establish the Freshwater Fish Marketing Corporation, and has agreed to report it with the following amendment:

To the Schedule: Add the following species of fish; Carp (*Cyprinus carpio*); Quillback (*Carpodes cyprinus*), white carp; Mooneye (*Hiodon tergisus*); Channel catfish (*Ictalurus punctatus*), catfish; Black bullhead (*Ictalurus melas*), bullhead; Brown bullhead (*Ictalurus nebulosus*), bullhead.

A copy of the Minutes of Proceedings and Evidence relating to this Bill (*Issue No. 11*) is tabled.

Respectfully submitted,

Le président,
GUY CROSSMAN,
Chairman.

RAPPORT À LA CHAMBRE

Le JEUDI 30 janvier 1969.

Le Comité permanent des pêches et des forêts a l'honneur de présenter son

QUATRIÈME RAPPORT

Le Comité a étudié le Bill C-148, Loi réglementant le commerce interprovincial et le commerce d'exportation du poisson d'eau douce et créant l'Office de commercialisation du poisson d'eau douce, et a convenu d'en faire rapport avec la modification suivante:

A l'Annexe: Ajouter les espèces de poissons suivantes: Carpe (*Cyprinus carpio*); Brème (*Carpodes cyprinus*); Laquaiche argentée (*Hiodon tergisus*); Barbue (*Ictalurus punctatus*); Barbotte noire (*Ictalurus melas*); Barbotte (*Ictalurus nebulosus*).

Un exemplaire des procès-verbaux et témoignages relatifs à ce bill (*fascicule n° 11*) est déposé.

Respectueusement soumis,

MINUTES OF PROCEEDINGS

(Text)

TUESDAY, January 28, 1969.
(11)

The Standing Committee on Fisheries and Forestry met this day at 9:48 a.m., the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Breau, Comeau, Crossman, Goode, Harding, Hogarth, Lundrigan, McQuaid, Noble, Penner, Smith (*Northumberland-Miramichi*), Ritchie, Turner (*London East*), Osler—(14).

Also present: The Honourable Jack Davis, Minister of Fisheries; and the Honourable Otto E. Lang, Minister without Portfolio.

In attendance: From the Department of Trade and Commerce: Mr. Denis Harvey, Special Adviser to the Deputy Minister.

The Chairman read the report of the Subcommittee on Agenda and Procedure which met January 21, 1969 and made the following recommendations respecting Bill C-148.

1. That the first meeting be held Tuesday, January 28, 1969.
2. That the Honourable Otto E. Lang address the Committee, to be followed by questions by the members on the general purpose of Bill C-148, before clause by clause examination.

The above recommendations were adopted unanimously.

The Chairman mentioned that there would be an afternoon meeting today at 2:30 p.m.

The Chairman read House of Commons Standing Order 65(7) and Mr. Hogarth moved,—

That the Chairman be authorized to hold meetings, to receive and authorize the printing of evidence when a quorum is not present.

PROCÈS-VERBAL

(Traduction)

MARDI 28 janvier 1969.
(11)

Le Comité permanent des pêches et forêts se réunit ce matin à 9 h. 48, sous la présidence de M. Crossman, président.

Présents: MM. Breau, Comeau, Crossman, Goode, Harding, Hogarth, Lundrigan, McQuaid, Noble, Penner, Smith (*Northumberland-Miramichi*), Ritchie, Turner (*London-Est*), Osler—(14).

De même que: L'honorable Jack Davis, ministre des Pêcheries, et l'honorable Otto E. Lang, ministre sans portefeuille.

Aussi présents: Du ministère de l'Industrie et du Commerce: M. Denis Harvey, conseiller spécial du sous-ministre.

Le président lit le rapport du sous-comité du programme et de la procédure, qui s'est réuni le 21 janvier 1969 et a fait les recommandations suivantes à l'égard du Bill C-148:

1. Que la première réunion ait lieu le mardi 28 janvier 1969.
2. Que l'honorable Otto E. Lang fasse une déclaration au Comité, que les membres du Comité posent ensuite des questions sur l'objet général du Bill C-148, puis que l'on procède à l'examen du Bill article par article.

Ces recommandations sont adoptées à l'unanimité.

Le président mentionne qu'il y aura une réunion cet après-midi à 2 h. 30.

Le président lit le paragraphe (7) de l'article 65 du Règlement de la Chambre, et M. Hogarth propose—

Que le président soit autorisé à tenir des réunions pour entendre les témoignages et à en autoriser la publication en l'absence d'un quorum.

After debate thereon, by unanimous consent, Mr. Hogarth was granted leave to withdraw his motion.

The Committee then proceeded to a clause by clause consideration of Bill C-148, An Act to regulate interprovincial and export trade in freshwater fish and to establish the Freshwater Fish Marketing Corporation.

The Chairman invited the Honourable Otto E. Lang, Minister Without Portfolio, to read a prepared statement before being questioned thereon assisted by Mr. Harvey, Special Adviser to the Deputy Minister.

Clause 2—carried.

On Clause 3

Mr. McQuaid moved that Sub-section 1 of clause 3 of the said Bill be amended by adding thereto, after the word "years" in the last line thereof, the following: "and at least four of whom shall be actively engaged in the fresh water fishing industry at the producer level."

At 10:58 a.m., there being no more quorum, the meeting adjourned to the call of the Chair.

AFTERNOON SITTING (12)

The Committee resumed at 2.37 p.m. this day, the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Breau, Comeau, Crossman, Dionne, Goode, Hogarth, Lundrigan, McQuaid, Murphy, Noble, Pennell, Smith (*Northumberland-Miramichi*), Ritchie, Turner (*London East*), Stafford, Osler—(16).

Also present: The Honourable Jack Davis, Minister of Fisheries; the Honourable Otto E. Lang, Minister without Portfolio; and Mr. Rose, M.P.

In attendance: Same as at morning meeting with the addition of Mr. H. V. Dempsey, Director, Inspection Service, Department of Fisheries.

Après débat, M. Hogarth est autorisé, à l'unanimité, à retirer sa proposition.

Le Comité procède ensuite à l'examen, article par article, du Bill C-148—Loi réglementant le commerce interprovincial et le commerce d'exportation du poisson d'eau douce et créant l'Office de commercialisation du poisson d'eau douce.

Le président invite l'honorable Otto E. Lang, ministre sans portefeuille, à lire une déclaration préparée, avant de répondre, avec l'aide de M. Harvey, conseiller spécial du sous-ministre, aux questions posées par les membres du Comité à l'égard de cette déclaration.

L'article 2 est adopté.

Au sujet de l'article 3

M. McQuaid propose que l'on modifie le paragraphe (1) de l'article 3 en y ajoutant, après les mots «cinq ans au plus», à la dernière ligne du paragraphe, les termes suivants: «et quatre au moins d'entre eux ayant une part active dans l'industrie de la pêche du poisson d'eau douce au niveau du producteur».

A 10 h. 58 du matin, en l'absence du quorum, le Comité s'ajourne jusqu'à nouvelle convocation du président.

SÉANCE DE L'APRÈS-MIDI (12)

Le Comité se réunit de nouveau cet après-midi à 2 h. 37, sous la présidence de M. Crossman, président.

Présents: MM. Breau, Comeau, Crossman, Dionne, Goode, Hogarth, Lundrigan, McQuaid, Murphy, Noble, Penner, Smith (*Northumberland-Miramichi*), Ritchie, Turner (*London-Est*), Stafford, Osler—(16).

De même que: L'honorable Jack Davis, ministre des Pêcheries; l'honorable Otto E. Lang, ministre sans portefeuille; et M. Rose, député.

Aussi présents: Les mêmes personnes qu'à la séance du matin, et, de plus, M. H. V. Dempsey, directeur du Service de l'inspection du ministère des Pêcheries.

The Committee resumed consideration of Bill C-148.

On clause 3

The Chairman put the question on the amendment presented by Mr. McQuaid at this morning's sitting; that Section 1 of clause 3 of the said Bill be amended by adding thereto, after the word "years" in the last line thereof, the following: "And at least four of whom shall be actively engaged in the fresh water fishing industry at producer level".

After debate thereon, the Motion was resolved in the negative. YEAS 5, NAYS 7.

Clauses 4 to 14 both inclusive, carried.

On clause 15

And debate arising thereon, Mr. Lundrigan moved that clause 15(1): be amended to add the following words after "Parliament": "That the Corporation shall endeavour to conduct his operation on a self-sustaining financial basis".

After further debate, the question being put on the said amendment, it was resolved in the negative. YEAS 2, NAYS 12.

Clauses 15, 16 and 17 carried.

On Clause 18

And debate arising thereon, Mr. McQuaid moved that clause 18(1) be amended by striking out the word "may" in the first line thereof and substituting the word "shall" therefor and by adding thereto the following words after the word "Committee" in the last line thereof: "and not less than seven of whom shall be actively engaged in the fresh water fishing industry at the producer level".

After further debate, the question being put on the said amendment, it was resolved in the negative. YEAS 6, NAYS 7.

Another debate arising thereon, Mr. McQuaid moved that 18(1) be amended by adding after the word "Committee", the words "of whom one third shall be holders of valid commercial fishing licenses".

Le Comité reprend l'étude du Bill C-148.

Au sujet de l'article 3

Le président met aux voix la modification présentée par M. McQuaid lors de la séance de ce matin: que l'on modifie le paragraphe (1) de l'article 3 en y ajoutant, après les mots «cinq ans au plus», à la dernière ligne du paragraphe, les termes suivants: «et quatre au moins d'entre eux ayant une part active dans l'industrie de la pêche du poisson d'eau douce au niveau du producteur».

Après débat, la proposition est rejetée par 7 voix contre 5.

Les articles 4 à 14 inclus sont adoptés.

Au sujet de l'article 15

Au cours du débat, M. Lundrigan propose que l'on modifie le paragraphe (1) de l'article 15 en y ajoutant, après le mot «Parlement», les termes suivants: «Que l'Office s'efforce d'être financièrement autonome».

Le débat se poursuit, puis, la modification étant mise au voix, elle est rejetée par 12 voix contre 2.

Les articles 15, 16 et 17 sont adoptés.

Au sujet de l'article 18

Au cours du débat, M. McQuaid propose que l'on modifie le paragraphe (1) de l'article 18 en remplaçant le mot «peut», à la première ligne dudit paragraphe, par le mot «doit», et en ajoutant après les mots «Comité consultatif», à la dernière ligne du même paragraphe, les termes: «et dont sept au moins ont une part active dans l'industrie de la pêche du poisson d'eau douce au niveau du producteur».

Le débat se poursuit, puis la modification étant mise aux voix, elle est rejetée par 7 voix contre 6.

Le débat reprend sur cet article, et M. McQuaid propose que l'on modifie le paragraphe (1) de l'article 18 en y ajoutant, après les mots «Comité consultatif», les termes: «et dont un tiers au moins détiennent un permis valide de pêche commerciale».

After further debate thereon, the question being put on the said amendment, it was resolved in the negative. YEAS 6, NAYS 7.

Then Mr. Comeau moved, "That this Committee do now adjourn".

The question being put on the said motion, it was resolved in the negative. YEAS 6, NAYS 7.

Clauses 18 to 34 both inclusive carried.

On the Schedule

Mr. Murphy moved that the Schedule be amended by the addition of the following species of fish: Carp (*Cyprinus carpio*); Quillback (*Carpoides cyprinus*)—white carp; Mooneye (*Hiodon tergisus*); Channel catfish (*Ictalurus punctatus*)—catfish; Black bullhead (*Ictalurus melas*)—bullhead; Brown bullhead (*Ictalurus nebulosus*)—bullhead.

The question being put on the amendment it was resolved in the affirmative.

The Schedule as amended carried.

Clause 1 and the title carried.

Bill C-148 as amended carried. On Division.

The Chairman was instructed to report Bill C-148 as amended.

At 5.38 p.m. the Committee adjourned to the call of the Chair.

Le débat se poursuit, puis la modification étant mise aux voix, elle est rejetée par 7 voix contre 6.

Puis M. Comeau propose—«Que l'on lève la séance maintenant».

La proposition, mise aux voix, est rejetée par 7 voix contre 6.

Les articles 18 à 34 inclus sont adoptés.

Au sujet de l'Annexe

M. Murphy propose que l'on modifie l'Annexe en y ajoutant les espèces suivantes de poisson: Carpe (*Cyprinus carpio*); Brème (*Carpoides cyprinus*)—carpe blanche; Laquaiche argentée (*Hiodon tergisus*); Barbue (*Ictalurus punctatus*)—barbue; Barbotte noire (*Ictalurus melas*)—barbotte; Barbotte (*Ictalurus nebulosus*)—barbotte.

La modification étant mise aux voix, elle est adoptée.

L'Annexe modifiée est adoptée.

L'article 1 et le titre sont adoptés.

Le Bill C-148 modifié est adopté à la majorité des voix.

Le président reçoit ordre de faire rapport du Bill C-148 sous sa forme modifiée.

A 5 h. 38 de l'après-midi, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,

J. H. Bennett,

Clerk of the Committee.

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday January 28, 1969

• 0947

The Chairman: I see a quorum. As you know, Bill C-148 has been referred to this Committee. The Sub-committee on Agenda and Procedure met on January 21 and made the following recommendations: that the first meeting take place Tuesday, January 28; that the Hon. Otto E. Lang address the Committee followed by questions by the members on the general purpose of Bill C-148 before the clause-by-clause examination. Is this agreeable to the Committee? Agreed.

We will be sitting this morning, and this afternoon at 2.30. I thought I would tell you now for the information of those members who will be leaving in a short while.

In accordance with the rules of the new Standing Orders I would like to call the attention of the members to Standing Order 65, which reads:

(7) The presence of a quorum shall be required whenever a vote, resolution or other decision is taken by a standing or a special committee, provided that any such committee, by resolution thereof, may authorize the chairman to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

If the Committee is agreeable, I am prepared to entertain such a motion, that is that the Chairman be authorized to hold meetings to receive and authorize the printing of evidence when a quorum is not present.

Moved by Mr. Hogarth.

The Chairman: Agreed?

• 0950

Mr. McQuaid: Mr. Chairman, before the motion is agreed to, just what is the interpretation of the Standing Order? Does that mean that this Committee can meet without a quorum and hear evidence?

The Chairman: Yes, to hear evidence only.

Mr. McQuaid: To hear evidence only. Well, I do not think, Mr. Chairman, that we should authorize this Committee to hear evidence if a quorum is not present. I think it is important that a quorum be present when we have witnesses before the Committee, particularly

[Interpretation]

TÉMOIGNAGES

(Enregistrement électronique)

[Interprétation]

Le président: Il y a quorum. Le bill C-148 a été déferé à notre comité. Le sous-comité du programme et de la procédure s'est réuni le 21 janvier, et a fait les recommandations suivantes. Que la première réunion ait lieu le 28 janvier, que l'honorable Otto Lang adresse la parole au comité et qu'ensuite les députés l'interrogent sur le bill C-148 avant l'examen article par article. Est-ce que cela vous convient messieurs?

Dans ce cas, d'accord. Il y aura une réunion ce matin et une autre cet après-midi à 2h.30. J'attire l'attention des députés sur l'article 65(7) du Nouveau Règlement:

(7) La présence d'un quorum est nécessaire lorsqu'un comité permanent ou spécial est appelé à se prononcer sur un crédit, une résolution ou une autre décision; toutefois, ces comités peuvent, par une résolution, autoriser le président à tenir des réunions pour entendre les témoignages et à en autoriser la publication en l'absence d'un quorum.

Si le comité en convient, je vais accepter une motion en ce sens, savoir que le président soit autorisé à tenir des réunions, recevoir et entendre des témoignages et autoriser l'impression des procès-verbaux, lorsqu'il n'y a pas quorum.

Proposé par M. Hogarth.

Le président: Adopté?

M. McQuaid: Avant que la motion ne soit adoptée, comment faut-il interpréter cet article du Règlement? Est-ce que cela veut dire que le comité peut se réunir sans quorum et entendre des témoignages?

Le président: Oui, mais uniquement pour entendre des témoignages.

M. McQuaid: Je ne crois pas qu'on devrait autoriser le comité à siéger sans quorum. Il est important qu'il y ait quorum lorsque le Comité entend des témoins surtout si des décisions sont prises par suite de ces témoignages. Bien qu'il peut être difficile d'obtenir

[Text]

if, as a result of that evidence, decisions may be arrived at. I realize that it is sometimes difficult to get a quorum; yet I think every effort should be made to have a quorum. I would have to oppose the motion.

The Chairman: I think that what we had in mind or this has in mind is that sometimes we are short of one or two members only and we are held up for an hour or an hour and a half waiting for an extra member or two.

Mr. McQuaid: Yes, but the problem is Mr. Chairman, there is no limit, apparently, if this resolution passes. If the Chairman himself and one other member is here, the Committee can proceed to hear evidence and carry on just as if there were a full quorum. I think it is a dangerous precedent.

The Chairman: This would not be exactly the same as a full quorum because it would not be empowered to pass any resolutions or motions.

Mr. McQuaid: No, but it has the authority to hear evidence. There would be witnesses here. Somebody may be denied the opportunity of cross-examining the witnesses who appear before the Committee.

The Chairman: That would be the...

Mr. McQuaid: I cannot see that very much hardship would be encountered, Mr. Chairman, if a quorum were required to be present. There have not been too many meetings of this Committee so far where we have not been able to get a quorum. I agree that we are sometimes a little late in getting one, but it is the responsibility of the members to attend the Committee meetings.

The Chairman: We could look at it this way. If at any time we are short one member for a quorum the meeting would have to rise, but even in the past we have sat beyond the time that a quorum was not present and continued to hear witnesses.

Mr. McQuaid: I think, Mr. Chairman, that it is a very dangerous precedent to set. I would certainly vote against the motion.

The Chairman: Mr. Breau?

Mr. Breau: Mr. Chairman, what was done in another Committee on which I sat is that the quorum was reduced to five members, so that at least the Chairman could not sit alone and hear evidence. I think we should reduce it to five members, because witnesses can come from far away and simply because we are missing on or two members we cannot

[Interpretation]

le quorum je crois qu'il faut tout tenter pour en arriver là. Je m'oppose à la motion.

Le président: Parfois il ne manque qu'un ou deux députés et nous devons attendre pendant une heure, une heure et demie pour avoir un quorum.

M. McQuaid: Oui, mais on ne pose aucune limite et si la résolution est adoptée, le président et un autre membre du Comité peuvent siéger et entendre les témoins tout comme s'il y avait quorum. Je crois que c'est un précédent dangereux.

Le président: Ce ne sera pas un véritable quorum puisque nous n'aurons pas le pouvoir d'adopter des résolutions.

M. McQuaid: Mais quand même, nous entendrons des témoins. Quelqu'un pourrait perdre l'occasion d'interroger contradictoirement les témoins présents.

Le président: Ce serait...

M. McQuaid: Je ne vois pas, monsieur le président, ce que l'on perdrait à exiger qu'il y ait un quorum. Il y a eu jusqu'ici trop de séances jusqu'ici où il nous a fallu un certain temps avant d'obtenir un quorum. Je suis d'accord que parfois cela prend du temps, mais c'est la responsabilité des députés d'assister aux réunions du comité.

Le président: Mettons que chaque fois qu'il manque un député pour former le quorum, la séance devrait être levée, mais même par le passé nous avons siégé lorsqu'il n'y avait pas quorum pour entendre des témoins.

M. McQuaid: Je crois, monsieur le président, que c'est un précédent très dangereux à établir. Je vais certainement voter contre la motion.

Le président: Monsieur Breau?

M. Breau: Monsieur le président, ce qu'on a fait dans un autre comité où j'étais membre, le quorum a été réduit à cinq, de façon à ce que le président ne puisse pas siéger seul pour entendre des témoignages. Je crois que nous devrions réduire le quorum à cinq, parce qu'il peut y avoir des témoins qui viennent de loin et simplement parce qu'il man-

[Texte]

hear their evidence. It can happen that we may miss a quorum by one or two members, and it is very unfortunate if those witnesses have to go back, even if they are just from Ottawa. I think that we should perhaps reduce it to five, or something like that.

The Chairman: Mr. Hogarth?

Mr. Hogarth: Mr. Chairman, is the number that must constitute a quorum fixed by statute?

The Chairman: It is 11.

Mr. Hogarth: Yes. I do not think we can reduce the quorum to five.

Mr. Breau: It has been done on the Transport and Communications Committee.

Mr. Hogarth: I was just going to ask my hon. friend who raised the objection to this motion if a quorum of five would be satisfactory if it could be done?

The Chairman: Mr. McQuaid?

Mr. McQuaid: A quorum of five would be satisfactory provided we take the precaution of adding that someone from the opposition be represented in the five members that are present.

The Chairman: Would you withdraw your motion, sir, and we will continue for the time being?

Mr. Hogarth: Yes, I certainly will. I did not think the motion would be opposed. I think the members of the Committee should, as much as possible, be *ad idem* with respect to our quorum and our procedure, so I will withdraw the motion.

The Chairman: I should think if at any time in the future we have difficulty with a quorum that we can bring this matter up again.

Mr. McQuaid: Yes, I think that is proper. It could be decided at a time when we do not have a quorum.

The Chairman: In accordance with Standing Orders, the short title, Clause 1, will be postponed. I will now call Clause 2 and invite the Honourable Otto E. Lang, Minister without Portfolio, to introduce his associates and address the Committee.

Hon. Otto E. Lang (Minister without Portfolio): Thank you, Mr. Chairman. Mr. Denis Harvey from the Department of Industry,

[Interprétation]

que un ou deux députés, on ne peut pas les entendre. Il peut arriver qu'il ne manque qu'un ou deux députés pour former un quorum et c'est malheureux si ces témoins doivent retourner chez-eux, même s'ils ne demeurent qu'à Ottawa. Je crois que nous pourrions peut-être réduire le quorum à cinq, mettons.

Le président: Monsieur Hogarth?

M. Hogarth: Monsieur le président, est-ce que le règlement prévoit le nombre de membres?

Le président: Oui, onze.

M. Hogarth: Oui. Je ne crois pas que nous puissions réduire le quorum à cinq.

M. Breau: On l'a fait au Comité des transports et communications.

M. Hogarth: Je voulais simplement demander à mon honorable ami qui a soulevé cette objection, à savoir si un quorum de cinq serait satisfaisant?

Le président: Monsieur McQuaid?

M. McQuaid: Oui, pourvu qu'il y ait quelqu'un de l'opposition qui soit présent sur les cinq.

Le président: Voulez-vous retirer votre motion et nous continuerons pour le moment?

M. Hogarth: Oui, certainement. Je ne croyais pas qu'il y aurait d'opposition. Je crois que les membres du Comité devraient être d'accord autant que possible, au sujet du quorum et de la procédure. Je vais donc retirer ma motion.

Le président: Si à l'avenir et en aucun temps, nous avons des difficultés avec le quorum, nous pourrions revenir sur la question.

M. McQuaid: Oui. Je crois que ça va. On pourrait en décider quand il n'y aura pas de quorum.

Le président: En conformité du Règlement, nous allons différer le titre abrégé de l'article premier et passer à l'article deux. J'invite l'honorable monsieur Otto E. Lang, ministre sans portefeuille, à nous présenter ses collègues et à adresser la parole au comité.

L'hon. Otto E. Lang (Ministre sans portefeuille): Merci, monsieur le président. M. Denis Harvey du ministère de l'Industrie et

[Text]

Trade and Commerce is present with me, and he is the man who is most knowledgeable about the background history and proposed operations of the Freshwater Fish Marketing Corporation, and I think he will be able to answer most of your detailed questions.

• 0955

I am happy to say, Mr. Chairman, that my colleague, the Hon. Mr. Davis, is here as well because of his special interest and responsibility in regard to fisheries.

I understand that Members of the Committee would like me to make a statement on the general purposes of the legislation for which the Freshwater Fish Marketing Corporation is being established. I am pleased to do this but I ask the indulgence of those members of the Committee who heard the remarks I made when moving second reading of this Bill.

In collaboration with the provincial governments the federal government's objective is to establish an effective marketing board for freshwater fish produced in the prairie provinces, the Northwest Territories and northwestern Ontario. In order to accomplish this purpose a Crown corporation with necessary powers to trade in fish and fish products is to be created. The corporation is desirable in order to serve the purpose of developing markets and sales for the production from these areas so that the corporation on its own account, where necessary or where it is deemed desirable, can join with private industry in developing the potential of this industry.

It is expected the corporation will operate jointly with private industry where private industry can fill an effective role with regard to processing and distribution. Through the intermediary of agents it is anticipated the corporation will purchase direct from the fishermen the catch in these areas and that it will then sell the resulting production. Through the powers given to it by this bill, it will be in control of the marketing of fish for export and for interprovincial trade. The corporation will also have the power to obtain by consent from the provincial governments, and the government on behalf of the territories, similar powers regarding marketing within the provinces and the designated areas themselves.

In addition to attempting to develop and expand the markets for freshwater fish, the corporation will engage in efforts to rationalize the operations of the industry for the

[Interpretation]

du Commerce est ici à mes côtés, il est très au courant de l'histoire et du fonctionnement projeté de l'Office de commercialisation du poisson d'eau douce. Je crois qu'il pourra répondre à la plupart de vos questions sur les points de détail. Il me fait plaisir que mon collègue, l'honorable monsieur Davis est ici également par suite de son intérêt particulier et de sa responsabilité au sujet des pêcheries.

Monsieur le président, sauf erreur, les membres du Comité ont manifesté le désir que j'expose les grandes lignes du projet de loi tendant à créer un Office de commercialisation du poisson d'eau douce. Je le fais volontiers, mais je compte sur la bienveillance des membres du Comité qui ont entendu mon exposé lorsque j'ai proposé la deuxième lecture du bill.

En collaboration avec les provinces, le gouvernement fédéral se propose d'établir un Office de commercialisation du poisson d'eau douce pour les Prairies, les Territoires du Nord-Ouest et le Nord-Ouest de l'Ontario. A cette fin, on créera une société de la Couronne, nantie des pouvoirs nécessaires pour vendre et acheter le poisson et les produits du poisson. Cet office servira à créer des marchés pour les produits de ces régions et, lorsqu'il le jugera nécessaire ou avantageux, il pourra de sa propre initiative collaborer avec l'entreprise privée pour développer le potentiel de cette industrie.

On compte que cet office travaillera en collaboration avec l'entreprise privée lorsque celle-ci pourra s'acquitter efficacement des travaux de transformation et de distribution. On s'attend que l'Office, par l'intermédiaire d'agents, achètera directement des pêcheurs les prises effectuées dans ces régions et qu'il vendra ensuite le produit final. En vertu des pouvoirs que lui conférera le bill, il sera chargé de la commercialisation du poisson destiné à l'exportation et aux échanges interprovinciaux. L'Office aura en outre le pouvoir d'obtenir le consentement des gouvernements provinciaux, et du gouvernement fédéral au nom des territoires; il aura aussi des pouvoirs analogues en ce qui concerne la commercialisation dans les limites des provinces et des régions désignées elles-mêmes.

Outre le développement et l'expansion des marchés pour le poisson d'eau douce, l'Office se consacrera à rationaliser l'exploitation de l'industrie à l'avantage des pêcheurs dont la

[Texte]

benefit of the fishermen whose difficult position was one of the very strong motivating factors in producing and initiating this particular bill.

Years of study have gone before this bill including work done by the McIvor Commission and studies by provincial governments and dominion-provincial conferences. The objective is to obtain a more rational industry, a more stable situation, a better marketing practice and, through all of these, a better share for the fishermen of the money which is to be obtained from this valuable product.

The real and ultimate purpose of this government and the provincial governments concerned is to create a totally new environment in this sector of the freshwater fisheries; an environment which will again be attractive to capital investment so that the whole organization of the industry may be changed. There are some 6,000 or 7,000 fishermen who obtain employment in the freshwater fisheries, many of whom at the present time are living at or near subsistence levels. Many of them are Indians or Métis.

The objective is that through this corporation and the regulation of the industry a better market and better prices may be obtained and that through rationalization of the industry a better return may be available to the fishermen. Through the co-operation of the provinces and the legislation which they will enact the corporation will be the effective purchaser of the commercial product for this wide area of the freshwater fishery. The corporation will be in a position to take steps to expand markets at home and abroad and to improve the quality of the product and the dependability of that product, which in itself is an important factor in improving markets and prices.

The corporation will be under the supervision of a board of directors with members appointed by the Governor in Council, with some of them nominated by the Lieutenant Governors in Council for the interested areas. There will be an advisory committee which is expected to include representatives of the industry in the widest sense, from all its parts, so that the corporation may have in this form some direct communication with the affected people and, in particular, with the fishermen. It will know quickly at all times the reaction to its efforts in the areas concerned.

The provinces will continue to be responsible for the administration of the fisheries

[Interprétation]

situation difficile a été l'un des motifs très puissants qui ont inspiré l'élaboration et la présentation du présent bill.

De longues études ont précédé la présentation de ce projet de loi, y compris les recherches effectuées par la commission McIvor et les études entreprises par les différents gouvernements provinciaux et les conférences fédérales-provinciales. On vise à rendre l'industrie plus rationnelle et la situation plus stable, à améliorer les méthodes commerciales et ainsi à faire bénéficier les pêcheurs davantage des recettes découlant de cet excellent produit.

Notre gouvernement et les gouvernements provinciaux en cause visent essentiellement à modifier de fond en comble le domaine des pêcheries en eau douce, à le rendre de nouveau attrayant à l'investisseur pour doter l'industrie d'une structure entièrement renouvelée. Les pêcheries en eau douce emploient environ de 6,000 à 7,000 pêcheurs dont bon nombre n'ont présentement que le strict minimum vital ou à peu près. Beaucoup d'entre eux sont des Indiens et des Métis.

Le but de l'Office et de la réglementation de l'industrie est d'obtenir un meilleur marché et de meilleurs prix et, ainsi, de rationaliser l'industrie, ce qui accroîtra les recettes des pêcheurs. Grâce à la collaboration des provinces et aux mesures législatives qu'elles adopteront, l'Office deviendra l'acheteur réel du produit commercial de ce vaste secteur de la pêche d'eau douce. L'Office sera en mesure de prendre des initiatives pour étendre les marchés intérieurs et étrangers, pour accroître la qualité et la sûreté du produit, ce qui peut contribuer énormément à l'amélioration de la commercialisation et des prix.

L'Office sera supervisé par un conseil d'administration dont les membres seront nommés par le gouverneur en conseil; certains d'entre eux seront désignés par le lieutenant-gouverneur en conseil, pour les régions intéressées. Il y aura un comité consultatif dont on espère qu'il se composera de représentants de l'industrie au sens le plus large du terme, de représentants de tous les secteurs de l'industrie, de telle sorte que les sociétés puissent ainsi être en communication directe avec les personnes concernées, et en particulier avec les pêcheurs. L'Office saura toujours rapidement comment les régions concernées réagissent devant ses efforts.

L'administration des pêcheries elles-mêmes, c'est-à-dire la tâche fondamentale de la con-

[Text]

themselves; that is to say, for the basic responsibility for conservation and similar matters. This will remain with the provinces. It will not be within the powers of the corporation to impose quotas on production. Where quotas exist this will be by their imposition on the part of the provinces and will be established for conservation purposes. It is to be expected that the corporation and the provincial authorities will be in close contact on these matters, but the corporation will have the basic responsibility to purchase commercial catches in the areas and to use the best possible commercial means of taking these catches to market in the most rational manner.

This is an industry that has been in need of action for some time. It is an industry which can only be successfully helped through the co-operation of the federal and provincial governments concerned. It is hoped that with the fruits of these efforts and co-operation, this corporation will do a great deal to improve the status of the men who work in the industry.

● 1000

The corporation has been given powers broad enough to enter into the necessary commercial aspects of this venture, to ensure good and sound marketing practices and the best possible return to the fishermen and the industry. This bill is expected to be a very important milestone for the freshwater fish industry in Canada.

Perhaps that is sufficient on the general purposes of the bill but a few explanatory comments might be in order on the structure of the bill. It is a bill in three parts.

Part I establishes the Crown corporation with powers for the purposes of marketing and trading in fish and fish products. It will be noted that the management to a large extent is to be vested in the president, who it is intended shall have a background of successful commercial experience and knowledge of the trade. It will be observed that five members of the board of the corporation will be nominated by the provinces concerned and the Northwest Territories. It will be found that provisions for staff of the corporation are comparable to those of other Crown corporations. It is to be expected the corporation would conduct its operations on a self-sustaining financial basis but will receive a grant of up to \$100,000 to meet initial operating and establishment expenses. Thereafter, it will have the benefit of the Minister of Finance's guarantee of its borrowings or direct

[Interpretation]

servation et les tâches similaires, continuera à relever des provinces. L'Office n'établira pas de contingents de production. S'il en existe, c'est que les provinces les auront établis à des fins de conservation. L'Office et les autorités provinciales se consulteront régulièrement sur ces questions, mais l'Office aura la responsabilité première d'acheter les prises dans les régions désignées et de recourir aux moyens les meilleurs et les plus rationnels de les mettre sur le marché.

Depuis un certain temps, cette industrie avait besoin qu'on s'en occupe. Il est possible de l'aider de façon fructueuse par la coopération du gouvernement fédéral et des provinces intéressées. On espère que les fruits de ces efforts et la collaboration avec l'Office feront beaucoup pour améliorer la condition des travailleurs de ce secteur.

L'Office a obtenu des pouvoirs assez étendus pour s'occuper des aspects commerciaux essentiels de cette entreprise, pour assurer l'adoption de méthodes de mise en marché satisfaisantes et judicieuses et pour permettre aux pêcheurs et à l'industrie de réaliser les meilleurs profits possibles. Ce projet de loi est censé être un jalon très important pour l'industrie du poisson d'eau douce au Canada.

Voilà pour les grandes lignes du projet de loi. Il y a peut-être lieu toutefois d'expliquer brièvement les trois parties qui composent le bill.

La Partie I confère à l'Office des pouvoirs aux fins de commercialiser, de vendre et d'acheter du poisson et des produits du poisson. Il est à noter que la direction est, dans une large mesure, dévolue au président, homme de métier qui, sur le plan commercial, devra avoir fait ses preuves dans ce domaine. On remarquera que le conseil d'administration comptera cinq administrateurs nommés par les provinces intéressées et les Territoires du Nord-Ouest. Les dispositions relatives au personnel de l'Office, on le constatera, sont similaires à celles d'autres sociétés de la Couronne. On s'attend que, financièrement, l'Office se suffise à lui-même, mais on lui accordera une subvention ne dépassant pas \$100,000 pour lui permettre de faire face à ses dépenses initiales d'exploitation et à ses frais de premier établissement. Par la suite, le ministre des Finances sera autorisé à garantir

[Texte]

loans to the corporation to the ceiling of \$5 million.

Part II of the bill establishes an advisory committee of not more than fifteen members. This advisory committee which has been mentioned earlier is intended to be widely representative and will certainly include a representative group of fishermen.

Part III of the bill defines the duties and the powers of the corporation in interprovincial and export trade and creates authority for agreement between the federal and provincial governments by which provinces may participate in the corporation's marketing arrangements.

A condition of these agreements will be the sharing by each participating province with the federal government of financial responsibility for the corporation. Another condition will be the undertaking by the province of compensation to owners for redundancy of plant arising as a result of the corporation's activities. The third condition will be the performance by the corporation on behalf of the provinces concerned of functions relating to intra-provincial trade.

I would draw your attention to the definition of fish in section 20 in Part III of the bill. There is a schedule attached which enumerates the species of fish and it is required by the definition that they are fished for commercial purposes in a participating province. It is also provided in the bill that this list of species may be amended by order in council; I believe this is a very necessary provision for the purposes for expansion of the fishery in the designated area. Indeed we already have three additions to the schedule which we are asked to consider by the province of Manitoba and a related amendment will be put before the Committee.

The Chairman: Thank you, Mr. Lang. Are there any questions on the general purpose of Bill No. C-148 before we go to clause by clause examination?

Mr. Lundrigan: Mr. Chairman, I think perhaps we should proceed to clause by clause examination. However, I do have a general question that relates to the entire bill. I am still wondering—and this is mentioned and reiterated in a number of places—about the tremendous emphasis on the need of the corporation to be viable. Is there any more to this than meets the eye? In other words, is this just a good aim that is being set for the corporation, or does it reflect the attitude of

[Interprétation]

les emprunts et les prêts directs consentis à l'Office jusqu'à concurrence de 5 millions de dollars.

Est établi, aux termes de la Partie II, un comité consultatif d'au plus quinze membres. Comme on l'a déjà dit, la composition du comité consultatif reflétera une vaste représentation, y compris bien entendu un groupe représentatif des pêcheurs.

La Partie III définit les droits et pouvoirs de l'Office dans le commerce interprovincial et le commerce d'exportation, et lui confère l'autorité de conclure des accords entre les gouvernements fédéral et provinciaux selon lesquels les provinces pourront participer aux dispositions prises par l'Office aux fins de la commercialisation.

L'une des conditions des accords prévoit que chaque province participante partagera avec le gouvernement fédéral la responsabilité financière de l'Office. Une autre condition prévoit le versement par la province d'une indemnité aux propriétaires d'établissements devenus superflus du fait d'activités exercées par l'Office. Une troisième condition prévoit l'exercice par l'Office, pour le compte de la province intéressée, de fonctions relatives au commerce restreint au terrain de cette province.

J'attire votre attention sur la définition de «poisson» à l'article 20 de la Partie III du bill. Les espèces de poisson sont énumérées dans l'Annexe et il faut, selon la définition, qu'il soit pêché à des fins commerciales dans une province participante. Le bill prévoit en outre que cette liste des espèces de poisson peut être modifiée par arrêté en conseil; cela, à mon avis, s'impose aux fins de l'expansion de la pêche dans la région désignée. En fait, la province du Manitoba nous a déjà demandé d'étudier l'à-propos d'ajouter trois espèces à l'Annexe et le Comité sera saisi d'un amendement en ce sens.

Le président: Merci, monsieur Lang. Y a-t-il des questions au sujet de l'objet du bill n° C-148 en général, avant que l'on passe à l'examen de chaque article?

M. Lundrigan: Monsieur le président, je crois qu'il y aurait avantage à passer à l'étude du bill article par article. Néanmoins, j'ai bien une question d'ordre général à poser, et elle se rattache à l'ensemble du bill. Je suis encore à me demander—et la chose est mentionnée et répétée à maints endroits—ce que signifie l'importance que l'on attache à la nécessité pour la Société d'être rentable. Y a-t-il anguille sous roche? Autrement dit, s'agit-il là tout simplement d'un objectif louable

[Text]

the American government towards federal involvement in the fishing industry to the extent of subsidization?

[Interpretation]

que l'on fixe à la société, ou reflète-t-il l'attitude du gouvernement américain qui voit le fédéral s'occuper de l'industrie de la pêche au point de la subventionner?

• 1005

Mr. Lang: It is the former rather than the latter. The idea really is that the corporation operation as such should be commercial in its nature. As you know, this really in no way precludes other kinds of governmental action should that be desirable, but it would not be expected that that action would be taken as part of the corporation's operations directly. In other words, to put it in its plainest form, if the government decided that a subsidy for fish were necessary it could certainly still pay that subsidy but it would not be expecting the corporation to bear or carry the subsidy, or end up with a loss. It could conceivably receive a grant from the government in order to raise prices and so on, but this is a separate and independent matter of policy and not really a part of the operation of efficient marketing.

Mr. Lundrigan: So you are actually saying that the corporation could indirectly receive assistance from the government by way of indemnity programs or payments which would help in cases of emergency.

Mr. Lang: Yes, I think it is certainly to do that.

Mr. Lundrigan: Have any figures been compiled to project the total administrative costs of administering the board and the continuing costs of the total operations, which could be administrative or otherwise?

Mr. Lang: A preliminary tentative assessment has been made.

Mr. Lundrigan: Could we get an indication of the nature of this preliminary tentative assessment?

Mr. Denis Harvey (Special Adviser to the Deputy Minister, Department of Trade and Commerce): Mr. Chairman, the preliminary figures which we have examined of course would be dependent upon quite a number of decisions which are required. For example, there is provision in the bill, at a later point in time, for decisions to be made with respect to remuneration of officers of the corporation. There is obviously also the necessity for making decisions with regard to fees to be paid to

M. Lang: Il s'agit plutôt d'un objectif louable. Ce que l'on cherche réellement, c'est de faire de la Société une entreprise de nature purement commerciale. Comme vous le savez, cela n'exclut aucunement d'autres genres d'action gouvernementale qui pourraient paraître souhaitables, mais il ne faudrait pas s'attendre que cette intervention soit faite dans le cadre des opérations directes de la Société. Autrement dit, en termes tout simples, si le gouvernement décidait qu'une subvention pour le poisson est devenue nécessaire, il pourrait sûrement verser cette subvention, mais il ne s'attendrait pas que la Société subisse ou supporte cette subvention, ou essuie une perte à la fin. Il est concevable que la Société reçoive une subvention du gouvernement afin de hausser les prix ou pour d'autres raisons, mais c'est là une question distincte et indépendante de politique, et non à vrai dire un aspect du fonctionnement d'une commercialisation efficace.

M. Lundrigan: Ce que vous dites, en réalité, c'est que la Société pourrait recevoir indirectement de l'aide du gouvernement sous forme d'indemnités ou de paiements susceptibles d'aider en cas d'urgence.

M. Lang: Oui, je crois que c'est ce qu'elle va faire.

M. Lundrigan: Est-ce qu'on a compilé des chiffres pour prévoir de ce qu'il en coûterait au total pour administrer le conseil ainsi que les frais permanents de l'exploitation totale, frais qui pourraient être de nature administrative ou autre?

M. Lang: On a fait une première évaluation provisoire.

M. Lundrigan: Pourriez-vous nous donner une indication de la nature de cette première évaluation provisoire?

M. Denis Harvey (Conseiller spécial auprès du sous-ministre du Commerce): Monsieur le président, les chiffres préliminaires que nous avons examinés sont assujétis naturellement à un assez bon nombre de décisions qu'il faudra prendre. Par exemple, le projet de loi contient une disposition prévoyant qu'à un moment donné, plus tard, des décisions devront être prises au sujet de la rétribution des fonctionnaires de la Société. Naturellement il y a aussi la nécessité de prendre des

[Texte]

members of the advisory committee and to directors, who are not of course salaried members of the corporation. These types of costs are a factor because, in total, what is envisaged here is a very small, very tightly-knit little marketing organization. Its possible costs, in our first assessments, might be somewhere between \$100,000 and \$200,000 a year—certainly within that range. It is a pretty wide range but a relatively small figure compared with the total value of the production which is to be handled by the corporation.

Mr. Lundrigan: Mr. Chairman, while I am still on finances, has any consideration been given to minimum prices to fishermen for their produce?

Mr. Lang: Do you mean a price above the market value?

Mr. Lundrigan: Not necessarily—some minimum standard price which would be paid fishermen regardless of marketing conditions or fluctuations, international or otherwise?

Mr. Lang: The corporation will be able to use its best judgment in setting the initial prices but it will be expected to use that judgment in a way which produces a self-sustaining result—it will not be able to disregard the market in setting the prices.

Mr. Lundrigan: Therefore, if the cost of administration is less than \$200,000 per annum or thereabouts, we can assume that this money will be paid by the corporation from—if I can use the phrase—the total income from the sale of fish. In other words, if the corporation has to assume its own administrative costs can we not assume that it could be possible that this would result in a lower price for the fishermen? What I am trying to get at here is the administrative costs and the resultant minimum price received by the fishermen. I require knowledge of these two factors to know if the fishermen will get a better share of the total market return than they are at the present moment.

• 1010

Mr. Lang: Of course it is true that these costs are to come out of the total receipts for fish, but of course the whole theory and the whole philosophy behind the marketing corporation is that the efficiencies and improvements in marketing and handling that result

[Interprétation]

décisions au sujet des droits à verser aux membres du comité consultatif et aux membres du Conseil d'administration, qui ne sont pas, bien sûr, des membres salariés de la Société. Ces genres de frais sont un facteur à considérer car, à tout prendre, ce que l'on envisage ici est la création d'une très petite organisation de ventes, une organisation très concentrée. Ses frais possibles, d'après nos premières estimations, peuvent se situer quelque part entre \$100,000 et \$200,000 par année, sûrement un chiffre situé entre ces deux-là. C'est un écart assez large, mais un chiffre relativement faible si on le compare à la valeur totale de la production dont s'occupera la Société.

M. Lundrigan: Monsieur le président, toujours au chapitre des finances, a-t-on étudié les prix minimums qu'il faudrait payer aux pêcheurs pour leurs produits?

M. Lang: Voulez-vous parler d'un prix supérieur à la valeur sur le marché?

M. Lundrigan: Pas nécessairement. Je songeais à un prix normal minimum qui serait versé au pêcheur, peu important les conditions de commercialisation ou les fluctuations, internationales ou autres?

M. Lang: La Société sera en mesure d'exercer son jugement pour établir les prix initiaux, mais elle devra exercer ce jugement de façon à produire des entreprises qui suffisent à leurs besoins; elle ne pourra pas fixer les prix sans tenir compte du marché.

M. Lundrigan: Ainsi, si les frais d'administration sont inférieurs à \$200,000 par année ou à peu près, on peut supposer que cet argent sera versé par la Société à même le revenu total de la vente du poisson, si l'on peut dire. En d'autres termes, si la Société doit payer ses propres frais d'administration, ne peut-on pas supposer qu'il en résulterait peut-être un prix moins élevé pour les pêcheurs? Je veux en venir ici aux frais d'administration et au prix minimum qui, en définitive, serait payé au pêcheur. Je voudrais des renseignements sur ces deux facteurs pour savoir si le pêcheur va recevoir une meilleure part des recettes totales du marché qu'il n'en retire à l'heure actuelle.

M. Lang: Naturellement, il est vrai que ces frais doivent venir des recettes totales provenant du poisson, mais naturellement toute la théorie et toute la philosophie qui inspirent la Société de commercialisation et que l'efficacité accrue et les améliorations dans le

[Text]

will much more than pay for this expenditure. Of course there will be savings in other ways as well, quite apart from the efficiencies in marketing and the improved position for marketing, and these are all designed to produce an income much greater than the cost of the corporation itself. This is the philosophy behind the corporation.

Mr. Lundrigan: Could I ask the Minister to elaborate on the specificities of this philosophy. I know the theory that you are propounding but do you have any knowledge or any information available which could support this philosophical contention?

Mr. Lang: Perhaps I will ask Mr. Harvey to review the background of the thinking.

Mr. Harvey: Mr. Chairman, this was the subject of a very great deal of study at the point in time when there was first the examination of the possibilities of effecting the improvements necessary by the introduction of board marketing in this field. Really one needs to consider the overhead in relation to the prospective increase in earnings, which is precisely what is the object of this question, I think. There are several ways of assessing this. The value of fish landed in the designated area, or of the five main species, averaged over seven years about 14 cents a pound. Now that takes in a great variety of fish in different grades, but it is one index; 14 cents a pound. The value of that product at export was 29 cents a pound. The value of the fish involved at the consumer level was substantially higher, of course, than 29 cents a pound, and in the last 10 or 15 years it has risen—the consumer level value has risen—out of any relationship to the export price or the price paid to the fisherman, which has continued at a very low level.

Let us say, then, that one of the objectives is, of course, to obtain a larger share of the export price and a larger share of the consumer price for the fisherman, for the original producer. And there are wide margins of opportunity in that regard. Now, talking of somewhere in the neighbourhood of, let us say, half way between \$100,000 and \$200,000 as being the overhead, what we are talking of is about 1 cent a pound by comparison with margins which I speak of here, a range of potential improvement of perhaps 5 cents a

[Interpretation]

domaine de la vente et de la manutention dépasseront de beaucoup ces dépenses. Il y aura bien sûr des épargnes réalisées d'autres façons, indépendamment de l'efficacité de la mise en marché et d'une meilleure commercialisation, et tout cela vise à produire un revenu beaucoup plus élevé que le coût de la Société elle-même. Voilà l'idée maîtresse qui préside à l'institution de la Société.

M. Lundrigan: Pourrais-je demander au ministre d'entrer dans les détails plus particuliers de cette philosophie. Je comprends la théorie que vous préconisez, mais avez-vous des données ou des renseignements qui viendraient appuyer cette assertion philosophique?

M. Lang: Je demanderais à M. Harvey de faire l'historique des faits qui ont mené à cette façon de voir.

M. Harvey: Monsieur le président, cette question a fait l'objet d'études poussées à un certain moment, lorsqu'on a tout d'abord examiné les possibilités d'apporter les améliorations rendues nécessaires par l'établissement de prix généraux, dans ce domaine. Il faut en vérité étudier les frais généraux en fonction de l'augmentation éventuelle des gains, ce qui fait précisément l'objet de cette question. Il existe plusieurs façons de faire cette évaluation. La valeur du poisson reçu dans la région désignée, ou la valeur des cinq principales sortes, était, en moyenne, pour la période de sept ans, de 14 cents la livre. Cette moyenne se rapporte à une grande variété de poissons de différentes qualités, mais elle n'en est pas moins de 14 cents la livre. La valeur de ce produit à l'exportation était de 29 cents la livre. Au niveau de la consommation, elle était sensiblement supérieure évidemment, à 29 cents la livre et, au cours des dix ou quinze dernières années, elle a augmenté, la valeur du produit à la consommation, dis-je, au point d'être sans commune mesure avec le prix à l'exportation ou le prix que touche le pêcheur, ce dernier prix demeurant à un niveau très bas.

Nous pouvons donc dire qu'un des objectifs est, bien entendu, d'assurer une part plus importante du prix de l'exportation et une part plus importante du prix à la consommation au pêcheur, le premier producteur de la chaîne. Une grande variété de moyens sont possibles à cette fin. A supposer que les frais généraux se situent, mettons, à peu près entre \$100,000 et \$200,000, il s'agit de 1 cent la livre, eu égard aux marges dont je parle ici, une échelle d'amélioration possible de 5 cents la livre peut-être, échelle tenue, à certains

[Texte]

pound, what we are advised in some respects and in some areas as being quite a conservative estimate.

Looking at the question in rather more precise terms and at particular species, one turns to one of the major factors in this, which is whitefish. There are many grades and qualities of whitefish from the market point of view and many forms in which the product is sold, but looking at the range of prices which occurs annually one sees in the Chicago market a low of 30 cents in July, shall we say, and a high of 70 cents in the following April. Those are not lake prices. Those are prices which are obtainable for the whitefish as sold in the Chicago market. Evening out prices and stabilizing this voluminous supply to the market during the course of the year would be one of the objectives of the corporation.

I remember when I was in Great Slave Lake in September the price of whitefish there was 21 cents a pound. A recent price paid to fishermen very, very locally and for a very specific quantity was in the neighbourhood of 60 cents a pound in Manitoba. Such price swings as that obviously are a cost to the fishermen because the trade in dealing with a fluctuating market tends to be conservative with respect to its engagements. By stabilizing the feed to the market there is confidence that better average prices can be obtained. And average prices would not need to be very substantially better to more than offset the potential overheads.

• 1015

Then again, of course, another area in which the corporation has to be extremely effective is in improving quality control. Where you have lower grade whitefish in supply from northern lakes, the price of about 4 cents a pound is all that is paid to fishermen. By finding ways of reducing the loss on infestation and eliminating the danger of rejection at the U.S. border, what value there is in good quality whitefish out of these northern areas would be considerably enhanced. Furthermore, of course, there is the intention here through the corporation of actively engaging in expansion of the total market and expanding the product range of forms in which the fish is marketed, prepared and frozen—Gefilte fish, individual portion wraps and things of this type. There is demand here if supply can be guaranteed to the processors of the raw material they need for increasing their volume of business, and there are decided opportunities in the export market for these margins. This is the basis of

[Interprétation]

égards et dans certaines régions, pour une estimation plutôt conservatrice.

Si nous examinons la question avec plus de précision et si nous nous arrêtons à des espèces particulières, nous sommes en présence de l'un des principaux facteurs, le poisson blanc. Bien des classes et bien des qualités de poisson blanc se vendent sur le marché, et sous plus d'une forme, mais du point de vue de l'éventail des prix qui se présente à chaque année, on remarque sur le marché de Chicago un minimum de 30 cents en juillet, mettons, et un maximum de 70 cents au mois d'avril suivant. Ces prix ne s'appliquent pas aux poissons des Lacs, mais sont exigés pour le poisson blanc vendu sur le marché de Chicago. La Société veut, entre autres objectifs, uniformiser les prix et stabiliser l'approvisionnement massif des marchés au cours de l'année.

Lorsque je me trouvais au Grand Lac des Esclaves en septembre, je me souviens que le prix du poisson blanc était de 21 cents la livre. Au Manitoba, certains pêcheurs, à un endroit donné et pour une quantité très déterminée de poisson, ont reçu près de 60 cents la livre. Pareilles fluctuations de prix nuisent manifestement au pêcheur qui n'ose pousser ses engagements sur un marché aussi variable. En stabilisant le ravitaillement du marché, on peut espérer obtenir de meilleures moyennes de prix. Et les moyennes des prix ne doivent pas nécessairement dépasser ce qu'il faut pour compenser les frais généraux possibles.

Encore une fois, bien entendu, la Société se heurte à un autre domaine dans lequel elle doit se révéler extrêmement efficace, celui de l'amélioration du contrôle de la qualité. Lorsqu'on peut obtenir du poisson blanc de qualité inférieure des lacs du nord, le pêcheur ne reçoit environ que 4 cents la livre. Si l'on trouvait le moyen de réduire la perte attribuable à l'infestation et d'éliminer le danger des rejets à la frontière américaine, la valeur du poisson blanc de qualité, en provenance de ces régions du nord, serait considérablement augmentée. En outre, évidemment, on se propose ici, par l'intermédiaire de la Société, de travailler activement à l'expansion du marché global et d'étendre la gamme des formes sous lesquelles le poisson est vendu, traité et congelé, le poisson Gefilte, les portions individuelles, par exemple. La demande existe et si l'on peut garantir l'approvisionnement des transformateurs de poissons en produits nécessaires à l'augmentation de leur volume d'affaires, le marché de l'exportation présente

[Text]

the confident prediction that the corporation can, quite clearly, offer their producers very considerable return, far in excess of what they might cost the industry in terms of overhead.

The Chairman: I would ask you to adhere to the 10-minute period as closely as possible.

Mr. Lundrigan: Mr. Chairman, we are going to be sitting all day, and could I raise this point now for the consideration by the Committee. In order to pursue any kind of line of questioning that has any continuity it is sometimes impossible to get it in 10 minutes.

The Chairman: No, but as close as possible, I said.

Mr. Lundrigan: We are going to be sitting all day, and I have two or three more very brief questions which might take four or five minutes and I think the Committee should be a little more lenient with respect to the 10-minute time limit. I do not think anybody is going to try and hog the time of the Committee on the fishermen of central Canada.

The Chairman: I mentioned this just to be fair to other members of the Committee. That is why I mentioned this and if it is agreeable, it is agreeable with me.

Mr. Lundrigan: Mr. Chairman, I have just a couple of brief observations. We just heard that the fishermen should receive—this was my original question—perhaps 5 cents more per pound. Bearing in mind that this was a question I wanted answered, I am quite happy to receive this kind of indication that there will be a substantially improved return to the fishermen as a result of the total market price, as much as perhaps 5 cents per pound, which is a commendable aim of the corporation and, hopefully, a future achievement. I am wondering if the gentlemen could reflect a little more fully on whether the reason for the depressed prices previously received was a result of inefficiency on the part of the trade or was the result of exorbitant profits received. It has to be one or the other or a combination. In the event that it was inefficiency, could the gentlemen indicate to what extent the marketing corporation specifically can aim at eliminating what types of inefficiencies?

Mr. Lang: I think it was due to many things, and some of these things the corporation will be ideally suited to eliminate. One of

[Interpretation]

des débouchés certains pour ces différences de volume. C'est sur ces possibilités que nous nous fondons pour prédire que la Société pourra nettement offrir aux producteurs des gains très considérables, très supérieurs au coût qu'ils peuvent représenter, en fait de frais généreux, pour l'industrie.

Le président: Je vous prierais d'essayer de respecter la limite de dix minutes autant que possible.

M. Lundrigan: Monsieur le président, nous siégeons toute la journée et j'aimerais soumettre le point suivant à l'étude du Comité.

Pour développer tous les aspects d'une même question, il est parfois impossible de ne pas dépasser les dix minutes.

Le président: Non, mais autant que possible, ai-je dit.

M. Lundrigan: Nous siégeons toute la journée, et j'ai deux ou trois autres questions très brèves qui prendront peut-être quatre ou cinq minutes. A mon avis, le Comité devrait se montrer plus indulgent au sujet de la période de dix minutes. Personne n'essaiera de gaspiller le temps du Comité quand il s'agit des pêcheurs du Canada central.

Le président: J'ai signalé la chose en toute justice pour les autres membres du Comité. C'est l'unique raison, et si vous n'y voyez aucun inconvénient, je n'en vois pas plus.

M. Lundrigan: Monsieur le président, j'aimerais formuler quelques brèves observations. On vient de dire que les pêcheurs devraient recevoir, et c'est ma première question, à peu près 5 cents de plus la livre. Sans oublier que j'attends une réponse à cette question, je suis heureux de voir que les pêcheurs connaîtront un gain passablement plus élevé sur le prix global du marché, peut-être autant que 5 cents la livre, ce qui est un effort louable de la Société et, nous l'espérons, un effort qui portera fruit. J'aimerais que ces messieurs examinent d'un peu plus près si la dépression des prix antérieurement touchés résultait de l'inefficacité du commerce même ou des bénéfices exorbitants recherchés. La cause doit être l'une ou l'autre de ces possibilités ou une combinaison des deux. S'il faut blâmer l'inefficacité, ces messieurs pourraient-ils indiquer dans quelle mesure la Société de la commercialisation peut espérer, de façon précise, éliminer les causes d'inefficacité?

M. Lang: Les causes sont nombreuses et l'Office sera l'organisme par excellence pour en éliminer quelques-unes. Une des causes est

[Texte]

the things it was certainly due to was the fact that you had weak sellers facing strong buyers, relatively speaking. And you certainly had duplication of facilities, which produced inefficiency in the actual operation. Mr. Harvey, perhaps you should elaborate on this.

Mr. Harvey: Mr. Chairman, the central problem of marketing in this industry has confronted the provinces in their study of what to do about it now for a considerable period of time. All their efforts to improve the organization of the fishery, to get fresh capital into the fishery, to improve productivity in the fishery, have been by their own statement, or at least by the statement of the Province of Manitoba, for example, before the McIvor Commission, have been brought to naught because of the central problem of marketing. This one which the Minister referred to, competition between many sellers for the custom of relatively limited number of United States importers, has been one of the expressions of that problem.

[Interprétation]

certainement la faiblesse des vendeurs devant la puissance des acheteurs, pour ainsi dire. Et l'existence d'installations qui font double emploi a engendré l'inefficacité des opérations elles-mêmes. Monsieur Harvey, voulez-vous donner plus de détails?

M. Harvey: Monsieur le président, les provinces travaillent depuis longtemps à la solution du problème de commercialisation auquel se bute cette industrie, au moyen d'études visant à découvrir ce qu'il est possible de faire pour y remédier. Tous leurs efforts pour améliorer l'organisation de l'industrie de la pêche, trouver de nouveaux capitaux à y investir, augmenter la productivité de l'industrie, n'ont donné, selon leurs dires, du moins selon ce qu'en ont dit les représentants du Manitoba par exemple, devant la Commission McIvor, aucun résultat à cause de ce problème de commercialisation. C'est celui dont le ministre nous a parlé. La concurrence que se font bon nombre de vendeurs pour la vente de leur produit à un nombre relativement peu élevé d'importateurs américains ne fait que refléter ce problème.

• 1020

Another has been, of course, the fact that the fishery itself is divided up at the present time between a relatively large number of dealers compared with the foreign buyers, and the dealers, to ensure their supply, have been compelled at times to invest in service facilities for the trade—lake landing stations, boat maintenance and boats—and the process of assisting the fishermen has involved them in fixed investments which from time to time have brought little return to them because it has also been possible on a relatively narrow margin for somebody to temporarily get between them and their suppliers, the producers, for small margins of profit, causing a further weakening in prices.

Un autre aspect du problème est, bien sûr, le fait qu'un nombre relativement grand de commerçants, comparé au nombre d'acheteurs étrangers, se divise le marché du poisson, et que les commerçants, afin d'être sûrs de leurs approvisionnements, se sont vu contraints à certains moments d'investir des fonds dans l'aménagement d'installations de service au profit de l'industrie, de débarcadères de poissons sur la côte des lacs, d'installations d'entretien des bateaux et dans l'achat de bateaux; cette aide qu'ils ont accordée aux pêcheurs, représente une mise de fonds qui n'a parfois rapporté que peu d'intérêt car, malgré la marge de profit relativement faible, certaines personnes sont venues temporairement se placer entre eux et leurs fournisseurs, les producteurs, et abaisser encore plus la marge de bénéfice, occasionnant ainsi un nouveau fléchissement des prix.

Centrally the price problem is the essence of the difficulty of the industry and it is not really a question of inability on the part of the existing industry to be efficient within its existing units except for the fact that from lack of input of capital, productivity has decidedly declined over time and there are many firms and many individuals in the industry who will readily agree that if some of the difficulties of marketing can be resolved for them, then they can do things about improving their own productivity in these plants.

C'est le problème des prix qui est à la base de toutes les difficultés auxquelles l'industrie se bute; ce n'est pas que l'industrie ne possède pas actuellement la compétence nécessaire pour accomplir sa tâche efficacement avec les bateaux dont elle dispose. Toutefois, à cause d'un manque de capitaux frais, la productivité a graduellement diminué, et bien des sociétés et bien des particuliers affirment volontiers que si l'on pouvait résoudre quelques-unes des difficultés relatives à la commercialisation, ils seraient capables de relever la productivité de leurs installations.

[Text]

Mr. Lundrigan: Mr. Chairman, the last question is a very technical one which will only take half a second. On page 4 of the statement by the Minister he indicates in the last sentence that the corporation will have the benefit of guarantees of borrowed moneys, and on page 8, section 17 of the proposed legislation, "the Corporation may", or "the Minister or the Governor in Council may authorize the Minister". Is this normally how bills are written? This may arise from my lack of knowledge of how bills are normally written but was the fact that we have "may" rather than "shall" an intentional insertion? There is no commitment on the government to guarantee the repayment of loans, but the Minister has indicated that there is.

Mr. Lang: Yes; this is the form that is normally used. The statement I make indicates the intention—the commitment—of the government in this direction. The form that is used is "may" which, as you will notice, allows for such terms and conditions as may be agreed upon, and so on. In other words, it is to suit the particular situation of the resulting relationship between the corporation and the Government relative to the guarantee. This is really necessary to protect the national credit.

Mr. Lundrigan: The terms of the agreement have to be identified and ironed out, but this "shall" is a guarantee that the corporation's loans will be supported and backed by the Government of Canada?

Mr. Lang: It is really a flat statement of the intention of the Government.

Mr. Lundrigan: Therefore, we can assume that this statement as it is written sets forth, the intention of the government?

Mr. Lang: Yes; I think that is fair enough.

Mr. Lundrigan: Thank you, Mr. Chairman.

The Chairman: A supplementary by the Hon. Jack Davis, Minister of Fisheries.

Hon. Jack Davis (Minister of Fisheries): Mr. Lundrigan asked about prices and Mr. Harvey was good enough to indicate, perhaps for illustrative purposes only, that the average price received by fishermen was of the order of 14 cents; and that the export, or wholesale, price leaving the country was of the order of twice that, or 29 cents. Can you

[Interpretation]

M. Lundrigan: Monsieur le président, ma dernière question en est une d'ordre technique qui ne prendra que très peu de temps. A la page 4 de son mémoire, le ministre laisse entendre dans la dernière phrase que les emprunts de l'Office seront garantis, et à la page 8 article 17 du projet de loi il est dit que «la Société peut» ou «le ministre ou le gouverneur en conseil peut autoriser le ministre». Est-ce la façon normale de rédiger les projets de loi? Il se peut que je n'aie que peu de connaissances de la façon dont les bills sont rédigés, mais est-ce intentionnellement que l'on a mis «peut» au lieu de «doit»? Le gouvernement ne s'engage pas à garantir le remboursement des emprunts, pourtant le ministre a laissé entendre que tel est le cas.

M. Lang: Oui, c'est la façon dont les bills sont normalement rédigés. Dans ma déclaration, j'ai dit que le gouvernement s'engage à le faire. On utilise le verbe «pouvoir» qui, comme vous le remarquerez, permet de tenir compte des modalités sur lesquelles on peut tomber d'accord, et ainsi de suite. Autrement dit, la formule est adaptée au rapport particulier qui existera entre le gouvernement et la Société en ce qui a trait à la garantie. C'est en fait une chose nécessaire pour protéger le crédit national.

M. Lundrigan: Les modalités de l'accord restent encore à définir et à mettre au point mais le «droit» est une garantie que les prêts de la Société seront appuyés et endossés par le gouvernement du Canada.

M. Lang: Il s'agit en fait d'une déclaration d'intention pure et simple de la part du gouvernement.

M. Lundrigan: Nous pouvons donc supposer que cette déclaration, dans sa forme actuelle, énonce l'intention du gouvernement?

M. Lang: Oui; je pense que c'est ainsi qu'on pourrait la décrire.

M. Lundrigan: Merci, monsieur le président.

Le président: Une question supplémentaire par l'honorable Jack Davis, ministre des Pêcheries.

L'hon. Jack Davis (ministre des Pêcheries): Monsieur Lundrigan a posé une question au sujet des prix et M. Harvey a eu l'amabilité d'expliquer, peut-être à titre d'exemple, que le pêcheur reçoit en moyenne 14 cents pour son produit, et que le prix d'exportation, ou de gros, au moment où le produit passe nos frontières, est le double, soit 29 cents. Pou-

[Texte]

give us some idea of what the retail price might be? Is it 50 cents or is it \$1? Where can we see the entire process in terms of price?

Mr. Harvey: Mr. Chairman, the difficulty there is that these are average prices, pooling all species and all qualities over a period of seven years. There really is not a precise corresponding figure.

• 1025

For example, at the time I mentioned, when I was in Great Slave Lake they were paying 21 cents for medium-large whitefish at the lake. About that same week we had a report from one of our posts in the United States to the effect that these fish at retail were realizing over \$1 per pound. So there is a considerable margin for improvement between what the retailer is prepared to pay for these fish and what the fisherman is getting.

When I mentioned the figure of 5 cents a moment ago I was thinking of a very, very rough approximation on an average basis. One could conceive that with organized development of the market much better margins would be possible over time than the one I spoke of then.

Mr. Davis: Do we have any idea about trends? Is the price to fishermen going up or down, and is the retail price going up or down?

Mr. Harvey: I was told the other day by a fisherman in Port Arthur that for his whitefish he was receiving the same price today that he received 20 years ago; whereas the retail price over that period of time would obviously have advanced very greatly indeed.

The trend is difficult to establish because there are years in which there must be a general down-trend in prices for fish because of conditions in the fish market; and there are also years when prices must be moving forward. In recent years, however, there has been no significant improvement in the price of freshwater fish.

Mr. Davis: Thank you.

The Chairman: I will now recognize Mr. Comeau.

Mr. Comeau: I have one question, Mr. Chairman. I realize that this Board will have much wider scope than has the Fisheries Prices Support Board which, as I understand it, is simply a board, or an act, that supports

[Interprétation]

vez-vous nous dire à peu près ce qu'est le prix de détail? Est-ce 50 cents ou un dollar? Comment peut-on se renseigner sur les différents prix par lesquels passe le produit, du producteur au consommateur?

M. Harvey: Monsieur le président, il s'agit ici de prix moyens, englobant toutes les espèces et toutes les qualités sur une période de sept ans. Nous ne disposons pas de chiffres exacts qu'il serait possible de comparer.

Par exemple, à l'époque dont j'ai parlé, alors que j'étais au Grand lac des Esclaves, le pêcheur recevait 21 cents, pour le poisson blanc, gros et moyen. Dans le courant de la semaine, nous avons appris d'un de nos représentants aux États-Unis que ces poissons se vendaient à un dollar la livre au détail. Il serait donc largement possible de réduire la marge qui existe entre le prix que le détaillant est prêt à payer pour ce poisson, et celui que l'on paie au pêcheur.

Lorsque j'ai cité le chiffre de cinq cents, il y a quelques minutes, il s'agissait d'un chiffre moyen très approximatif. On peut fort bien supposer que, en organisant le marché et en lui donnant de l'expansion, il serait possible d'assurer une marge de bénéfice beaucoup plus intéressante, avec le temps, que celle dont j'ai parlé plus tôt.

M. Davis: A-t-on quelque idée de la tendance des prix? Le prix qu'obtient le pêcheur a-t-il tendance à monter ou à descendre; les prix de détail sont-ils en hausse ou en baisse?

M. Harvey: Il y a quelques jours, un pêcheur de Port-Arthur m'a dit qu'il reçoit aujourd'hui pour son poisson blanc le même prix qu'il recevait il y a 20 ans, alors que, évidemment, les prix de détail ont grandement augmenté pendant la même période.

Il est difficile de dire quelle est la tendance des prix car, certaines années, le prix du poisson a une tendance générale à la baisse à cause des conditions du marché; par contre, certaines années, les prix ont tendance à monter. Toutefois, au cours des dernières années, il y a eu une telle amélioration dans le prix du poisson d'eau douce.

M. Davis: Je vous remercie.

Le président: Je cède maintenant la parole à M. Comeau.

M. Comeau: Je désire poser une question, monsieur le président. Je conçois que cette commission aura beaucoup plus d'envergure que l'Office des prix des produits de la pêche qui n'est, comme je le comprends, qu'un

[Text]

the price of fish in terms of perhaps deficiency payments, or that sort of thing. Could the Minister explain why the Fisheries Prices Support Board, or the act as it may be called, will not fulfil the purpose of this proposed legislation?

Mr. Lang: I think there was a real need to create a control of the whole marketing situation. The corporation will be able to do many things which a simple support program would be unable to do. It will be able to do much more relative to control of marketing, to ensure, for instance, that products remain of sound quality; that the flow of product on to the market is at the proper rate for the best benefit; and, of course, on the inside of its operation it will also be able to become involved in actual fish marketing procedures wherever that is necessary, even right down to the lake level. Therefore, in that way it has much more scope.

Mr. Harvey, do you have anything to add?

Mr. Harvey: I do not think so, sir. That seems to answer the question.

The Chairman: Mr. Ritchie?

Mr. Ritchie: I would like to ask Mr. Harvey, through you, Mr. Chairman, whether, from his estimate, he hopes to improve the price by reducing the spread between the export price and the fisherman and the export price and the retailer in the United States?

First of all, approximately how much of the total fish is sold in Canada and how much is exported? Can you answer that, roughly?

Mr. Harvey: Mr. Chairman, it would depend on species. The great bulk of the fish is exported, but there are decided possibilities of increasing the proportion sold in the Canadian market.

Mr. Ritchie: This by education and promotion?

Mr. Harvey: Yes; and improvement of quality is a very important factor there, Mr. Chairman. It happens that in this industry there has been a problem of infestation and rejection of shipments; and there has been a deplorable tendency on the part of some traders to use the Canadian market for what has

[Interpretation]

organisme ou une loi qui soutient le prix du poisson en ce qui a trait peut-être aux avances ou autres choses du même genre. Est-ce que le ministre pourrait nous expliquer la raison pour laquelle l'Office des prix des produits de la pêche, ou la Loi sur le soutien des prix des produits de la pêche, selon le cas, ne répondra pas aux besoins de la loi envisagée?

M. Lang: Je crois qu'il était vraiment nécessaire d'établir un contrôle sur l'ensemble du marché. La Société sera en mesure de prendre un grand nombre d'initiatives qu'un simple programme d'aide ne pourrait entreprendre. Elle pourra réaliser bien davantage en ce qui a trait au contrôle du marché afin d'assurer par exemple que les produits demeurent de bonne qualité et que l'écoulement des produits sur le marché s'opère à un rythme convenable dans l'intérêt commun; elle pourra aussi évidemment, au sein de son exploitation, agir sur les politiques de mise en marché du poisson là où cela sera nécessaire, et ce jusqu'aux lieux de pêche. De cette façon, elle a donc beaucoup plus d'envergure.

Monsieur Harvey, avez-vous quelque chose à ajouter?

M. Harvey: Je ne crois pas, monsieur. Cela semble avoir répondu à ma question.

Le président: Monsieur Ritchie?

M. Ritchie: Par votre intermédiaire, monsieur le président, je désire demander à M. Harvey si, grâce à ses estimations, il espère améliorer les prix en réduisant l'écart entre le prix d'exportation et le pêcheur et le prix d'exportation et le détaillant aux États-Unis?

En tout premier lieu, quelle est la proportion approximative des prises globales vendues au Canada et celle qui est réservée à l'exportation? Pouvez-vous me donner une réponse plus ou moins précise?

M. Harvey: Cela dépend de la sorte de poisson, monsieur le président. La majeure partie des prises est exportée, mais il existe des possibilités indéniables d'augmenter la proportion des ventes au Canada.

M. Ritchie: Grâce à la publicité et à l'encouragement?

M. Harvey: Oui; d'ailleurs, l'amélioration de la qualité constitue dans ce cas un facteur très important, monsieur le président. Il se trouve que dans cette industrie, il y a eu un problème d'infestation et de rejet des expéditions; certains commerçants ont fait preuve d'une tendance déplorable à utiliser le marché

[Texte]

been rejected by the export market, if they have been able to do so.

This kind of thing obviously is not acceptable and is not sound marketing practice. There are important gains to be made by attention to quality in the Canadian market.

● 10.30

Mr. Ritchie: If the figures of 14c to 29c as you imply, are reasonably correct in the processing and handling—and certain knowledgeable people who have been in the industry many years have somewhat doubted that you can make all these savings—you would hope to make substantial savings by rationalising the processors and handlers of fish?

Mr. Harvey: Mr. Chairman, the spokesmen for the industry have acknowledged publicly, or have been quoted publicly as acknowledging—and I have heard them acknowledge that there are important savings to be made, for the industry itself or in the cost of selling, merely by a co-ordinated attack on the marketing problem. Instead of having every potential buyer in the United States covered several times over by potential Canadian sellers, to have one, and one only, liaison with that particular buyer and thus prevent the opportunity of exploiting this competition from this side in the selling.

The possibilities of improved selling prices for the industry also are enhanced by diverting some of the pressure of the flush of supply in the period of peak production from the export market immediately and into processed forms where the volume can be handled more successfully over a longer period of time. For example, the most valuable form in which good quality whitefish can be sold, of course, is in the fresh or frozen form; that is, as whole fish. Where the pressure on the market is such that prices are being weakened, as has been happening regularly during the periods of peak production annually, if the peak pressure can be diverted from the market and into processed forms where without loss of value this can be filleted and frozen in various market packages and perhaps under private brands with prospects of release of this over a longer period of time, the effect in not weakening prices at that moment strengthens the value of the product through the entire season because the filleted product itself is related to the cost of the raw fish and if the raw fish market is strengthened then the price of the filleted product is

[Interprétation]

canadien pour écouler les rejets de l'exportation, lorsqu'ils en ont eu l'occasion.

Il est évident que cet état de chose est inacceptable et ne constitue pas une pratique commerciale recommandable. Le marché canadien peut être considérablement amélioré en soignant la qualité.

M. Ritchie: Si, comme vous le donnez à entendre, les chiffres de 14 cents à 29 cents sont plus ou moins exacts en ce qui a trait au traitement et à la manutention, (et certaines personnes bien informées travaillant dans l'industrie depuis bon nombre d'années semblent quelque peu sceptiques à l'égard de telles économies), vous espérez réaliser des épargnes considérables en rationalisant le traitement et la manutention du poisson?

M. Harvey: Monsieur le président, les porte-parole de l'industrie ont reconnu publiquement, ou ont été cités comme ayant publiquement reconnu, et j'en ai été personnellement témoin, que d'importantes économies peuvent être réalisées, tant en faveur de l'industrie elle-même que dans le domaine des frais de vente, en coordonnant tout simplement la mise en marché. Au lieu de soumettre chaque acheteur virtuel des États-Unis aux sollicitations répétées des vendeurs potentiels canadiens, il est préférable d'avoir un agent de liaison, un seul, avec l'acheteur en question, afin d'éviter toute exploitation provenant des vendeurs canadiens.

La possibilité d'une amélioration des prix de vente est également accrue en dérivant immédiatement une partie de la surabondance de prises survenant en période de pointe, du marché d'exportation vers les usines de traitement où le volume peut être plus efficacement manutentionné sur une plus longue période de temps. A titre d'exemple, le poisson blanc de bonne qualité est évidemment surtout recherché frais ou congelé, c'est-à-dire sous forme de poisson entier. Lorsque la pression sur le marché est telle que les prix fléchissent, ce qui arrive régulièrement chaque année au cours des périodes de prises maximales, il est avantageux de diriger le trop-plein du marché vers les usines de traitement où, sans perte de valeur, il peut être filleté et congelé sous diverses formes, peut-être sous des marques de commerce, en vue de sa mise en marché sur une plus longue période de temps; en n'affaiblissant pas les prix à ce moment-là, on consolide la valeur du produit durant toute la saison car le produit filleté est lui-même relié au coût du poisson cru, et si le marché du poisson cru est renforcé, le prix du produit filleté l'est égale-

[Text]

strengthened. It is a question really of orderly marketing that confronts the corporation, and the need for this has been acknowledged by the industry itself and indeed the industry at times has attempted to cope with this very problem in its own organization and, of course, as a result of the existence of competition been unable to achieve any result.

Mr. Ritchie: It has been stated that the American market is largely controlled by two very large importers who set the prices. Is this correct or not?

Mr. Harvey: Yes, a limited number. The number varies from time to time, but two or three importers represent a very large proportion of the American trade of the whole fish. The filleted product, of course, which is sold under private brand may be handled through quite a number of distributive organizations. Some American fish companies have branches here in Canada who put up filleted product under their own brand. This is not immediately connected with the fresh fish market and as a consequence can represent a means of diverting pressure, as I mentioned a moment ago, on fresh fish prices—expansion of that type of sale.

Mr. Ritchie: In the United States do you have sort of a captive market? You will always have people who prefer to eat fresh-water fish but what are the limiting factors, in regard to price in the sense of, when does it compete with other meat products and so on? Does the price go too high so people eat pork or salt water fish?

• 1035

Mr. Harvey: Mr. Chairman, I would comment on that this way. It is not safe ever to assume that there is an irreplaceable demand for a particular product. Obviously there are limits to which consumers are prepared to go in paying for some specialty product. However, there is a special nature of demand for this freshwater fish. A typical example is Gefilte fish processing in the United States which is based mainly upon supply of various freshwater fish species.

There is no immediate alternative source for freshwater fish in the volume that is available from Canada, but that does not mean to say, of course, that the Canadian industry would therefore be enabled to demand any price it wishes. This would be a most inappropriate philosophy for a marketing organization.

[Interpretation]

ment. Il s'agit en réalité pour la Société d'une question de mise en marché rationnelle; l'industrie elle-même a reconnu ce besoin et a déjà essayé de résoudre ce problème dans son propre secteur mais, en raison de la concurrence actuelle, elle n'a pu obtenir aucun résultat positif.

M. Ritchie: Il a été dit que le marché américain est en grande partie dirigé par deux importateurs de grande envergure qui établissent les prix. Est-ce que cela est exact?

M. Harvey: Oui, un nombre limité. Le nombre varie de temps en temps mais deux ou trois importateurs représentent une très grande proportion du commerce américain du poisson entier. Les produits filetés, naturellement, qui sont vendus sous marques de commerce peuvent être manutentionnés par plusieurs organismes de distribution. Quelques sociétés américaines ont des filiales canadiennes qui vendent les produits filetés sous leur propre marque. Cela ne se rattache pas directement au marché du poisson frais et en conséquence peut représenter un moyen de détourner les pressions, comme je l'ai dit il y a un moment, qui s'exercent sur les prix du poisson frais, et ce moyen serait de donner de l'ampleur à ce genre de commerce.

M. Ritchie: Existe-t-il aux États-Unis un genre de marché satellite? Il y aura toujours des gens qui préféreront manger du poisson d'eau douce, mais quels sont les facteurs restrictifs quant aux prix, c'est-à-dire quelle est la situation de la concurrence avec les autres viandes? Le prix est-il si élevé que les gens consomment du porc ou du poisson de mer?

M. Harvey: A cet égard, monsieur le président, j'ajouterais ceci: Il n'est jamais bon de supposer qu'il existe une demande irremplaçable pour un produit donné. Évidemment il y a des limites aux prix que les consommateurs acceptent de payer pour des spécialités. Cependant la demande pour ce poisson d'eau douce est d'une nature spéciale. Un bon exemple en est la Gefilte, aux États-Unis, dont le commerce est fondé surtout sur diverses espèces de poissons d'eau douce.

Il n'existe pas au Canada d'autres sources d'approvisionnement en poissons d'eau douce, mais cela ne signifie pas que l'industrie canadienne pourrait exiger n'importe quel prix. Ce serait une ligne de conduite inappropriée pour un poisson organisme de mise en marché.

[Texte]

Without looking at the prospect of increasing consumer prices, I think that the object of the Corporation would be to enhance the average market value through stabilization, co-ordinated marketing, of the share the fisherman receives from the total returns that consumers make available to this industry.

Mr. Ritchie: In other words, you hope to cut back on some of the profits or spread that the U.S. importers are now making by leveling out your process?

Mr. Harvey: Through increased efficiencies in handling and in marketing to achieve that objective, but to a large extent through improved efficiency in marketing and eliminating causes of loss, yes.

Mr. Ritchie: Just one or two questions which may be involved in this clause of the bill. Will the Board be required to buy all fish offered to it at all times?

Mr. Lang: Yes, Mr. Chairman, that is a clause in the bill that the Board will be expected to purchase the fish offered. Of course, the clause goes on to say at a price agreed upon so that while this is an obligation, it is an obligation subject to significant influence in the hands of the Corporation.

Mr. Ritchie: What I am getting at is, say the demand for fish might be low from a certain lake. Have they any power to impose a quota and say they will only buy so much from this lake at this particular season?

Mr. Lang: No, it is not expected that the Corporation will be involved in quotas at all. If quotas are to be imposed on present attitudes this will be a result of provincial action in regard to conservation. The provincial governments will still be in charge of conservation.

The Chairman: Mr. Osler?

Mr. Osler: I have a couple of questions Mr. Chairman. The first one deals with the quorum of the Board linked to the financial participation by the provinces. The quorum of the Board I do not find set out anywhere. There are 10 members if my arithmetic is correct, four of whom would be appointed by the provinces. Is it not possible that this Board could become at least a temporary thing of provincial governments if they got together? It is quite possible that they would because there is considerable community of

[Interprétation]

Sans examiner les possibilités d'accroître les prix aux consommateurs, je crois que le but de la Société serait d'augmenter, par la stabilisation et la rationalisation de la vente, la valeur moyenne de la part que le pêcheur reçoit des sommes totales que les consommateurs versent à cette industrie.

M. Ritchie: En d'autres mots vous espérez réduire les profits que les importateurs américains réalisent en uniformisant vos procédés?

M. Harvey: Par une efficacité accrue dans la manutention et la mise en marché, mais, dans une grande mesure, par une meilleure mise en marché et par l'élimination des causes de pertes, oui.

M. Ritchie: Une ou deux questions encore qui pourraient se rapporter à cet article du projet de loi. La Société sera-t-elle tenue d'acheter tout le poisson qui lui sera offert en tout temps?

M. Lang: Oui, monsieur le président, c'est un article du projet de loi. La Commission sera tenue d'acheter le poisson qui lui sera offert. Naturellement l'article stipule que ce sera à un prix convenu de sorte que s'il y a obligation, c'est une obligation qui est sujette à une influence notable de la part de la Société.

M. Ritchie: Où je veux en venir, c'est que la demande de poisson d'un certain lac peut être faible: la Société aura-t-elle le droit d'imposer des quotas et décider de n'acheter que tant de poisson de ce lac dans une saison donnée?

M. Lang: Non, la Société n'aura pas à s'occuper des quotas. Si des quotas doivent être imposés ce sera le résultat de décisions provinciales relatives à la conservation. Le gouvernement provincial sera toujours responsable de la conservation.

Le président: Monsieur Osler?

M. Osler: J'ai quelques questions à poser, monsieur le président. La première est au sujet du quorum aux réunions de la Société et je pense à la participation financière des provinces. Je ne vois indiqué nulle part ce que sera le quorum. Il y a dix membres si j'ai bien compris dont quatre seraient nommés par les provinces. N'est-il pas possible que cette Société puisse temporairement devenir propriété des gouvernements provinciaux si les représentants se groupaient? Il est fort possible qu'ils puissent le faire puisqu'il y a

[Text]

interest with northwestern Ontario and the three prairie provinces.

Mr. Lang: The actual appointments give the non-area representatives a majority. The Board would total 11 with the Chairman and the President, the five and four of the others. Presumably a quorum in such circumstances would be a majority, according to general parliamentary procedure.

• 1040

Mr. Osler: I do not mean you to state what a quorum is. I presume that this is set out in their own by-laws.

Mr. Lang: This would ordinarily be so, yes. Initially it would be a majority, according to general procedure.

Mr. Osler: Would the by-laws then have to be approved by the Governor-in-Council, or by a Minister?

Mr. Lang: No, there is no such provision in the act. The by-laws here would be within their powers as with many ordinary corporations.

Mr. Osler: I am arguing from the other side of the fence because I was recently on the CBC Board and the Government had absolutely nothing to do with our by-laws and could not even see them if we did not want to show them to them. This has been changed in the new Act so that substantive changes in by-laws have to be approved by the Minister, if I remember rightly. At least eight months ago—my memory is perhaps a little weak—but there was a definite attempt made to get some control over the by-laws. I just wondered if this would be something worth considering in this case when you have such strong provincial participation.

Leaving that, there was some reference made in your statement here to provincial participation. We know that the Federal Government is going to put up up to \$100,000 worth of working capital plus up to \$5 million dollars in loans from time to time. There was reference made to provincial financial participation. This is worked out on a separate negotiating basis with each province, is it?

Mr. Lang: That is right. Actually, even the \$100,000 itself, or that part of it which is required, is expected to be shared as a result of the agreement and the agreement will re-

[Interpretation]

une grande communauté d'intérêts entre le nord-ouest de l'Ontario et les trois provinces des Prairies.

M. Lang: Les nominations donnent la majorité aux membres qui ne représentent aucune région. La Commission comporterait onze membres y compris le président d'assemblée et le président. Il est probable qu'en ces circonstances le quorum consisterait dans la majorité comprise selon la procédure parlementaire générale.

M. Osler: Je ne demande pas que ce soit vous qui déterminiez le quorum. Je suppose qu'il est stipulé dans les règlements.

M. Lang: Ce devrait l'être, oui. Ce devrait être la majorité selon la procédure générale.

M. Osler: Les règlements seront-ils approuvés par le gouverneur en conseil ou par un ministre?

M. Lang: Non, la loi ne renferme pas de dispositions de ce genre. L'Office comme toute société ordinaire, a le droit de faire ses règlements.

M. Osler: Je présente l'autre point de vue parce que je faisais partie dernièrement du bureau de direction de la société Radio-Canada et je sais que le gouvernement n'avait rien à faire au sujet de nos règlements et qu'il ne pouvait même pas les voir si nous ne voulions pas les lui montrer. La nouvelle loi a été modifiée de sorte que les changements importants aux règlements doivent être approuvés par le ministre, si je me souviens bien. Il y a au moins huit mois...ma mémoire est peut-être un peu défectueuse...on a essayé de prendre un peu d'autorité au sujet des règlements. Je me demande s'il ne serait pas opportun d'y réfléchir vu que dans le cas présent nous avons une forte participation provinciale.

Laissons cette question pour le moment. Dans votre exposé vous avez parlé de participation provinciale. Nous savons que le gouvernement fédéral va investir 100,000 dollars en capital de roulement et jusqu'à 5 millions de dollars en prêts. Il a été question de participation financière provinciale. Cette participation sera fondée sur des négociations individuelles, soit avec chaque province, n'est-ce pas?

M. Lang: C'est exact. A vrai dire, chacun versera sa quote-part des \$100,000 en question ou ne serait-ce que d'une tranche de cette somme dont on aura besoin, du fait de l'en-

[Texte]

flect the participation of the various provinces in the operation. Manitoba is a much more active province than the others because of the quantity of fish involved, and so on, and this will, no doubt, be reflected in the arrangement. The federal share is expected to be 50 per cent.

Mr. Osler: Mr. Chairman, one more question then. The Advisory Committee is appointed by the Governor in Council and yet it meets at the pleasure of the Board. I wonder if the Advisory Committee could not become a thing of the Board and be completely sidetracked and ignored because of the provision? The Governor in Council, presumably, thinks that the Advisory Committee is worthwhile and is appointing it, and yet it only meets at the pleasure of the board. So could it not be sidetracked, and in that case could it not lead to a great deal of regional bitterness and frustration on the part of those who thought they were helping to advise this corporation?

Mr. Lang: Of course, I do not think that is really different from the general question of saying could the Board not do its job badly; will it inform the fishermen, for instance, about what is going on? I suppose there is no way of answering this except to say that the board will be appointed in a way that it will be composed of men who will not likely do this and any re-appointment would bear in mind how they function. The Advisory Committee is designed to be advisory and it is normally fairly good sense to let the body which is going to be advised decide upon the appropriate occasion for that advice. We certainly expect good use to be made by the Board of the Corporation of the Advisory Committee, but there is no specific guarantee about that.

Mr. Osler: Would it not be worth thinking about making a guarantee of some kind? Certainly in Manitoba, there has been considerable bitterness, probably because of frustration, between the so-called kingpins of the industry and the fishermen themselves who have really been mortgaged to the hilt to the companies all the time, with probably too many fishermen involved, anyway. If the people who best know the industry, and therefore might become naturals for your board of directors, turn out to be some of the same faces that have been running the industry

[Interprétation]

tente intervenue qui traduira la participation des diverses provinces à cette réalisation. Le Manitoba est intéressé de plus près à la chose que les autres provinces, en raison de la quantité de poisson qui s'y pêche et de bien d'autres facteurs, et il ne fait aucun doute que cela entrera en ligne de compte dans l'entente. La quote-part du gouvernement fédéral doit s'élever à 50 p. 100.

M. Osler: Monsieur le président, j'aimerais poser une autre question. Le comité consultatif est nommé par le gouverneur en conseil et, néanmoins, il se réunit au bon plaisir de la Commission. Je me demande si le comité consultatif ne risque pas de devenir l'instrument de la Commission et, ainsi, de jouer un rôle très secondaire, sans aucune voix au chapitre, compte tenu de la disposition particulière de la loi qui s'y applique. Sans doute, le gouverneur en conseil estime-t-il que le comité consultatif a sa raison d'être et il l'a nommé par voie de conséquence, mais toujours est-il qu'on ne le convoque qu'à la demande expresse de la Commission. Ne risque-t-il pas ainsi d'être mis de côté, ce qui pourrait provoquer un grand ressentiment et beaucoup de frustrations chez ceux qui croiraient jouer un rôle de conseillers auprès de la Société?

M. Lang: Oui, bien sûr, mais je pense que cela revient en fait à se demander si l'Office mènera sa tâche à bien, si, par exemple, elle tiendra les pêcheurs au courant au jour le jour. Je suppose qu'on ne peut rien en dire encore, si ce n'est qu'elle sera telle que les hommes qui la composeront éviteront ces écueils et que, de toute façon, toute nouvelle nomination se fera en fonction de leur conduite lors de leur premier mandat. Le comité consultatif est là pour conseiller et il s'entend que c'est à l'organisme qu'il conseille de décider du moment approprié pour le consulter. Nous nous attendons évidemment à ce que le conseil d'administration de la Société ait un recours judiciaire aux services du comité consultatif, mais rien ne le garantit vraiment.

M. Osler: N'y aurait-il pas lieu, dans ce cas, d'envisager une garantie de quelque sorte? Certes, il y a eu une vague de ressentiment, fruit de la frustration des pêcheurs envers les soi-disant magnats de l'industrie, les premiers étant débiteurs jusqu'à la corde des seconds. Si ceux qui connaissent toutes les ficelles de l'industrie et qui peuvent, par conséquent, devenir membres de votre conseil d'administration, sont aussi des ex-dirigeants de cette industrie, on devrait laisser ces frustrations s'exprimer, tout au moins par le canal du comité consultatif.

[Text]

before, there should be some way of allowing, through the Advisory Committee at least, these frustrations to be expressed.

• 1045

Mr. Lang: Would you comment on that, Mr. Harvey?

Mr. Harvey: Mr. Chairman, the structure of the direction of the company was established in its pattern with the emphasis, with regard to the management, being put upon able, commercial marketing experience in the capacity of the president general manager with a small commercial team handling the actual transaction of business of the corporation. The nominations by the provinces of their respective representatives on the Board of Directors provided for the co-ordination between the provinces in the direction of the company and also for their liaison, naturally, in the Board on the subject of co-ordination of production, co-ordination of opening and closing of fishing seasons, and so on. So it is very much a Government interest reflected in the board of directors of the Corporation.

Those same governments which are concerned with the direction of the Corporation are also equally concerned with the problems of the overall improvement of productivity and efficiency of the fishery itself. They would be most concerned, as would the Federal Government, in seeing that the operations of the Corporation are thoroughly well understood, that there is good communication, in fact, between the Corporation and the fishermen. One of the channels of this communication is certainly the Advisory Committee; the advisory committee would constitute a two-way channel, in fact. What is envisaged here is use of the Advisory Committee not merely for occasional reference but very much in a fairly continuous capacity. Membership in the Advisory Committee would be important to the corporation to see that there was a relatively wide distribution and representative collection of people on the Advisory Committee who themselves were understanding of the objectives of the corporation and also in touch with reaction at the producer level.

This is not a precise answer to the question of should the Advisory Committee, therefore, be convened, let us say at the direction of the Minister rather than at the request of the Board, but it is the Board that needs the Advisory Committee and the Board represents Government.

[Interpretation]

M. Lang: Monsieur Harvey, je vous donne la parole.

M. Harvey: Monsieur le président, le directorat de la société a été constitué principalement en fonction des aptitudes du président directeur général sur le plan de la gestion, s'entend en raison de son expérience de la commercialisation; celui-ci étant secondé par quelques collaborateurs chargés de s'occuper des affaires courantes de la Société. Les nominations par les provinces de leurs représentants respectifs au conseil d'administration ont servi à faire le lien entre les provinces et la Société pour ce qui était de la coordination en matière de production, d'ouverture et de fermeture des saisons de pêche, etc. De sorte que le conseil d'administration représente les intérêts des divers gouvernements.

Ce sont ces mêmes gouvernements qui se préoccupent de la gestion de l'Office, ainsi que des problèmes d'amélioration de la productivité et de la pêche en tant que telle. C'est donc dans leur intérêt, tout comme ça l'est pour le gouvernement fédéral, de veiller à ce que le mode de gestion de la Société ne crée aucun malentendu, à ce qu'il y ait, en fait, communication entre la Société et les pêcheurs. Ce dernier rôle incombe, bien entendu, au comité consultatif qui peut faire tampon entre les deux parties. Il n'est donc pas question de faire appel au comité consultatif que de temps à autre, mais bien de façon continue. La Société devrait voir à ce que le comité consultatif se compose d'un large échantillonnage représentatif de personnes qui comprennent les objectifs de la Société et qui soient à même de juger de la situation des producteurs.

Je ne réponds pas vraiment à la question de savoir si le comité consultatif devrait, par conséquent, être convoqué à la demande du ministre plutôt qu'à la demande de la Commission, mais toujours est-il que c'est la Commission qui requiert les services du comité consultatif et que la Commission représente le gouvernement.

[Texte]

Mr. Osler: I still think, Mr. Chairman, with respect that it might be wise to compel the Board to cause the Advisory Committee to meet twice a year or something like that. That provision is in the new Radio Television Commission Act, for instance, where the Advisory Committee has no powers whatsoever but it does have to meet regularly and it does have to be consulted.

Mr. Lang: Mr. Chairman, I would certainly see no harm in that kind of provision which is not at all unusual in regard to advisory boards.

Mr. Lundrigan: Mr. Chairman, just a supplementary on that same line of questioning, really. It goes back to a question asked a couple of minutes ago about the involvement of the provinces. Have the provinces been consulted all the way along the line and have agreements with the provinces on the very stipulations of the bill been ratified, consummated and received, or is this a rather unilateral action on the part of the Federal Government at the moment, hopefully with consummation later on?

Mr. Lang: No, Mr. Chairman, the provinces were consulted all the way along and they are really all actively engaged in producing the parallel legislation. There is complete agreement among the provinces and with the Federal Government about the content of the bill.

Mr. Lundrigan: And specifically with relationship to the various clauses as well?

Mr. Lang: That is right, yes.

Mr. Lundrigan: Thank you.

• 1050

The Chairman: Are there anything further? Mr. Harding.

Mr. Harding: I have just two short questions, Mr. Chairman. I notice in here you have mentioned by-products. What would you expect to have as a by-product from this, and would there be a ready sale for it?

Mr. Lang: Mr. Harvey, perhaps you can give the answer to that.

Mr. Harvey: Mr. Chairman, in reference to by-products, I presume the questions concern the reference to the powers of the Corporation in Part I. Inclusion there of products and by-products is merely to make that particular power sufficiently broad and descriptive of what possible avenues of business may be

[Interprétation]

M. Osler: Je n'en pense pas moins, monsieur le président, qu'il conviendrait d'obliger l'Office à convoquer le comité consultatif deux fois par an ou selon une fréquence donnée. Cette disposition figure, par exemple, dans la Loi sur le Conseil de la Radio-Télévision canadienne, où il est prescrit que le comité consultatif ne jouit d'aucun pouvoir, mais qu'il est tenu de se réunir régulièrement et qu'il doit être consulté.

M. Lang: Monsieur le président, je n'ai aucune objection à cette disposition de la loi qui n'a rien d'inhabituel en ce qui concerne les organismes consultatifs.

M. Lundrigan: Monsieur le président, je voudrais poser une question dans cette veine. Je voudrais revenir à la question posée il y a quelques instants à propos de la participation des provinces. Les a-t-on consultées sur toutes les questions de fond et les accords conclus avec elles sur les stipulations du bill ont-ils été ratifiés, ou bien est-ce une décision prise unilatéralement par le gouvernement fédéral pour l'instant, avec l'intention de l'entériner plus tard?

M. Lang: Non, monsieur le président, les provinces ont été consultées dès le début et elles ont toutes participé à l'élaboration de la législation parallèle. Il y a complet accord entre le gouvernement fédéral et les provinces sur la teneur du bill.

M. Lundrigan: Et cela est-il vrai pour tous les articles?

M. Lang: Oui.

M. Lundrigan: Je vous remercie.

Le président: Avez-vous quelque chose à ajouter, monsieur Harding?

M. Harding: Deux petites questions, monsieur le président. Je vois ici qu'il est question de sous-produits. De quel sous-produits s'agit-il exactement et auriez-vous un marché?

M. Lang: Monsieur Harvey, pourriez-vous répondre?

M. Harvey: Monsieur le président, en ce qui concerne les sous-produits, je suppose que cela revient à parler des pouvoirs de la Société à la partie I du bill. Il n'y est question des produits et des sous-produits que pour donner à ce pouvoir une dimension suffisamment large et descriptive de la voie.

[Text]

developed by the corporation. A by-product, for example, might be pet food or some form of an agricultural food supplement. I do not believe that it should be interpreted as referring to any particular form of by-product. The important thing is that all avenues for improving the earnings and reducing wastage in this industry should be open to the corporation.

Mr. Harding: You have no specific plan though what you might go into as far as by-products are concerned?

Mr. Harvey: Sir, the corporation does not really exist at this moment in time and plans of that nature would be very tentative on the part of individuals who are concerned with it.

Mr. Harding: On a further question, Mr. Chairman, I notice on page . . .

The Chairman: If I may interrupt, in respect of questions on specific clauses, Mr. Harding, do you not feel it would be better to wait until that clause comes before the Committee. If you have more general questions, you may put them.

Mr. Harding: In a way, Mr. Chairman, it is kind of a general question, so perhaps it could be taken at this time.

My question is on redundant plants in the areas, and I understand that agreement will be reached between the province and the corporation. Are these private plants where some private processor has been put out of business because of the corporation getting into the field?

Mr. Harvey: Yes, that is true.

Mr. Harding: Do I understand that the corporation, in conjunction with the provinces, will either take over these plants or at least reimburse the owner for the value remaining in them?

Mr. Lang: There are a number of ways in which the redundancy can occur—either through the use by the corporation of a particular private operation out of a choice of three of them, where all three of them are operating under capacity for instance, or through the corporation actually getting into an operation that it feels is necessary, and in all of these cases the provinces have accepted the responsibility for compensation for redundancy resulting from the operations of the corporation.

Mr. Noble: I have a supplementary on that, Mr. Chairman.

[Interpretation]

Un sous-produit, par exemple, pourrait être un supplément de produit agricole. Le texte ne porte pas sur un sous-produit en particulier; l'important est que toutes les méthodes possibles pour augmenter les revenus et pour supprimer le gaspillage soient utilisées à l'Office.

M. Harding: Mais vous n'avez pas de plans précis vis-à-vis des sous-produits?

M. Harvey: L'Office n'existe pas encore réellement, et des plans comme ceux-là ne pourraient être que provisoires.

M. Harding: Une autre question, monsieur le président. A la page . . .

Le président: Toute question portant sur un article en particulier devrait être posée au moment où l'article sera mis en délibération. Il s'agit maintenant des questions générales sur les objectifs du projet de loi.

M. Harding: Monsieur le président, il s'agit d'une question d'ordre assez général.

Si je comprends bien, nous parlons d'usines supplémentaires, au sujet desquelles un accord sera conclu entre les provinces et l'Office. S'agit-il d'usines où la production a dû cesser à cause de l'activité de l'Office?

M. Harvey: En effet.

M. Harding: L'Office, de concert avec les provinces, assumerait-il alors l'exploitation de ces usines, ou au moins dédommagerait-il le propriétaire?

M. Lang: Il peut y avoir double emploi de plusieurs façons. Il se peut que l'Office choisisse d'opérer par exemple une usine entre trois fonctionnant à plein rendement, lorsqu'il le juge nécessaire. Et dans tous ces cas, les provinces ont accepté la responsabilité d'indemniser les propriétaires de ces usines.

M. Noble: J'ai une question supplémentaire, monsieur le président. Qu'advierait-il d'une

[Texte]

What is going to happen to a plant that is picking up the by-products from the fisheries now and making it available to mink ranches across the country? Is it going to be taken over by the marketing board?

Mr. Lang: No, there is no necessary reason that it would. The marketing board would likely regard this plant as a buyer of part of its product and so market it.

The Chairman: Are there further questions on the general purpose of Bill C-148? Gentlemen, I allowed each questioner extra time on the general questioning but I think it only right to adhere as close as possible to the 10 minute limit on the clause by clause examination.

We have stood Clause 1, the Short Title.

• 1055

Clause 2 agreed to.

On clause 3—Corporation established.

Mr. McQuaid: Mr. Chairman, I have an observation to make with respect to clause 3.

I think it is generally agreed that we are considering a very important and far-reaching piece of legislation here. If we examine clause 21 of the bill we will find that this proposed corporation is going to have almost unlimited powers in the marketing and dealing in all respects with freshwater fish.

Now I want to make it abundantly clear at the beginning that I am quite in accord with the principle of the bill. I think that much that is worthwhile can be accomplished on behalf of the freshwater fishermen by setting up a marketing board to assist the fishermen in the marketing of their products as a means of obtaining a better price. But I think it is also important to realize, Mr. Chairman, that if this proposed board is going to meet with any measure of success at all, it is essential that the producers themselves must be guaranteed a place on it. I see nothing in this bill which will guarantee to the fishermen themselves that they will be represented either on the board of directors or on the advisory committee.

Somebody has said that the advisory committee is envisaged as comprising a wide variety of people but there is nothing to guarantee that even on the advisory committee we will have fishermen who are actively engaged in the freshwater fishing industry.

I say that unless the fishermen themselves co-operate with this board then the board will

[Interprétation]

usine qui vendrait par exemple les sous-produits de la pêche à un éleveur de vison? L'Office prendra-t-il possession de cette usine?

M. Lang: Non, je ne vois pas pourquoi cela serait nécessaire. L'Office de commercialisation considérerait simplement cette usine comme un acheteur de son produit, et en tiendrait compte.

Le président: Y-a-t-il d'autres questions quant aux objectifs généraux sur le bill C-148? J'ai toléré que l'on s'attarde sur les questions générales, mais il faudrait que chacun se limite à 10 minutes. Nous avons laissé l'article 1 en suspens.

L'article 2 est adopté.

Article 3, création de l'Office.

M. McQuaid: Monsieur le président, j'ai une observation à faire au sujet de l'article 3.

On convient généralement, je pense, que cette loi est d'une très grande portée. Si nous étudions l'article 21 du Bill, nous constatons que cet Office projeté aura en quelque sorte des pouvoirs illimités pour ce qui est de l'organisation de la vente du poisson d'eau douce.

Je veux qu'il soit bien entendu dès maintenant que j'approuve sans hésiter le principe dont s'inspire le projet de loi, et je crois qu'on pourra obtenir de très bons résultats pour les pêcheurs d'eau douce par l'établissement de cet Office de commercialisation pour aider le pêcheur à vendre son produit et à obtenir un meilleur prix. Mais il est également important de nous rendre compte, monsieur le président, que si cet Office projeté veut réussir, il est essentiel que les producteurs eux-mêmes aient leur place au sein de cet Office. Or, je ne vois rien dans le projet de loi qui garantisse aux pêcheurs qu'ils seront représentés soit au conseil d'administration, soit au comité consultatif.

Quelqu'un a dit que le comité consultatif doit comprendre toute une gamme de gens mais rien ne garantit qu'au sein du comité consultatif il y aura des pêcheurs authentiques, qui gagnent leur vie par la pêche du poisson d'eau douce.

Et, à moins que les pêcheurs eux-mêmes ne collaborent avec l'Office, l'Office ne fonction-

[Text]

never properly function, and the only way to make sure that the fishermen will be behind the board is to make sure that they are properly represented on it. The producers themselves are the ones who are going to be most seriously affected and, I think, Mr. Chairman, that some provision should be made now whereby we would have a guarantee that when this proposed board is set up we will have actively engaged fishermen on it. And it is important that they be represented on it, not in an advisory capacity on the advisory committee but, rather, on the board of directors, because it is within this board that possibly the most important work is going to be done.

With that in mind, Mr. Chairman, I am going to ask the Committee to consider the following amendment: that clause 3(1) of the said bill be amended by adding thereto after the word "years" in the last line thereof the following "and at least four of whom shall be actively engaged in the freshwater fishing industry at the producer level."

Mr. Chairman, if that amendment is inserted in the bill and carried, then I think the fishermen themselves—the ones who are primarily affected by the setting up of this marketing board, will be guaranteed of representation on the board of directors.

As I mentioned earlier, I think it is essential that if the board is going to function properly the producers—the fishermen themselves, should be represented on the board.

• 1100

Mr. Lang: If I may just say a word, Mr. Chairman, I do not think the amendment would serve the interests of the industry. The corporation is essentially intended to be a trading corporation and in that sense it should be possible to appoint to it people who are best suited to the operation of that particular trade. I might point out to members of the Committee that the very famous marketing board, the Canadian Wheat Board, has no similar provision requiring producer representation on its board for, I am sure, that same philosophic reason. It is true that on the Canadian Wheat Board from time to time some persons who are regarded as producers are represented but they are on the Board essentially for their ability in operating the corporation and not otherwise. So I certainly would not think that the amendment is in the best interests of the freshwater fish industry.

The Chairman: May I point out, gentlemen, that in the absence of a quorum we cannot vote on the motion.

[Interpretation]

nera jamais très bien. Pour rallier l'appui des pêcheurs, il faut qu'ils soient justement représentés au sein de l'Office. Ce sont les producteurs eux-mêmes qui sont les plus directement intéressés, et il me semble qu'une disposition devrait garantir que lorsque l'Office sera établi, des pêcheurs authentiques en feront partie. Il est important qu'ils soient représentés non pas simplement à titre consultatif mais sur le conseil d'administration, car c'est au sein de ce conseil que le gros du travail sera accompli.

Cela dit, monsieur le président, je voudrais demander au Comité de considérer cet amendement. Que le paragraphe un de l'article 3 du Bill soit modifié en y ajoutant après le mot «à la fin du» ce qui suit: «dont au moins quatre se livrent activement à la pêche du poisson d'eau douce au niveau de producteur.»

Si cet amendement est adopté, si cette disposition est insérée dans la loi, les pêcheurs eux-mêmes, ceux qui sont le plus directement intéressés par l'établissement de cet Office de commercialisation seront sûrs d'être représentés au conseil d'administration.

Je crois, comme je viens de le dire, qu'il est essentiel pour le bon fonctionnement de l'Office, que les producteurs, c'est-à-dire les pêcheurs eux-mêmes soient représentés au sein du conseil.

M. Lang: Je ne crois pas que cet amendement puisse servir les intérêts de l'industrie. Il s'agit là d'un Office de vente. Pour cette raison, il serait préférable de désigner pour en faire partie ceux qui œuvrent directement dans cette sphère d'activité.

Nous avons par exemple, la Commission canadienne du blé, un organisme très réputé, dont la composition n'exige pas la représentation des producteurs pour la même raison. A l'occasion, j'en suis sûr, on désigne à la Commission canadienne du blé quelqu'un qui peut être considéré comme un producteur mais cette personne est là parce qu'elle est en mesure de rendre des services à la commission et pas pour d'autres raisons.

Je ne crois donc pas que l'amendement soit dans l'intérêt du pêcheur d'eau douce.

Le président: Maintenant que nous n'avons plus le quorum, nous ne pouvons pas mettre la motion aux voix.

[Texte]

An hon. Member: Are we allowed to discuss it?

Mr. McQuaid: Under our present Standing Orders are we allowed to proceed further?

Mr. Lundrigan: Mr. Chairman, it is now 11 o'clock and there are other committee meetings. Are we going to meet again at 2 or 2.30?

The Chairman: Two-thirty.

Mr. Lundrigan: I consider this amendment important enough to be debated for awhile, and hopefully a favourable decision can be reached. If we cannot proceed any further now we might as well wait until 2 o'clock.

The Chairman: Because of the regulations and for lack of a quorum it is my duty to call this meeting adjourned.

AFTERNOON SITTING

• 1440

The Chairman: I see a quorum. Following along from this morning's meeting, an amendment was moved by Mr. McQuaid that subsection (1) of Clause 3 of the said bill be amended by adding thereto, after the word "years" in the last line thereof, the following:

... and at least four of whom shall be actively engaged in the fresh water fishing industry at the producer level.

Mr. Goode?

Mr. Goode: Thank you, Mr. Chairman. In studying this amendment over the noon hour, although on first looking at it it sounded like a good idea, I find it has many things against it. One of the major problems facing the make-up of this Committee is the fact that the federal government is responsible for putting on the board people for marketing, finance, export, and quality control. These are the things, after all, that the whole bill is all about.

Consequently the four members who are going to be put on by the federal government, plus a president and chairman, must be from this field; the marketing, finance, export and quality control. The other five members, I take it, are being appointed by the provincial government, although through us, and I do not think we have the right to tell the five provincial governments who they must put on this board. I think that they must have their

[Interprétation]

Une voix: Pouvons-nous la discuter?

M. McQuaid: Est-ce qu'on peut continuer en vertu du nouveau Règlement?

M. Lundrigan: Monsieur le président, il est onze heures. D'autres comités se réunissent. Devons-nous revenir à deux heures ou deux heures et demie.

Le président: A deux heures et demie.

M. Lundrigan: Je crois que cet amendement est assez important pour être débattu pendant un certain temps afin que nous puissions en venir à une décision. Nous pourrions peut-être remettre la discussion à deux heures.

Le président: Parce qu'il n'y a pas quorum, la séance est levée conformément au Règlement.

SÉANCE DE L'APRÈS-MIDI

Le mardi 28 janvier 1969

Le président: Je vois qu'il y a quorum. A la réunion de ce matin, un amendement a été présenté au Comité par M. McQuaid, à savoir que le paragraphe 1 de l'article 3 soit modifié, par l'addition des mots suivants, à la fin du paragraphe, après les mots «au plus»:

et dont au moins quatre se livrent activement à la pêche du poisson d'eau douce au niveau de la production.

Monsieur Goode?

M. Goode: Merci, monsieur le président. En étudiant cet amendement pendant l'heure du déjeuner, même si, à première vue, il m'avait semblé une bonne idée, j'ai trouvé plusieurs arguments contraires. Un des grands problèmes du Comité, c'est que le gouvernement fédéral doit nommer au sein de l'Office des personnes pour la commercialisation, le financement, l'exportation et le contrôle de la qualité. C'est là-dessus que porte le Bill.

En conséquence, les 4 membres, en plus du président, doivent être du domaine de la commercialisation, du financement, de l'exportation et du contrôle de la qualité. Les cinq autres membres sont désignés par le gouvernement provincial. Je ne crois pas que nous ayons le droit d'indiquer aux gouvernements provinciaux qui ils doivent désigner pour faire partie de cet Office. C'est à eux de faire leur choix et rien ne les empêche de nommer

[Text]

own rights. Indeed, I am sure they will be putting some fishermen on; there is no rule against putting fishermen on. But I think that we have no right to tell the five provinces involved who they must put on that board. In fact, I think it is entirely wrong. Those are my comments, Mr. Chairman.

Mr. Lundrigan: Mr. Chairman, first of all, I recognize the fact that the Board is not constituted solely by appointees of the four provinces involved. As I understand it, the provinces are guaranteed that they will have four people on the board. So it does not mean that the other seven people cannot accommodate the proposed amendment. In other words, we are not necessarily pointing out to the provinces that they have to ensure that a fisherman, a producer, be placed on the board. That is an argument which I would take issue with.

The other argument which I would take issue with is even more serious, and reflects on the previous speaker as well as the Minister who objected to the amendment, and that is that the board is set up for the marketing of fish; the marketing, the financial operations and so on. This is entirely false because we have on page 4, clause 7 of the proposed legislation, an indication of a very broad spectrum of activities of this marketing corporation. I would like to draw the Committee's attention to Clause 7:

(a) buy fish and dress, fillet, freeze, package...

It does everything that the trade was supposed to do: it takes it from the fisherman, the round catch, the unprocessed catch right from the boats, and it takes full responsibility for buying, manufacturing, storing, shipping, insuring, importing, exporting, selling or otherwise disposing of.

I could go on and quote the total involvement of Clause 7, just to indicate for the record the extent of the operations of this corporation. It is not at all in my opinion thought of as a narrow expertise body which is responsible for international agreements, international arrangements, financial and otherwise. It is the total gamut of the fishing operation, right from the boat when it is taken from the water until it is consumed by the buyer on the American market. I think this is all the more reason why fishermen should be involved, and these are the people who are expert in not all of the terms of Clause 7, but in many of them.

The Chairman: Mr. Comeau?

[Interpretation]

des pêcheurs. Mais nous n'avons pas le droit de dire aux 5 provinces en cause qui elles doivent nommer. Je crois que nous aurions parfaitement tort.

M. Lundrigan: Je reconnais que l'Office n'est pas constitué uniquement de gens désignés par les 4 provinces intéressées. Si je comprends bien, on garantit aux provinces que 4 de leurs représentants feront partie de l'Office. Cela ne veut pas dire que les 7 autres seront choisis de la même façon. Par conséquent, nous ne disons pas nécessairement aux provinces qu'elles doivent s'assurer qu'un pêcheur ou un producteur soient nommés membres de l'Office. Je n'accepte pas du tout cet argument.

Une autre raison qu'on a alléguée, c'est que l'Office est désigné pour la commercialisation du poisson, les opérations financières, etc. Je crois que c'est une prétention tout à fait fausse. A la page 4, article 7, on indique toute une gamme d'activités qu'exercera cet Office. Je voudrais porter l'attention du Comité sur l'article 7:

a) d'acheter du poisson et de l'apprêter, d'en détacher les filets, de le congeler, l'empaqueter...

La prise est achetée directement du bateau de pêche et l'Office assume toutes les responsabilités pour l'achat, l'apprêt, l'emballage, la préparation, etc. du poisson.

Je voudrais que cet article soit inclus dans la discussion, puisqu'on y donne une description des activités qu'exercera l'Office. Il ne faudra pas s'en tenir à une conception étroite d'un organisme qui s'occupe d'accords internationaux, des finances, etc. Son activité s'étend à toute la gamme des activités de la pêche, depuis la prise du poisson jusqu'à ce qu'il soit offert aux consommateurs. On choisira donc des gens qui sont des spécialistes, non pas dans tous ces domaines, mais au moins dans quelques-uns d'entre eux.

Le président: Monsieur Comeau?

[Texte]

Mr. Comeau: Mr. Chairman, I would like to sincerely support this in seconding it because I feel that we are always legislating or creating boards, or creating various things, or doing things for the fishermen, in salt water as well as freshwater and we do not seem to consult the fishermen enough. We seem to simply have experts. I could go on with various examples. For example, they build wharves in my area as far as salt fishing is concerned. The engineers come down; they are not fishermen; they do not consult the fishermen; they do not know what the fishermen want. Some wharves are not built as they should be and it is simply because they are not consulting the fishermen enough. I therefore strongly support this because I feel that we should have somebody who is right in it, who is dealing with the fishing industry. I agree we must have some experts on this, but we still must have some people who know something about the bare facts of the fishing industry.

The Chairman: Mr. Ritchie?

Mr. Ritchie: I would like to support this in general. One of the criticisms of the industry has been that processors are working against the interests of the fishermen, and this is so. Before, at least the fisherman could sell his products to different fish companies; if he did not like one he could go over and see the other and bargain, but under this scheme he will have no ability to do this whatsoever because they are going to be a monopoly buyer. Surely the corporation will have in its employees most of the people who are expert on the marketing and selling of fish.

Most marketing boards of a producer nature have been more successful than the government; I believe in the general way one can say this, at least from experience in western Canada. Therefore, there should be some producing members on this board, otherwise there will almost certainly have to be a corresponding organization of fishermen to present their case to the corporation. The corporation might well welcome having some fishermen on here to express a point of view, because it is in the interests of the fishermen that the whole board is being organized. At least I see no other means whereby fishermen would have a direct interest, or have some direct communication with the board in the handling of their products.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, I would probably be in support of this if it read "on the advisory committee" or "on the board of directors". Another reason why I am a little concerned about it

[Interprétation]

M. Comeau: Je voudrais appuyer l'amendement, car j'estime que nous établissons des commissions, des offices pour les pêcheurs d'eau salée et pour les pêcheurs d'eau douce, et nous semblons ne jamais consulter les pêcheurs eux-mêmes. Nous demandons l'avis de spécialistes seulement. On a construit, par exemple, des quais dans ma circonscription; les ingénieurs sont venus sur les lieux; ils ne sont pas pêcheurs, ils n'ont pas consulté les pêcheurs et ne savent pas ce que ceux-ci veulent. C'est tout simplement parce qu'ils ne consultent pas suffisamment les pêcheurs qu'ils ne sont pas satisfaits. C'est pourquoi, j'appuie l'idée de mon collègue, qui veut qu'on consulte les pêcheurs.

Je reconnais qu'il est nécessaire de recourir aux services des spécialistes, mais il ne faut pas laisser de côté ceux qui connaissent les faits fondamentaux de l'industrie de la pêche.

Le président: Monsieur Ritchie?

M. Ritchie: Je voudrais appuyer cet amendement. L'une des critiques que l'on entend le plus souvent, c'est que les conditionneurs nuisent aux intérêts des pêcheurs, et c'est un fait. Le pêcheur normalement peut marchander, présenter son produit à une société plutôt qu'à une autre, mais une fois que la Loi aura été adoptée il n'aura plus cette liberté, car il n'y aura qu'un acheteur. Les employés de l'Office seront pour la plupart des experts de la mise en marché et de la vente du poisson.

La plupart des spécialistes de la vente du poisson ont eu plus de succès en règle générale que les gouvernements, du moins dans l'ouest du Canada. J'estime donc qu'il doit y avoir des producteurs au sein de l'Office, autrement il faudra d'autres associations correspondantes de pêcheurs qui pourront y présenter le point de vue des hommes du métier. Après tout, c'est dans leur intérêt qu'on établit cet office de commercialisation. Il faudrait donc qu'il y ait un lien direct entre les pêcheurs et l'Office pour faciliter la vente des produits.

M. Smith (Northumberland-Miramichi): Je préférerais que l'amendement prévoie que ces gens soient nommés au Comité consultatif ou au Conseil d'administration. Une chose qui m'inquiète quelque peu, c'est que le texte

[Text]

is that I do not believe that it is too clearly worded in this way, that I do not understand whether it means that these four people shall be actually fishermen. It says, engaged in the freshwater fishing industry at the producer level. Is the intent of the amendment that they be actually fishermen, or engaged in it somewhere near the producer level, or what? It is not too clear to me.

Mr. McQuaid: If I might clarify that, Mr. Chairman, it definitely says at the producer level, and the intent of the amendment is that fishermen themselves be represented on the board. If I may Mr. Chairman, I would like to ask the Minister why he objects, if he does object, to having fishermen on the board of directors?

Mr. Lang: I think the points, Mr. Chairman, really are several and I think Mr. Goode made them quite effectively at the beginning of our discussion this afternoon. The choice of people for the board of directors, must be made with Clause 7 very much in mind, and the operations involved in Clause 7 which cover, as Mr. Lundrigan said, the whole operations of the fishing industry, and people knowledgeable in the fishing industry no doubt are expected to be involved. This certainly may or may not include fishermen themselves who are after all experienced in one particular end of the business, and that particular end which the corporation is least concerned with. It certainly affects the fishermen but it is not going to be an activity of the industry to fish.

The other thing is that the manner of appointment is rather complicated already in that the participating areas appoint five. The president and the chairman, of course, are one each and presumably are more permanent. That leaves then four appointed really by the Governor in Council on the decision of the federal government. I might say that, of course, this manner of appointment was agreed upon in the discussions between the provinces and the federal government, and was satisfactory to all parties. It still is certainly open to any of the appointing powers to appoint anyone, and this kind of flexibility is most desirable and for that reason I do not see that the government could accept the amendment.

Mr. McQuaid: Surely, you are not suggesting, Mr. Chairman that there are not four fishermen actively engaged in the industry within the participating provinces who are not knowledgeable with respect to the freshwater fish industry. I do not think there is any question but we can find within the par-

[Interpretation]

n'est pas tellement clair. Je ne sais pas s'il veut dire que ces 4 membres doivent être effectivement des pêcheurs. On dit qu'ils doivent se livrer à la pêche en eau douce, au niveau du producteur. Je ne sais pas si le parrain de l'amendement veut que ce soit à tout prix des pêcheurs ou quelqu'un qui soit près du producteur. Je ne vois pas très bien.

M. McQuaid: On dit «au niveau du producteur». Par conséquent, l'amendement demande que les pêcheurs eux-mêmes soient présents au Conseil. Je voudrais demander au ministre, pourquoi il s'oppose, si en réalité il s'oppose, à ce que des pêcheurs fassent partie du Conseil d'administration?

M. Lang: Les raisons sont nombreuses, monsieur le président, et M. Goode en a exposé quelques-unes très bien au début de la séance de cet après-midi.

Le choix des membres du Conseil d'administration doit se faire dans le contexte de l'article 7 et des activités qui y sont énumérées, je dirais, qui s'étendent à toute l'industrie de la pêche. Les gens du Conseil devront bien connaître toutes les facettes de cette industrie. Cela peut inclure ou ne pas inclure des pêcheurs, mais ces gens possèdent une expérience dans un domaine particulier, situé à l'extrémité de la chaîne de l'industrie des pêcheries dont l'Office s'occupe le moins, la pêche. Les provinces membres vont désigner 5 membres. Le président du Conseil, président, et l'orateur seront membres permanents, et 4 seront désignés par le gouverneur en conseil sur recommandation du gouvernement fédéral.

Ce mode de nomination a été convenu avec les provinces au cours des entretiens que nous avons eus avec elles. Toutes les parties en étaient satisfaites. Et si nous demandons le pouvoir de désigner n'importe qui, c'est que nous voulons que l'article soit aussi souple que possible et c'est pourquoi je crois que le Gouvernement devrait rejeter l'amendement.

M. McQuaid: Je suppose qu'il y a au moins quatre pêcheurs, dans les provinces membres qui sont au courant de ce qui se passe dans l'industrie de la pêche. Tout ce que nous demandons c'est que 4 pêcheurs qui connaissent bien cette industrie soient nommés. Cela ne doit pas poser de problèmes, à mon avis.

[Texte]

ticipating provinces four men actively engaged in the fishing industry who are knowledgeable about the industry. I do not think there is any problem there.

You say it is left to the discretion of the provinces, but I would like to see it written right into the Act to make sure that we are going to have on this board of directors men who are actively engaged in the industry. The federal government has dictated the number of men the provinces be permitted to appoint. I do not see why it cannot dictate too the type of men.

Mr. Lang: The federal government has not dictated the number; the number was arrived at as a result of consultation between the governments at the two levels. The objective is to obtain a board of directors most qualified to do the job; this may or may not involve X number of men at the producer level, X number of men whose training was at the packaging level, or whatever. This is the kind of question where, when you are going to have the best possible board, there should be the maximum amount of flexibility in regard to appointment.

Mr. McQuaid: My suggestion is, Mr. Chairman, that if we are going to have the best possible board then we must have representatives of the producers on the board.

The Chairman: Is there further discussion? You are all aware of the amendment. Shall I put the question?

Amendment negated.

Clauses 3 and 4 agreed to.

Mr. Turner (London East): Clause 3, Mr. Chairman.

The Chairman: Pardon?

Mr. Turner (London East): In clause 3 why is it 70 years of age when the ordinary person has to retire at 65?

The Chairman: Could I ask Mr. Harvey to answer this?

Mr. Harvey: I think, Mr. Chairman, there are other precedents for this, and I believe that the view of the Ministers at both levels of government when discussing this was that this extra leeway might be advantageous on occasion.

Mr. Turner (London East): In other words, if you are rich, and you sit on this board you

[Interprétation]

Vous dites que cela est laissé à la discrétion des provinces. Je voudrais que cela soit inscrit dans la Loi, pour que nous soyons sûrs que ce Conseil d'administration comprendra des hommes impliqués activement dans l'industrie de la pêche. Le gouvernement fédéral a déterminé le nombre de membres qui seront désignés par les provinces; je ne vois pas pourquoi il ne pourrait pas désigner aussi le genre de membres qui devront être nommés par les provinces.

M. Lang: Le gouvernement fédéral n'a pas «déterminé» le nombre des membres. Nous en sommes arrivés à ce nombre en accord avec les provinces. Nous voulons établir un Conseil d'administration qui soit en mesure d'accomplir le travail que nous lui confions. Cela ne veut pas dire que nous devons en nommer tant au niveau de production, tant à d'autres niveaux, nous voulons choisir les hommes les plus qualifiés, et pour ce faire, la formule de nomination doit être très souple.

M. McQuaid: Si nous voulons obtenir le Conseil le plus efficace possible, il faudra que les producteurs y soient représentés.

Le président: Est-ce qu'il y a d'autres commentaires? Vous connaissez l'amendement proposé. L'amendement est-il adopté?

L'amendement est rejeté.

L'article 3 est adopté.

L'article 4 est adopté.

M. Turner (London-Est): L'article 3, monsieur le président.

Le président: Pardon?

M. Turner (London-Est): Pourquoi cette distinction, pourquoi fixer à l'âge de 70 ans, alors que d'habitude la retraite a lieu à 65 ans?

Le président: Monsieur Harvey, pourriez-vous répondre à cette question?

M. Harvey: Il existe des précédents, je pense. Lorsque nous en avons discuté, nous avons cru que, en reculant l'âge quelque peu cela pourrait être avantageux dans certains cas.

M. Turner (London-Est): Si vous êtes membre du Conseil, vous pouvez servir jusqu'à 70

[Text]

would be allowed to go to 70, whereas a little person is retired at 65. I disagree with this.

Mr. Lang: There are some advantages: there may well be occasions when a person who has been actively engaged in, say, an appointment in the industry might be a suitable person to appoint to the board and who might accept it on reaching his ordinary retirement age. That kind of flexibility makes this desirable, I think.

• 1455

Clauses 3 to 5 inclusive agreed to.

The Chairman: Mr. Comeau.

Mr. Comeau: Mr. Chairman, may I ask the Minister if, under subclause (1) of clause 6 he has any idea of the salaries of the president and directors. It reads, in part "a salary to be fixed by the Governor in Council..."

Mr. Lang: It has not been established. I am not sure whether this is the kind of information which is ordinarily given in regard to this particular position, but the salary has not yet been established.

Mr. Comeau: Would it compare, let us say, to the Canadian Wheat Board in that regard?

Mr. Lang: It could be. I am not sure it would be as high as that at the beginning.

Mr. Lundrigan: On the same point, has any consideration been given to job specifications or the type of people you would want to fill the positions of the president and directors, or does the Department have authority to specify the job requirements which would perhaps tie in with the salaries?

Mr. Lang: Yes, job specification has been a matter of discussion at the official level between the various governments, with a draft paper on specifications before them. Mr. Harvey has just drawn to my attention the fact that it is intended that there should be agreement between the participating provinces and the federal government about appointments.

Clause 6 agreed to.

[Interpretation]

ans. Si vous êtes un citoyen ordinaire, on vous met à la retraite à 65 ans. Je ne suis pas d'accord.

M. Lang: Il y a peut-être certains avantages; il peut y avoir des personnes qui se sont occupées activement de l'industrie jusqu'à l'âge de soixante-cinq ans, et qu'on pourra désigner comme membres du Conseil. Nous voulons assurer une certaine souplesse dans le choix des candidats.

L'article 3 est adopté.

L'article 4 est adopté.

L'article 5 est adopté.

Le président: L'article 6? Monsieur Comeau.

M. Comeau: Puis-je demander au ministre au sujet du paragraphe (1) de l'article 6, s'il a une idée des traitements qui seront versés au président du Conseil et les autres administrateurs? Je vois qu'ils seront «fixés par le gouverneur en conseil».

M. Lang: Les échelles de traitement n'ont pas été établies. Je ne sais pas si des renseignements sont d'habitude donnés au sujet de postes comme ceux-là. Je regrette, mais le montant n'est pas encore établi.

M. Comeau: Croyez-vous que ces traitements seront comparables aux traitements de la Commission canadienne du blé, par exemple?

M. Lang: C'est possible. Peut-être pas aussi élevé au début.

M. Lundrigan: A ce sujet, a-t-on songé à une description des emplois ou du genre de candidats qu'on recherche pour la présidence et les autres postes? Le ministère peut-il déterminer les qualités qui seront exigées, et avec lesquelles les salaires seront compatibles, j' imagine?

M. Lang: Oui, cette description de l'emploi a fait l'objet de discussions au niveau des fonctionnaires entre les ministères et gouvernements intéressés. M. Harvey me rappelle qu'il devra y avoir entente entre les provinces participantes et le gouvernement fédéral au sujet des nominations.

L'article 6 est adopté.

[Texte]

On clause 7—Purpose and Powers.

Mr. Ritchie: This clause mentions fish products and fish by-products, yet clause 20(a), page 9 under Regulation of Interprovincial and Export Trade defines “fish” as fish, fresh or frozen. It makes no mention of such by-products as smoked fish, canned fish, or cured fish. Is this a difference?

Mr. Harvey: Mr. Chairman, the reference to definition in clause 20 affects the regulatory powers in Part III of the bill. Clause 7, now before us, merely deals with the trading powers of the Corporation—its ability, in other words, to ensure that fish by-product potentials are fully exploited where they are apparent. It has the necessary powers in clause 7 but it does not require regulatory powers for that purpose. What is dealt with in section 20 of the bill is really the definition for the purpose of the regulatory powers. These would not really be required in the case of pet food and things of that nature. So that regulatory powers are not given where they are not required.

Mr. Hogarth: Well would not smoked fish be included in clause 7 subclause (b) where it says:

... otherwise prepare fish products and fish by-products...

Mr. Harvey: Yes, but as a prepared form of fish, a processed fish—not really a fish by-product.

Mr. Hogarth: I appreciate the latter phrase is not applicable.

Mr. Lundrigan: I have a couple of questions on subclause (e) of clause 7. Just for the record, what is meant by the phrase “establish branches or employ agents in Canada or elsewhere;”

Mr. Lang: This, again, is simply to give broad powers to the corporation. The corporation might well be involved in having purchasing agents, for instance, throughout the area and conceivably it could want branches of its own operations anywhere in Canada or elsewhere in regard to any aspect of the processing or marketing operation.

• 1500

Mr. Lundrigan: And subsection (g) “... upon the credit of the Corporation;” what does that mean?

Mr. Lang: That means they can borrow money.

[Interprétation]

Article 7, Objet et pouvoirs.

M. Ritchie: On mentionne ici les sous-produits des poissons. Pourtant à l'article 20 a)—page 9 on parle de poisson, frais ou congelé, dans la «Réglementation du commerce interprovincial et du commerce d'exportation». Il n'est pas fait mention de sous-produits comme produits de poissons fumés, en conserve, etc... Existe-t-il une différence?

M. Harvey: Monsieur le président, le renvoi aux définitions touche à la troisième partie du Bill. Il s'agit de la réglementation. L'article 7 que nous étudions présentement autorise l'Office à faire du commerce, ou encore à voir à ce que toutes les possibilités commerciales des sous-produits de la pêche soient exploitées. L'article 7 prévoit cette autorisation, et nul «pouvoir de réglementation» n'est nécessaire à cette fin. A l'article 20, c'est de définitions pour fin de réglementation qu'il s'agit. Ces pouvoirs ne sont pas nécessaires ici dans le contexte de l'article 7 et c'est pourquoi ils ne sont pas inclus ici.

M. Hogarth: Le poisson fumé ne fait-il pas partie des

produits et des sous-produits du poisson dont parle le paragraphe (b) de l'article 7?

M. Harvey: Oui, mais en tant que poisson ayant subi une transformation industrielle, non en tant que sous-produit.

M. Hogarth: Je crois que cette dernière assertion n'est pas appropriée.

M. Lundrigan: J'ai deux ou trois questions à poser. Qu'est-ce qu'on entend par «d'établir des succursales ou employer des mandataires au Canada ou ailleurs», au paragraphe (e) de l'article 7?

M. Lang: Il s'agit d'accorder des pouvoirs étendus à l'Office. L'Office peut avoir besoin d'agents d'achat ici et là; il peut arriver qu'il veuille établir des succursales n'importe où au Canada ou ailleurs à l'égard de l'une de ses activités, soit la transformation ou la commercialisation.

M. Lundrigan: Et au paragraphe (g), «d'emprunter de l'argent de toute banque sur le crédit de l'Office.» Qu'est-ce que cela veut dire?

M. Lang: Cela veut dire qu'ils ont le pouvoir d'emprunter.

[Text]

Mr. Lundrigan: What does the phrase "upon the credit" mean?

Mr. Lang: It is really the legal power to pledge the credit of the corporation—that is to say, their assets—in regard to any borrowing.

Mr. Lundrigan: There is an indication in subclause (h)—and this is a commendable move—that the corporation will have the power to advance loans to individuals. I think the Minister of Fisheries in the House made direct reference to this and indicated that it might be a necessary move to enable people to broaden their basis of operations, modernize their own techniques of fishing operations, and so on. But again there is no indication at all—no indication at all of the level of interest which would be paid. Can we assume that the level of interest that would be paid by fishermen taking advantage of this kind of a stipulation would be comparable to the market price of money at the time, which might be 10 or 12 per cent. Is this the assumption, or can we assume that the government will make an effort to impose some kind of a freeze which will enable them to borrow at a reasonable interest rate?

Mr. Lang: I think the logical assumption is that the corporation, left to its own devices, would use a commercial rate because, to do anything else, would be to redistribute on its own initiative money from other fishermen to the fishermen who were borrowing the money and that would not make sound economic sense. There would still be nothing in the corporation or in the structure preventing the government from intervening, if it felt that that was a particularly desirable form of aid to fishermen.

Mr. Lundrigan: So the terms of borrowing with respect to the amount, interest and all these sorts of things, would be left completely to the corporation?

Mr. Lang: Right.

Mr. Lundrigan: With the assumption that the government could intervene in the event of practices developing which would not be deemed favourable to the fishing industry?

Mr. Lang: Well, if it seemed desirable to do so, yes. Actually, subclause (h) is there to take care of the present situation. Existing companies buying fish from the fishermen are in fact extending these zones in many cases and with the corporation taking their place as the buyer there would be an obvious and immediate gap in the lending business to the

[Interpretation]

M. Lundrigan: Que veulent dire ces mots: «sur le crédit»?

M. Lang: «Sur le crédit de l'Office,» c'est-à-dire le pouvoir juridique d'engagement du crédit de l'Office, c'est-à-dire son pouvoir d'emprunter.

M. Lundrigan: Et le paragraphe h)? Il me semble que ce soit une bonne idée que l'Office ait le pouvoir de consentir des prêts à des particuliers. Le ministre des Pêcheries en a parlé je pense à la Chambre. Il a dit que cela serait peut-être nécessaire pour permettre aux gens d'élargir leurs opérations, pour rajeunir leurs méthodes, etc. Rien n'indique ici le taux d'intérêt qui sera exigé. Est-ce que l'on peut supposer que le taux d'intérêt que devront payer les pêcheurs qui veulent profiter de cet article, sera comparable aux prix du marché, soit de 10 ou 12 p. 100 ou peut-être plus? Est-ce qu'on peut supposer que le gouvernement fera un effort pour permettre d'en venir à un taux d'intérêt raisonnable?

M. Lang: J'imagine que l'Office, s'il était laissé à lui-même, utiliserait les taux commerciaux; autrement, il prendrait l'initiative de redistribuer les richesses. Rien n'empêchera le gouvernement d'intervenir s'il juge que c'est nécessaire ou opportun pour aider les pêcheurs.

M. Lundrigan: Par conséquent, les conditions d'emprunt, pour ce qui est de la somme et du taux d'intérêt seront laissées entièrement à l'Office?

M. Lang: En effet.

M. Lundrigan: Et on prévoit que le gouvernement pourrait intervenir dans le cas de pratiques jugées défavorables à l'industrie de la pêche?

M. Lang: C'est ce que nous avons cru bon de prévoir. Le paragraphe h) intéresse les prêts qui existent déjà de la part des compagnies achetant les produits des pêcheurs. L'Office en quelque sorte sera substitué à ces compagnies pour les prêts à des pêcheurs particuliers. Et ce paragraphe permet à l'Office d'intervenir en ce sens.

[Texte]

fishermen. This allows the corporation to step in in that regard.

Mr. Ritchie: The Minister has pretty well answered my question. This is referred to in the fish industry as almost grubstaking. It creates a lot of problems in that they always lose a fair number of these loans because the entrepreneurs are just so small and the catch is poor. I gather considerable effort has been put into this clause. I think it will be a fairly important one for quite a while.

Mr. Osler: In respect of subclause (h), we do not want to be hard on the fishermen but, on the other hand, we do not want word to get right out to the whole country that money is pouring out of the ears of the government either.

By "make loans of working capital..." do you mean the making of loans against the catch? You would have to have some security of some kind. In other words, somebody could not just borrow \$500 to buy a new outboard outfit and then disappear?

Mr. Lang: This really would be up to the corporation.

Mr. Osler: Some of these people do all sorts of things. I can visualize some cunning fellow deciding that he needed a new boat and motor, getting it by this means, disappearing for the season, spending his money and by the time you caught up to him he would have neither boat nor money.

• 1505

Mr. Harvey: Mr. Chairman, there really are a number of possible sources of finance for the fishermen with regard to what probably might be described as a capital item, in his terminology—a boat, a motor, something in the way of long term debt. This provision is intended for his grubstake financing, as referred to a moment ago—food, maintenance costs, nets, replacement of nets and fuel for his boat and this kind of thing. There is a distinction, quite recognized in certain loan facilities and not in others, between short-term grubstake financing and capital requirements.

Under the Indian Revolving Loan Fund there are facilities available for the Indian fishermen which he now enjoys for his long-term requirements. Under the various provincial regulations there are some facilities available and they are studying what supplementary requirements may exist at the present time related to the introduction of this board marketing arrangement. This is

[Interprétation]

M. Ritchie: Le ministre a assez bien répondu à ma question par ses derniers commentaires. Il s'agit presque d'un prêt où le créancier retire tout le produit, comme dans le cas des prospecteurs de mines. Cela peut créer toutes sortes de problèmes puisque certains prêts peuvent n'être pas remboursés, la pêche étant insignifiante. Je crois qu'on a dû étudier de près cet article, et qu'il sera d'une grande importance pendant longtemps.

M. Osler: Monsieur le président, à propos du paragraphe h), «consentir des prêts de fonds de roulement...», sans vouloir «couler» le pêcheur, il ne faudrait pas que tout le pays apprenne que des flots de dollars sont distribués par le gouvernement. La pêche serait-elle la seule sécurité de l'Office? Il faudra tout de même des garanties? Un pêcheur peut emprunter 500 dollars pour acheter un nouveau gréement, puis disparaître?

M. Lang: C'est à l'Office de prendre ses précautions.

M. Osler: Certaines gens font toutes sortes de choses. Il peut arriver que quelqu'un d'assez rusé obtienne un prêt, pour ensuite disparaître pour le reste de la saison de pêche. Et peut-être avant qu'on puisse l'attraper l'argent sera dépensé, et il n'y aura pas de bateau.

M. Harvey: Il y a plusieurs sources de financement possibles pour les pêcheurs, quand il s'agit d'équipement absolument nécessaire, comme le bateau. Il s'agit en quelque sorte de dettes à long terme. Ces dispositions ici portent sur les frais d'entretien, de subsistance, et autres frais analogues. Il y a une distinction que reconnaissent certains services de prêts, et que ne reconnaissent pas certains autres, entre les prêts à court terme de subsistance, et les besoins en équipement, à long terme.

Le *Indian Revolving Loan Fund* met des fonds à la disposition des pêcheurs indiens, qui peuvent se prévaloir de prêts à long terme. Aux termes des règlements provinciaux, il existe certains services et on est à étudier les besoins supplémentaires en ce moment, en vue de la mise sur pied de ce système de commercialisation. Il s'agit ici de capital de roulement, comme le mentionne le paragraphe h) de l'article 7.

[Text]

intended to be primarily the working capital and it is so specified in subclause (h) of clause 7.

Clause 7 agreed to.

On clause 8—Acceptance and exercise of additional powers.

Mr. Lundrigan: Perhaps this is not the appropriate clause to mention this but the corporation may enter into and carry out arrangements with any government or person that the corporation deems necessary. The general principle of the bill gives the corporation authority to market fish internationally, intranationally if you want, or interprovincially, and right now we have the Department of Industry and Trade and Commerce involved in the marketing of products outside as well as within the Canadian nation.

I raised the point in the House when I was debating the bill on second reading, and I remember raising it on a number of occasions during the year, that there seemed to be quite a bit of jurisdictional overlapping between the Department of Fisheries and the Department of Industry and Trade and Commerce regarding the marketing of fish. I remember asking questions in the House on a number of occasions on the efforts being made by the Minister's department to stimulate the exportation of fish to the American market. I believe I initially posed the question to the Minister of Fisheries and they properly passed it along to the Department of Industry and Trade and Commerce.

In other aspects of the fishing industry do we still have the responsibility for marketing under the jurisdiction of the Department of Industry and Trade and Commerce internationally and the Department of Fisheries nationally? Is this still the jurisdiction, or is this an exception to the existing practice?

Mr. Lang: I do not think there is any exception to the existing practice in regard to this field. The Department of Industry and Trade and Commerce may be interested in those capacities not only in the marketing of fish abroad, which is within its jurisdiction within the old Department of Trade and Commerce, but also within the development of the industry itself at home, and various programs within the Department of Industry may well affect an industry or an operation which, in another way, has a special interest for another governmental department. This is certainly true about the fishing industry.

From the point of view of fisheries, the Department of Fisheries has its interest in the operation from the point of view of the devel-

[Interpretation]

L'article 7 est adopté.

L'article 8, Acceptation et exercice de pouvoirs supplémentaires.

M. Lundrigan: Le moment n'est peut-être pas bien choisi, mais si j'ai compris, l'Office peut conclure et appliquer avec tout gouvernement et toute personne les ententes qu'il estime nécessaires ou souhaitables. Le principe du Bill permet à l'Office de mettre le poisson en vente sur le marché interprovincial, comme international. Or, le ministère de l'Industrie et du Commerce s'occupe déjà de la mise en marché de ces produits aussi bien à l'étranger qu'à l'intérieur du Canada.

J'ai soulevé ce point lors du débat en deuxième lecture de ce Bill, et je me souviens avoir soulevé la question à plusieurs reprises au cours de l'année. Il me semble qu'il y a beaucoup de chevauchement entre les travaux du ministère des Pêcheries et du ministère de l'Industrie et du Commerce, au sujet de la mise en marché du poisson. Je me souviens d'avoir posé des questions en Chambre pour savoir ce que faisait le Ministère pour la mise en marché du poisson aux États-Unis. Et je crois que la question a été posée d'abord au Ministère des Pêcheries et on m'a répondu qu'il me fallait poser la question au Ministère de l'Industrie et du Commerce.

Est-ce que dans d'autres aspects du commerce du poisson, la responsabilité des mises en marché au point de vue international revient au ministère de l'Industrie et du Commerce, et au ministère des Pêcheries pour le commerce national? Est-ce là la situation existante, ou est-ce une exception?

M. Lang: Je ne crois pas qu'il y ait exception à la règle: Le ministère de l'Industrie et du Commerce s'intéresse non seulement à la mise en marché du poisson à l'étranger, ce qui était sous la juridiction du ministère du Commerce mais aussi au développement de l'industrie même sur la scène domestique par ses divers programmes, et ainsi collaborer avec un autre ministère. Cette situation existe en tous cas avec le ministère des Pêcheries.

Du point de vue des pêcheries, c'est le ministère des Pêcheries qui s'occupe du développement. Mais le ministère de l'Industrie et

[Texte]

opment of industry; the Department of Industry and Trade and Commerce may have its interest and jurisdiction even in regard to the operation of the industry within Canada, quite apart from trade. So this kind of apparent double interest in a matter is not at all unusual. It is fairly common and, I think, quite unavoidable.

Mr. Lundrigan: In other words, Mr. Chairman, if my friend from New Brunswick or from British Columbia wanted to approach a particular government agency to stimulate the Canadian market, which is a necessary need at the present moment—we all feel that this market is not consuming the amount of fish that it could and consequently that we should be providing this market at our own national level—we would approach your Department. In other words, we could hold your Department responsible for the kind of stimulation that I am referring to on the national level.

Mr. Lang: Well, I think it could have its different aspects, if I may put it that way. The objective of promoting the cause of fisheries themselves with a view to promoting the welfare of the fishermen has hit home within the Department of Fisheries, as I understand it. If you were talking about the improvement of some specific agencies or devices for the fishing industry you might well be consulting the Department of Industry, as it used to be, or that branch within the Department of Industry or Trade and Commerce which is interested in the matter, so that it really would depend on the nature of your inquiry whether you would be pursuing it most successfully within the Department of Fisheries or within the Department of Industry or Trade and Commerce.

Mr. Lundrigan: Perhaps it is my mind or my inability to conceptualize the problem but I still cannot see it. If we want to sell fish in Canada, if we want people to eat more fish, if we want to put on promotional practices so that there is a greater consumption of fish on the part of the consumer in Canada, who do we approach? There are a number of members from all across Canada who feel—I would say almost everybody in the Committee right now—that there should be a great deal more effort to stimulate our Canadian consumption of all species of fish. Who do we approach, to whom can we make suggestions and who do we hold responsible?

Mr. Lang: I think it does depend on the particular kind of project but I would like to ask Mr. Harvey to comment on the question.

[Interprétation]

du Commerce s'y intéresse également et non seulement au point de vue commercial. Il arrive très souvent que deux ministères s'intéressent à une même industrie mais de différents points de vue, et je dirais que c'est inévitable.

M. Lundrigan: Si quelqu'un en Colombie-Britannique ou au Nouveau-Brunswick voulait demander que l'on stimule le marché canadien, ce qui est juste, parce que c'est un marché qui ne consomme pas la quantité de poisson qu'il pourrait, et que l'on encourage la mise en marché au Canada, devrait-il consulter votre ministère? Est-ce votre ministère qui a la responsabilité pour encourager la mise en marché au plan national?

M. Lang: Ce problème présente, pour ainsi dire, différents aspects. L'idée de promouvoir la cause des pêcheries au Canada, en vue d'améliorer la situation sociale des pêcheurs, concerne le ministère des Pêcheries. Mais si vous parlez de perfectionner des organismes ou des appareils de pêche, vous auriez peut-être affaire à l'ancien ministère de l'Industrie ou à la direction intéressée du ministère de l'Industrie et du Commerce. Tout dépend du caractère de la demande, à savoir qui sera le plus en mesure d'y répondre, soit le ministère des Pêcheries ou le ministère de l'Industrie et du Commerce.

M. Lundrigan: Je suis peut-être en faute, mais je ne saisis pas très bien le caractère du problème. Si nous voulons vendre plus de poisson au Canada et pousser les gens à en manger d'avantage, si nous voulons, par la publicité, encourager la consommation du poisson au Canada, qui doit-on voir? Plusieurs députés de toutes les parties du Canada, je dirais même pratiquement tous les membres du Comité aujourd'hui, s'accordent pour dire qu'il faudrait s'efforcer davantage d'encourager la consommation du poisson au Canada. A qui devons-nous soumettre nos suggestions? Et qui tenons-nous pour responsable?

M. Lang: Ca dépend du genre de projet. Je demanderais à M. Harvey de répondre.

[Text]

Mr. Harvey: Mr. Chairman, I think that is right. If an approach is received from some sector of an industry that properly employs both the facilities of the Department of Industry and Trade and Commerce, and the Department of Fisheries in this case, obviously whichever department was approached would promptly engage to obtain the benefit of the services of the other as well, each operating in its special area.

Going back to the original point made, the Department of Trade and Commerce, of course, has the foreign arm, the foreign trade service, resident officers in posts spread throughout the world who supply commercial intelligence and, of course, such commercial intelligence has to be indiscriminate of whether it is fisheries or food items or raw materials or whatever it may be. They use their knowledge and intelligence to the best advantage of all the Canadian industry and this is fed through the system to the industry liaison people within the department in Ottawa of Industry or Trade and Commerce. If there is any information in there that is relevant and important to other departments such as Agriculture, Energy, Mines and Resources, Fisheries and Forestry, obviously this is passed immediately to them. This is a teamwork proposition.

With respect to the division of labour within the Canadian market, of course there is one aspect of this that perhaps should be touched upon. Dealing within Canada, it is quite important in trade promotional work not to find yourself working for the benefit of a particular company in its competition against other companies who are also taxpayers. The problem here really is whether one is working for an industry as a whole and not for an individual. In the foreign market it is quite appropriate to be working for whoever has the initiative to tackle a particular market because you are not really dealing with all the factors of competition in the foreign market, so that anybody approaching the Department of Industry or Trade and Commerce in Ottawa, or the Department of Fisheries, can approach either department or both, with the object in mind of developing interest in whatever it may be that they have in the Canadian market in the way of a promotional operation, and if it is appropriate that government resources should be employed on this, whichever department he approaches he will very quickly receive guidance in that regard and need not hesitate to approach either department. Perhaps that really answers the question.

● 1515

Clauses 8 and 9 agreed to.

[Interpretation]

M. Harvey: Je pense que c'est juste. Lorsqu'une demande provient d'un secteur de l'industrie qui utilise aussi bien les services du ministère de l'Industrie et du Commerce que ceux du ministère des Pêcheries, il est clair que celui qui reçoit la demande essayera d'y intéresser les service de l'autre ministère, chacun travaillant à sa propre spécialité.

Pour revenir au point que vous avez soulevé, le ministère du Commerce dispose du service de commerce extérieur, et il a des fonctionnaires en poste à l'étranger qui constituent un service de renseignement qui ne fait naturellement pas de distinction entre les produits de la pêche, les aliments, les matières premières, et ainsi de suite. Ils utilisent leurs connaissances au bénéfice des industries canadiennes, par l'intermédiaire des agents de liaison du ministère de l'Industrie et du Commerce. Si un de ces renseignements est de nature à intéresser d'autres ministères comme l'Agriculture, l'Énergie, les Mines et les Ressources, et les Pêcheries et Forêts, ils leur sont immédiatement transmis. C'est une question de travail d'équipe.

Quant à la division de la main-d'œuvre à l'intérieur du marché du travail au Canada, il y a un aspect sur lequel il faudrait élaborer. Dans l'encouragement de la commercialisation au Canada, il est important de ne pas aider une entreprise au détriment d'une autre entreprise. Il importe de savoir si l'on travaille pour l'ensemble d'une industrie ou pour une entreprise en particulier. Dans un marché étranger, il est tout à fait acceptable de promouvoir les produits de l'entreprise qui a suffisamment d'initiative pour s'y introduire, car les facteurs de la concurrence sur le marché étranger n'entrent pas en jeu. Quiconque soumettra une demande au ministère de l'Industrie et du Commerce, ou au ministère des Pêcheries, ou aux deux, en vue de susciter de l'intérêt dans leur produit au moyen d'un effort publicitaire. S'il convient d'utiliser les ressources du gouvernement, le ministère qui reçoit la demande verra à lui répondre rapidement. Ils ne devraient pas hésiter à contacter un de ces deux ministères. Ai-je répondu à votre question?

(Les articles 8 et 9 sont adoptés)

[Texte]

On Clause 10—Application of certain Acts and regulations.

Mr. McQuaid: What relationship is there between Section 5 of the Aeronautics Act and the freshwater fishing industry?

Mr. Harvey: Mr. Chairman, should public servants be casualties in non-commercial flying accidents they have certain protection under Section 5 of the Act. This is available also to employees of this Corporation, very necessarily so, because they will be doing a great deal of non-commercial flying, in all expectation.

Mr. McQuaid: That is fine, Mr. Chairman. I just wanted to clear that point.

Clauses 10 to 14, inclusive, agreed to.

On Clause 15—Conduct of financial obligations.

Mr. Ritchie: Just what does it mean, for the purpose of the Income Tax Act, to be a corporation specified in Schedule D to the Financial Administration Act? What does that entail?

Mr. Lang: It means that it is taxable under the Act.

Mr. Ritchie: In other words, do they pay a corporation tax as such or not?

Mr. Harvey: Mr. Chairman the situation really is that, of course, the corporation is intended to distribute back to the fishermen as part of its payment for the fish the excess earnings it may make over its initial cost of the fish. It will necessarily require, because it has to be self-sustaining, certain types of reserves against bad debts and those problems of doing business, but the Corporation will not, in all likelihood, have retained profits which would be taxable. But as a Crown corporation it is in Schedule D of the Financial Administration Act and if it did retain profits, income, this would be taxable. It is in a similar position to that of the Export Credits Insurance Corporation and other Crown corporations of that type.

Mr. Ritchie: In practice, then, after some time, after a year or two, presumably enough money would be available so that there would be very little if any profit. Most of it would be re-distributed.

[Interprétation]

Article 10, Application de certaines lois et de certains règlements.

M. McQuaid: Quel rapport y-a-t-il entre la *Loi sur l'aéronautique* et l'industrie de la pêche en eau douce?

M. Harvey: Lorsque les fonctionnaires subissent un accident sur un vol non commercial, ils sont protégés par l'article 5 de cette Loi. Cette disposition s'étendra nécessairement aux employés de l'Office puisqu'ils seront vraisemblablement appelés à voyager beaucoup sur des vols non commerciaux.

M. McQuaid: Très bien, monsieur le président. Je désirais seulement une explication.

(Les articles 10 à 14 inclusivement sont adoptés.)

Article 15, Opérations financières.

M. Ritchie: Qu'est-ce qu'on veut dire au juste lorsqu'on dit:

aux fins de la *Loi de l'impôt sur le revenu*, être une corporation visée à l'Annexe D de la *Loi sur l'administration financière*

qu'est-ce que cela signifie?

M. Lang: Que l'Office est imposable en vertu de la Loi.

M. Ritchie: Est-ce qu'elle paie l'impôt sur les sociétés ou non?

M. Harvey: En réalité, l'Office doit distribuer aux pêcheurs, comme paiement partiel du poisson, l'excédent sur ses frais d'exploitation. Comme il s'agit d'une entreprise d'automne, elle doit nécessairement se constituer certaines réserves pour parer aux créances irrécouvrables et imprévus. Il est peu probable cependant qu'elle ait retenu des bénéfices qui soient imposables. A titre de société de la Couronne, elle figure à l'Annexe D de la *Loi sur l'administration financière* et, si, de fait, elle retient des bénéfices, ils sont imposables. Elle est sur le même pied que les autres sociétés de la Couronne, comme la *Société d'Assurance des crédits à l'exportation*.

M. Ritchie: Après une année ou deux, elle aura donc vraisemblablement suffisamment d'argent mais il n'y aura pas beaucoup de bénéfices puisque la majeure partie de cet argent sera redistribué aux pêcheurs, n'est-ce pas?

[Text]

Mr. Harvey: Yes, it is the intent of the Corporation to give the fishermen the benefit of its earnings as a part of the cost of the fish.

The Chairman: Mr. Comeau.

Mr. Comeau: It says in subclause (1) that

The Corporation shall conduct its operations on a self-sustaining financial basis without appropriations therefor by Parliament.

Exactly what does this mean? Does this mean that Parliament will not be asked to make grants to this Corporation? As I understand it there is the initial grant as far as the setting up of the operations is concerned, but what of after that? To my mind this means that the government will not be asked to grant money to this Corporation. Is that correct?

Mr. Lang: That is right. The guideline to the Corporation is to operate on a self-sustaining basis, subject only to the payment of the establishment costs of up to \$100,000.

Mr. Comeau: Yet later on the government can be asked to make loans to this Corporation. Is that correct?

Mr. Lang: No, the bill provides for the guarantee by the Minister of Finance, by the government through the Minister of Finance, of loans which the Corporation may make in the financing of its operations up to \$5 million.

Mr. Comeau: I see. We will be coming to that in Clause 16 then. After the Corporation is set up and its operations are begun, Parliament will not be asked to make loans or grants of any kind to this Corporation.

Mr. Lang: It is possible for the government to make loans to the Corporation under Clause 17 (1) (b) and subclause (2).

• 1520

Mr. Hogarth: It would appear that it only has power to borrow money from a bank, if you look at Clause 7 (g) unless I am mistaken, and that is quite possibly so. The only thing that concerns me is that Clause 7 (i) says "do all such other things". Certainly if the power to borrow is restricted in Clause 7 (g) it could not be broadened by 7 (i). It might be wise, sir, if I might suggest it, that you reflect on that clause and maybe broaden it so that the corporation can borrow from any institution.

Mr. Lang: Yes, I think I would like to look into it. I appreciate its being drawn to my

[Interpretation]

M. Harvey: Oui l'Office a l'intention de faire profiter les pêcheurs de ses gains.

Le président: M. Comeau.

M. Comeau: Au paragraphe I, on dit que:

L'Office est financièrement autonome et ne reçoit pas pour ses opérations de crédits affectés par le Parlement.

Qu'est-ce que cela signifie au juste? Qu'on ne demandera pas au Parlement de voter des subventions pour cet Office? Si je comprends bien, il y a une subvention initiale d'établissement, mais ensuite? Si je comprends bien, on ne demandera pas au Parlement d'accorder des subventions à cet Office. Est-ce exact?

M. Lang: C'est exact. L'Office doit être autonome, exception faite de la subvention initiale d'établissement de 100,000 dollars.

M. Comeau: Mais elle pourra peut-être, plus tard, demander un prêt auprès de l'État, n'est-ce pas?

M. Lang: Non. La Loi prévoit que l'État pourra, par l'intermédiaire du ministre des Finances, garantir les emprunts que la Société peut contracter pour financer son exploitation, et jusqu'à concurrence de \$5 millions.

M. Comeau: Je comprends, on en parlera donc à l'article 16. Après l'établissement de l'Office et que l'exploitation est en marche, elle ne pourra pas demander au Parlement de lui accorder des prêts ou des subventions d'aucune sorte.

M. Lang: Aux termes de l'article 17, paragraphe 1) et 2), l'État peut accorder un prêt à l'Office.

M. Hogarth: Il me semble ici que l'Office peut emprunter uniquement des banques, en vertu de l'article 7(g), à moins que je fasse erreur, ce qui est fort possible. Tout ce qui m'inquiète c'est qu'à l'article 7(i) on dit: «toute autre chose»... Si les pouvoirs d'emprunt se trouvent restreints par les dispositions de l'article 7(g) il est certain qu'ils ne peuvent pas être élargis par l'article 7(i). Je propose donc qu'on étudie cet article et, s'il y a lieu, qu'on permette à la société d'emprunter de n'importe quelle source.

M. Lang: Je vous remercie d'avoir porté ce point à mon attention. Je verrai à discuter ce

[Texte]

attention. I would like to look at the implications of that with the law officers whether in fact the implication of Clause 17 is that Clause 7 needs broadening.

The Chairman: Excuse me. I have other members who have indicated they want to ask questions and Mr. Rose is one.

Mr. Rose: Sir, my question deals with the same subclause of clause 15 and it seems to be pretty final without appropriations because as I understand it, what we are doing here is imposing it on a particular industry. Is that not so?

Mr. Lang: Yes.

Mr. Rose: It is a federal-provincial imposition of a marketing board on a particular industry.

Mr. Lang: That is right. Certainly as a result of the enactment of this law by this government and the provincial governments the fishermen will not be free to sell their catch except to the Corporation in general.

Mr. Rose: Earlier in this meeting I also noted that a motion was lost so that the actual people who are going to be served by this particular board are not going to be necessarily part of the management of this particular Corporation. What concerns me here is that we have a particular industry.

We are imposing a marketing board upon it—a management board really because it will be more than just marketing—and certainly we hope that sales will increase and the general picture of the industry will be improved. Nevertheless, what we are doing here is putting a large bureaucracy in control of this particular industry, and the complete financing of this bureaucracy is to come out of the industry. Unless the board can improve the return to the fishermen it will not act in that way at all. It will be a cost to the fishermen rather than an aid to them.

Could you give me any estimate of the kind of costs that we might be faced with, or the industry might be faced with, with the imposition of this particular board? How large is this going to be?

Mr. Lang: Mr. Harvey has answered that question this morning. He gave the range of between \$100,000 and \$200,000 as his preliminary, tentative, estimate of the cost of operation, and we also had a full discussion on the probable benefits which would cover this. The precedent of marketing boards, of course, is there before us. The Canadian Wheat Board operates in much the same fashion.

[Interprétation]

point avec les juristes, à voir si l'article 17 entraîne un élargissement de l'article 7.

Le président: D'autres membres ont demandé la parole, dont M. Rose.

M. Rose: Ma question porte sur le même paragraphe de l'article 15. Il me semble que la société ne pourra pas tenir le coup sans subvention, surtout que nous imposons cet Office à une industrie, n'est-ce pas?

M. Lang: Oui.

M. Rose: L'État et les provinces se sont entendus pour imposer un Office de commercialisation sur une industrie.

M. Lang: Vous avez raison, l'adoption de cette loi par le gouvernement fédéral et de lois semblables par les gouvernements provinciaux, forcera les pêcheurs à vendre leur prise à l'Office.

M. Rose: Au début de cette réunion, j'ai remarqué qu'on a rejeté une motion de sorte que les gens qui seront desservis par cet Office ne feront pas nécessairement partie de sa direction. C'est qu'il s'agit d'une industrie particulière.

Nous leur imposons un Office de commercialisation, ou plutôt un conseil d'administration, puisque l'Office ne s'en tiendra pas à la commercialisation, nous espérons, bien entendu, que la situation générale de l'industrie s'améliorera et que les ventes s'accroîtront. En somme, nous établissons une puissante bureaucratie pour cette industrie qui doit en assurer le financement. A moins que l'Office puisse améliorer le rendement des pêcheurs, il constituera un passif pour les pêcheurs plutôt qu'un actif. Pouvez-vous me donner une estimation de ce que cet Office coûtera à l'industrie? De quel ordre seront ces dépenses?

M. Lang: M. Harvey a répondu à cette question ce matin. Il a dit que ce serait entre 100,000 et 200,000 dollars. Ce n'est qu'une estimation préliminaire des frais d'exploitation possibles. Nous avons également parlé des bénéfices prévus qui compenseront ces frais. Il existe d'ailleurs un précédent, celui de la Commission du blé pour les producteurs de céréales.

[Text]

Mr. Rose: I am not concerned, sir, with the principle of marketing boards. I think we can all support this. What I am concerned with here is the finality of this clause without appropriations because it may be that for some time until this thing gets rolling this particular board from time to time may need assistance from Parliament and I just feel that this is a little bit final.

• 1525

Mr. Lang: We have to come back to Parliament.

Mr. Lundrigan: Mr. Chairman, could I comment on this because I feel that it is the same point Mr. Chairman exactly.

The Chairman: Exactly?

Mr. Lundrigan: Yes, it is a supplementary observation perhaps. I raised this point on several occasions and I was struck with the same feeling. I remember bringing it to the Minister's attention earlier today. The Minister said—and I was going to suggest that this be written into the bill as well—that in the event of an emergency naturally the government would come to the aid of the Corporation. I raised this in the House and when I raised it today I said that I am wondering if the reason for the clause is purely to set a good standard, a good goal for the Corporation, or if it is a reflection of Canadian policy really based on demands by another government. Specifically I am thinking of the American government and I know the attitude of the American government towards Canadian involvement in the fishing industry. Consequently I asked the Minister what would be the situation in the event of an emergency? Would the Government of Canada, would Parliament not consider the necessity of getting involved? The Minister said yes, that this would be logical.

If this is the case, then why can we not eliminate the phrase which forms the last part of subclause (1) of Clause 15, or continue with a phrase which will indicate that in the event of emergencies Parliament will deem it necessary to become implicated.

The Chairman: On a supplementary Mr. Hogarth?

Mr. Hogarth: When I first read subclause (1) of Clause 15 I assumed that the government would be able at any time to loan money to this Corporation and perhaps with the powers of the Corporation broadened that could take place, but I assumed subclause (1) of Clause

[Interpretation]

M. Rose: Il ne s'agit guère du principe même des offices de commercialisation. Je pense que nous l'appuyons tous. Mais je m'inquiète du fait que, aux termes de cet article sur les crédits, il n'est pas prévu de subventions, alors qu'il se peut très bien que l'Office ait besoin, à l'occasion, de l'aide du Parlement, et cela me semble être un peu trop décisif.

M. Lang: Il nous faudra revenir au Parlement dans pareil cas.

M. Lundrigan: Monsieur le président, pourrais-je faire une observation à cet égard, car il me semble qu'il s'agit exactement du même sujet.

Le président: Exactement?

M. Lundrigan: Oui. C'est peut-être une question supplémentaire. J'ai soulevé cette question plusieurs fois, et j'avais précisément la même opinion. J'en ai parlé au Ministre aujourd'hui. Il a dit—et je propose que cela soit aussi inséré dans le bill—qu'évidemment, en cas d'urgence, le gouvernement se porterait au secours de l'Office. J'ai soulevé ce point à la Chambre, et lorsque je suis revenu sur ce sujet aujourd'hui, j'ai dit que je me demandais s'il s'agissait tout simplement, par cet article, d'établir de bonnes normes, un bon objectif pour l'Office, ou s'il reflétait la politique du Canada fondée, en réalité, sur les exigences d'un autre gouvernement. Je pense surtout au gouvernement américain, et je connais son attitude à l'égard de l'intervention du gouvernement canadien dans l'industrie de la pêche. J'ai donc demandé au ministre quelle serait la situation en cas d'urgence. Est-ce que le gouvernement du Canada, le Parlement, ne songerait pas à la nécessité d'intervenir? Le ministre a dit que si, que cela serait logique.

Si tel est le cas, pourquoi ne pas éliminer les derniers mots du paragraphe (1) de l'article 15, ou y ajouter quelques termes qui indiqueront qu'en cas d'urgence, le Parlement sera prêt à intervenir.

Le président: Monsieur Hogarth, question supplémentaire?

M. Hogarth: Lorsque j'ai lu le paragraphe (1) de l'article 15 pour la première fois, j'ai supposé que le gouvernement pourrait, à tout moment, prêter des fonds à l'Office et, si les pouvoirs de l'Office sont élargis, cela sera peut-être possible mais j'ai pensé que le para-

[Texte]

15 meant that the financial statements of this Corporation and its necessity for money would not form any part of the estimates of any department of the Government of Canada and I assumed that:

...without appropriations therefor by Parliament.

meant that we would not have to consider the moneys required by this Corporation in our Parliamentary estimates and it was on a self-sustaining basis. I might be wrong, but that is what I assumed it meant.

The Chairman: Mr. Rose?

Mr. Rose: Mr. Chairman, it is pretty final—just “without appropriations.” What concerns me is that in the event, for instance, of massive failure of sales in any one year, the \$100,000 it is going to cost to run this operation is going to come directly out of the pockets of the people it is set up to assist. I just feel that this phrase is extremely strong. Had I been in this Committee a little longer, I would perhaps be prepared to move an amendment on this.

The Chairman: Mr. Ritchie, you indicated...

Mr. Lang: I wonder if I might...

The Chairman: Mr. Lang?

Mr. Lang: ...pick up some of those points. First of all Mr. Lundrigan's point: I did not at any time talk about the government in an emergency coming to the assistance of the Corporation. In the discussion I had with him in the House, as I recall it, the point I made was that...

An hon. Member: For further study...

Mr. Lang: ...the point I have been trying to make whenever we have discussed this topic is that when in a fishing industry, or any other industry, any part of it might need assistance nothing in the existence of the Corporation stops that from happening. It is not necessarily done through the route of the Corporation. There are all sorts of other routes through which this can be done. There can be loan plans for fishermen, there can be support prices for the product without involving the Corporation directly at all, and so on. There can be all sorts of other plans. This is really what I meant, that there are all sorts of governmental powers.

The Corporation is intended to aim at putting its operations on a self-sustaining basis. The government is giving it a guarantee in

[Interprétation]

graphe (1) de l'article 15 voulait dire que les bilans financiers de l'Office et que ses besoins d'argent ne figureraient dans les crédits d'aucun ministère du gouvernement canadien. J'ai supposé que l'expression:

Ne reçoit pas... de crédits affectés par le Parlement

signifiait que nous n'aurions pas à tenir compte, dans nos prévisions budgétaires, des fonds requis par l'Office, et que ce dernier était financièrement autonome. C'est ce que j'ai supposé, du moins; je peux me tromper.

Le président: Monsieur Rose?

Mr. Rose: Monsieur le président, cette expression «ne reçoit pas de crédits» me paraît trop définitive. Ce qui m'inquiète, c'est que si, par exemple, les ventes sont très mauvaises une année, les 100,000 dollars nécessaires pour les frais d'exploitation vont venir directement des poches de ceux que l'Office est censé aider. J'estime que cette expression est beaucoup trop forte. Si j'avais siégé au Comité plus longtemps, je n'hésiterais pas à proposer une modification à cet égard.

Le président: Monsieur Ritchie, vous avez dit...

M. Lang: Je me demande si je pourrais...

Le président: Monsieur Lang?

M. Lang: ...faire quelques observations sur certaines de ces réflexions. Tout d'abord, au sujet de ce qu'a dit M. Lundrigan: je n'ai jamais dit qu'en cas d'urgence, le gouvernement porterait secours à l'Office. Pour autant que je me souviens, lorsque j'en ai parlé avec lui à la Chambre, j'ai dit que...

Une voix: A étudier davantage...

M. Lang: ...ce que j'ai essayé de dire chaque fois que nous avons débattu cette question, c'était que lorsqu'un secteur quelconque de l'industrie de la pêche, ou de n'importe quelle autre industrie, avait besoin d'assistance, rien dans l'existence de l'Office n'empêchait le gouvernement d'intervenir. Cela ne se fait pas nécessairement pas l'entremise de l'Office, et il y a toutes sortes d'autres moyens. Il peut y avoir des programmes de prêts aux pêcheurs, des prix de soutien pour les produits sans que l'Office soit mis directement en cause, et ainsi de suite. Il peut y avoir toutes sortes de programmes. C'est là, en réalité, ce que je voulais dire—qu'il y a toutes sortes de pouvoirs aux mains du gouvernement.

L'Office doit chercher à mener son exploitation au restant financièrement autonome. Le gouvernement lui garantit des prêts de sorte

[Text]

regard to loans which really allows it to do certain things which it could not do immediately, and indeed to take care of sudden changes in its position, but it is certainly expected to so arrange its initial prices that it can expect to be on a self-sustaining basis. That is the objective of the operation. The government guarantee of loans, of course, could be important in this in regard to early years and really means that there is no emergency. This is the Corporation itself. The marketing board operation is designed not to be a vehicle of transferring money from the government to the fisherman, but rather is specifically designed to be an improvement of the conditions of the industry so that the fisherman receives a better share of the money. This is the philosophy that is reflected in these sections.

• 1530

The Chairman: Mr. Ritchie?

Mr. Ritchie: If I heard the Minister correctly, then the government has the ability on short notice to sustain the fishing industry, in the case just mentioned where there was an over-all failure of sales. Can the government do this quickly and easily without involving the Corporation? Do I understand this correctly? Is there a mechanism to do this?

Mr. Lang: No, I do not suggest existing mechanisms, but I do not suggest mechanisms without Parliamentary action.

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, I can see the Minister's point and I think I had his interpretation correct today when he did say that the government could come to the assistance of the industry. Perhaps I misrepresented the situation and said "corporation" can come to the assistance of the industry. Right now existing legislation enables this to happen through the prices support.

I think there should be some indication. I can see this kind of clause creating a kind of pessimism about the nature and future of the Corporation which might not be at all a reflection of the Corporation or its potential. This is what I feel; I have felt this all along. I have taken strong exception to the sub-clause. Why do we have to include it? If we do have to include it, can we not include in the same Clause some indication that the government can under certain conditions, without specifying these conditions, come to the assistance of the fishing industry, which

[Interpretation]

qu'il puisse faire certaines choses que, sans cela, il ne pourrait pas faire immédiatement, ainsi que pour remédier aux changements soudains de sa situation, mais on attend assurément que les prix soient fixés dès le début de façon que l'Office puisse parvenir à l'autonomie financière. C'est là l'objectif de l'opération. La garantie que donne le gouvernement de faire des prêts peut, bien sûr, jouer un rôle important là-dedans au cours des premières années, et suppose en fait qu'il n'y a pas de situation d'urgence. Il s'agit là de l'Office même. L'Office de commercialisation n'est pas prévu pour transférer des fonds du gouvernement aux pêcheurs, mais plutôt pour améliorer les conditions de l'industrie afin que les pêcheurs touchent une plus forte part de l'argent. C'est là la pensée que reflètent ces articles.

Le président: Monsieur Ritchie.

M. Ritchie: Si j'ai bien compris le ministre, le gouvernement peut donc, à bref délai, soutenir l'industrie de la pêche dans le cas, que l'on mentionnait tout à l'heure, où l'ensemble des ventes était mauvais. Le gouvernement peut-il intervenir rapidement et facilement sans que l'Office soit mis en cause? Est-ce que j'ai bien compris? Est-ce que quelque chose est prévu?

M. Lang: Non, rien n'est prévu actuellement, mais je ne propose pas que l'on prévoie quoi que ce soit sans intervention du Parlement.

Le président: Monsieur Lundrigan?

M. Lundrigan: Monsieur le président, je vois ce que veut dire le ministre, et j'avais bien interprété ses paroles d'aujourd'hui, lorsqu'il disait que le gouvernement pourrait venir en aide à l'industrie. Peut-être ai-je mal présenté la chose en disant que l'Office pourrait venir en aide à l'industrie. Même les lois qui existent à l'heure actuelle permettent cela, sous forme d'un soutien des prix.

Je crois que l'on devrait donner quelque indication de cela. Sinon un article comme celui-ci pourrait créer une atmosphère de pessimisme quant à la nature et à l'avenir de l'Office qui ne refléterait peut-être pas du tout la situation de l'Office ou ses possibilités futures. C'est le sentiment que j'ai eu depuis le début, et j'ai eu des réserves nettes quant à ce paragraphe de l'article. Pourquoi inclure ce paragraphe ici? Et, si c'est indispensable, ne pourrions-nous pas alors indiquer dans le même article que le gouvernement peut, dans certaines circonstances—sans mentionner ce

[Texte]

of course present legislation permits. What is the reason for its inclusion? If we do include it, why should we not stipulate that the government can do this? It still permits the government, if it deems it necessary, to come to the assistance of the industry.

Mr. Lang: It may not be included because it is unnecessary. The philosophy of the operation by the Board is what is set out in that section and not general in other governmental policy.

The Chairman: Mr. Murphy?

Mr. Murphy: Subclause (3) of Clause 15 says:

(3) The Corporation may make grants in lieu of taxes to any municipality in Canada . . .

Would the government consider changing that word "may" to "shall" so that there will be no doubt that the federal government will be paying its share of the municipal burdens?

Mr. Lang: This is, I think, the common approach. I do not think this distinguishes this Corporation from other Crown Corporations.

Mr. Murphy: I agree with the Minister on that, but do you not think it is time that we realized the plight that many of the municipalities are finding themselves in, and, rather than meeting this as a discretionary matter with the Corporation, make sure that it pays its way in a municipality.

Mr. Hogarth: The city of Winnipeg appreciates it.

Mr. Murphy: I am sure they would.

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, I was going to move an amendment to subclause (1). Clause 15 has not carried, has it?

The Chairman: No.

Mr. Lundrigan: So it is still in order?

The Chairman: The clause has not been carried.

Mr. Lundrigan: The amendment on subclause (1) of Clause 15 would be as follows, that the present subsection be changed to read: The Corporation shall endeavour to conduct its operations on a self-sustaining financial basis.

[Interprétation]

que sont ces circonstances—, venir en aide à l'industrie de la pêche, ce que, bien sûr, autorisent les lois actuelles. Pourquoi avoir inclus ce paragraphe? Et s'il le faut absolument, pourquoi alors ne pas stipuler que le gouvernement peut agir ainsi? Cela permet tout de même au gouvernement, s'il le juge à propos, de se porter au secours de l'industrie.

M. Lang: Nous ne l'incluons pas parce que cela n'est pas nécessaire. Les principes du fonctionnement de l'Office sont ceux qui sont posés dans cet article, et non ceux de la politique générale du Gouvernement.

Le président: Monsieur Murphy?

M. Murphy: On dit, au paragraphe (3) de l'article 15:

L'Office peut accorder, pour tenir lieu d'impôts, à toute municipalité au Canada des subventions. . .

Le gouvernement ne pourrait-il pas remplacer le mot «peut» par «doit» afin qu'il ne laisse aucun doute que le gouvernement paiera sa part de la charge municipale?

M. Lang: C'est ainsi que cela se fait d'ordinaire. C'est la même chose que pour les autres sociétés de la Couronne.

M. Murphy: Je suis d'accord avec le ministre sur ce point, mais n'est-il pas temps de se rendre compte que beaucoup de municipalités se trouvent dans une situation précaire, et plutôt que de laisser cela à la discrétion de l'Office, de s'assurer que ce dernier payât ses impôts à la municipalité.

M. Hogarth: La ville de Winnipeg en est heureuse.

M. Murphy: Je suis certain qu'elle le serait.

Le président: Monsieur Lundrigan?

M. Lundrigan: Monsieur le président, je voudrais proposer une modification au paragraphe (1) de l'article 15. L'article 15 n'est pas encore adopté, n'est-ce pas?

Le président: Non.

M. Lundrigan: Cela reste donc conforme au Règlement?

Le président: L'article n'a pas été adopté.

M. Lundrigan: La modification au paragraphe (1) de l'article 15 serait la suivante: que le paragraphe actuel soit remplacé par: «L'Office s'efforcera d'être financièrement autonome».

[Text]

The Chairman: Thank you Mr. Lundrigan. Mr. Hogarth?

Mr. Hogarth: Mr. Chairman, before the question is put, might I suggest to the hon. member who has moved that amendment and to the Minister that the members of this Committee have a chance to reflect on the meaning of the words:

... without appropriations therefor by Parliament.

I would suggest that the motion be tabled until such time as we have had an opportunity to look into that.

The Chairman: Is this agreeable?

Mr. Lundrigan: Do you mean Mr. Chairman that we do not vote on Clause 15...

Mr. Hogarth: We can vote on Clause 15 after we have had a chance to look into that.

The Chairman: You mean you are asking to have Clause 15 stood?

Mr. Hogarth: Yes, just stood until the next meeting or until later.

• 1535

Mr. Comeau: I wish to raise an objection to that, because if we do this now, then we will be doing it for every clause until we have consulted and consulted and we will never get things done in this Committee. We were appointed to this Committee to get this legislation through and I think that we should simply carry these clauses as they come along.

The Chairman: Yes, Mr. Osler.

Mr. Osler: I do not understand what the perplexity is all about. Perhaps it is because I am just naturally a little slow, but it seems to me that those who have thought of this bill have decided in their wisdom that an amount of approximately \$100,000 is needed to launch the scheme and that in the general course of events you may need a credit line of up to \$5 million backed by Parliament. If that turns out to be bad planning, like any other corporation they will have to replan. So they come back to Parliament and get an amendment. To loosen this thing up at the moment is giving this new Board a blank cheque that they may not need and it seems to me we have not got that kind of money to be floating blank cheques around.

If in their wisdom our experts think that the kind of money they have requested is enough money, it is the same as a private corporation coming and saying we can get

[Interpretation]

Le président: Merci, monsieur Lundrigan. Monsieur Hogarth?

M. Hogarth: Monsieur le président, avant que l'on ne pose la question relative à la modification proposée, pourrais-je proposer à l'honorable député qui en a fait la proposition, ainsi qu'au ministre, de donner aux membres du Comité le temps de réfléchir au sens des mots:

... et ne reçoit pas pour ses opérations de crédits affectés par le Parlement.

Je propose que l'on dépose la proposition jusqu'à ce que nous ayons eu l'occasion d'examiner cela.

Le président: Est-ce d'accord?

M. Lundrigan: Voulez-vous dire que nous ne votons pas sur l'article 15?

M. Hogarth: Nous pourrions voter sur l'article 15 après que nous aurons eu l'occasion de l'étudier.

Le président: Vous voudriez réserver l'article 15?

M. Hogarth: Oui, jusqu'à la prochaine réunion, sinon plus tard.

M. Comeau: Je veux m'opposer à cette pratique. Si nous l'adoptons, en effet, nous agirons ainsi pour chaque article, consultant sans cesse, et nous n'en finirons plus. Or, notre Comité a été institué pour en terminer avec cette loi. Nous devons donc adopter ces articles comme ils se présentent.

Le président: Monsieur Osler?

M. Osler: Je ne sais pas quel est le texte qui est difficile à comprendre ici. Les rédacteurs des projets de Loi, dans leur sagesse, ont décidé qu'il faudrait \$100,000 pour mettre l'opération en marche. Il faudra peut-être un crédit jusqu'à \$5 millions de dollars qui sera garanti par le Parlement. Est-ce que c'est là de la mauvaise planification? On reviendra alors devant le Parlement pour demander un amendement. Pour le moment nous donnons à l'Office un chèque en blanc dont il n'aura peut-être pas besoin.

Si, dans leur sagesse, nos spécialistes estiment que l'argent demandé est suffisant, c'est la même chose que s'il s'agissait d'une entreprise privée.

[Texte]

this thing going with so many thousand dollars or so many million dollars. They have to go back to the money market if they are wrong.

Mr. Lundrigan: Mr. Chairman, is my motion already accepted?

The Chairman: Accepted for debate.

Mr. Lundrigan: Yes. Is it now debatable?

The Chairman: It is debatable.

Mr. Lundrigan: Mr. Chairman, the reason I moved the amendment is that the Minister earlier today gave an indication that the reason for this particular subclause is purely to set some kind of goal for the Corporation, and I am in favour of this. The goal is that the Corporation will endeavour to conduct its operations on a self-sustaining basis, hopefully—and we all hope this—without any appropriations from Parliament for any time in the future. This is the aim. The Minister indicated on being questioned this morning that this was the purpose of the subclause, to set a standard, expectations if you wish, for the Corporation in question. To leave the subclause as it is right now would perhaps generate a certain pessimism. Someone indicated a finality to the whole thing, which is not necessary because all the subclause is aimed at doing is bringing about the expectations.

Consequently, to eliminate this generation of pessimism we could just indicate that the Corporation shall endeavour to conduct its operations, as the motion indicates, on a self-sustaining basis. This is the aim set for the Corporation.

The Chairman: Mr. McQuaid?

Mr. McQuaid: Mr. Chairman, I just wanted to ask the Minister a question. Do you think, Mr. Lang, this Committee has any jurisdiction to consider an amendment which affects the public purse, that is, the spending of government money. Does our jurisdiction extend that far?

Mr. Lang: Clearly no.

Mr. McQuaid: Would this amendment have that effect if it passed?

Mr. Lang: I do not think so. I should not be giving legal opinions on the meanings of these amendments. I think the amended form is more pessimistic than the existing form.

The Chairman: Mr. Osler?

Mr. Osler: That would be my comment, Mr. Chairman. I think that the kind of optimism

[Interprétation]

M. Lundrigan: Ma motion est-elle déjà acceptée?

Le président: Oui, pour la discussion.

M. Lundrigan: Oui. Peut-on discuter?

Le président: On peut discuter.

M. Lundrigan: La raison pour laquelle j'ai proposé cet amendement c'est que le ministre, aujourd'hui, nous a dit que la raison de ce paragraphe c'est tout simplement d'établir une sorte d'objectif pour l'Office.

J'approuve cette idée. L'Office cherchera autant que possible à s'établir sur une base rentable sans subvention du Parlement, c'est là l'objectif. Le ministre, quand on l'a interrogé, ce matin, vers 10 h. 30, a dit que c'était là le but de cet article, d'établir une norme. Si on laissait l'article tel qu'il est, cela pourrait engendrer un certain pessimisme, une certaine fidélité qui ne m'apparaît pas nécessaire, puisque tout ce qu'on veut c'est de définir les objectifs, par conséquent, pour supprimer cette incertitude et ce pessimisme, on pourrait dire simplement que l'Office cherchera à mener ses opérations sur une base rentable. C'est le but établi pour l'Office n'est-ce pas?

Le président: M. McQuaid.

M. McQuaid: Je voudrais poser une question au ministre. Croyez-vous que le Comité puisse considérer un amendement qui peut comporter la dépense d'argent public? Croyez-vous que notre compétence aille jusque-là?

M. Lang: Sûrement pas.

M. McQuaid: Est-ce que cet amendement aura cet effet s'il était adopté?

M. Lang: Je ne crois pas. Je ne devrais pas donner d'opinions juridiques ici, à l'égard d'un amendement. Je crois cependant que l'amendement est encore plus pessimiste que l'article.

Le président: Monsieur Osler?

M. Osler: Je crois, pour ma part, que l'optimisme que réclame mon honorable ami est de

[Text]

that our friend is asking us to generate is the kind of optimism that certainly my mail tells me we should not be generating. People want to see us using money wisely and not going wildly optimistic to the tune of spending it unwisely. The Minister has pointed out that if the industry needs financial assistance it can be done by other methods. This is purely a marketing device, and if that marketing device is going to cost more than \$100,000 with a \$5 million working capital, then I suggest it is going to be run inefficiently.

The Chairman: Mr. Rose?

• 1540

Mr. Rose: Mr. Chairman, I think that this will loosen it up somewhat. Perhaps in the long term effects it will not make much difference. My particular concern in regard to efficiency is how this is going to affect the individual fishermen. I can see the people who are the management part of this Board getting along just fine, really, no matter what condition the industry is in. Perhaps I am being a bit extravagant when I say this, but I am concerned about the fellow who is supposed to receive the money for his product when it finally trickles down to him. I do not believe this is a pessimistic move at all. It would open the door so that if it were necessary it would be possible for the Corporation to at least approach Parliament for some kind of assistance under whatever the conditions might be.

I feel in any discussion of a bill by committee that we should endeavour to not just perhaps underline what great wisdom is contained within the bill and therefore it cannot be altered in any way, but to discuss it together here to see if this perhaps would not be an improvement. I certainly do not like this business of being without appropriations for ever and ever. Here you are boys, we have set you up and you are finished.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, I believe the proposed amendment pretty well has the effect of destroying the clause altogether, if it means anything at the present time. It would not mean anything if we were to pass legislation telling this Corporation to try to not go into debt. In my opinion that does not add up to anything at all. If we are going to amend it this way we may as well scrap the subsection.

Mr. Noble: Mr. Chairman, approaching this as a businessman, I think this is merely a warning to the Corporation that they are on a self-sustaining basis. I do not think this is going to be any hazard to the fishermen because I feel if the fishing industry got to a point where the fishermen were going to

[Interpretation]

l'optimisme que l'on ne devrait pas favoriser si nous voulons. Il faut ici, se servir de cet argent à bon escient, non pas le gaspiller. Le ministre a déjà dit que si l'industrie a besoin d'assistance sur le plan financier, cela pourra se faire par d'autres moyens. Il s'agit ici simplement d'organisation des banques. Si cela coûte plus de \$100,000 sur un total de \$5 millions, c'est que l'organisation n'est pas efficace.

Le président: Monsieur Rose?

M. Rose: Peut-être qu'à long terme, cela ne fera pas une grande différence, mais ce qui me préoccupe ici, c'est de savoir comment cela aidera les pêcheurs en particulier? Je ne vois pas comment les fonctionnaires, ou les administrateurs de cet Office, pourront se tirer d'affaire très bien, quel que soit l'état de l'industrie. C'est peut-être de l'extravagance, mais je pense à celui qui est censé recevoir de l'argent pour son produit et qu'on lui distribue au compte-gouttes. Ce n'est pas, je crois, une idée pessimiste. Cela ouvrirait la porte de façon que, si c'était nécessaire, l'Office pourrait au moins demander au Parlement de l'assistance dans certaines conditions, quelles qu'elles soient.

J'estime que dans toute discussion d'un projet de loi, au Comité, nous devrions nous efforcer, non pas seulement de souligner la grande sagesse de ce projet de loi, mais en discuter ensemble, et se demander s'il n'y aurait pas moyen de l'améliorer. Je ne sais pas comment on pourra procéder sans crédit.

M. Smith (Northumberland-Miramichi): Monsieur le président, je crois que la modification va annuler toute la portée de l'article, si l'article veut dire quelque chose. Cela ne signifierait absolument rien, si on adoptait une loi disant à l'Office qu'il ne doit pas s'endetter. Cela ne me semble pas logique du tout. Si nous voulons modifier la loi de cette façon-là, il vaut mieux supprimer l'article.

M. Noble: Je songe à cela en homme d'affaires. Ceci n'est qu'un avertissement à l'Office qu'il ne doit pas s'endetter. Cela n'affectera pas le pêcheur parce qu'il me semble que l'industrie de la pêche est arrivée à un point tel que si les pêcheurs souffrent des conséquences économiques, ils recevront le

[Texte]

suffer, they would be taken care of by price support. As far as I am concerned I think this is a good clause and I go along with it.

Mr. Comeau: I also agree, I think this is a good clause. The Minister tells us he has great hopes for this Corporation. It should solve the problems of the freshwater fishing industry. They would be given a grant to start their operations, and if this Corporation does not work they would then come back to Parliament and we would use some other method to get them out of it, either scrap the Corporation or do something else. I go along with this clause.

The Chairman: I will put the question. The proposed amendment reads:

The Corporation shall endeavour to conduct its operations on a self-sustaining financial basis.

Mr. Lundrigan: I so move.

Motion negatived.

The Chairman: Shall Clause 15 carry?

Mr. Ritchie: The point was brought up a few minutes ago about making grants in lieu of taxes. The Corporation probably has quite a bit of property, particularly in villages, and so forth, and I would like to know about this. It says "may make grants". It does not seem as though it has to make grants. What formula does it arrive at and how is this taken care of?

Mr. Lang: I believe in the ordinary course this results in discussions between the municipal government and the appropriate Corporation about the equivalents to other taxes. That is my understanding of the situation. I do not think there has been any great objection to this in a general way across the country.

Mr. Ritchie: It is somewhat a bone of contention at various times. I just wondered how it was taken care of.

Mr. Lang: It used to be some years ago, before this kind of provision was included, in regard to some entities.

The Chairman: Shall Clause 15 carry? Mr. Osler.

• 1545

Mr. Osler: Is there a relationship between Clauses 15 (2) and 15 (4)? If so, could somebody explain it to me. Taxes are spoken about in both cases. Does subclause (4) mean that we will be paying provincial income taxes or we will not be paying them?

[Interprétation]

prix de soutien. Et il me semble que voici un excellent article; je l'appuie tout à fait.

M. Comeau: Je suis d'accord également. Je pense que l'article est excellent. Le ministre nous a exprimé des vues très optimistes quant à l'avenir de cet Office. Donc, il me semble qu'on devrait leur donner une subvention pour commencer leurs travaux et si la somme n'est pas suffisante, ils reviendront au Parlement en demander une autre. Utilisons cet Office ou utilisons un autre moyen.

Le président: Est-ce que je fais la mise au voix? La modification se lit comme suit:

L'Office s'efforcera d'atteindre à la rentabilité.

M. Lundrigan: J'en fais la proposition.

La proposition est rejetée.

Le président: L'article 15 est-il adopté?

M. Ritchie: Vous avez soulevé un point il y a quelques minutes au sujet des subventions en remplacement d'impôts. Si cet Office avait des propriétés dans les villages, il pourrait faire des subventions. Quelle est la formule qu'on adoptera?

M. Lang: Je crois qu'il y a des discussions entre la municipalité et l'Office au sujet des équivalents à d'autres impôts. Il me semble qu'il n'y a pas eu beaucoup d'opposition au pays, en général.

M. Ritchie: Je me demandais comment on s'en occupait.

M. Lang: Il y a quelques années, on s'en occupait d'une autre façon.

Le président: L'article 15 est-il adopté? Monsieur Osler.

M. Osler: Est-ce qu'il y a un rapport entre les articles 15(-2) et 15(-4)? Si oui, voulez-vous l'expliquer? Vous parlez d'impôt dans les deux cas. Le paragraphe 4, signifie-t-il que nous allons payer l'impôt sur le revenu provincial?

[Text]

Mr. Harvey: Mr. Chairman, "Provincial Taxes and Fees" are other than income tax. The Corporation would have to pay sales tax and assessments of that type under subclause (4). The Income Tax Act reference is specifically to income tax.

Clause 15 agreed to.

On Clause 16—Payment by Minister of Finance.

Mr. Lundrigan: Mr. Chairman, Mr. Harvey indicated today that it would cost between \$100,000 and \$200,000 per annum to administer the Corporation. Is this—

Mr. Harvey: Mr. Chairman, there is no relationship between the provision of \$100,000 for the initial start-up expenses to establish the Corporation and the annual operating costs, which are properly payable out of annual earnings.

Mr. Lundrigan: In other words, the \$100,000 would be considered sufficient to get the Corporation properly structured.

Mr. Harvey: Yes. Mr. Chairman, it was considered inappropriate to consider charging the initial start-up costs to the first year's earnings.

Mr. Lundrigan: Yes. The reason I asked the question, Mr. Chairman, was because of the fact that it would cost perhaps as much as \$200,000 per annum to administer. I was thinking, therefore, that perhaps it would cost in excess of \$100,000 to properly structure it. However, Mr. Harvey has indicated there is no relationship.

Mr. Comeau: Mr. Chairman, I have one further question on a point of information. Does the Corporation have to repay this amount? There is no provision for that?

Mr. Lang: No.

Mr. Comeau: This is an outright grant.

Mr. Lang: This is an initial grant.

Clause 16 agreed to.

On Clause 17—Minister of Finance may guarantee borrowing by and make loans to the Corporation.

Mr. Lundrigan: Mr. Chairman, I hate to be on the agenda again but on looking through the bill—and I have done this very carefully—I have to come to the same conclusion my hon. friend across the way did a few moments ago about the word "may". I raised this point

[Interpretation]

M. Harvey: Les taxes et droits provinciaux ne sont pas la même chose que l'impôt sur le revenu. L'Office devra payer les taxes de vente et autres, en vertu du paragraphe (4).

L'article 15 est adopté.

Article 16: Payment par le ministre des Finances.

M. Lundrigan: Aujourd'hui, M. Harvey a indiqué que cela coûterait entre \$100,000 et \$200,000 par an pour administrer l'Office.

M. Harvey: Il n'y a aucun rapport entre la somme de \$100,000 nécessaire à l'établissement de l'Office et les frais d'exploitation annuels que les revenus annuels peuvent rembourser.

M. Lundrigan: En d'autres termes, les \$100,000 suffisent alors pour établir l'Office.

M. Harvey: Oui, monsieur le président. On ne voulait pas défrayer le coût d'établissement de l'Office à même les gains de la première année.

M. Lundrigan: J'ai posé cette question parce qu'il me semblait que ça coûterait peut-être \$200,000 par an pour administrer l'Office. Mais il semble n'y avoir aucun rapport entre les deux; donc, c'est juste.

M. Comeau: Monsieur le président, est-ce que l'Office doit rembourser ces sommes?

M. Lang: Il n'y a aucune disposition qui prévoit le remboursement.

M. Comeau: Il s'agit d'une subvention directe.

M. Lang: C'est une subvention initiale.

L'article 16 est adopté.

Article 17: Le ministre des Finances peut garantir les emprunts faits par l'Office et lui consentir des prêts.

M. Lundrigan: Après avoir étudié la loi, je l'ai lue très soigneusement, j'en arrive aux mêmes conclusions que mon ami il y a quelques instants au sujet du mot «peut»

[Texte]

earlier today. Clause 19 reads "The Advisory Committee shall". Of course, this is part of the Corporation. It says in Clause 15 (4) "The Corporation shall". There are a number of places where the government "shall" do so and so. In Clause 17 (1) it says:

... the Governor in Council may authorize the Minister ...

and so on. If this is a commitment the government is making that it will guarantee the repayment of loans, I do not see why it cannot be indicated definitely. Subclauses (1) and (2) of Clause 17 guarantee the lending of funds up to \$5 million. Why can we not just say this exactly? In other words, why should we say "may" authorize? If this is tradition, if this is the way things are written, I am totally against it. I do not see why the Corporation should be committed to all sorts of things with the use of the word "shall", and when it comes to this kind of a commitment the government has a legal loophole, as far as I am concerned, to withhold this kind of a commitment. I think it should be changed. If the government is saying, "This is what we will do", then why can we not just say this and have it over with? This is a very clear-cut example of where there should not even be any debate on the topic.

Mr. Lang: I do not think there should be much debate. In the legal sense this is a matter of power rather than of duty, and therefore the Governor in Council is empowered to do this—hence the use of the word "may".

Mr. Hogarth: It may be that a great many loans are going to be made by this Corporation without the necessity of a guarantee. Surely there will be day-to-day loans from the local bank, et cetera. I do not see why all those should have to be guaranteed if the bank is prepared to deal with them without it. I take it these are for large capital loans. I do not think you can compel the government to guarantee it if the circumstances under which the money is being borrowed are not sound.

● 1550

Mr. Lundrigan: I think, Mr. Chairman, the disagreement is over whether this is a duty or a power. I think we should say it is a duty.

Mr. Hogarth: If the Corporation is going to make an unwise loan in the eyes of the Cabinet, then why in the world should the people of Canada have to guarantee it? I am not suggesting for a moment that situation would ever arise, but in the eyes of the Governor

[Interprétation]

J'ai soulevé la question plus tôt. On indique que:

19. (1) Le Comité consultatif doit se réunir

Il y a plusieurs endroits où on dit: le gouvernement devra; et ici nous voyons:

le gouverneur en conseil peut autoriser le ministre

Je ne vois pas pourquoi on ne peut pas l'indiquer de façon définitive. S'il s'agit d'un engagement, le gouvernement remboursera des prêts et garantira des emprunts ce qui fait un total de 5 millions, selon les paragraphes (1) et (2) de l'article 17. Pourquoi ne pas le dire, pourquoi dire: «peut autoriser»? S'il s'agit d'une tradition, je suis tout à fait opposé à cette tradition. Je ne sais pas pourquoi l'Office devrait être engagé à faire toute sorte de choses par l'expression «devra», tandis que le gouvernement n'est tenu qu'à l'expression «peut». S'il y a un engagement, le gouvernement doit dire: voici ce que nous faisons; pourquoi ne pas le dire très clairement? Il ne devrait même pas y avoir de débat à ce sujet-là.

M. Lang: Il ne devrait pas y avoir de débat; c'est une question de pouvoir plutôt que de devoir. Le gouverneur en conseil a ce pouvoir. C'est tout ce qu'on veut dire lorsqu'on dit: «peut nommer».

M. Hogarth: Cet Office fera énormément d'emprunts sans garantie. Il y a beaucoup d'emprunts de consentis par les banques. Je ne sais pas pourquoi tous ces emprunts doivent être garantis si le gérant de la banque veut bien faire ces emprunts sans garantie, si les circonstances n'exigent pas qu'il y ait une garantie.

M. Lundrigan: Le désaccord est plutôt au sujet de savoir s'il s'agit ici d'un devoir ou d'un pouvoir. Il me semble qu'il s'agit d'un devoir.

M. Hogarth: Mais si l'Office a fait un emprunt qui n'est pas sage du point de vue du cabinet, si l'emprunt n'est pas sage, pourquoi le peuple canadien garantirait-il cet emprunt. Je ne dis pas que ce serait le cas mais la question pourrait être soulevée. Il se

[Text]

in Council it might, under certain circumstances, be an unwise borrowing of \$500,000, \$2 million or \$3 million, and certainly the government should have some control over the borrowing of this Corporation. Surely that is where this control comes in. That is the way it appears to me, in any event. It is a matter of discretion.

Mr. Rose: I agree with the hon. member from New Westminster. It appears to me that it depends largely upon the quality of the loan and the kind of security. I think "may" is quite satisfactory here. I think subclause (2) would also support this position. It depends upon the total amount being borrowed and a number of other things of that kind. I do not see anything wrong with this.

Mr. Comeau: Mr. Chairman, I asked a question of the Minister a while back on this and I understood when we discussed Clause 15 that Parliament would not be authorized to make loans to this Corporation, and yet here it says:

... the Governor in Council may authorize the Minister of Finance...

(b) to make loans to the Corporation.

I do not understand this.

Mr. Lang: I think the later discussion made it clear that while the normal route would be to guarantee it, the power in Clause 17 is included for direct loans to the Corporation. You may remember that a question was raised whether Clause 7 was adequate to the receiving of those loans by the Corporation, and we are going to have the law officers check the interpretation of that. The intention of Clause 17 is that in certain circumstances the loans could be made directly out of government funds. I suppose, for instance, in circumstances where the loans which the Corporation could obtain were at such rates of interest that it was undesirable for the government to be guaranteeing them when it could lend the money directly itself at a more favourable rate.

Mr. Comeau: Therefore the government is authorized to make loans to the Corporation?

Mr. Lang: Yes.

The Chairman: Mr. Osler.

Mr. Osler: I wonder if the Minister would consider amending subclause (1) slightly? I will not suggest the words but my thought is that when you look at the terms under which the Board is appointed you will see they are all pretty well appointed on the same basis

[Interpretation]

pourrait que le gouverneur en conseil considère que l'emprunt de 1 million ou de $\frac{1}{2}$ million ne soit pas sage. Le gouvernement devrait pouvoir contrôler les pouvoirs d'emprunt de cet Office. Il me semble que c'est ici qu'on envisage les pouvoirs discrétionnaires.

M. Rose: Je suis d'accord avec le député de New Westminster; il me semble que tout dépend du genre de prêt et de garantie. Et je pense que le «peut» est tout à fait satisfaisant. Au paragraphe 2, on trouve un autre argument qui appuie mon point de vue. Je ne suis pas en désaccord avec cette façon de s'exprimer du tout.

M. Comeau: J'ai consulté le ministre il y a quelques mois à ce sujet, et j'ai compris, lors de l'étude de l'article 15, que le Parlement ne serait pas autorisé à prêter de l'argent à cet Office.

Mais ici je vois:

Le gouverneur en conseil peut autoriser...

b) à consentir des prêts à l'Office.

Je ne comprends pas cela.

M. Lang: Mais la discussion vient de démontrer qu'il peut y avoir des prêts directs à l'Office. Nos conseillers juridiques vont vérifier cette question-là. Donc, l'article 17 veut dire que les prêts peuvent être consentis directement à même les fonds gouvernementaux, dans les circonstances où l'Office considère que, peut-être, les taux d'intérêts ne justifient pas que le gouvernement les garantisse.

M. Comeau: Donc, le gouvernement est autorisé à consentir des prêts à l'Office?

M. Lang: Oui.

Le président: Monsieur Osler.

M. Osler: Je me demande si le ministre voudrait étudier la possibilité de modifier un peu le paragraphe (1). Je ne veux pas proposer le libellé, mais quand vous étudiez les nominations au Conseil, tous les membres sont nommés de la même façon. Il est difficile

[Texte]

and it is difficult for a board to stand up against a president, or vice versa, if there were to be an argument. I wonder if it would give this Board a certain amount of added responsibility if a phrase such as this were used: "on the recommendation of the Board the Minister is authorized to consider". In other words, you would have to have the problem thought out and agreed upon. Otherwise it could be a management decision. The president could telephone the Treasury Board and say, "I think we need a loan and I am having a tough time with it on my Board", but there is no indication how the government will act. The government does have to have a directive from the Corporation before it acts. Do you see what I am getting at?

Mr. Lang: Yes.

Mr. Hogarth: Are you suggesting that merely because the president recommends a \$2 million loan the corporation could find that it has borrowed the money from the government and the Board does not go along with it?

Mr. Lang: Mr. Chairman, perhaps the power of the board under clause 12 really covers the point and allows the board to make by-laws covering its general operation; so that it is, or is not, consulted on those matters, as it sees fit.

Mr. Osler: There is still no route clearly spelled out here. The Governor in Council may authorize, but who asks him to authorize and for what reasons? This is left completely in the air.

● 1555

Mr. Hogarth: It is a resolution of the Board.

Mr. Olson: I know; but it does not say so.

Mr. Hogarth: No; but the conduct of the business of the corporation is left up to the Board, and there could not be a borrowing without a resolution of the board.

Mr. Osler: I am a little nervous about that, as I said at the beginning.

Mr. Comeau: May I have some information on clause 17(2)(b) which reads:

(b) the amounts loaned by the Minister of Finance under this section shall not exceed five million dollars.

Does this mean at any particular time, or in whole?

Mr. Lang: Aggregate outstanding; so that it is...

[Interprétation]

pour un Conseil de s'opposer à la nomination d'un président ou d'un vice-président. Je me demande si on donnerait à ce Conseil un peu plus de pouvoir en ajoutant: «sur recommandation du Conseil, le ministre est autorisé à étudier...». Il vous faudrait une discussion préliminaire, parmi les directeurs, de toute question impliquant ces montants. Et il n'y a aucun indice ici de la décision du gouvernement. Voyez-vous ce que je cherchais à exprimer?

M. Lang: Oui.

M. Hogarth: C'est-à-dire qu'on recommande un prêt de 2 millions. L'Office a emprunté la somme au gouvernement et le Conseil des directeurs n'était pas d'accord.

M. Lang: Il me semble que les pouvoirs de l'Office, c'est l'article 12, lui permettent d'être consulté ou non, selon que la question l'intéresse ou non.

M. Osler: Mais il n'y a pas de pouvoir de défini ici quant au Trésor. «Le gouverneur en conseil peut autoriser», on dit. Mais qui leur demande d'autoriser? Il n'y a rien de spécifié là-dedans.

M. Hogarth: C'est une décision du Conseil?

M. Osler: Ce n'est pas spécifié.

M. Hogarth: C'est au conseil de décider. Et il ne pourrait pas y avoir un prêt de consenti à moins d'une décision prise en conseil.

M. Osler: Je ne faisais que poser la question. C'est tout.

M. Comeau: J'en reviens au sous-paragraphe (2) de l'article 17:

(b) Les montants prêtés par le ministre des Finances en vertu du présent article ne doivent pas dépasser cinq millions de dollars.

Est-ce que cela veut dire pendant une certaine période?

M. Lang: L'ensemble; c'est donc...

[Text]

Mr. Comeau: They cannot have more than five million of the total indebtedness guaranteed?

Mr. Hogarth: They might have a \$100,000 loan from the bank under subclause (3) of clause 7, and it would appear that the total indebtedness, guaranteed or not, is limited to \$5 million. Is that right?

An hon. Member: Yes.

Mr. Comeau: That is right.

Mr. Lang: I agree that that is true relative to the further guarantee by the corporation. Is that true if the corporation is borrowing without guarantee? I do not think there is a limit in those cases. In other words, you have the guarantee first and then further loans.

Mr. Harvey: Mr. Chairman, may I comment for a moment on this relationship? It is not really anticipated that the \$5 million ceiling would constitute any problem for the corporation. Over the years we have examined very carefully the amount of the peak inventory value of the industry. The figure of \$5 million was set, in careful consultation with the provinces, with that average peak figure in mind.

On the relationship of Clause 7 to Clause 17, I think our view was that if the guarantee of the Minister of Finance was available to the bank, the bank would not likely be ready to extend credit beyond that on which it had that nice comfortable guarantee.

Our expectation was that in all likelihood the \$5 million would, in any event, be an adequate total guarantee. I do not think that we have considered the need for flexibility and difference between guaranteed and non-guaranteed credit from banks.

Mr. Hogarth: As I read subclause (2) this corporation cannot be indebted over \$5 million.

Mr. Lang: I think that is right.

Mr. Osler: Unless the provinces put up the money.

The Chairman: May I say, gentlemen, that sudden interjections can create confusion in the recording of the Minutes. Please address the chair in the ordinary way.

Clause 17 agreed to.

On Clause 18—Appointment of Advisory Committee.

Mr. McQuaid: Having failed in our attempt to have the fishermen represented on the

[Interpretation]

M. Comeau: Il ne peut y avoir plus de cinq millions de dollars. Les dettes de garantie ne doivent pas dépasser cinq millions de dollars. Voilà ce que cela veut dire.

M. Hogarth: Ils recevraient peut-être un emprunt de \$100,000, en vertu du paragraphe (3) de l'article 7. Il semblerait que les dettes au total ne doivent pas dépasser cinq millions.

Une voix: Oui.

M. Comeau: Cela est vrai.

M. Lang: Est-ce que c'est vrai si l'Office emprunte sans garantie ou prête sans garantie?

M. Harvey: Un commentaire. On n'envisage pas que le plafond de 5 millions constitue un problème pour l'Office. Nous avons étudié très soigneusement quelles sont les valeurs à l'inventaire maximums dans l'industrie et nous avons un chiffre de 5 millions. Nous avons consulté les provinces et c'est là la moyenne. Quant au rapport, de 7 à 17, nous étions d'accord, je pense, que la garantie du ministre des Finances était disponible pour la banque. La banque ne prêterait pas de somme au-delà des sommes garanties par le ministre des Finances. Et les 5 millions représentaient les sommes garanties. Nous n'avons pas étudié la possibilité de prêt garanti et non garanti, avec marge de manœuvre entre ces possibilités.

M. Hogarth: De la façon dont je lis le paragraphe (2), l'Office ne peut pas s'endetter pour plus de 5 millions.

M. Lang: Je crois que c'est exact.

M. Osler: A moins que les provinces le finance.

Le président: Lorsque plusieurs députés interrompent à la fois, cela peut causer de la confusion. Peut-être que l'on pourrait procéder de la façon habituelle, c'est-à-dire à l'appel du président.

L'article 17 est adopté.

Article 18: Nomination d'un Comité consultatif.

M. McQuaid: Comme nous n'avons pas réussi à faire représenter des pêcheurs au

[Texte]

board of directors, and still being convinced of the necessity of having them represented somewhere on this board, I propose to move an amendment to clause 18.

In so doing I also want to try to ensure that the Governor in Council will appoint an advisory committee. As I said previously, I am convinced, Mr. Chairman, just as sure as we are sitting here, that this board is not going to function satisfactorily unless we have the producers on it. I now submit the following amendment: That subclause (1) of clause 18 be amended by striking out the word "may" in the first line thereof and substituting therefor the word "shall" and by adding thereto the following words after the word "Committee" in the last line thereof: "and not less than seven of whom shall be actively engaged in the freshwater fishing industry at the producer level".

● 1600

Amendment negated.

Mr. Lundrigan: Mr. Chairman, before we continue could we have some indication of how we can get fishermen on to the advisory committee?

It has been voted down and one member who indicated that he would support having representation at the producer's level on the advisory committee voted against it. Perhaps an exception is being taken to the number.

We are certainly not against having fishermen involved in the marketing corporation. Perhaps if we took a moment another amendment involving five such members might find acceptance.

I just cannot believe what we have done. There must be some reason, such as the number, for the exception which was taken.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, probably at the outset the number on the advisory committee would be small and gradually it possibly would grow to the full fifteen, or possibly not.

To insist at the outset that seven of them be actively engaged in fishing as a producer might be a little difficult to arrange. I believe that they should be on it, and I think they will be, but I doubt that you can tie it down to numbers at this time.

I am still a little concerned about what is meant by a person "actively engaged in the fishing industry at the producer level". Does it have to be a person who actually goes out to fish, or can it be a merchant who has a number of boats hired, or owns a number of boats and has other people fish them? It

[Interprétation]

conseil d'administration, étant convaincu qu'il est nécessaire qu'ils le soient quelque part au moins, je vais présenter un amendement à l'article 18. En même temps, je veux vous donner l'assurance, je veux être sûr que le gouverneur en conseil désignera en fait un Comité consultatif. Je suis convaincu que cet Office ne donnera pas de résultats satisfaisants à moins qu'il y ait des pêcheurs qui en fassent partie. Je vais donc proposer un amendement optant que le paragraphe 1) de l'article 18 soit amendé en supprimant le mot «peut» à la première ligne pour le remplacer par le mot «doit», et en ajoutant ce qui suit après le mot «consultatif», dernière ligne: «dont au moins sept se livrent activement à la pêche du poisson d'eau douce au niveau du producteur». A l'article 18, paragraphe 1).

L'amendement est rejeté.

M. Lundrigan: Est-ce qu'on pourrait nous donner une idée de la façon dont nous pourrions nous y prendre pour faire nommer des pêcheurs au Comité? La raison pour laquelle on a voté contre l'amendement, c'est que quelqu'un a déjà dit qu'il appuierait l'idée de pêcheur au niveau de la production au sein du Comité consultatif. Je me demande si c'est une question de nombre, si c'est au nombre qu'on s'oppose. Certainement personne n'est contre la nomination de pêcheurs au sein de ce Comité consultatif. Peut-être pourrions-nous y réfléchir un instant. Peut-être qu'un autre amendement pourrait être présenté dans le même sens. Il doit certainement y avoir une raison pour laquelle on s'est opposé à cet amendement.

M. Smith (Northumberland-Miramichi): Probablement au début, le nombre serait petit. Peut-être qu'il y aurait 15, peut-être que non. S'il n'y a que 7 au début, et on insiste que 7 soient activement engagés dans l'industrie de la pêche au niveau des producteurs, c'est difficile de trouver des membres de cette catégorie-là. Je crois qu'il y aurait certainement des producteurs qui seront membres, mais je ne veux pas que vous puissiez adopter une modification de ce genre-là à ce moment-ci.

Je m'inquiète encore un peu au sujet de ce que vous voulez dire: par une personne engagée activement au niveau de la production, est-ce que vous voulez dire une personne qui s'occupe de faire de la pêche ou est-ce le marchand qui a loué un nombre de bateaux, qui est propriétaire d'un nombre de bateaux

[Text]

might be a little difficult to determine just what exactly is meant by "actively engaged at the producer level". Perhaps that is no problem at all, but I do not know just precisely what it means.

Mr. Osler: In my opinion the two latter observations were very good ones. I hope that it will be the intent of the government to have producer representation, and there would be no harm in having that confirmed.

I do not like the idea of qualifying the numbers, because I foresee regional differences. You are dealing with a rather big and diversified region, and it seems to me that my own area in Manitoba is probably the predominant influence in it at the moment.

• 1605

You will have to be rather careful how you set this thing up regionally, or you are going to be swamped by the stronger area. Therefore, I am against numbers being quoted. I would, however, like to have, as a definition of the person we are seeking, something more satisfactory than somebody "actively engaged in..." and—so on. This is, however, an area that can be worked on. I think everybody is interested in having active fishermen represented somewhere.

Mr. Rose: Just to follow up Mr. Osler's statement, I certainly hope that the government, whether it specifies the number or not, does intend, to include those who are at the grass roots of the fishing industry. Do I understand that this is, or is not, the intention? May I ask the Minister, please?

Mr. Lang: Yes, Mr. Chairman. Probably one of the best reasons for not having passed the amendment is that we are fully on the record—fully on the record in the House a number of times—as indicating the intention of having on the advisory committee adequate representation from the fishermen's groups.

The only problem with a specific number is that it makes flexibility difficult when no one is sure at this moment how many persons should be appointed to the Board in the first instance.

However, the intention of Mr. Lundrigan's motion is certainly a firm part of our intention, that there be adequate representation of fishermen on this advisory board.

Mr. Rose: I am glad we have the Minister's commitment on that at this meeting, because it really does concern me. We see in our universities and in many other areas of our

[Interpretation]

de pêche? C'est assez difficile de définir ce que vous voulez dire par cette expression-là: «engagés activement au niveau de la production». Peut-être que cela ne représente pas un problème, mais je ne sais pas au juste ce que vous voulez dire par cela.

M. Osler: Monsieur le président, les deux observations qui ont précédé les miennes sont fort pertinentes. Je suppose que le gouvernement entend faire représenter les producteurs au sein de l'Office. Je crois qu'on n'y perdrait rien à insérer cela dans la loi; peut-être pas indiquer un nombre exact parce qu'il faut tenir compte de différences régionales et qu'il faut tenir compte aussi de la diversité. Au Manitoba, par exemple, l'influence prédominante est de nature régionale.

Il faut prendre toutes les précautions nécessaires. Je ne voudrais pas qu'on indique un chiffre en particulier, mais on pourrait peut-être définir la personne qu'on veut faire nommer, le genre de personne qu'on veut faire nommer, c'est-à-dire définir les mots «engagés activement à la pêche du poisson d'eau douce». Certainement que nous pourrions nous arrêter sur ce point. Tout le monde veut, j'en suis sûr, que des pêcheurs soient représentés d'une façon ou d'une autre.

M. Rose: A la suite de ce que vient de dire M. Osler, j'espère que le gouvernement se propose, que le chiffre soit mentionné ou non, d'inclure des gens qui sont des pêcheurs authentiques. Est-ce que c'est l'intention du gouvernement oui ou non? Puis-je le demander au ministre?

M. Lang: Oui, monsieur le président, probablement que c'est la meilleure raison pour laquelle nous n'avons pas accepté l'amendement. C'est que, pour ma part, par exemple, j'ai dit plusieurs fois que nous nous proposons de désigner des pêcheurs pour faire partie de cet organisme. La seule difficulté, c'est que si nous établissons un nombre fixe, l'article pourra manquer de souplesse. Et l'intention de la motion de M. Lundrigan coïncide avec nos intentions de désigner des pêcheurs pour faire partie.

M. Rose: Je suis heureux que le ministre nous fasse cette promesse. Dans les universités, beaucoup ailleurs aussi dans la société, on se préoccupe des décisions qu'on prend, et il

[Texte]

society extreme concern about decision-making and participation therein. If this cooperation is going to work and serve the people whom it is set up to serve it appears to me that they will have to have a strong voice on it. I certainly hope it is the government's intention, regardless of any quibbling on numbers, to have adequate representation from those whom it is designed to serve.

My main concern is that it may be loaded with persons with an ancillary or peripheral interest in the business.

I am very satisfied with the commitment made by the Minister, and I hope that when the appointments are made these people will be represented in reasonable numbers, and not just a token number as in the case of the one or two negroes in the big TV shows—just to be there.

Mr. Breau: Mr. Chairman, may I point out, in answer to Mr. Lundrigan's statement, that there is nothing in that clause to prevent representatives of the producers being on the committee. We have the Minister's commitment—the government's commitment—that the government will appoint the members of the advisory committee, therefore Mr. Lundrigan's question has been answered.

Mr. McQuaid: Mr. Chairman, I am quite prepared to accept the Minister's assurance today that the fishermen will be represented on the board, but the problem is that the present Minister probably will not always be the Minister. To make sure that these men are on the board I would like to see it written into the legislation. Now, I appreciate too the objection raised by one of the hon. members of the Committee that we do not know at the moment how many may be designated as members of the Advisory Committee. The Clause does say not more than 15 and I realize now that it is rather unfair to ask that not less than 7 be appointed.

Therefore if I may, Mr. Chairman, I would like to move an amendment to my own motion and change that to: "of whom one-third shall be holders of valid commercial fishing licences."

The Chairman: Mr. McQuaid, the amendment has been defeated.

Mr. McQuaid: Oh yes, well then I will move a new amendment. My amendment now is that subclause (1) of Clause 18 be amended by striking out the word "may" in the first line thereof, substituting the word "shall" and adding after the word "Committee" in the last line thereof the following words: "Of whom

[Interprétation]

faut que chacun des secteurs ait sa voix au chapitre. Pour ce qui est du nombre, nous pouvons laisser faire, mais nous voulons, ce qui me préoccupe surtout, c'est que les pêcheurs soient représentés et que l'Office ne se compose pas exclusivement de gens qui n'ont qu'un intérêt accessoire pour l'industrie de la pêche. Et c'est ce qui m'inquiète le plus.

Je serais très satisfait de cette promesse ou de cet engagement du ministre. Et j'espère qu'il y en aura un nombre suffisant et non pas un nombre symbolique comme, par exemple, aux États-Unis, quand on accepte un ou deux Noirs pour une très grande émission de télévision. Cela n'est pas suffisant.

M. Breau: En réponse à la déclaration de M. Lundrigan il n'y a rien dans cet article qui empêche des représentants des producteurs de faire partie du Comité. Nous avons l'engagement du ministre et du gouvernement. C'est le gouvernement qui désignera les membres du comité consultatif. Je crois donc que l'amendement n'a pas sa raison d'être.

M. McQuaid: Je suis prêt à accepter les assurances du ministre pour aujourd'hui, à savoir que les pêcheurs seront représentés. Mais le problème c'est que le ministre actuel ne sera pas toujours ministre, et pour être sûr qu'il y ait des pêcheurs, je voudrais que cela se trouve dans la Loi. Je comprends l'objection à savoir que nous ne savons pas combien de membres, combien le comité consultatif aura de membres. On dit pas plus que 15. Je me rends compte qu'il serait injuste de demander que pas moins de 7 pêcheurs soient désignés.

Par conséquent, si vous me le permettez, je voudrais proposer un amendement à ma propre proposition. À savoir, qu'un tiers doivent être des pêcheurs authentiques.

Le président: Votre amendement a déjà été défait.

M. McQuaid: Par conséquent je vais présenter un amendement que le paragraphe 1 de l'article 18 soit modifié en supprimant le mot «peut» première ligne, pour le remplacer par le mot «doit» et en ajoutant à la fin de l'article après les mots
comité consultatif
dernière ligne

[Text]

one-third shall be holders of valid commercial fishing licences."

• 1610

Mr. Chairman, I think this may take care of the objection raised by the hon. member that he is not quite sure who may be appointed. I would be very definitely opposed to seeing men classified as fishermen who are not actually fishermen. My aim is to get fishermen represented on this Board in some way and have some definite assurance written into the law that they will be there. I am not doubting the word of the Minister that they will be, but I think as a precautionary measure it should be written right into the Bill today.

The Chairman: Before I put the motion Mr. Noble has indicated he would like to speak.

Mr. Noble: Mr. Chairman, I would like to speak in support of this amendment and I believe there is a very good example; possibly some of the members from British Columbia are familiar with this. In Vancouver they have an auction company that sells furs for the fur breeders of that province and for the rest of Canada, and on this Board they have quite a number of producers. A very good job is being done for these people and I do not see why the same could not be done for the fishermen.

Mr. Murphy: Speaking to the amendment, Mr. Chairman, I can appreciate the problem but I do not think the amendment necessarily is going to solve the problem that has been raised of requiring one-third of the members of the Advisory Committee to be holders of valid fishing licences, or whatever phrase was used. This would not necessarily stop the government from putting anyone it wants on the Committee, whether in the fishing industry or not. I could go out and get a fishing licence and that would qualify me to sit on this Advisory Committee if the amendment carried.

Mr. Ritchie: You cannot get one.

Mr. Murphy: Well, I happen to come from the part of the country that is covered by this particular Act and I do not know why I could not get one.

Mr. McQuaid: "Fisherman" is defined in the Act. It can be found in Clause 20(b).

Mr. Murphy: That is the only comment I have to make on the amendment.

[Interpretation]

«dont le tiers détiendront des permis de pêche valables».

Je crois que cela va démolir l'objection de mon collègue. Je m'opposerais nettement à ce qu'on qualifie de pêcheurs des hommes qui ne sont pas des pêcheurs authentiques. Et, ce sont les pêcheurs à mon avis qui doivent être représentés. Je voudrais que cette assurance figure dans la loi. Ce n'est pas que je mette en doute la parole du ministre, mais à titre de précaution je crois qu'il faudrait bien dire cela dans la Loi.

Le président: Monsieur Noble.

M. Noble: J'aimerais appuyer l'amendement. Je crois que nous en avons un bon exemple et certains députés de la Colombie-Britannique sont au courant, j'en suis sûr. A Vancouver il y a une compagnie de vente à la criée qui est établie dans cette province mais qui fait affaire partout au Canada et dans le Conseil d'administration il y a plusieurs producteurs. Je ne vois pas pourquoi on ne ferait pas la même chose pour les pêcheurs.

M. Murphy: A propos de l'amendement, monsieur le président, je me rends compte du problème. Je ne crois pas que l'amendement soit nécessairement la solution. En exigeant qu'un tiers des membres du comité consultatif détienne des permis valides de pêche ou quels que soient les mots qu'on a utilisés, peu importe, cela n'empêchera pas forcément le gouvernement de désigner quelqu'un qui représente ou non l'industrie de la pêche. Je puis moi-même obtenir un permis de pêche et faire partie de ce comité consultatif.

M. Ritchie: C'est impossible.

M. Murphy: Je fais partie du pays visé par cet article et je ne vois pas pourquoi cela me serait impossible.

M. McQuaid: Je peux moi-même être désigné pour faire partie de ce comité. Par le paragraphe 2, de l'article 20.

M. Murphy: C'est la seule observation que j'ai à faire sur l'amendement.

[Texte]

Mr. Comeau: Mr. Chairman, I too would like to support this. I have supported it before and I think we do need someone who has direct knowledge of the fishing industry on this Advisory Committee. I know this amendment is going to be defeated and that is why I have raised objections to the Committee system in the first place.

All amendments that are going to be brought forward will be defeated, even though some time ago we had a member who stated he would support this as far as the Advisory Committee is concerned, because the members of this Committee do not want to take the responsibility.

They do not want to pass the motion right away; they want to consult the Minister, and so on. I know it will be defeated, but again I support this and I think we should really consider this and do what our consciences tells us to do to do the job right. We should not worry whether we are going to go against the government or not.

This is a Committee that is supposed to decide things of this nature and I strongly support this. The reason I do is that the Minister tells us he wants to have representation from the fishing industry and if he wants this representation I cannot see why we should object to specifying that to make sure we do get representation on this Advisory Committee.

Mr. Breau: Mr. Chairman, I do not agree with Mr. Comeau. First of all, we just happen to believe that the definition in the amendment of the person they want there is not clear. It could be the president of a company who owns three or four big boats and he could call himself the holder of the licences, but he would not necessarily represent the fishermen.

• 1615

We have the commitment of the government that they want representatives of the fishing industry, producers or fishermen, on the Advisory Committee and I do not see where there is anything in there that prevents the government from naming fishermen or producers or whatever you want to call them.

Therefore, I do not think the amendment means anything really, because it does not define what they do want. Why would the government put someone on this Committee who does not know anything about the fishing industry? It is an Advisory Committee to a Fish Marketing board and I oppose the

[Interprétation]

M. Comeau: Monsieur le président, je voudrais aussi appuyer cette proposition, je l'ai d'ailleurs déjà fait. Nous avons vraiment besoin de quelqu'un qui connaisse directement l'industrie de la pêche et qui fasse partie de ce comité consultatif. Je n'ignore pas que cet amendement va être battu. C'est pourquoi je me suis opposé à l'origine au système de comité.

Toutes les propositions ou amendements proposés ici vont être battus, même si un député du gouvernement dit qu'il l'appuierait, parce que les membres du Comité ne veulent pas prendre leurs responsabilités.

Ils aiment consulter les ministres, etc. Je sais que la proposition à l'amendement va être battue. Mais j'appuie néanmoins la motion une fois de plus. Nous devrions obéir à notre conscience. Peu importe que cela puisse blesser les susceptibilités du gouvernement ou pas. Après tout, c'est notre comité qui est compétent pour décider de questions comme celle-ci.

J'appuie très volontiers cette proposition pour une raison en particulier, parce que le ministre nous dit qu'il veut que l'industrie de la pêche soit représentée. S'il le désire, je ne vois pas pourquoi nous devrions nous y opposer. Nous devrions nous assurer que l'industrie de la pêche soit représentée au sein du comité consultatif.

M. Breau: Je ne suis pas de l'avis de M. Comeau. Il se trouve que la définition dans l'amendement de la personne voulue n'est pas claire. Ce pourrait être le président d'une compagnie propriétaire de trois ou quatre bateaux, il pourrait s'intituler titulaire du permis, il ne représenterait pas pour autant les pêcheurs. Nous avons l'engagement du gouvernement.

Le gouvernement s'est engagé à faire représenter les pêcheurs au comité consultatif. Il n'y a rien qui empêche le gouvernement d'y nommer des pêcheurs ou des producteurs, ou ce que vous voudrez. L'amendement ne veut pas dire grand chose, car on ne définit pas ce qu'on désire. Pourquoi est-ce que le gouvernement désignerait ici quelqu'un qui ne représente pas les intérêts du pêcheur? C'est pourquoi je m'oppose à l'amendement.

[Text]

amendment because it does not define that you should have fishermen.

Mr. Lundrigan: Mr. Chairman, this is a very important amendment, more important even than the principle involved in the amendment, and I think this was touched on by Mr. Comeau a few minutes ago. I have every confidence that the Governor in Council will appoint proper persons. If we suggest or state that the Governor in Council shall appoint representatives of the fishermen, the fishermen themselves if you want it defined by Mr. MacQuaid's motion, or by Clause 20 of the Bill itself, regardless of what we say, we are saying that there shall be fishermen on this Board. This is all we are saying.

I have every confidence that the Governor in Council will not appoint people—if they are the so-called merchants that the hon. member mentioned—who have no connection with the industry other than by holding a licence. I do not think this will happen. I am supporting the fact that there ought to be written into this Bill some clear indication that we will have some of the people so affected involved in the decision-making process of this Corporation. This is my only reason for supporting it and I think it is a good amendment.

My second observation, Mr. Chairman, is this: Earlier on, about half an hour ago, we saw evidence of some of my colleagues disagreeing with one of my amendments. I thought that was a commendable indication of the fact that we in Committee have to do this, because they are going to be much more important. We have to rise above this business of nit-picking every time some little amendment comes up.

I am going to make a strong statement on this because I think we have to face the facts. I could take exception to Clause 18 because it does not have a bracket. It is discriminated against. You know, you can get to a point where a Committee just cannot function and we have to be able to look at this and say: "Is this going to be a good thing; is it going to be a bad thing, or what?" and make our own decisions. If we cannot do this I might as well forget about it. If I am going to sit all day long and know that every time I speak my colleagues are going to support me, or every time I speak members of the government are going to be against me, then I might as well leave. I am wasting my time. I have a lot of important work to do and I might as well go out and help the fishermen in Western Canada improve their own lot and then get out of there.

[Interpretation]

M. Lundrigan: C'est un amendement très important qui va bien au-delà du principe qui est incorporé. Je voudrais faire écho à ce que disait M. Comeau, il y a un instant. Je suis sûr que le gouverneur en conseil nommera des représentants valables. Des pêcheurs tels que définis par M. McQuaid dans sa motion ou aux termes de l'article 20 du projet de loi lui-même. Ce que nous retrouvons à dire c'est que le comité consultatif devrait comprendre des pêcheurs.

Je suis persuadé que le gouverneur en conseil ne nommera pas des gens—marchands ou autres—qui ne soient liés à l'industrie de la pêche que par la possession d'un permis. Je suis persuadé que cela ne va pas se produire. Néanmoins, je pense qu'on devrait écrire ici dans la Loi quelque chose de bien précis. Nous devrions bien préciser que la société ou corporation en cause comprendra des représentants des pêcheurs mêmes. C'est pourquoi l'amendement me paraît bon.

D'autre part, il y a quelques instants, une demi-heure à peine, mes collègues n'ont pas pu appuyer une de mes motions, n'ont pas pu appuyer mon amendement. C'est une bonne idée. Nous devrions éviter de nous perdre dans de tout petits détails à chaque petit amendement. Qu'on propose des amendements ici, par exemple, moi je pourrais m'opposer à l'article 18 mais si nous nous opposons à tout, le régime des comités ne pourra jamais fonctionner.

Nous devrions regarder en face le problème, en disant: «ceci est bon» «ceci est mauvais» et en venir à nos propres décisions. Si je vais rester ici toute la journée en sachant que mes collègues vont m'appuyer chaque fois que je parle ou chaque fois que j'ouvre la bouche, ou si je sais que tous les membres du gouvernement vont s'opposer à moi, autant ne pas rester ici. J'ai du travail à faire. Et du travail utile.

[Texte]

I am in agreement with a couple of members who have spoken; they are supporting the amendment, I hope, and there are other members whom I accuse of nit-picking and this is going to affect the natural operation of this Committee. This is why I think it is more important for the principle that is at stake here than just the amendment itself.

Mr. Comeau: May I ask a question, Mr. Chairman? Would the Minister or the members of the government entertain any type of motion along these lines?

Mr. Lang: Mr. Chairman, it seems difficult, having stated the principle we intend that there should be fishermen representation on this Board, that we are not willing to accept this particular form of words that spell this out. However, there are a number of difficulties with the amendment as it stands.

I think first of all the word "shall" may well be traditionally inappropriate in relation to the Governor General, but that is a rather small point. Second, as it was worded it would be terribly limiting upon the government. The amendment says one-third shall be. I would hope that in some circumstances it might be one-half. As the amendment is worded I do not think we could do that.

Third, there is another very fundamental matter which perhaps hon. members have not thought about and I do not think these points are nit-picking. To designate certain persons as representing a certain interest is apt to produce the wrong atmosphere and attitude on the Board. I would not really want to see six people coming there and saying: "I am the fishermen's representative and those guys are for someone else." I think that is the wrong approach. The men who are on the Board are to advise the industry as a whole, not to be representative of a particular interest, but to have a background that makes some good representatives on the Advisory Committee. I think that is a matter of general issue.

Mr. McQuaid: Mr. Chairman, may I ask the Minister whether, if we withdrew this motion, he would consider going back to the legal advisers of his Department and ask them to frame an amendment which will guarantee to the fishermen, to those who are actively engaged in the industry—out of the boats—that they will be represented on this Board? Would he ask the law officers of the Crown to prepare an appropriate amendment that would guarantee this?

[Interprétation]

J'espère que les deux députés qui viennent de parler vont appuyer l'amendement. Or, il y en a d'autres ici, d'autres membres du comité, qui se perdent dans de tout petits détails, dans de petites critiques mesquines. Le principe est beaucoup plus important, en fait, que le contenu de l'amendement lui-même.

M. Comeau: Est-ce que le gouvernement pourra recevoir une motion de ce genre?

M. Lang: Monsieur le président, nous avons dit que selon nous les pêcheurs devraient être représentés ici. Mais nous ne pouvons pas accepter l'amendement tel qu'il a été proposé, et cela pour plusieurs raisons.

L'amendement tel qu'il est conçu imposerait des restrictions très sévères au gouvernement. On a parlé d'un tiers. Or dans de telles circonstances nous préférerions que ce soit la moitié.

Troisièmement, il est une autre question très fondamentale à laquelle on n'a peut-être pas réfléchi. Ce ne sont pas des petites critiques mesquines. Vouloir que certaines personnes représentent certains petits intérêts risque de provoquer au sein de ce comité consultatif une ambiance désagréable. Je ne voudrais pas que l'on vienne dire: «Je suis le représentant du pêcheur et les autres représentent d'autres intérêts». Les membres de ce groupement consultatif sont là pour conseiller l'industrie dans son ensemble et ne sont pas représentants des industries en particulier. Tout ce dont on se soucie c'est de varier les origines des membres pour que toute l'industrie soit représentée.

M. McQuaid: Mais si nous retirions notre motion, est-ce que l'honorable ministre pourrait retourner auprès des conseillers juridiques du ministère pour qu'ils rédigent un amendement qui soit propre à satisfaire les pêcheurs?

[Text]

● 1620

Mr. Lang: How would I get over the last difficulty I referred to?

Mr. McQuaid: Which one is that?

Mr. Lang: That they then would come to the Board as representatives of an interest against other people who represent other interests?

Mr. McQuaid: They would be there. There is only going to be a limited number of them and they are going to be actually representing those who are going to be most affected by this whole Act. When you boil it down, it is the fishermen that are going to be most affected by this. Now, surely the fishermen have a right to have some say in the operation of this Board.

This is my only argument. I do not think this Board should be controlled by packers or financiers or anyone like that. I think the fishermen themselves, who are the ones most directly affected, should have some say in the operation of this proposed Board. All I would ask is that we stand this Clause and that the law officers of the Crown be requested to submit an amendment that might take care of this particular situation.

Mr. Hogarth: I would like to ask the Minister a question. In dealing with the licensing of freshwater fishermen, are the freshwater fishermen not licensed by the provinces?

Mr. Lang: That is right. The licence referred to presumably would be the provincial licence; that is the licence referred to elsewhere in the Bill.

Mr. Hogarth: Presumably also the licences could be corporate licences?

Mr. Lang: Conceivably they could be. Obviously this would depend on the provincial law. I am not sure.

Mr. Hogarth: Also, one province might adopt a system of licensing boats as opposed to licensing fishermen.

Mr. Lang: I beg your pardon?

Mr. Hogarth: One province might adopt a system of licensing boats as opposed to licensing fishermen?

[Interpretation]

M. Lang: Comment moi, est-ce que je pourrais me débarrasser de la dernière difficulté dont j'ai parlé?

M. McQuaid: Quelle est-elle?

M. Lang: Ils pourraient représenter au Conseil un groupement, face à des représentants d'autres groupements.

M. McQuaid: Ils ne sont pas très nombreux, et ils seraient les représentants des gens qui vont être touchés de plus près par cette loi. Après tout, c'est le pêcheur qui va être touché par la Loi. Après tout le pêcheur a droit d'avoir un mot à dire dans le fonctionnement de ce Conseil, n'est-ce-pas? C'est toute ma thèse. Je ne pense pas que ce Conseil doive être dominé par les préparateurs, les financiers, etc. Je pense que le pêcheur, étant essentiellement en cause, doit avoir un mot à dire dans le fonctionnement de ce Conseil.

Tout ce que je demande donc, c'est que les conseillers juridiques de la Couronne soient priés de rédiger un amendement qui pourrait faire disparaître la difficulté dont j'ai parlé. Nous pourrions réserver, me semble-t-il, cet article.

M. Hogarth: Est-ce que je pourrais poser une question au ministre? En ce qui concerne la délivrance de permis aux pêcheurs en eau douce, est-ce que ces pêcheurs ne sont pas titulaires de permis délivrés par les provinces?

M. Lang: Si. Le permis dont il est question ici est un permis émis par une province.

M. Hogarth: Ces permis pourraient être des permis émis à des groupements?

M. Lang: Des groupements aux termes des lois provinciales, n'est-ce-pas? Je ne sais pas.

M. Hogarth: Une province, par exemple, pourrait délivrer des permis à des bateaux au lieu qu'à des pêcheurs.

M. Lang: Pardon?

M. Hogarth: Par exemple une province pourrait délivrer des permis au titre du bateau, et non au titre du Pêcheur?

[Texte]

Mr. Lang: Mr. Harvey tells me this is not the present practice.

Mr. Hogarh: I appreciate that, but it could be done that way, so it would appear to me that you could end up with situations with large corporate interests on the Advisory Board—a company producing so many tons of fish a year should certainly be on the Advisory Board—and you could end up with a system where one province had no representation at all because it chose to license boats.

It would appear to me that this Board, as you suggested obliquely, might come to serve special or regional interests. I think everyone here agrees—and certainly the Minister has made the point—that fishermen have to be on this Board, but I think it should be in the widest discretion of the government who those fishermen might be and whether they should be corporate representations, bearing in mind the whole situation.

I suggest that this will probably become law in the near future and this Parliament theoretically is going to be here for four years, so let us wait and see how the Corporation starts out. If there are complaints from the fishermen that they are not being represented on this Board, then let us bring it back to the Minister and see whether we cannot get appropriate changes. I do not think we should hog-tie the government at this time in the matter of who shall form the membership of this Board.

Mr. Ritchie: I would like to ask the Minister a question. So far as I can see—and perhaps I am not right in this—either on the Corporation Board or the Advisory Committee is the only place where representatives of the producing industry can meet with the members of the Board. Now, if they are not there, and they do not have to be if this is passed the way it is, surely something would have to be set up.

After all, the whole industry is now going to become largely civil servants—the whole industry—so that each fisherman is dealing with a government as an individual. Almost certainly he will want to band himself with others to deal with this body. I do not see what objection there can be to designating that some members of the Board be in the producing end of it, or does the Minister envisage any other form of arrangement whereby fishermen can make their views known to the Board?

[Interprétation]

M. Lang: Ce n'est pas le cas actuellement, me dit-on.

M. Hogarh: Sans doute. Mais, on pourrait procéder de cette façon, n'est-ce-pas? Il me semble donc que là où de grandes sociétés seraient représentées au sein du comité consultatif, si vous disiez par exemple que cette société produisant 2 tonnes de poissons par année devrait être représentée au conseil consultatif. En somme donc, une province pourrait se trouver privée de représentants parce qu'elle délivre des permis à des bateaux de pêche plutôt qu'à des sociétés.

En somme ce Conseil pourrait en venir à servir des intérêts particuliers. Mettons des intérêts régionaux. Tout le monde ici convient, et je crois que le ministre nous l'a fait clairement entendre, que le pêcheur doit être représenté au sein de ce conseil. C'est le moment, je pense, que le gouvernement doit être investi ici de grands pouvoirs quant à la définition du «pêcheur». Il s'agit peut-être de faire représenter au sein du conseil consultatif des collectivités de pêcheurs, par exemple, des groupes.

Théoriquement, la législature va durer 4 ans. On pourrait peut-être attendre pour voir comment marcherait cette corporation. Si les choses ne marchent pas bien, nous pourrions de nouveau en saisir le ministre et puis changer la loi s'il le faut. Mais nous ne devrions, je pense, imposer aucune restriction trop sévère au gouvernement, en ce moment, quant à la composition de ce conseil consultatif.

M. Ritchie: Autant que je puisse voir, je ne suis peut-être pas très malin, mais enfin autant que je puisse voir, les seuls endroits où les représentants de l'industrie peuvent se rencontrer avec la corporation, le seul endroit, c'est, me semble-t-il, le conseil consultatif. S'il n'y a aucune garantie en ce sens, il faudra peut-être la prévoir.

Somme toute, l'industrie va être soumise à des bureaucrates. Chaque pêcheur à titre habituel individuel aura à traiter avec l'État. Il y aura donc avantage pour les pêcheurs à se grouper pour y traiter d'égal à égal avec ce Conseil ou cette société d'État. Je ne vois pas pourquoi on hésiterait à préciser qu'il faudrait que ce Conseil consultatif comprenne obligatoirement des pêcheurs à moins que le ministre, évidemment ne trouve un autre moyen qui permette aux pêcheurs de faire connaître leur point de vue.

● 1625

Mr. Lang: As I said, I expect the fishermen to be represented. There are other ways by which it is possible for that same voice to be represented. There are fishermen's associations, for instance, that may have representatives on the Board, in effect, who may or may not be fishermen. That would, after all, depend on the association. So far as the Board is concerned there is expected to be that contact there. Of course, we envisage close contact between the Corporation and fishermen in any case throughout the whole operation.

For instance, the whole publicity operation that is going to be necessary between the Corporation and fishermen is a very large one. The Corporation will have to be publicizing regularly matters of price, conditions, quality specifications, and so on. There will be a constant program of contact between the Corporation and the fishermen regarding many of these matters.

Mr. Noble: Mr. Chairman, I would like to ask the Minister whether he does not feel that the fishermen collectively should have some say about who would be the representative on this Board?

Mr. Lang: Yes, I think the ordinary procedures in regard to these matters would be followed, which is for broad consultation with the groups concerned prior to the appointment to the Board.

Mr. Noble: It could be, Mr. Chairman, that the fishermen might have somebody that could do a good job of representing them who was not connected actively with the industry.

Mr. Lang: You are quite right.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, just to clear up a point arising out of something said by Mr. Comeau when we were discussing Clause 3 and the amendment about four directors being connected directly with fishing, at that time I said that I might consider it differently if we were talking about the Advisory Committee. I did not, as he indicated, say that I would. I am prepared to accept the Minister's assurance that the fishermen will be represented on this Advisory Committee.

Mr. McQuaid: Would you have any objection, sir, to having it written into the Bill?

Mr. Smith (Northumberland-Miramichi): I see problems.

[Interpretation]

M. Lang: Comme je l'ai dit, je prévois une représentation des pêcheurs. Il y a d'autres façons dont le pêcheur peut faire entendre sa voix. Par exemple, il y a des groupements de pêcheurs, des associations qui peuvent se faire entendre. Evidemment, au sein de ces associations, il peut y avoir des pêcheurs et des représentants d'autres métiers. Nous prévoyons des contacts étroits entre ces organismes et les pêcheurs.

La Corporation aura à faire faire beaucoup de publicité, de façon régulière, en ce qui concerne les prix, les conditions, la qualité, etc. Il y aura un programme permanent de contact entre l'Office et les pêcheurs en ce qui concerne un grand nombre de ces questions.

M. Noble: Je voudrais demander au ministre s'il ne pense pas que, collectivement, les pêcheurs devraient avoir quelque chose à dire sur leur représentant au sein de ce Conseil?

M. Lang: Oui. Je pense que les procédures habituelles seraient suivies pour ces questions, c'est-à-dire pour une large consultation avec les groupements intéressés avant la formation du Conseil.

M. Noble: N'est-il pas concevable que les pêcheurs pourraient se faire représenter par quelqu'un qui n'a pas un contact étroit et constant avec eux?

M. Lang: Sans doute.

M. Smith (Northumberland Miramichi): Je veux dissiper un malentendu possible. Lorsque nous en étions à l'article 3 nous parlions de l'amendement: on disait que quatre des directeurs devraient être associés directement à l'industrie de la pêche. Je disais, à ce moment-là, que je serais peut-être disposé à envisager la chose autrement lorsqu'on étudierait le Comité consultatif. Je suis disposé à accepter les assurances du ministre. Je suis prêt à le croire quand il dit que les pêcheurs seront représentés au sein de ce Comité consultatif.

M. McQuaid: Ne voudriez-vous pas inclure quelque chose à la Loi à ce sujet?

M. Smith (Northumberland-Miramichi): Je vois des problèmes.

[Texte]

Mr. Lundrigan: Mr. Chairman, I am prepared to accept the Minister's word that there shall be such a bill known as Bill C-148, but the fact is that we have a bill known as Bill C-148. It is just as logical to say, "Let us forget about the Bill and take the Minister's word for it". No one is disagreeing with the Minister's intention of having fishermen represented, but the big difficulty is that there is no guarantee. One of the members of the Committee has already indicated that it could really happen that the Governor in Council may not appoint any "fishermen" to the Advisory Committee.

Granted there are ways that you can make your voice known. You can march on Parliament as an example of making your voice known, but this Committee has legal status and in Clause 19 there is an indication that it shall meet with the Corporation. Consequently, it forms a legally constituted link, mode of communication, between the fishermen and the Corporation itself. We have heard quite a bit of discussion in the last few months about participatory democracy and I would like to say if we really feel this, then this is one way we can just show it and it is so simple that I almost feel ashamed to have to stand here and try to lobby, almost.

I feel like a lobbyist for the fishermen of Central Canada. This is a darn shame. These people are the experts; they are experts as far as the producer end of the industries is concerned and I cannot see, for the life of me, how we can leave this Committee this afternoon without having made this kind of commitment.

We are only saying to these people that we want you along because we feel you have some say, that you should have some say and that you have some knowledge. Granted there are all kinds of ways. Perhaps there might be a corporate license, there might be this, there might be that. This is gobbledegook. This is all it is. All we are trying to say is that either we do not want them on there, or we are not prepared to go along with it but we are prepared to say, "Yes, we agree but we do not want to write it down on paper".

I would like to say if we feel that we should have them on there, let us just write it into the act as we have written every other stipulation and let us make it quite clear to the fishermen of Canada that we want their voice on this Corporation in some way or other and this is the particular avenue. We

[Interprétation]

M. Lundrigan: Le fait est que nous avons un projet de loi sous les yeux, le Bill C-148. Nous pourrions dire: «Oublions le bill et faisons confiance au ministre». La difficulté est qu'il n'y a pas de garantie. Un des membres du Comité a déjà donné à entendre qu'il est très possible que le gouverneur en conseil ne nomme pas de «pêcheurs» à ce Comité consultatif.

Sans doute on peut se faire entendre; on peut marcher sur le Parlement, par exemple. C'est une manière de se faire entendre. Mais, ce Comité a un statut légal et, à l'article 19, on dit qu'il se réunira avec l'Office. En conséquence, c'est une entité juridique reconnue. Depuis quelques mois, on a beaucoup parlé de la démocratie à participation. Si nous sommes véritablement sincères, nous devrions, il me semble, agir autrement. J'ai presque honte d'être obligé de faire des pressions au nom du pêcheur canadien. Après tout, les experts sont les pêcheurs eux-mêmes. Ce sont eux qui ont l'expérience nécessaire en ce qui concerne la production. Je ne vois pas comment nous pourrions quitter ce Comité, cet après-midi, sans avoir pris cet engagement.

Nous disons à ces gens: «Nous voulons que vous soyez représentés. C'est vous qui connaissez ce domaine.» J'admets qu'il y a bien des façons. Mais toutes les excuses que l'on a fait valoir jusqu'ici ne veulent rien dire du tout. Tout ce que nous trouvons à dire, c'est que nous ne voulons pas que le pêcheur soit représenté à ce Comité consultatif. Nous sommes disposés à dire oui, mais nous hésitons à mettre cela noir sur blanc.

Si le pêcheur doit être représenté au Comité, au moins mettons-le noir sur blanc. Faisons bien comprendre aux pêcheurs canadiens que nous voulons que leur voix soit entendue au sein de l'Office.

[Text]

had some debates. I think some of the points the Minister raised about the Board of Directors were legitimate. This is what the Committee is, and advisory committee; it is not a decision-making body. The Corporation with the Board of Directors is the decision-making body.

This is the line of communication so, technically, they could be left out in the cold altogether and I think the Minister's point about vested interest is not a good point at all. This is what we want. They want people who have particular feelings, strong feelings and they can get these through to the Corporation. That is what they are doing. Their advice does not have to be accepted but we want to make darn sure that they can get through.

Mr. Chairman, I am not going to speak on this or any other part of the bill any more this afternoon unless we can get some kind of unanimity on that point.

Mr. Noble: Mr. Chairman, I would like to make one more observation before we go any further. In view of the fact that this Corporation is being imposed on the fishermen I think it will be only a democratic gesture to assure the fishermen they will be suitably represented and I think it should be included in the Bill.

Some hon. Member: Hear, hear.

Mr. Osler: Mr. Chairman, I think I share the feelings of most of the people here, and I think the Minister shares them; we have a community of feeling on this subject. Quite recently I was at a meeting of Indians and Métis in my home province. Incidentally, they are supposed to be about as sophisticated a group as there is. These people, with the exception of a very few, still are unsophisticated enough to have to speak through lawyers to whom they pay large fees out of their band money. I am not a specialist in fishing, but as a tourist going to fishing areas I see the quality of education of many of these people and I submit that there would be a danger in stipulating exactly how many people had to be on the Advisory Committee or their agents, which I construe this fishermen's licence thing could turn out to be—an agent of the fishermen involved.

I can see two or three lawyers in Winnipeg or somewhere getting quite a lot of power and getting quite a lot of newspaper headlines, essentially for their own benefit, in purporting to act for these relatively uneducated, unsophisticated fishermen. I really can. I know one legal firm that is making \$12,000 a

[Interpretation]

Certaines des difficultés qu'a fait valoir le ministre étaient à retenir. C'était des objections très sérieuses. Mais il s'agit simplement d'un comité consultatif, il n'est pas habilité à prendre des décisions. C'est là le rôle de l'Office et du Conseil d'administration.

Il s'agit ici d'un organe de liaison, et le ministre n'a pas raison, je pense, de parler de droits acquis. Ceux que nous voulons nommer à ce comité consultatif, ce sont des gens qui ont des idées bien arrêtées, et qui peuvent les réaliser dans l'Office. Ce n'est pas que nous voulions absolument suivre leurs idées, mais nous tenons à ce qu'elles soient entendues. Je ne reparlerai plus cet après-midi, à moins que nous ne fassions une certaine unanimité sur ce point.

M. Noble: Un autre point avant d'aller plus loin: vu que cet office va être imposé aux pêcheurs, ce serait une bonne chose que d'assurer aux pêcheurs qu'ils y seront représentés, et je crois que ce devrait être prévu littéralement dans le projet de loi.

Des voix: Écoutez, écoutez.

M. Osler: Monsieur le président, je partage les sentiments qu'éprouvent la plupart d'entre nous et, je pense, le ministre aussi, d'ailleurs. Mais j'ai assisté assez récemment à une réunion d'Indiens et de Métis dans ma province. Ces gens étaient censés connaître assez bien ces questions. A quelques très rares exceptions près, cependant ils sont assez peu évolués pour avoir à s'adresser à nous par l'entremise d'avocats à qui ils paient de gros honoraires. Je ne connais pas ces questions autrement qu'en touriste. Je sais, néanmoins, quel est le degré d'instruction d'un grand nombre de ces personnes, et je pense qu'il y aurait danger à préciser combien de ces gens devraient être représentés au comité consultatif, que ce soit directement ou par leurs agents.

Par exemple, j'ai l'impression qu'il serait très facile à deux ou trois avocats de la région de Winnipeg de se faire énormément de publicité et de crédit en prétendant agir au nom de ces pêcheurs qui sont peu instruits et en somme peu évolués. C'est une crainte vraiment sérieuse. Je connais un cabinet d'a-

[Texte]

year representing Indian bands right now just as a retainer, apart from any work they do.

I think we can trust the Minister. He is on record. As there will be another minister some day, so this act can be amended some day. Anything can happen any time. It seems to me that it would make more sense to leave it and see what happens with common sense prevailing and good will being used in the appointment of these people rather than laying down a legal definition that could work to the detriment of these people.

Having said that, I am all in favour of having these people represented and I would personally hold the Minister accountable if they are not, because he has said he will see that they will be.

Mr. Noble: Mr. Chairman, are we to believe that the fishing industry does not have capable men within its ranks to represent them without hiring lawyers? I do not go for that.

The Chairman: Shall I put the question?

Mr. Lundrigan: Mr. Chairman, before you put the question, may I put a question to the Chair? Is what the Minister says a commitment that has to be adhered to in an obligatory sense or is this what we are voting on right here? I am not doubting the Minister's word, but I want to know if the Minister's statement commits the government definitely to this. In other words, is this all recorded in such a way that this becomes part of the legislative process of Canada because I do not think it is. This is why the question arose in the first place. I think perhaps the Minister could clarify that point as well.

• 1635

Mr. Lang: I think the record will clearly show that it is a commitment. I do not know what more I can add to that. You say the Minister may not be here some time. The commitment is a commitment of the government and that is really how the matter stands.

Mr. Lundrigan: How is a commitment revealed? Is it not revealed through the sort of process we have here right now, Mr. Chairman, or...

Mr. Lang: No, we are talking about that distinction between what is legislative enactment and what is a commitment.

Mr. Comeau: Mr. Chairman, if the Minister suggests or if we are to believe his word—and I believe it—that we are going to appoint

[Interprétation]

vocats qui gagne douze mille dollars par année rien qu'à représenter des bandes indiennes. Et c'est quelque chose qu'on leur donne rien qu'à forfait, sans même qu'ils aient à travailler pour les Indiens. La loi pourrait être modifiée un jour, et le ministre n'est pas éternel. J'ai l'impression qu'il serait beaucoup plus raisonnable de laisser les choses «se tasser» pour voir ce qui va se passer. Après tout, le bon sens finira par triompher et on montrera certainement de la bonne volonté lorsqu'il s'agira de nommer ces gens. Cela vaudra beaucoup mieux que de retenir des décisions rigoureuses qui pourraient nuire à ces gens.

Ceci dit, je suis tout à fait favorable à la représentation de ces gens, et je pense que c'est au ministre maintenant, à voir qu'ils le soient, comme il s'est engagé à le faire.

M. Noble: Est-ce qu'ils n'ont pas assez de gens compétents parmi eux qui puissent les représenter sans qu'ils aient à engager des avocats? Je ne peux y croire.

Le président: Puis-je mettre l'amendement aux voix?

M. Lundrigan: Puis-je poser une question au président? Est-ce que ce que le ministre nous a dit être un engagement auquel il est obligé d'adhérer, ou est-ce ce sur quoi nous votons? Je ne doute pas de la parole du ministre, mais est-ce que, par sa parole, le gouvernement est engagé définitivement? Est-ce que tout ceci, ce que vient de dire le ministre, a force de loi?

Je ne le pense pas. Le ministre pourrait peut-être tirer la question au clair.

M. Lang: Le compte rendu de la séance montrera clairement que c'est un engagement. Je ne vois pas ce que je pourrais ajouter à ce que j'ai dit. Vous dites que le ministre pourra disparaître, mais l'engagement que j'ai pris, je l'ai pris au nom du gouvernement. Voilà la situation.

M. Lundrigan: Mais comment sait-on si cet engagement peut être tenu? Est-ce qu'il ne doit pas être tenu par un processus législatif tel que celui que nous suivons maintenant?

M. Lang: Nous parlons de la distinction entre ce qui est loi et ce qui est engagement.

M. Comeau: Nous pouvons je pense, faire confiance au ministre. On va certainement nommer des pêcheurs à ce Comité consultatif.

[Text]

some fishermen to this Board, then he specifies that there are some qualified fishermen and I cannot see why we cannot include it in this Bill. That is all, Mr. Chairman.

Mr. McQuaid: That is right, Mr. Chairman. That is the whole thing. The Minister gives us his assurance. I think he has even gone so far as to say that it is government policy. Whether the Minister can sit here today and expound government policy I am not so sure, but I understood from his remarks that it is government policy. Then if it is Government policy, surely none of the members of the government or of the party can object to having this written in.

We just want to make sure, that is all. We want to make sure and there is not better way of making sure than having it written into the act itself. Surely there cannot be any harm in guaranteeing that the fishermen will be represented on this Committee particularly, as somebody has already said, as it is not a policy-making committee, it is only an Advisory Committee. The Act itself says:

19. (1) The Advisory Committee shall meet at such times as are fixed by the Board and shall advise the Corporation.

Who is better able, I ask, Mr. Chairman—who is better able to advise the Corporation on matters pertaining to the freshwater fishing industry than those who are right out there in the boats and fishing?

Mr. Hogarth: The fishing producers and processors. This is a marketing board, a marketing corporation we are setting up, not a corporation to catch fish and the best people to advise the government are those that are processing and marketing the products. To my mind I do not doubt for a moment that there should be fishermen represented on this Board. The Minister said he was going to put them on the Board but certainly there are far more competent people to advise this Crown agency, this Crown corporation, than the fishermen who are catching fish.

If the fishermen who are catching fish could sell them it would not be necessary to create this corporation in the first instance. That is the whole problem. They cannot sell their fish so we are creating a Crown corporation to do it and it certainly appears to me that there are many, many people, other than the fishermen themselves, who can advise this corporation as to how to market these fish and get the industry moving and I would not want to tie the government down to the number of fishermen who are going to be on that Board. Certainly they should be represented, but I would not tie them down to a number.

[Interpretation]

Il reconnaît donc qu'il existe des pêcheurs qualifiés. Je ne vois pas pourquoi nous ne pouvons pas inclure cette précision dans le projet de loi. Voilà.

Mr. McQuaid: Il a raison. Le ministre nous donne cette assurance, il a même été jusqu'à dire que c'est la politique du gouvernement, je crois. J'ignore s'il en a le droit, mais c'est ce qu'il a dit, n'est-ce pas? Alors, si c'est la politique du gouvernement, aucun membre du gouvernement, aucun membre du parti du gouvernement ne devrait s'opposer à ce que nous le notions dans le projet de loi.

Nous voulons simplement une assurance par écrit, et il n'y a pas de meilleure façon de procéder que de l'inscrire dans la loi elle-même. Après tout, cela ne peut pas faire de mal. Quel inconvénient voit-on à ce qu'on assure par écrit que les pêcheurs y seront représentés? Après tout, ce n'est qu'un comité consultatif ou plus précisément:

Le Comité consultatif doit se réunir aux époques fixées par le conseil, et conseiller l'Office.

Or, qui peut donner de meilleurs conseils, à l'Office, en ce qui conseille les questions relatives à la pêche en eau douce que les pêcheurs eux-mêmes?

M. Hogarth: Les producteurs et les conditionneurs. Il s'agit d'un office de commercialisation et non pas une société chargée de prendre du poisson. Ceux qui peuvent le mieux conseiller le gouvernement sont les spécialistes dans ce domaine.

Et, bien entendu, il doit y avoir des pêcheurs nommés au Conseil. Et le ministre a dit qu'il y en aurait. Mais il y a des gens beaucoup plus compétents pour conseiller cet organisme.

Si les pêcheurs arrivaient à vendre leur poisson, il ne serait pas nécessaire de créer cet Office. Le problème est que le poisson ne se vend pas. On crée donc un office de commercialisation. Beaucoup d'autres gens que les pêcheurs eux-mêmes peuvent conseiller plus adéquatement cet office sur la commercialisation pour remettre l'industrie en marche. Je ne voudrais pas obliger le gouvernement à nommer un certain nombre de pêcheurs.

Certes, les pêcheurs doivent être représentés, mais je ne voudrais pas qu'on fixe un chiffre.

[Texte]

Mr. Lundrigan: Mr. Chairman, may I remind the honourable member that we are not talking about representation on the Corporation which is the marketing Corporation. We are talking about representatives on the Advisory Committee to the Corporation which is the Marketing Corporation. I think he has confused the issue terribly.

The Chairman: I call on Mr. Ritchie.

Mr. Ritchie: Mr. Chairman, it is my understanding that the Marketing Board will do all this and that the only processor would be an agent which, in essence, makes him an employee of the Corporation. The honourable member who just spoke implied that companies will be involved in processing. My understanding is that there will be no companies involved except some, perhaps, as agents—in other words, as employees of the board—so how can he draw out of these processors an advisory board when they are already employees of the board?

Mr. Lang: Mr. Chairman, the Corporation's powers are broad enough for it to go into the processing business but certainly it is not intended to replace all processors. It may certainly sell fish to existing or new individual enterprises for processing. It is not intended that the Corporation occupy the whole field, by any means. It is expected to work with the private industry in many areas.

Mr. Ritchie: Mr. Chairman, my understanding is that most of the private industry processors in Manitoba think they are going out of business and become agents of this Board.

• 1640

The Chairman: Shall I put the question? You have heard the motion, Clause 18 (1), after "Advisory Committee", of whom one-third shall be holders of valid commercial fishing licences.

Motion negatived.

The Chairman: Shall Clause 18 carry?

Mr. Lundrigan: Mr. Chairman, again I wonder whether I could just reflect on the question posed by Mr. McQuaid earlier? The question is whether the Minister would consult with—maybe the question is totally out of order now because apparently there has been a good indication that this will not be done but I just want a final word from the Minister. Would he consult with the legal counsel and see if there is a way to write some kind of provision which would guarantee these people a voice?

[Interprétation]

M. Lundrigan: Nous ne parlons pas de représentation au sein de l'Office, mais au sein du Comité consultatif. Je crois que le député confond les deux.

Le président: M. Ritchie.

M. Ritchie: Si j'ai bien compris, tout sera fait par l'Office de commercialisation. Le seul conditionneur serait un agent qui deviendrait, en quelque sorte, un employé de l'Office.

Si je comprends bien, aucune compagnie ne sera en cause, si ce n'est qu'à titre d'agent, ou d'employé de l'Office. Comment peuvent-ils faire partie du Comité consultatif, s'ils sont des employés de l'Office?

M. Lang: Les pouvoirs de l'Office sont assez vastes pour qu'il se lance dans le conditionnement, mais il ne remplacera certainement pas tous les apprêteurs. On ne veut pas que l'Office occupe le domaine tout entier de l'industrie de la pêche.

M. Ritchie: Si je comprends bien, les apprêteurs du Manitoba, pour la plupart, pensent devenir des agents de cet Office.

Le président: Dois-je mettre la question aux voix? Vous avez entendu la motion. Article 18, paragraphe (1), après les mots «comité consultatif», dont un tiers détiendront des permis valides de pêche.

(La motion est rejetée.)

Le président: L'article 18 est-il adopté?

M. Lundrigan: Est-ce que je pourrais répondre à la question qu'a posée M. McQuaid, à savoir si le ministre irait consulter. Ma question est peut-être irrecevable, mais je voudrais que le ministre nous dise définitivement s'il entend consulter un conseiller juridique pour voir s'il n'y aurait pas lieu d'introduire une disposition garantissant à ces gens une voix.

[Text]

Mr. Hogarth: Mr. Chairman, as I understand the new rules Mr. Lundrigan can move an amendment at the time the Bill goes back, can he not? He can have Parliamentary counsel draw it and he can debate it in the House, as I understand the new rules, at the report stage.

Mr. Lang: I have indicated my difficulty with any particular phrasing. There is no point in my asking or saying I am going to ask counsel to do something when I cannot tell him what I want him to do. I cannot frame the motion in a satisfactory way that is really flexible enough to all the circumstances.

You see, there is no way in which you can start breaking this thing down without ending up arguing that it can be broken down more, how many Indians from Manitoba should be on the Board, and so on. You could make motions of this sort endlessly, and I come back to the fundamental proposition that I cannot see representation as such so I will not make an undertaking to refer it to counsel.

Mr. McQuaid: That is about the flimsiest excuse, I think, that we have ever had submitted to a Committee of this House.

Mr. Lundrigan: Mr. Chairman, I have one last statement. I think the Minister began—yes, I said that a couple of times before but this is a guarantee—the Minister came here and gave me the impression today that we had a piece of legislation of which we are in favour. We have stated this in the House. We have come here and, through the process of this Committee, tried to clarify certain things, to improve certain things. There is no omnipotence in this Minister, Mr. Chairman, or in the government or in anybody, or the member for Gander-Twillingate. There is nobody here who has the kind of authority and power to decide without any guarantee of change that he is right, and this is the purpose of debating it.

We have raised certain objections. They have not been adhered to, naturally, and now we come to this one and we did not get an excuse, we did not get a reason. If we had received one reasonable objection to our amendment I would have been quite willing to forget about the whole matter and move on. We did not get any reasonable objection, and if this is an indication of the way the Committee is going to work—perhaps it is only this particular Bill from this particular Department and this particular Minister, maybe that might make it better—then we might as well forget about it.

[Interpretation]

M. Hogarth: Monsieur le président, M. Lundrigan peut poser un amendement lorsque le bill reviendra devant la Chambre. Il pourrait demander au conseiller parlementaire de rédiger la question afin qu'elle soit débattue à la Chambre, si je comprends bien.

M. Lang: Je vous ai déjà exposé mes difficultés de rédaction. Il ne servirait à rien de demander au conseiller de rédiger un texte alors que je ne pourrais pas lui exprimer mon point de vue. Je ne puis exprimer ma motion pour quelle soit assez souple pour couvrir toutes les situations. Il faudrait d'abord s'entendre sur la possibilité de le faire. Combien d'Indiens du Manitoba, par exemple, peuvent faire partie de l'Office? On pourrait présenter un nombre infini de motions de ce genre. Je ne vois pas qu'il puisse y avoir représentation, il est donc inutile de s'adresser au conseiller.

M. McQuaid: C'est sûrement l'excuse la plus légère qu'il m'ait été donné d'entendre aux comités de la Chambre.

M. Lundrigan: Je l'ai déjà mentionné plusieurs fois, mais il s'agit d'une garantie. Le ministre m'a donné l'impression que nous approuvons cette mesure législative. Nous l'avons déjà dit à la Chambre. Nous avons cherché, au moyen du Comité, d'élucider et d'améliorer certains points. Le ministre n'est pas infaillible ni le gouvernement, ni le député de Gander-Twillingate. Il n'y a personne ici, qui a l'autorité et le pouvoir de décider, sans garantie de changement, qu'il a raison. C'est pour cette raison que nous engageons un débat.

Nous avons soulevé des objections qui n'ont pas été acceptées, mais on ne nous a pas dit pourquoi celle-ci a été rejetée. Et, si on nous disait pourquoi on s'oppose à notre amendement, je serais très heureux de laisser tomber. Mais, on ne nous a donné aucune objection raisonnable. Si le comité doit fonctionner ainsi, il s'agit peut-être d'un bill ou d'un ministre particulier, mais, si c'est ainsi que le comité doit fonctionner, nous serions aussi bien de rester chez nous.

[Texte]

We raised a legitimate point. There seemed to be not one legitimate objection, not one real objection to our position. The record will show literally dozens of favourable positions, favourable commentary, in connection with the amendment and we did not get one indication of why the Minister was against it. Now, I cannot see the reason for this.

Apparently being a neophyte in this particular Committee and this particular Parliament I have got to learn to accept some of the realities. If I am going to accept these realities I am not going waste my time on any Committee—I am not going to waste my time. I am quite willing for my colleagues to vote against me at any time. I am equally willing for a Committee, but if this is going to be the trend and there is no chance at all of my changing in any way any of the clauses and stipulations of any bill which will be brought before our Committee, then I am not going to waste my time here. Time is too valuable.

• 1645

I say the Minister has not been fair with us. He has not indicated any reason why he has been against it, other than flimsy, gobbledygookish excuses. This is all it has been, just a lot of nonsense, and I cannot see my wasting time. If this is the way the Committee in going to meet, Mr. Chairman, then I say the steering committee should make the decisions.

Mr. Comeau: Mr. Chairman, I want to object in the same manner and I want to move that this Committee adjourn its sittings and this Bill reported to the House and discussed in the House. I have been saying to myself all along that these committees are not going to bring about any amendments or very, very few amendments, to these bills and therefore I say that these committees are practically worthless and so I move that the Committee adjourn its sittings.

Motion negatived.

Mr. Lang: I wonder, Mr. Chairman, if I could say a word to Mr. Lundrigan before he leaves? He commented fairly wildly on the remarks that had been made in the course of the recent rather good, I thought, debate. As far as amendments are concerned, I understand that a member has one to a clause that we are just about to come to which was indicated earlier, as far as I could see, was probably acceptable. There is no suggestion, certainly on my part, Mr. Chairman, that one must take the position that amendments are automatically unacceptable. I would just like him to know that before he departs the scene.

[Interprétation]

On ne nous a pas posé une seule objection raisonnable. Et, nous avons pourtant exposé des arguments favorables à la douzaine. Le ministre ne nous a pas donné une seule raison pour laquelle il s'oppose à ces amendements.

Puisque je suis novice à ce comité et à ce parlement, je dois accepter la réalité, mais si je dois accepter ces réalités, je n'entends pas perdre mon temps aux comités. Je ne m'oppose pas à ce que mes collègues votent contre mes propositions, mais si je constate que je n'ai aucune chance de modifier un article ou une disposition quelconque d'aucun projet de loi, je n'entends pas perdre mon temps ici. Mon temps est trop précieux.

Le ministre n'a pas été juste envers nous. Il ne nous a exposé aucune raison, sauf des excuses incompréhensibles, un tas d'imbécillités, et si c'est ainsi que le comité doit fonctionner, je ne vais pas y perdre mon temps. Je crois que le Comité directeur devra prendre les décisions.

M. Comeau: Je veux poser la même objection et je voudrais proposer qu'on lève la séance et qu'on fasse rapport du bill à la Chambre, et qu'on en discute à la Chambre. Je me suis posé la question tout le long de nos délibérations si ces comités pourront jamais apporter d'amendements à ces bills. Ces comités sont à peu près inutiles, et je propose donc qu'on ajourne le comité.

(La motion est rejetée.)

M. Lang: Je pourrais peut-être dire un mot à M. Lundrigan avant qu'il parte. Il a fait des remarques assez désobligeantes au sujet d'un débat qui m'a pourtant paru assez fructueux. Je crois que nous arrivons présentement à un amendement proposé par un membre qui nous a paru acceptable. Comme je l'ai dit, il ne faut pas s'imaginer que tous les amendements sont automatiquement inacceptables. Je voulais le lui faire remarquer avant qu'il ne parte.

[Text]

Mr. Lundrigan: Did you say Mr. Minister, your member?

Mr. Lang: Pardon?

Mr. Lundrigan: Did you say *my* member?

Mr. Lang: I said *a* member.

Mr. Lundrigan: Oh, I am sorry.

Mr. Goode: Mr. Chairman, before Mr. Lundrigan leaves I would like to say that I personally am going to take up an amendment that may be supported or may not on the next bill that is going to come before the Committee. I am quite excited as a backbencher of the government's party that I may be able to change a law, just as I think that he may be able to change a law being a backbencher of the opposition party.

I think if we do not co-operate in this Committee where the Committee has been most co-operative amongst parties, that we are not going to get anything done and I think between us we will get these things done. I believe sincerely that there was an objection to this amendment, particularly on my part, before the Committee and I could not vote with him, but I would say that if I believe what he is doing is right I will vote with him, not in a partisan political position.

I think he will see, particularly in this committee which has two good Ministers that have been co-operative, that we will get a lot done together. I would hope he will not walk out on us and leave unrepresented what I think is his good ability to present things to this Committee. I think we are both going to suffer defeats in Committee, and I think we must accept them as being the majority rules even though today it appeared to be partisan because one group voted against the other. However, I think you will find that we will be able to do great things for the industry if we stick together.

Mr. Lundrigan: It is a very nice apology, Mr. Chairman, and I accept the member's apology. Nevertheless, may I just say that I am not walking out on this Committee; I am walking out on this Bill because I think it is a waste of time as the honourable member suggested. I am going to be around for a little while, Mr. Goode, and I will be around in the capacity of a member of the Committee, I hope, but I am certainly not going to waste my time on this particular piece of legislation. That is the only reason I am not staying. I have lots of work to do,

[Interpretation]

M. Lundrigan: Monsieur le ministre, avez-vous dit votre membre?

M. Lang: Pardon?

M. Lundrigan: Avez-vous dit *mon* député?

M. Lang: J'ai dit un député.

M. Lundrigan: Excusez-moi.

M. Goode: Avant que M. Lundrigan ne parte, je voudrais dire que je vais moi-même proposer un amendement, qui sera peut-être appuyé, sur le prochain bill. Je suis fier qu'à titre de député sans porte-feuille du parti au pouvoir, je puisse modifier une loi, et je crois qu'il pourrait en faire autant à titre de représentant de l'Opposition. Il me semble que si nous ne coopérons pas, nous n'aboutirons à rien, et, entre nous, je crois que nous réaliserons quelque chose. Les objections qu'on a posées me paraissent très acceptables. Je ne pourrais pas voter pour les amendements du député. Mais si j'avais cru qu'il avait raison, j'aurais certainement voté en faveur de son amendement.

Nous avons, ici, deux excellents ministres qui sont tout prêts à collaborer. Je ne voudrais pas que le député parte en claquant les portes. Je crois qu'il devrait présenter sa cause au comité comme il sait très bien le faire. Nous devons accepter le fait que nous subissons tous deux des échecs. On a peut-être eu l'impression aujourd'hui que le vote se faisait par fractions, mais je crois que nous pourrions réaliser quelque chose pour l'industrie si nous coopérons.

M. Lundrigan: J'accepte les excuses du député mais je ne pars pas, je laisse simplement tomber l'examen de ce bill, car je crois que nous perdons notre temps. Je n'entends pas perdre plus de temps sur cette mesure législative. C'est pour cette raison que je quitte la pièce. J'ai beaucoup de travail.

[Texte]

Clauses 18 and 19 agreed to.

On Clause 20—Definitions.

Mr. Hogarth: Mr. Chairman, before we get into this, I note Clause 20 is the commencement of Part III and I take it the whole Part is entirely concerned with the interprovincial regulations. This is actually the operative part of the statute, is that correct?

Mr. Lang: That is right.

Mr. Hogarth: I cannot understand why in Clause 34 that this Part should not be proclaimed at the same time as the statute is passed. Is there some reason for that?

Mr. Lang: Well, yes. The statute must be in effect, Mr. Chairman, in order for the Corporation to begin its planning and its operations. Part III should not be in effect until the Corporation is ready to begin its purchasing of fish.

The Chairman: Are there any other questions on Clause 20? Mr. McQuaid?

Mr. McQuaid: I have just one question, Mr. Chairman. Clause 20 (a) as I see it attempts to set the definition for fish. Now, it says,

• 1650

“fish” means round, dressed or filleted fish of any species...whether fresh or frozen...

It does not make any mention of smoked fish, canned fish, cured fish, pickled or salted fish. Does it refer only to fresh or frozen fish? Is that all that is included in the definition of fish?

Mr. Harvey: Mr. Chairman, the regulatory power here applies simply to the fresh frozen, whether packed or unpackaged, and since it refers to including parts of any fish it also includes filleted product. Now, this can be in those forms—fresh frozen and packaged and unpackaged. If you get into cooked fish or into by-products, and so on, these regulatory provisions of the Bill do not apply.

Mr. McQuaid: They do not apply?

Mr. Harvey: No.

Mr. McQuaid: When we go to Clause 21 where it says, “export fish from Canada;” that only means fresh or frozen fish. Is that right?

Mr. Harvey: That is right, including fillets, of course.

29723—6

[Interprétation]

(Les articles 18 et 19 sont adoptés.)

Article 20—*Définitions.*

M. Hogarth: L'article 20 amorce la partie 3 qui porte sur la réglementation du commerce interprovincial. En fait, c'est la partie exécutoire de la loi, n'est-ce pas?

M. Lang: C'est juste.

M. Hogarth: Pourtant, à l'article 34, il est dit que la partie n'entrera pas en vigueur au même moment que le reste de la loi? Est-ce qu'il y a une raison à cela?

M. Lang: Oui. La loi doit être en vigueur pour que l'Office commence sa planification et ses opérations. La partie 3 n'entrera en vigueur que lorsque l'Office commencera à acheter le poisson.

Le président: D'autres questions? Monsieur McQuaid.

M. McQuaid: Une question seulement, monsieur le président. L'article 20, paragraphe a) tente de définir le mot «poisson». On dit:

«Poisson» signifie le poisson entier, apprêté ou présenté en filet, qu'il soit frais ou congelé...

Il n'est pas fait mention du poisson en conserves, du poisson fumé, du poisson saumuré ni du poisson salé. Est-ce qu'il s'agit seulement du poisson frais et du poisson congelé? Est-ce tout ce qu'englobe la définition du mot «poisson»?

M. Harvey: Monsieur le président, la partie sur la réglementation s'applique uniquement aux poissons frais ou congelés, emballés ou non, ainsi que le poisson en filet. Pour le poisson présenté sous d'autres formes, le poisson cuit ou les sous-produits du poisson, et ainsi de suite, la loi ne s'applique pas.

M. McQuaid: Elle ne s'applique pas?

M. Harvey: Non.

M. McQuaid: A l'article 21, on parle d'exporter du poisson hors du Canada. Est-ce que cela comprend uniquement le poisson frais ou congelé?

M. Harvey: C'est juste, y compris les filets.

[Text]

Mr. Lang: I think, Mr. Chairman, it might be clearer to note that this, coupled with parallel powers from the provincial governments in regard to fish within the provinces, will give the Corporation real monopoly control over all the fish listed in the Schedule.

You are referring to some of the fish in certain states and conditions later on, in regard to which the Corporation may not be in control but there is no way in which the fish can really get early into those states without the operation of the Corporation. All of the fish have to be sold to the Corporation, so in that sense the Corporation has full control over the designated fish from the designated area.

Mr. McQuaid: I understand, then, Mr. Chairman, that the only fish that can be exported from Canada under this Board are fresh or frozen fish, is that right?

Mr. Lang: No; this fish could be in any form by the time it is exported.

Mr. Hogarth: Your suggestion is that there will be analogous legislation in each of the participating provinces to control the processed fish. For instance, I notice goldeyes are in the Schedule. Mr. McQuaid's suggestion is that smoked goldeyes would not be controlled by the provisions of Clause 20 because they are neither fresh nor frozen. Now, is it your suggestion that the Province of Manitoba, if it participates, will pass legislation to bring smoked goldeyes under the aegis of this Corporation?

Mr. Lang: The control really is at the point at which the fish moves from the fishermen into the processing.

Mr. Hogarth: So you will control the actual processing but will not control the marketing of the fish after its process?

Mr. Lang: That is certainly conceivable. That is right. The independent trade, buying fish and processing it, may then be in charge of its own marketing for that product. It may do it under brand names, for instance.

Mr. Hogarth: I see.

Mr. Lang: However, the Corporation fully controls the price of the product as it passes to that processor because it has to pass from the fisherman to the processor through the title of the Corporation.

Mr. Hogarth: If that takes place within the province only,...

[Interpretation]

M. Lang: Il serait peut-être bon d'ajouter que, avec le pouvoir parallèle des gouvernements provinciaux, sur le poisson à l'intérieur des provinces, l'Office aura le monopole de la vente de tous les poissons énumérés à l'Appendice. Vous parlez des poissons sous certaines formes qui ne relèveront peut-être pas de l'Office, mais il est impossible que le poisson atteigne cette forme sans l'intervention de l'Office. Tout le poisson doit être vendu à l'Office, et, dans ce sens, l'Office contrôle complètement le poisson de ces catégories provenant de la région désignée.

M. McQuaid: Par conséquent, le seul poisson que l'Office peut exporter est le poisson frais et le poisson congelé, n'est-ce pas?

M. Lang: Non, le poisson peut se présenter sous n'importe quelle forme, au moment de l'exportation.

M. Hogarth: Selon vous, il y aura une loi parallèle dans chaque province pour le contrôle du poisson apprêté. Par exemple, la laquaiche aux yeux d'or paraît à l'Appendice. Selon M. McQuaid, la laquaiche aux yeux d'or fumée ne tomberait pas sous le coup de l'article 20, n'étant ni fraîche, ni congelée. Proposez-vous que la province du Manitoba adopte une loi pour porter la laquaiche aux yeux d'or fumée sous le contrôle de l'Office.

M. Lang: Le contrôle se fait au moment où le poisson passe du pêcheur à la transformation.

M. Hogarth: Vous allez donc contrôler la transformation, mais non pas sa commercialisation subséquente.

M. Lang: C'est concevable et même exact. L'entreprise qui achète et apprête le poisson se chargera de sa commercialisation. Sous ses marques de commerce, bien entendu.

M. Hogarth:... je vois...

M. Lang: Mais la société contrôle complètement le prix du produit vendu à l'apprêteur, car le poisson passe du pêcheur à l'apprêteur par l'intermédiaire de l'Office.

M. Hogarth: Seulement à l'intérieur de la province...

[Texte]

Mr. Lang: This act will not apply; provincial parallel legislation...

Mr. Hogarth: That is the provincial legislation you are referring to. Thank you, sir.

Mr. Smith (Northumberland-Miramichi): Mr. Chairman, I notice that this Clause defines fish and mentions those listed in the Schedule. I notice that the lowly but tasty smelt is not mentioned here. As you very well know, Mr. Chairman, smelt fishing used to be quite an industry on the east coast of New Brunswick, chiefly from the ice in the winter time, and over the past 10 or 20 years the price has dropped to about one-third of what it used to be. Consequently, the industry has nearly gone out of existence. Down on the East Coast we used to be told that the reason for the drop in price was the competition from smelts caught in the Great Lakes. These were not of the same quality as the salt water smelts and the market deteriorated for that reason.

• 1655

I hope that if this corporation ever markets smelts they will be labelled in such a way to indicate that they are not the salt water smelts that used to be quite an industry on the East Coast.

Are smelts not caught in some of these waters that are mentioned here and, if so, why are they not in the Schedule? I am quite happy if they are not in the Schedule, I do not care, but I am just wondering?

Mr. Lang: I think basically the answer is that a portion of the area concerned, if you include the whole of Ontario, certainly does catch smelts, but present indications are that that area of Ontario where most of the smelts are caught will not be included within the area designated for the operation of the corporation and, accordingly, the smelts will not be included.

I might say, Mr. Chairman, six additional types of fish have been submitted by the provinces and received since the printing of the original bill for inclusion within the schedule. I would be very pleased if some member of the Committee would move that we add them to the schedule at this time. The government certainly has no objection to their inclusion.

Mr. Smith (Northumberland-Miramichi): What are they, Mr. Chairman?

Mr. Lang: The types are Carp, Quillback, Mooneye, Channel catfish, Black bullhead, and Brown bullhead.

[Interprétation]

M. Lang: Cette loi ne s'appliquera pas; seulement les lois provinciales parallèles.

M. Hogarth: Il y aura donc une loi provinciale. Merci, monsieur.

M. Smith (Northumberland-Miramichi): Cet article définit les poissons et mentionne ceux qui sont énumérés à l'Appendice. Je remarque que l'éperlan n'y paraît pas. Vous n'ignorez pas que l'éperlan représentait autrefois une industrie considérable sur le littoral de l'est, au Nouveau-Brunswick. Depuis 10 ou 20 ans, le prix de l'éperlan a baissé d'environ le tiers. En conséquence, l'industrie a en quelque sorte cessé d'exister. Sur le littoral de l'est, on nous expliquait la chute des prix par la concurrence de l'éperlan prise dans les Grands Lacs. Il n'était pas de la même qualité que l'éperlan de mer ce qui nous avait fait perdre une partie du marché.

Si jamais l'Office vend de l'éperlan, ils seront étiquetés de façon qu'on sache bien que ce n'est pas l'éperlan de mer qui représentait autrefois une industrie considérable sur le littoral de l'est.

Est-ce que l'éperlan n'est pas pêché dans certaines des eaux mentionnées? Pourquoi ne sont-ils pas en liste? Peu m'importe que leur nom ne soit pas mentionné à l'Appendice, mais je me demande pourquoi?

M. Lang: Je crois qu'au fond la raison est que dans une partie de la région en cause, si elle comprend tout l'Ontario, on pêche l'éperlan. Mais il semble que cette partie de l'Ontario où l'on pêche l'éperlan ne fera pas partie de région désignée relevant de l'Office et, par conséquent, on a omis l'éperlan.

Les provinces désirent ajouter six autres espèces de poissons à la liste initiale dans l'Appendice. Si quelqu'un voulait bien proposer qu'on les ajoute maintenant, nous pourrions certainement les ajouter, car le gouvernement ne s'y oppose pas.

M. Smith (Northumberland-Miramichi): Quelles sont ces espèces, monsieur le président?

M. Lang: Il s'agit de la carpe, de la prême, de la laquache argentée, de la barbue, de la barbotte noire et de la barbotte brune.

[Text]

The Chairman: We are now dealing with clause 20. I do not think that we should add this list to the schedule until such time as we deal with the schedule itself.

Mr. Hogarth: Mr. Chairman, I just have one more question on clause 20. This clause reads, in part:

"fisherman" means a person licensed pursuant to the Fisheries Act...

Does the Fisheries Act license freshwater fishermen?

Mr. Lang: It does not but pursuant to the Fisheries Act the provincial governments have authority to license the fishermen. This is one of these areas where, in fact, the authority was federal and it is in fact now up to each province to delegate it.

Mr. McQuaid: So would it be the provincial government, Mr. Minister, who would be issuing the licences?

Mr. Lang: That is right.

Clause 20 agreed to.

On Clause 21—*Interprovincial and export trade in fish*

Mr. Ritchie: Will it be an offence for a fisherman to catch fish, take it across a provincial border and sell it; and if so, how is he dealt with?

• 1700

Mr. Lang: I think clause 30 covers all that.

Mr. Ritchie: Will there be similar regulations passed by the province to deal with offenders within the province?

Mr. Lang: That is right.

Mr. Davis: Perhaps I might explain that each year the provinces write new regulations regarding the freshwater fisheries. The regulations are submitted to the federal government for verification, for editing if Ottawa deems necessary—usually there is not substantial editing, and they are approved here under the Fisheries Act because the fisheries power is national. However, the powers under the Act with respect to freshwater fisheries have been delegated and the provinces administer it. Provinces are writing and re-writing regulations from time to time, and this is necessary because of the delegation to have Ottawa review the new regulations and generally approve them. So that there is a federal involvement even in the regulations. But basically the provinces administer them,

[Interpretation]

Le président: Nous en sommes actuellement à l'article 20. Je crois que nous devrions attendre d'en être à l'Appendice avant d'y ajouter cette liste.

M. Hogarth: Je n'ai qu'une question à poser au sujet de l'article 20 on y dit:

20. b) «pêcheur» désigne une personne autorisée en conformité de la *Loi sur pêcheries* ou est-ce que la *Loi sur les pêcheries* régit les pêcheurs d'eau douce?

M. Lang: Non, mais elle accorde aux autorités provinciales le droit de délivrer des permis. C'est un des domaine de juridiction fédérale que les provinces sont autorisées à déléguer.

M. McQuaid: Ce sera donc le gouvernement provincial qui délivrera les permis?

M. Lang: C'est exact.

(L'article 20 est adopté.)

Article 21—*Commerce interprovincial et commerce d'exportation du poisson.*

M. Ritchie: Si un pêcheur prend du poisson et le transporte d'une province à une autre pour le vendre, est-ce qu'il commet une infraction? Et dans le cas, qu'est-ce qu'il lui arrive?

M. Lang: Je crois que l'article 30 traite de ce point.

M. Ritchie: Est-ce qu'il y aura des règlements analogues sur le plan provincial?

M. Lang: Oui.

M. Davis: Chaque année, les provinces préparent de nouveaux règlements pour la pêche en eau douce. Ces règlements sont soumis au gouvernement fédéral pour qu'il en fasse la revision, s'il y a lieu, et pour qu'ils soient approuvés aux termes de la *Loi sur les pêcheries*, car il s'agit d'un domaine de juridiction fédérale. Mais, en vertu de la Loi, les pouvoirs sur la pêche en eau douce ont été délégués aux provinces, qui les appliquent.

Les provinces rédigent les règlements et les remanient à l'occasion, mais à cause de cette délégation de pouvoirs, il est nécessaire qu'ils soient révisés et approuvés par le gouvernement fédéral. Par conséquent, le gouvernement fédéral participe même à l'établissement du règlement. Mais ce sont les provinces qui le rédige et qui l'administre.

[Texte]

and this includes writing the regulations as well.

Mr. Ritchie: Mr. Minister, am I correct then that, under this, a province could allow fishing to be carried on as before, resulting in a complete industry being in private hands within the province?

Mr. Lang: Mr. Chairman, the answer to that question really is that to be a participating province or area of a province under clause 26 the province agrees to do certain things, and that includes enacting the necessary legislation so that the intra-provincial fishing of the specified kind is regulated and is within the power of the corporation. This is the agreement with the provinces that is basic to us proceeding at all at this point, and the specific agreements with the provinces will involve that before the province is in fact an area within the ambit of the act.

Mr. Ritchie: Then the amount of flexibility within the province could vary considerably at that time.

Mr. Lang: The federal government must decide that the participation, as far as the province is concerned, is adequate. In other words, the province cannot write its own terms of entering into the operation; it must write terms which are acceptable to the federal government.

Mr. Osler: I am perhaps being naive, Mr. Chairman, but there is the definition of "fish" under clause 20 and then the prohibitions in clause 21. "Fished for commercial purposes" is what worries me, and it probably should not. In northwestern Ontario, for instance, tourist places have literally been turned into commercial fishing camps, the reason being that these waters are heavily stocked to bring on the tourists. I understand it is quite a viable industry. In such a situation, if a fellow went from Manitoba to northwestern Ontario and brought home 12 trout would there be any danger of his being prosecuted?

Mr. Harvey: This is a simple question, Mr. Chairman. This really refers to the form of licence under which the fish are caught. If you are fishing with a sporting licence you are not fishing for commercial purposes.

Mr. Osler: Thank you.

• 1705

Mr. Noble: Mr. Chairman, I would like to ask one question.

[Interprétation]

M. Ritchie: Ai-je raison de croire, monsieur le ministre, qu'en vertu de cet article une province pourrait permettre que la pêche se poursuive comme autrefois, et ainsi laisser la pêche aux mains de l'industrie privée à l'intérieur de la province.

M. Lang: Pour participer aux termes de l'article 25, à l'application de la Loi, la province convient de faire certaines choses, dont l'adoption des lois nécessaires pour que la pêche intra-provinciale en cause soit réglementée et tombe sous la juridiction de l'Office.

C'est l'accord qui a été conclu entre les provinces et nous. Et la province doit adopter ses lois avant de pouvoir tomber sous le coup de la Loi.

M. Ritchie: Par conséquent, la latitude qu'on laisse à la province peut varier considérablement.

M. Lang: Le gouvernement fédéral décidera si la participation de la province est suffisante. La province ne peut pas poser ses propres conditions de participation. Ses conditions doivent être acceptables au gouvernement fédéral.

M. Osler: Ma question peut être naïve, monsieur le président, mais nous avons la définition du mot «poisson», à l'article 20, et ensuite les interdictions à l'article 21. Les «poissons pêchés à des fins commerciales», voilà une expression qui m'inquiète, peut-être sans raison. Dans le nord-ouest de l'Ontario, où il y a toutes sortes de camps de pêche sportive, qui ont littéralement été transformés en camps de pêche commerciale parce que ces endroits ont été empoisonnés pour attirer les touristes. On dit que c'est une industrie lucrative. Mais dans une telle situation, si quelqu'un passe du Manitoba au nord-ouest de l'Ontario et rapporte une douzaine de truites, est-ce qu'il court le risque d'être poursuivi?

M. Harvey: Tout dépend du permis de pêche que détient le pêcheur. Si vous avez un permis pour faire de la pêche sportive, vous ne faites pas de la pêche commerciale.

M. Osler: Merci.

M. Noble: Une question, monsieur le président. Si je comprends bien, ce serait une

[Text]

As I understand it, it would be an infraction of the law if a fisherman sold a fish to his neighbour. Is this true?

Mr. Lang: Not quite. Clause 22 allows the Governor in Council by regulation to exempt certain types of sales, yet the present intention is that purely local sales will in fact be exempted. I said in my statement in the House that it was expected that sales to local milk ranchers, to local smoke houses, to local restaurants, for instance, would be exempted. "Local" in each of those cases means where the product itself is used locally. So the smoke house which sold abroad would not be treated as a local smoke house.

Clauses 21 to 26 inclusive agreed to.

On Clause 27—*Powers of inspector.*

Mr. McQuaid: Is clause 27 framed broadly enough to allow an inspector to search the premises without a search warrant?

Mr. Lang: Yes, it is. I believe it is exactly parallel to the inspector's provisions in five or six other statutes, from the Food and Drugs Act through to the Dairy Commission Act and so on.

Mr. McQuaid: I just have one observation on that, Mr. Chairman. Two wrongs do not make a right. I am very much opposed to this encroachment on the lives of our people. I think that the least the inspector could be required to do is to have a search warrant when he enters, say, a place of business. Subclause (a) is all right. I do not mind him having the right to enter a premises. However, subclause (b) reads:

open any container found therein or examine anything found therein that he reasonably believes contains any such fish, and take samples thereof

If that can be interpreted widely enough to allow him to make the search without a warrant, I take exception to that. I think he should be required, like many other police officers, to have a warrant. Even under our Excise Act, and I think this is about as stringent an act as we can find, a search cannot be made without a warrant.

Mr. Davis: Mr. Chairman, I believe this comes under the Fish Inspection Act. Mr. Dempsey is here from the Fisheries Inspection Service and he could certainly amplify or answer any specific question in this connection. I imagine that the administration carried out now by the fisheries' inspection people

[Interpretation]

infraction pour un pêcheur de vendre du poisson à son voisin? Est-ce exact?

M. Lang: Pas tout à fait. L'article 22 permet au gouverneur en conseil d'exempter certaines ventes par un règlement. Pour le moment, il semble que les ventes purement locales seront exemptées. J'ai dit à la Chambre que les ventes aux éleveurs de visons locaux, aux fumoirs et aux restaurants locaux seront exemptes. On entend par «locaux» ici l'emploi sur place du produit lui-même. Par conséquent, les fumoirs qui exportent à l'étranger ne sont pas considérés comme des fumoirs locaux.

(Les articles 21 à 26 inclusivement sont adoptés.)

Article 27—*Pouvoirs de l'inspecteur.*

M. McQuaid: Est-ce que la portée de cet article permettra à un inspecteur de faire une perquisition sans mandat?

M. Lang: Oui, je le pense. Il correspond aux dispositions sur l'inspection de cinq ou six autres lois, comme la *Loi sur les Aliments et drogues*, la *Loi de l'industrie laitière*, et ainsi de suite.

M. McQuaid: J'aurais un commentaire à faire à ce sujet, monsieur le président. Deux noirs ne font pas un blanc. Je m'oppose à cet empiètement sur la liberté des gens. On pourrait au moins exiger de l'inspecteur de se présenter avec un mandat, lorsqu'il veut faire une perquisition. Le paragraphe (a) doit être maintenu. Je comprends qu'il peut avoir le droit de pénétrer sur les lieux. Mais le paragraphe (b) dit:

«ouvrir tout récipient qui s'y trouve ou examiner toute chose qui s'y trouve lorsqu'il a des raisons de croire qu'ils contiennent du poisson pour le marché, et il peut en prélever des échantillons».

Si la portée de cet article lui permet de faire une perquisition sans mandat, je m'y oppose. Comme tout autre officier de la loi, il devrait être tenu d'avoir un mandat. Même dans la *Loi sur l'accise*, l'une de nos lois les plus rigoureuses, il faut un mandat pour faire une perquisition.

M. Davis: Je crois que cela relève de la *Loi sur l'inspection du poisson*. M. Dempsey est ici, du Service de l'inspection du ministère des Pêcheries. Il pourrait certainement donner plus de détails à ce sujet. J'imagine que le travail de ce service ne sera pas affecté considérablement.

[Texte]

[Interprétation]

would continue much as it has done in the past.

Mr. H. V. Dempsey (Director, Inspection Service, Department of Fisheries): Yes, the wording is very similar to the wording of section 4 of the Fish Inspection Act which was revised and passed in 1967 where inspectors, for the purposes of fish inspection, may enter any place or premises, open any container and in general perform the same actions as those contemplated in the present bill.

Mr. McQuaid: Mr. Chairman, is that considered necessary? Is there any reason that these men should not be required to have a search warrant. It seems to me you are putting a considerable amount of power in the hands of men who we are not absolutely sure will exercise it judiciously. Is it necessary that they be able to do this without a warrant?

• 1710

Mr. Dempsey: Mr. Chairman, if I may comment, the circumstances, which, fortunately, happen infrequently, are usually such that it would be impossible or difficult to go through the process of obtaining a search warrant when you are involved with trucks which are on the move or vehicles which are on the move or perhaps you are in a very remote part of the country where search warrants are not readily obtainable. I figure it is for this reason that the Fish Inspection Act does not contain a provision that a search warrant should be obtained.

Mr. Lang: Mr. Chairman, I myself have pursued this matter of whether such a provision might be necessary because it concerned me in another context. The explanation which in the end persuaded me was that in the normal process in cases like this the inspector is, in fact, in a close and informal relationship with most of the people concerned in the industry and he is visiting their places from time to time, simply entering, really, with their consent at all times and so on, and there is no difficulty; that to bring him into the position where he would have to have a warrant on all of these occasions would be a very great difficulty.

The alternative, that only when there was an objection would he get a warrant, would be really to give the person with whom he was dealing adequate time to make the warrant completely useless. In other words, the difficulty is that your easy administration simply disappears if, at that crucial point

M. H. V. Dempsey (Directeur, Service de l'inspection du ministère des Pêcheries): Cet article ressemble beaucoup à l'article 4 de la *Loi de l'inspection des poissons* qui a été révisé et adopté en 1967, d'après laquelle les inspecteurs peuvent, à des fins d'inspection, entrer dans n'importe quel endroit, ouvrir n'importe quel récipient, et procéder en général ainsi que prévu aux termes du présent projet.

M. McQuaid: Monsieur le président, est-ce que l'on considère que c'est nécessaire? Y a-t-il une raison pour laquelle ces inspecteurs ne sont pas requis d'avoir un mandat de perquisition? Il me semble que vous donnez énormément de pouvoirs à des hommes et on ne peut pas être certains qu'ils exerceront ces pouvoirs de façon judicieuse.

Est-il essentiel qu'ils fassent ces inspections sans mandat?

M. Dempsey: Monsieur le président, les circonstances sont telles qu'il serait impossible ou difficile d'obtenir un mandat de perquisition quand des camions sont en marche ou que vous vous trouvez dans une partie éloignée du pays où on ne peut pas obtenir aisément des mandats. C'est pour ces raisons que la *Loi d'inspection des pêcheries* n'a pas exigé qu'on obtienne un mandat de perquisition.

M. Lang: Permettez-moi. J'avais étudié cette question aussi, à savoir si une telle disposition était nécessaire. Les explications qu'on m'a données portent à croire que dans des conditions normales, concernant des cas de ce genre, l'inspecteur a des rapports assez intimes avec les gens travaillant dans cette industrie et il leur rend visite à leurs lieux de travail de temps à autre, d'habitude sur leur propre consentement à chacune de ces occasions et son travail serait rendu difficile s'il avait à obtenir un mandat dans chacun de ces cas.

Ce serait que lorsqu'il y aurait une objection possible et qu'il lui faudrait un mandat, cela donnerait le temps à la personne dont les locaux sont inspectés de faire disparaître les preuves. En d'autres mots, l'administration facile de la Loi disparaît simplement, si, au moment crucial où une personne s'objecte à

[Text]

when someone is objecting to his looking at a particular sample or product he stops him from doing it and is given an opportunity to withdraw. I may say that if you or anyone else in your ingenuity could produce a solution which would satisfy the ease of administration and, at the same time, guard against the possibility of an inspector's overstepping his bounds, apart from the normal civil law, I would be delighted.

Mr. McQuaid: Mr. Chairman, why should this inspector be in any more favourable position, for example, than a police officer searching under the Excise Act? This man requires a warrant. I think we must be careful here that we do not allow ourselves to develop into a police state, where these men are given very wide powers and can more or less run roughshod over everybody. I do not think that it would be putting too much of a burden on these inspectors to require them to have a warrant before they are able to search my car or my truck.

Mr. Hogarth: Mr. Chairman, in that regard I have not reviewed the law with regard to search warrants, but as I have always understood it, you never have to have a search warrant to search a car or an aircraft or a vessel. The only thing you have to have a search warrant for is premises. My recollection is, and I may be wrong, but I have a suspicion that that may be confined to a dwelling house; but I would not want to be confined to that view because I would like to have a look at the law first. But it appears to me, Mr. Minister, that surely we could except dwelling houses from this clause because after all the Royal Canadian Mounted Police have to have a search warrant to get into a dwelling house to find stolen goods and many other things, pursuant to the Criminal Code.

I do concur to a certain extent in the hon. member's suggestion that surely dwelling houses should have some protection. Whether or not we should take it and extend it from there to locked premises as opposed to premises that he can go into by implied invitation is another matter, but may I suggest that we consider that when we are bringing the bill back at the report stage. In the meantime I will look up the Criminal Code on search warrants.

The Chairman: Shall Clause 27 carry?

Mr. McQuaid: Mr. Chairman, is it allowed to stand until the Minister lets us know whether or not dwelling houses can be exempt from this?

[Interpretation]

l'inspection d'un échantillon ou d'un produit particulier, on donne à cette personne le droit de s'opposer à cette inspection et la chance de s'y soustraire.

Si vous ou n'importe qui d'autre pouvait trouver une solution à ce dilemme, c'est-à-dire satisfaire à l'administration aisée de la Loi et voir à ce qu'un inspecteur ne dépasse pas les limites de son pouvoir, et en même temps lui permettre de faire son travail, j'en serais satisfait.

M. McQuaid: Alors, pourquoi est-ce que cet inspecteur, aurait davantage de pouvoirs qu'un agent de la Sûreté enquêtant en vertu de la Loi d'accise. Cet homme a besoin d'un mandat. Il me semble que nous devons prendre garde de ne pas encourager le développement d'un État policier, en donnant de très larges pouvoirs à ces inspecteurs qui peuvent alors plus ou moins faire la loi envers quiconque. Je ne crois pas qu'il est exagéré de demander que ces inspecteurs obtiennent des mandats, avant qu'ils fouillent ma voiture ou mon camion.

M. Hogarth: Je n'ai pas étudié la Loi quant au mandat de perquisition, mais j'ai toujours constaté qu'il ne faut pas de mandat pour inspecter un vaisseau, une voiture ou un avion. Vous n'avez besoin d'un mandat que lorsqu'il s'agit d'une maison, et si je ne me trompe pas il se peut que ce soit uniquement pour un logement. Il me faudrait consulter la loi, mais il me semble qu'assurément on pourrait excepter les logements, parce qu'après tout la Gendarmerie royale a besoin d'un mandat de perquisition pour pénétrer dans une maison habitée lorsqu'ils sont à la recherche d'objets volés et d'autres objets relevant du Code criminel.

Je suis d'accord jusqu'à un certain point avec les députés qui voulaient protéger au moins les logements. Si on devrait peut-être excepter les locaux qui sont fermés à clé par opposition aux locaux où il peut entrer sans autre invitation serait un autre problème, mais je pense qu'il nous faudra étudier cette question au moment du rapport. Entre temps, je consulterai le Code criminel au sujet des mandats de perquisition.

Le président: L'article 27 est-il adopté?

M. McQuaid: Non, il est réservé jusqu'au moment où le ministre nous dira si les logements seront exemptés ou non.

[Texte]

The Chairman: Is it the wish of the Committee that we stand Clause 27?

Mr. Lang: Certainly, Mr. Chairman, I think the suggestion is a reasonable one and I am not sure that there would be any difficulty at all in exempting dwelling houses because certainly my general argument would not cover that. I would certainly be glad to look into this matter.

• 1715

The Chairman: Shall we stand Clause 27?

Mr. Hogarth: Mr. Chairman, I do not think we have any other clauses standing, have we? It would appear to me that on the basis of the representations made by the Minister we should go ahead and carry this clause. It can be the subject of debate at the report stage should the occasion arise. It is not that important that we should hold up this Bill and have another meeting merely for that point.

Clauses 27, 28 and 29, inclusive, agreed to.

On Clause 30—*Punishment*.

Mr. Murphy: Mr. Chairman, in Clause 30, subclause (2) there is a provision:

In any prosecution for an offence under this Part, it is sufficient proof of the offence to establish that it was committed by an employee or agent of the accused whether or not the employee or agent is identified or has been prosecuted for the offence,...

Then the subclause goes on and puts the onus on the accused to establish that the offence was committed without his knowledge. I think that onus is sufficient in itself. It is a reversal of the usual onus without going on to say that a man could be charged for something done by someone else, without imposing the requirement on the prosecutor, as it were, to name the person who actually committed the offence. I think it would be very difficult to defend oneself against a charge committed by someone who is not identified and who does not have to be identified. With the onus already on the accused to establish his innocence, as it were, under subclause (2), I do

[Interprétation]

Le président: Le Comité désire-t-il réserver l'article 27?

M. Lang: Certainement, monsieur le président, je pense que la suggestion est tout à fait raisonnable. Je ne crois pas qu'il y ait des difficultés à exempter les logements, car le principe général de la Loi ne touche pas ces cas. Je serai très heureux d'approfondir cette question.

Le président: Alors, nous réservons l'article 27?

M. Hogarth: Monsieur le président, je ne pense pas qu'il y ait d'autres articles réservés, n'est-ce pas? Alors, il me semble qu'à la suite des déclarations du ministre, nous devrions adopter l'article. Ce dernier pourrait faire l'objet d'un débat au moment du rapport si l'occasion se présente. Il n'est pas absolument nécessaire de retenir ce projet de loi et de tenir une autre réunion sur ce sujet particulier.

Les articles 27, 28 et 29 inclusivement sont adoptés.

L'article 30—*Infractions et peines*.

M. Murphy: Monsieur le président, à l'article 30 paragraphe (2) il y a la disposition suivante:

(2) Dans la poursuite d'une infraction prévue par la présente Partie, il suffit, pour établir l'infraction, de démontrer qu'elle a été commise par un employé ou un mandataire de l'accusé, que cet employé ou mandataire soit ou non identifié ou qu'il ait été poursuivi ou non pour cette infraction, à moins que cette personne n'établisse d'une part que la contravention a été commise sans qu'elle le sache ou y consente et d'autre part qu'elle s'est dûment appliquée à en prévenir sa commission.

Ainsi ce paragraphe reporte sur l'accusé la preuve à faire que le délit a été commis sans intention. Je pense que la constitution de la preuve est en elle-même suffisante. C'est le contraire de la charge de la preuve habituelle, sans dire cependant qu'un homme peut être accusé pour un acte commis par quelqu'un d'autre sans imposer à la poursuite de nommer la personne qui a commis réellement l'infraction. Il me semble qu'il serait très difficile de défendre quelqu'un contre une accusation visant quelqu'un qui n'est pas identifié et qui n'a pas à être identifié. Lorsque l'accusé doit déjà établir qu'il est innocent, tel qu'il est mentionné dans cet article,

[Text]

not think I can support that clause while the words "whether or not the employee or agent is identified or has been prosecuted for the offence", remain.

Mr. Lang: Mr. Chairman, you will notice that it is the first burden on the Crown to establish that the offence was committed by the employee or agent. Having done that, they will surely have had to establish enough evidence so that the employer would be in a good position to know who his employee or agent was. This subclause is really meant to guard against the proposition that the Crown cannot establish the actual identity, yet has to establish that the person was an employee. It seems to me reasonable there to leave that burden upon the employer, who should be in a position to know, if it is relevant to him, which of his employees it was.

Mr. Murphy: Surely, Mr. Chairman, if the Crown is in a position to establish that individual "x" is an employee or agent of accused "y" it must have the name of the individual or be able to identify the individual in order to prove that. If that is the case, what objection is there to making that information known to the accused?

Mr. Lang: Well, I can imagine situations where the Crown could establish to the satisfaction of the court that it was an employee who committed the offence and yet not be able to supply the actual name, but the circumstances may indicate that it was an employee without its being apparent what the name is. What you have said about the difficulty of doing the two indicates how narrow the ambit of the clause is and therefore how narrow the danger is.

Mr. Murphy: Mr. Chairman, I cannot see how a person can establish that person "x" did something without his knowledge if he does not know who person "x" is.

• 1720

Mr. Lang: Well, let us assume that in the circumstances the Crown can show to the satisfaction of the court, for instance, that it was one of three employees who did the thing on which the charge is now based. This subclause would allow the Crown to proceed against the employer without having to establish which of the three it was. I think this would be exactly the kind of problem which the clause is intended to cover. Again, this clause is parallel to similar sections in other statutes. I know that is not a defence if the clause is wrong but I think it does indicate

[Interpretation]

je ne peux pas donner mon appui à un tel article tant que les mots «que cet employé ou mandataire soit ou non identifié ou qu'il ait été poursuivi»... sont conservés.

M. Lang: Monsieur le président, mais vous noterez que la première charge de la Couronne est d'établir que l'infraction fut commise par l'employé ou le mandataire.

Avant établi cela, la Couronne a dû certainement établir suffisamment de preuves pour faire connaître à l'employeur, lequel de ses employés ou mandataires est coupable. Ce paragraphe consiste à protéger la Couronne, lorsqu'elle ne peut pas identifier le coupable, mais peut établir cependant que ce dernier est un employé. Il me semble raisonnable de laisser la charge à l'employeur, qui lui connaît la situation, de déterminer le coupable parmi son personnel.

M. Murphy: Mais il me semble que si la Couronne se trouve dans une situation telle qu'elle peut établir que X est un mandataire ou employé de l'accusé Y, il faut que la Couronne ait identifié l'individu afin de prouver cela. Si tel est le cas, quelle objection y a-t-il à ce que l'accusé soit au courant?

M. Lang: J'imagine qu'il existe des situations où la Couronne pourrait établir que la personne responsable était un employé et pourtant ne pourrait pas donner le nom véritable de l'employé ou de l'accusé. Mais les circonstances peuvent démontrer qu'il s'agit bien d'un employé, sans qu'on puisse le nommer. Ce que vous dites au sujet des difficultés de faire la double preuve démontre combien est étroite l'ambiguïté de l'article, et combien le danger est restreint.

M. Murphy: Monsieur le président, je ne peux pas entrevoir comment une personne peut prouver qu'une personne X a commis un délit sans qu'elle le sache, quand il ne sait justement pas qui est la personne X.

M. Lang: Présignons que la Couronne peut prouver à la satisfaction du tribunal par exemple, que ce fut l'un des trois employés qui a commis l'acte sur lequel se base l'accusation. Cet article permet à la Couronne de poursuivre l'employeur sans établir lequel des trois employés est responsable. C'est exactement le genre de situation que l'article est supposé couvrir.

Encore une fois cet article est le pendant d'article semblables se trouvant dans d'autres statuts. Je sais que ce n'est pas une raison, si l'article s'avère fautif mais c'est la

[Texte]

that a certain amount of legal procedure and thinking has gone on.

Mr. Smith (Northumberland-Miramichi): I had a question on subclause (1) (a) of Clause 30. It reads:

...is guilty of (a) an indictable offence and is liable to imprisonment for two years,

Does that mean two years or does it mean up to two years?

Mr. Lang: Up to two years.

Mr. Smith (Northumberland-Miramichi): Is it worded that way in the Code?

Mr. Lang: Yes.

Mr. Smith (Northumberland-Miramichi): On the second part:

...or (b) an offence punishable on summary conviction.

I think that we all realize that for the accused person the information would read in the very same words except that at the end it would say contrary to Clause 30, subclause (1), paragraph (a) or it could be paragraph (b). Now, that one little letter means quite a difference. Actually, to the accused the penalty might be the same, a \$50 fine.

However, the accused, if he is a fisherman and is not represented by counsel, may not realize the great difference between the (a) and the (b), particularly where the penalty very likely might be the same. Under (a), if it is under (a) that he is guilty of an indictable offence, he is fingerprinted, he is barred from entry to the United States. I know that this occurs in other statutes, notably the Criminal Code, but I hate to think of some young constable typing an (a) instead of a (b), possibly mistakenly, or perhaps with some feeling of malice towards the accused. The accused, as I say, unrepresented by counsel would not in many cases, on a plea of guilty, realize the difference until later on.

My question is; who is going to decide whether it is going to be (a) or (b), indictable or summary conviction?

Mr. Lang: Mr. Chairman, this is a matter that is under the jurisdiction of the law enforcement agencies and in this case, therefore, the provincial department of the Attorney General.

[Interprétation]

preuve qu'un certain montant de réflexion a été dépensé à ce sujet.

Mr. Smith (Northumberland-Miramichi): J'ai une question concernant le paragraphe (1) (a) de l'article 30.

Il se lit ainsi:

a) d'un acte criminel est passible d'un emprisonnement de deux ans, ou

Est-ce que cela veut dire deux ans, ou jusqu'à deux ans?

Mr. Lang: Jusqu'à deux ans.

Mr. Smith (Northumberland-Miramichi): Est-ce mentionné ainsi dans le Code?

Mr. Lang: Oui.

Mr. Smith (Northumberland-Miramichi): Bon, à la deuxième partie de l'article 30, on dit:

(1) b) d'une infraction punissable sur déclaration sommaire de culpabilité.

Nous réalisons tous que, pour l'accusé, la loi semble identique, excepté qu'à la fin, que l'article 30, paragraphe (1) alinéa a) est loin d'être semblable à l'alinéa b). Ainsi une petite lettre peut faire toute la différence. Pour l'accusé, la peine peut paraître la même, une amende de \$50.

Cependant, le prévenu, si c'est un pêcheur et qu'il n'est pas représenté par son avocat, ne se rendra peut-être pas compte de la grande différence entre a) et le b), même si la peine semble identique. En vertu de a) il est coupable d'un vrai délit, on prend ses empreintes digitales, il ne peut plus pénétrer aux États-Unis. Je sais que cela arrive aussi dans d'autres statuts, notamment dans le Code criminel. Mais je n'aime pas penser qu'un jeune agent de police pourrait, par exemple, mettre par erreur un a) plutôt qu'un b) ou qui pourrait avoir à l'endroit du prévenu des sentiments hostiles. L'accusé n'étant pas toujours représenté par son avocat, lorsqu'il plaide coupable, il ne se rendrait compte de la différence que lorsqu'il sera trop tard.

Voici ma question. Qui va décider si la poursuite se fera selon a) ou selon b), s'il s'agit d'un délit criminel, ou d'une infraction punissable sur déclaration sommaire de culpabilité.

Mr. Lang: Cela dépend évidemment des forces de l'ordre, et, dans ce cas, des procureurs généraux des provinces.

[Text]

Mr. Smith (Northumberland-Miramichi): I do not think so. I hate to disagree with the Minister, but the Minister of Justice would appoint an agent and would presume that he would keep an eye on it and see that it was...

Mr. Hogarth: This is provided for in the Omnibus Bill, Clause 2, which we are having a great argument about. With respect, Mr. Minister, I cannot understand why we are putting indictable offences into statutes other than the Criminal Code. I realize that there could be serious offences committed against this act but I cannot see—and I join the hon. member in his remarks—I really cannot see why we should have any provisions for indictable offences in this type of statute. It is a regulatory statute; it is not a criminal one. I respectfully suggest that there is really no room for indictable offences in this type of statute. You could even proceed by way of summary conviction and make the punishment more than the \$500 fine or, alternatively, six months. You could even extend the summary conviction penalty. I think, with respect, it would be the more appropriate way.

• 1725

Mr. Smith (Northumberland-Miramichi): I think, Mr. Chairman, it might be noted that under the Fisheries Act itself there is a summary conviction offence of obstructing a police officer whereas under the Criminal Code this offence is wholly indictable; it cannot be tried with a summary conviction. I am just giving you an example that under the Fisheries Act there is a summary conviction offence of obstructing a peace officer, whereas under the Criminal Code that offence is indictable—it has to be indictable. I think I am correct on that. This indicates that the Fisheries Act itself is inclined towards summary conviction offences rather than indictable.

Mr. Lang: Mr. Chairman, I do not see offhand any fundamental reason for having to retain the indictable offence procedure here so long as the available punishment is adequate and perhaps more flexible than it would be under (b) alone. The matter involved—the possible profit by an offender—is of some significance and therefore a fairly sizeable punishment may be required in certain cases.

Mr. Hogarth: I concur with what my hon. friend has said. You see, if a police officer or an inspector decided that he was not happy with the performance of an individual and he was going to really hit him as hard as he could, he would lay an information and he

[Interpretation]

M. Smith (Northumberland-Miramichi): Je ne pense pas. Je ne veux pas contredire le ministre mais si le ministre de la Justice nomme un agent, nous présumons qu'il surveillera la situation de près.

M. Hogarth: Je ne veux pas parler de l'article 2 du bill fourre-tout qui fait l'objet de belles discussions en ce moment. Mais avec votre respect, monsieur le ministre, je ne vois pas pourquoi nous incluons des délits criminels dans des lois autres que le Code criminel. Je me rends parfaitement compte que l'on peut commettre des délits sérieux contre cette Loi, mais je ne vois pas—et je rejoins là la remarque de M. le député—pourquoi on inclut des dispositions visant des délits criminels dans ce genre de loi; c'est une loi administrative; il ne s'agit pas d'une loi répressive. Je dirais respectueusement qu'il n'y a pas de place pour des délits criminels dans ce genre de loi. Vous pourriez même majorer l'amende de \$500 ou la peine de prison de six mois. Je pense que ce serait préférable.

M. Smith (Northumberland-Miramichi) Aux termes de la *Loi sur les pêcheries*, il y a un délit punissable sur déclaration sommaire de culpabilité si un agent de la paix est gêné dans l'exercice de ses fonctions alors qu'aux termes du Code pénal, il s'agit d'un crime de sorte qu'il est impossible de procéder par voie de déclaration sommaire de culpabilité. Ce qui indique que la *Loi sur les pêcheries* penche plutôt du côté des délits punissables sur déclaration sommaire de culpabilité.

M. Lang: Je ne vois pas de raison particulière d'avoir inscrit ici ce type de procédure aussi longtemps que les sanctions sont adéquates. L'avantage éventuel que pourrait retirer un prévenu d'une infraction à la loi est tel cependant, qu'il faut prévoir des sanctions d'importance.

M. Hogarth: Mais si un inspecteur ou un agent de police décide qu'il n'est pas content de la façon dont se comporte tel individu et s'il décide de le frapper aussi durement que possible, il n'a qu'à décider qu'il s'agit d'un délit criminel. Le procès se déroulerait auto-

[Texte]

would announce that he is proceeding by way of an indictment. It is an automatic jury trial. A man does not even have the rights that he gets under such other offences as breaking and entering and being tried forthwith before the magistrate or before a county court judge, he has to go right to a jury. With respect, I think it is perhaps going much too far than is necessary for the regulation of this industry.

The Chairman: Shall we stand Clause 30 or—

Mr. Hogarth: I think we should take the same course as we did with the others and carry them subject to the comments that were made.

Mr. McQuaid: Mr. Chairman, this is the second time today that a suggestion put forward by a member of this Committee supporting the government has been taken under advisement. I agree that both the suggestions are worth while; yet, that we consider to be just as worth while a suggestion has been ruled out. I am just wondering whether this is the form of procedure that is going to continue in this Committee. If it is, I feel that I will have to join with Mr. Lundrigan and depart.

Mr. Hogarth: With respect, Mr. Chairman, Clause 27 was put forward by Mr. McQuaid, on search warrants. It was you, sir, who brought up the question of search warrants.

Mr. McQuaid: I raised the question of search warrants, but it happened to be concurred in by the government supporters. I think we have to get this Committee down to a more practical working basis.

Clauses 30 to 34 inclusive agreed to.

The Chairman: Shall the amendment proposed as an addition to the Schedule carry?

Mr. Hogarth: Mr. Minister, in dealing with the Schedule, why were rainbow trout not included? They are marketed extensively, are they not?

Mr. Harvey: Mr. Chairman I could answer that. The list of species here which are covered are those specified by the provincial fisheries departments and also examined and agreed to by the federal Department of Fisheries. The significance or insignificance of rainbow—at the present moment it is a species commercially fished and traded in the Prairie Provinces—is such, obviously, that they disregarded it. It is recognized that rainbow might very well become a commercial

[Interprétation]

matiquement devant un jury. Un individu ne jouirait même pas des privilèges qui sont accordés à celui qui est accusé de vol par effraction et dont la cause est entendue sur-le-champ par un magistrat; son procès se déroule automatiquement devant un jury. Je crois que nous allons un petit peu trop loin.

Le président: Vous réservez l'article 30?

M. Hogarth: Pourquoi ne pas adopter la même attitude que pour les autres?

M. McQuaid: Pour la deuxième fois aujourd'hui, une suggestion est présentée par un membre de ce comité, qui appuie le gouvernement, est prise en délibéré. Je conviens que les deux idées sont bonnes et pourtant, une suggestion que nous jugeons tout aussi utile a été rejetée. Je me demande si cette façon de procéder se poursuivra. Si tel est le cas, je suivrai l'exemple de M. Lundrigan et quitterai les lieux.

M. Hogarth: L'article 27 sur les perquisitions, a été mis de l'avant par M. McQuaid. C'est vous qui avez soulevé la question.

M. McQuaid: En effet, c'est moi qui ai soulevé la question des mandats de perquisition, mais la chose a été reprise par les amis du gouvernement. Il faudrait que le comité soit un peu plus pratique dans ses travaux.

Les article 30 à 34 inclusivement sont adoptés.

Le président: L'amendement ajouté à l'annexe est-il adopté?

M. Hogarth: Pourquoi n'est-il pas question des truites arc-en-ciel, ne sont-elles pas vendues en quantité importante?

M. Harvey: Les cas prévus ici sont les cas prévus par les ministères provinciaux des Pêcheries qui ont fait l'objet d'une approbation ultérieure par le ministère fédéral. L'importance ou la non-importance, de la truite arc-en-ciel (il s'agit d'un poisson pêché et vendu dans les provinces des Prairies) est telle qu'on n'a pas voulu en tenir compte. Il est possible que la truite arc-en-ciel prenne de l'importance au point de vue commercial.

[Text]

species in the course of time, particularly with fish farming, and provision is included in the bill for any addenda to the Schedule to be approved by Order in Council.

• 1730

Mr. Murphy: I move that the Schedule in Bill C-148 be amended by adding thereto the following species of fish: Carp (*Cyprinus carpio*); Quillback (*Carpodes cyprinus*) white carp; Mooneye (*Hiodon tergisus*); Channel catfish (*Ictalurus punctatus*)—catfish; Black bullhead (*Ictalurus melas*)—bullhead; Brown bullhead (*Ictalurus nebulosus*)—bullhead.

Schedule as amended agreed to.

Clause 1 agreed to.

Title agreed to.

Mr. Chairman: Shall I report the Bill as amended to the House?

Some hon. Members: Agreed.

The Chairman: Thank you, gentlemen.

Mr. Lang: Thank you, very much.

[Interpretation]

C'est pourquoi le bill permet les additions en annexe.

M. Murphy: Je propose que l'annexe au bill C-148 soit modifiée pour ajouter les espèces suivantes: carpe (*cyprinus carpio*); brème (*carpiodes cyprinus*); laquaiche argentée (*hiodon tergisus*); barbue (*ictalurus punctatus*); barbotte noire (*ictalurus melas*); barbotte (*ictalurus nebulosus*).

L'annexe modifiée est adoptée.

L'article 1 est adopté.

Le titre est adopté.

Le président: Dois-je faire rapport du Bill, à la Chambre, tel que modifié?

Des voix: D'accord.

Le président: Merci, messieurs.

M. Lang: Merci beaucoup.

MINUTES OF PROCEEDINGS

THURSDAY, February 6, 1969.
(13)

The Standing Committee on Fisheries and Forestry met this day at 10:20 a.m., the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Anderson, Borrie, Comeau, Crossman, Crouse, Goode, Hogarth, Lundrigan, McQuaid, Noble, Osler, Smith (*Northumberland-Miramichi*), St. Pierre, Perrault, Turner (*London East*), Whelan—(16).

Also present: The Honourable Jack Davis, Minister of Fisheries, and Mr. Ritchie, M.P.

In attendance: From the Department of Finance: Mr. A. Renwick, Government Financing and Capital Markets Branch.

The Committee proceeded to a clause by clause consideration of Bill C-151, An Act to amend the Fisheries Improvement Loans Act.

On clause 1

The Minister of Fisheries, the Honourable Jack Davis, introduced his associates, Mr. John Proskie, Research Economist from the Department of Fisheries and Mr. Renwick from the Department of Finance and then read a statement and was questioned thereon, assisted by Mr. Renwick.

It was agreed that two sets of tables be attached to today's Minutes of Proceedings and Evidence (*See Appendix "D"*).

Debate arose thereon and Mr. Crouse "That Paragraphs (d) and (e) of Subsection (1) of Section 3 of the Fisheries Improvement Loans Act are repealed and the following substituted therefor: (d) The sum of the principal amount of the loan and the amount that (1) is owing in respect of previous guaranteed loans that were made to the borrower, and all other fishermen with whom the borrower is associated in the same primary fishing enterprise if made in respect of that primary fishing enterprise, and (2) is

PROCÈS-VERBAUX

JEUDI 6 février 1969.
(13)

Le Comité permanent des pêches et forêts se réunit ce matin à 10 h. 20, sous la présidence de M. Crossman, président.

Présents: MM. Anderson, Borrie, Comeau, Crossman, Crouse, Goode, Hogarth, Lundrigan, McQuaid, Noble, Osler, Smith, (*Northumberland - Miramichi*), Saint-Pierre, Perrault, Turner (*London-Est*), Whelan—(16).

De même que: L'honorable Jack Davis, ministre des Pêcheries, et M. Ritchie, député.

Aussi présents: Du ministère des Finances: M. A. Renwick, de la Direction des finances de l'État et des marchés financiers.

Le Comité passe à l'examen article par article du Bill C-151—Loi modifiant la Loi sur les prêts aidant aux opérations de pêche.

Sur l'article 1

Le ministre des Pêcheries, l'honorable Jack Davis, présente ses associés, M. John Proskie, économiste du service de recherche du ministère des Pêcheries, et M. Renwick, du ministère des Finances. Il lit ensuite une déclaration, puis aidé de M. Renwick, il répond aux questions que lui posent les membres du Comité.

On décide d'annexer deux séries de tableaux aux Procès-verbaux et Témoignages d'aujourd'hui. (*Voir Appendice "D"*).

On délibère sur l'article 1, et M. Crouse propose la modification suivante:

Que les alinéas d) et e) du paragraphe (1) de l'article 3 de la Loi sur les prêts aidant aux opérations de pêche soient abrogés et remplacés par ce qui suit: d) la somme du principal du prêt et du montant qui (i) reste dû à l'égard de prêts garantis faits précédemment à l'emprunteur, et à tous les autres pêcheurs avec lesquels l'emprunteur est associé dans la même entreprise primaire de pêche si les prêts ont été faits à l'égard de cette entre-

disclosed in the application, or of which the lender had knowledge, did not exceed twenty-five thousand dollars; (e) The loan was repayable in full by the terms thereof in not more than fifteen years.

The said motion was ruled out of order by the Chairman on the grounds that it involved an expenditure of public money. (Beauchesnes (4) 249).

After further debate clause 1 carried.

On clause 2

Debate arose thereon and Mr. Crouse moved "That paragraphs (f) and (g) of subsection (1) of the said Act are repealed and the following substituted therefor: (f) no fee, service charge or charge of any kind other than simple interest at the rate prescribed, and shall not be more than one per cent of the cost of money to the federal government, and a prescribed charge for insurance was by the terms of the loan, payable to the lender in respect of the loan, so long as the fisherman was not in default on the loan;"

After further debate thereon, the question being put on the said amendment, it was resolved in the negative. YEAS 3, NAYS 9.

Then Mr. Lundrigan moved "That this Committee do now adjourn.

The question being put on the said motion, it was resolved in the negative. YEAS 3. NAYS 8.

And debate continuing, Mr. Crouse moved that Bill C-151, An Act to amend the Fisheries Improvement Loans Act, be amended by renumbering clause 2 thereof as subclause (2) of clause 2 and by adding as subclause (1) of clause 2 the following:

"2. (1) All that portion of paragraph (d) of subsection (1) of section 3 of the said Act following subparagraph (ii) thereof is repealed and the following substituted therefor:

prise primaire de pêche, et (ii) est déclaré dans la demande comme ne dépassant pas, ou que le prêteur savait ne pas dépasser, vingt-cinq mille dollars; e) le prêt était remboursable dans sa totalité, selon les conditions y afférentes, en quinze ans au maximum.

Le président déclare ladite motion irrecevable, parce que comportant la dépense de deniers publics. (Beauchesne (4), 249).

Le débat se poursuit, puis l'article 1 est adopté.

Sur l'article 2

On délibère sur l'article 2, et M. Crouse propose la modification suivante:

Que les alinéas f) et g) du paragraphe (1) de l'article 3 de ladite loi soient abrogés et remplacés par ce qui suit: f) nuls honoraires, nuls frais de service, nulle rétribution de quelque espèce autre que l'intérêt simple au taux prescrit, et qui ne doit pas dépasser un pour cent du coût de cet argent pour le gouvernement fédéral, et une rétribution prescrite pour l'assurance, n'ont été payables au prêteur, selon les conditions du prêt, relativement à ce dernier, tant que le pêcheur n'a pas été en défaut à l'égard du prêt.

Le débat se poursuit, puis la modification, mise aux voix, est rejetée par 9 voix contre 3.

Puis M. Lundrigan propose:
Que la séance soit levée.

La motion, mise aux voix, est rejetée par 8 voix contre 3.

Le débat se poursuit, et M. Crouse propose que l'on modifie le Bill C-151—Loi modifiant la Loi sur les prêts aidant aux opérations de pêche, en renumérotant l'article 2, qui deviendrait alors le paragraphe (2) de l'article 2, et en y ajoutant, en tant que paragraphe (1) de l'article 2, la disposition suivante:

2. (1) Toute la section de l'alinéa d) du paragraphe (1) de l'article 3 de ladite loi qui suit le sous-alinéa (ii) est abrogée et remplacée par ce qui suit:

“did not exceed twenty-five thousand dollars;”

The said motion was ruled out of order by the Chairman on the grounds that it involved an expenditure of public money. Beauchesne's 4 (249).

Clause 2 carried on division.

On clause 3

After debate, clause 3 carried.

The title carried.

Bill C-151 carried.

After debate, the Chairman was instructed to report Bill C-151 to the House without amendment.

At 12:55 p.m. the Committee adjourned to the call of the Chair.

J. H. Bennett,
Clerk of the Committee.

«ne dépassait pas vingt-cinq mille dollars».

Le président déclare ladite motion irrecevable, parce que comportant la dépense de deniers publics. (Beauchesne (4), 249).

L'article 2 est adopté à la majorité des voix.

Sur l'article 3

Après débat, l'article 3 est adopté.

Le titre est adopté.

Le Bill C-151 est adopté.

Après débat, on demande au président de faire rapport à la Chambre du Bill C-151 sans modification.

A midi 55, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
J. H. Bennett.

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, February 6, 1969.

• 1018

The Chairman: Gentlemen, I see a quorum.

This Committee has had referred to it Bill C-151, an Act to amend the Fisheries Improvement Loans Act.

We will now proceed to a clause by clause consideration of this bill and I will now call Clause 1, and invite the Honourable Jack Davis, Minister of Fisheries, to introduce his associates and to answer questions by the members, following his statement.

Mr. Jack Davis (Minister of Fisheries): Thank you very much, Mr. Chairman. I have with me Mr. Alexander Renwick of the Department of Finance and Mr. John Proskie of the Department of Fisheries, both of whom have knowledge of the details of this legislation and the manner in which it has been administered in the past. You may wish, from time to time, to ask them questions, or to ask me questions which I will refer to them, about the detail of this legislation and the regulations which have been written pursuant to it.

When I moved second reading of Bill C-151 in the House, which is an Act to amend the Fisheries Improvement Loans Act, I outlined the main changes to this legislation which are proposed at the present time. I also reviewed in some detail the background and principal provisions of the Fisheries Improvement Loans Act and some of the experiences which the government has had in its administration in recent years.

Basically, this Act lends the credit of the people of Canada to individual fishermen and thereby improves the rate of interest at which they can borrow money. It lends security, in other words, to the lending institutions which, in turn, will make money available on long-term bases to fishermen under terms more favourable than they would otherwise obtain.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 6 février 1969

Le président: Messieurs, nous sommes en nombre.

On a renvoyé à ce Comité le Bill. C-151—Loi modifiant la Loi sur les prêts aidant aux opérations de pêche.

Nous allons maintenant examiner le Bill article par article. Je mets en délibération l'article 1, et je vais demander à l'honorable Jack Davis, ministre des Pêcheries, de nous présenter ses associés, puis de faire sa déclaration. Les membres du Comité pourront ensuite poser des questions.

L'hon. M. Jack Davis (ministre des Pêcheries): Merci beaucoup, monsieur le président. J'ai avec moi aujourd'hui M. Alexander Renwick, du ministère des Finances, et M. John Proskie, du ministère des Pêcheries. Tous deux connaissent les détails de ce projet de loi et la façon dont la Loi a été exécutée par le passé.

Vous voudrez peut-être, de temps à autre, leur poser des questions, ou me poser des questions que je leur renverrai, sur les détails de ce Bill et sur les règlements qui y ont trait.

Quand j'ai proposé la deuxième lecture à la Chambre du Bill C-151—Loi modifiant la Loi sur les prêts aidant aux opérations de pêche—j'ai exposé les principales modifications que nous proposons actuellement d'apporter à la loi.

J'ai aussi passé en revue de façon assez détaillée l'historique et les dispositions principales de la Loi sur les prêts aidant aux opérations de pêche, ainsi que certaines des expériences qu'a eues le gouvernement, au cours des dernières années, dans l'exécution de cette Loi.

Essentiellement, cette Loi prévoit que l'on prête l'argent de la population canadienne à des pêcheurs individuels, et améliore ainsi le taux d'intérêt auquel ces derniers peuvent emprunter de l'argent. En d'autres termes, elle garantit une certaine sécurité aux établissements de prêts qui, à leur tour, mettront à la disposition des pêcheurs de l'argent à long terme, et à des conditions meilleures qu'ils ne pourraient autrement en obtenir.

[Text]

• 1020

During the course of the debate several members expressed their views on the legislation and offered suggestions for the improvement of Bill C-151. I welcome these suggestions and will later propose an amendment dealing with the maximum loan available under the Fisheries Improvement Loans Act. I suggested in the House that the present ceiling of \$10,000 be raised to \$25,000, and we will be hearing evidence later during our deliberations today, or next week, about the appropriate level of these maximum loans.

The proposed changes to the Fisheries Improvement Loans Act as encompassed in Bill C-151 are as follows: First, the number and variety of lenders is extended from banks and credit unions and caisses populaires, as set forth in the original legislation in 1955, to include trust and loan companies and insurance companies.

In other words, trust and loan companies and insurance companies will also become eligible lenders under this legislation.

It is hoped that these new lenders will participate in the program and make available to fishermen additional sources of loans, and that fishermen will find it more convenient to go to branch offices of these companies than heretofore in respect to the banks, credit unions and caisses populaires.

The second main change relates to the rate of interest chargeable on these loans. Previously there has been a 5 per cent provision. This 5 per cent provision will be removed from the Act and a new rate, which will vary from time to time, will be established by Order in Council. This new arrangement is similar to the arrangement which has been proposed and passed relative to the Farm Improvement Loans Act.

In effect, the new rate of interest will be the borrowing rate of the federal government for a previous period plus 1 per cent.

For example, if the federal government is borrowing, as it has been recently, at 6½ per cent then the cost of money to fishermen on new loans under the Fisheries Improvements Loans Act would be 7½ per cent. If, in the future, the borrowing rate of the federal government goes down to 5 per cent, the interest rate chargeable under this legislation would be 6 per cent to fishermen; and if it went down to 3 per cent, as has been the borrowing rate to the federal government within the last three years, then the cost of money to the individual fisherman would be 4 per cent.

[Interpretation]

Au cours du débat, plusieurs députés ont exprimé leur opinion sur ce projet de loi et ont fait quelques propositions en vue d'améliorer le Bill C-151. Je les accueille de grand cœur et moi-même je proposerais un amendement ayant trait aux prêts maximum que nous pouvons mettre à la disposition, en vertu de la mesure. J'ai proposé à la Chambre que le plafond qui est présentement de \$10,000 soit élevé à \$25,000. Et, au cours de nos délibérations, nous entendrons les propositions quant au niveau approprié de ces prêts maximum.

Maintenant, les changements que nous proposons dans le Bill C-151 à la *Loi sur les prêts aidant aux opérations de pêche* sont, d'abord, d'étendre le nombre ou la variété des prêteurs. Il va au-delà des banques, des caisses populaires, et des caisses d'économie, ainsi que le contenait la mesure de 1955 et va maintenant comprendre les compagnies de fiducie, les compagnies de prêts et les compagnies d'assurances.

En d'autres mots, toutes sociétés seront admissibles au terme de cette mesure et nous espérons que ces prêteurs vont participer à ce programme et rendront disponibles des prêts aux pêcheurs. Ces derniers trouveront plus facile de s'adresser aux filiales de ces compagnies plutôt que d'aller aux banques, aux caisses populaires et aux caisses d'économie, comme ils le faisaient auparavant.

Le deuxième changement a trait aux taux chargés pour ces prêts. Auparavant il y avait une disposition fixant le taux à 5 p. 100 qui sera maintenant supprimée de la loi. Et un nouveau taux, variant de temps à autre, sera établi en vertu d'un décret ministériel. Ce nouvel arrangement est semblable à l'arrangement qui a été proposé dans le passé au sujet de la *Loi sur les prêts pour les améliorations agricoles*. Le nouveau taux d'intérêt sera le taux payé par le gouvernement pour un emprunt fait à une période précédente, plus 1 p. 100.

En d'autres mots, si le gouvernement emprunte au taux de 6½ p. 100, le nouveau taux aux pêcheurs sera de 7½ p. 100. Si, à l'avenir, le taux d'emprunt du gouvernement fédéral passe à 5 p. 100, le taux d'intérêt, en vertu de la loi, sera de 6 p. 100 pour les pêcheurs. Si cela descend à 3 p. 100, qui était le taux d'emprunt au cours des trois dernières années pour le gouvernement fédéral, cela coûterait 4 p. 100 aux pêcheurs commerciaux. Le taux sera calculé après le 1^{er} octobre de chaque année, au taux de 1 p. 100 de plus que le taux d'emprunt du gouvernement pour les

[Texte]

The actual rate will be computed on April 1 and October 1 of each year at a rate of 1 per cent above the government's borrowing rate on intermediate term loans over the immediately preceding six-month period.

Of course, the rate of interest which fishermen will have to pay will vary according to the rate which the Government of Canada has to pay for its money. It will vary in the sense only that the date of the loan will determine the rate which obtains over the whole period of the loan. In other words, the rate of interest will not go up and down on any given loan; it will be set at the time the loan is negotiated, and will remain fixed throughout the term of the loan.

I might point out that this rate of interest, which is 1 per cent above the federal government's intermediate loan borrowing rate, is a favourable rate. It is a lower rate, for example, than large corporations would be paying for new money. At the present time I understand that the largest fishing companies in Canada are paying somewhere between 8 per cent and 8½ per cent for their new money, so that if these changes in the Act were in effect at the present time fishermen would be negotiating loans at 7½ per cent, which is a rate lower than the rates available to the big corporations.

● 1025

The third change is to increase the federal government's liability relative to these loans. The total amount of loans guaranteed by the government is extended to cover 90 per cent of the first \$125,000 of loans made by a lender, to 50 per cent of the amount between \$125,000 and \$250,000 and to 10 per cent of the amount in excess of \$250,000.

This extension of the liability of the federal government will provide greater protection and security to the lending institutions, and, in particular, to the small-volume lenders. It is hoped that this provision will encourage more of these institutions to lend money to fishermen.

When the Bill is reported back to the House, Mr. Chairman, I propose to make a further amendment, which I mentioned previously, to section 3 of the Act, which will raise the maximum individual loan to \$25,000. When this Act was first passed in 1955, the maximum loan was established at \$4,000. Three years ago, in 1965, the \$4,000 figure was increased to \$10,000. During the second reading of Bill C-151 I indicated that we should consider a higher maximum figure, and this was concurred in by several members speaking in the House of Commons recently.

[Interprétation]

prêts à moyen terme pendant la période de six mois qui précède immédiatement.

Cela va varier selon le taux que devra payer le gouvernement pour son argent. Le taux va varier dans le sens que la date de l'emprunt va déterminer le taux d'intérêt pour toute sa durée. En d'autres mots, le taux d'intérêt ne variera pas mais sera fixé au moment où le prêt est négocié et restera à ce taux pendant toute la durée du prêt.

Je pourrais signaler ici que ce taux d'intérêt qui est 1 p. 100 de plus que le taux payé par le gouvernement, lorsqu'il doit emprunter, est un taux intéressant. Il est inférieur au taux d'intérêt payé par les grandes sociétés pour obtenir de l'argent. Je crois que les plus grandes compagnies de pêche commerciale au Canada paient entre 8 et 8½ p. 100 pour leur argent. Donc, à l'heure actuelle, les pêcheurs obtiennent des prêts à 7½ p. 100, taux inférieur au taux consenti aux grandes sociétés.

Le troisième changement consiste à augmenter la responsabilité du gouvernement relativement à ces prêts. Le montant total garanti de l'ensemble des prêts consentis par le gouvernement, couvrira 90 p. 100 des premiers \$125,000 prêtés, 50 p. 100 entre \$125,000 et \$250,000 et 10 p. 100 pour les montants qui excèdent \$250,000. Cette modification, ce prolongement de la responsabilité du gouvernement donnera une plus grande garantie aux sociétés prêteuses, et surtout pour les petits prêteurs. Et, nous espérons que cela va encourager ces institutions à consentir des prêts aux pêcheurs.

Lorsque le bill sera référé de nouveau à la Chambre, monsieur le président, j'ai l'intention de proposer une autre modification dont j'ai déjà parlé, à l'article 3, qui va augmenter le prêt maximum individuel à \$25,000. Quand la loi a été mise en vigueur, en 1955, le prêt maximum était établi à \$4,000. Il y a 3 ans, en 1965, ce chiffre de \$4,000 a été porté à \$10,000. Et, au cours de la deuxième lecture du Bill C-151 j'ai dit qu'il faudrait songer à un montant maximum plus élevé et plusieurs députés abondaient dans le même sens.

[Text]

I think it may be of interest to you to know about submissions we have received about the average cost of new vessels, new equipment and new shore installations. The evidence I have received from the West Coast, for example, under the new Indian Fishermen's Assistance Program, is that the lowest cost gill net boat, built in a yard, would be available for approximately \$18,000. That is the cheapest boat available on the West Coast. There are, of course, many vessels, especially fully equipped vessels, which would run up into the \$30,000, \$40,000 or \$50,000 bracket.

The Fishing Vessel Owners Association on the West Coast would like to see the ceiling raised above \$25,000. They say that new vessels bought by most of their members cost \$40,000 or \$50,000.

The Pacific Trawlers Association would like to see the ceiling raised to \$30,000 because, similarly, vessels in their case cost \$30,000, \$40,000 or \$50,000.

We in the Department have details of the cost of new vessels on the Atlantic Coast, and, similarly, the figures we have received range anywhere from a low of several thousand dollars for lobster boats to figures up in the order of a hundred thousand dollars for some of the medium-sized fishing vessels used in the maritime provinces and Newfoundland.

We have circulated some tables, Mr. Chairman, which perhaps I can refer to as Appendix "A", which indicate some of these costs. Mr. Proskie, of the Department of Fisheries, who compiled this data is here today, should you wish to ask him about these figures later.

You will note that the capital costs of selected Atlantic Coast fishing vessels range all the way from a low of \$13,000 for a wooden longliner, which I understand would be built by the individual fisherman in his own time, to figures as high as \$190,000 for a wooden herring seiner in Nova Scotia. There is not too much available for less than \$25,000 all up price, so you can see that there is a good case for raising the maximum loan available under this legislation to \$25,000.

● 1030

As this legislation is aimed at individual fishermen and not companies or corporations we are concerned with boats and equipment of the character which would normally be bought by individuals rather than larger groups of people and companies. So we are focussing at the lower end of the scale.

On the east coast, particularly, many fishermen have been converting from the traditional fisheries into some of the newer and more profitable lines—fishing—for crab and

[Interpretation]

Je crois que cela vous intéressera peut-être d'entendre parler des coûts des nouvelles embarcations de pêche, par exemple, de la côte Ouest. Au terme du programme de l'assistance aux Indiens, le coût d'une embarcation, conçue dans un chantier, coûterait \$18,000 environ sur la côte Ouest. Il y a beaucoup de navires complètement équipés qui iraient chercher jusqu'à trente ou quarante ou cinquante mille dollars. L'Association des propriétaires d'embarcations de pêche de la côte Ouest voudrait voir le plafond supérieur à \$25,000, parce que les nouveaux navires achetés par ses membres coûtent \$40,000 ou \$50,000. Et l'Association des chalutiers du Pacifique aimerait voir le même plafond fixé à \$30,000 car des bateaux semblables, dans leur cas, coûtent de \$30,000 à \$40,000.

Nous avons aussi une idée du coût des navires sur la côte Atlantique. Et, les chiffres que nous avons reçus vont de \$7,000 pour des bateaux destinés à la pêche aux homards jusqu'à \$100,000 pour certaines embarcations de grandeur moyenne que l'on utilise dans les Provinces Maritimes et Terre-Neuve.

Nous avons fait circuler certains tableaux que je pourrais peut-être désigner comme annexe A, et qui indiquent certains prix, et M. Proskie, du ministère des Pêcheries, qui a rassemblé toutes ces données est ici présent. Alors, si vous voulez lui poser des questions au sujet de ces chiffres, il pourra vous répondre.

Vous noterez que le prix coûtant pour un navire sélectionné de la côte Atlantique ira de \$13,000 pour une embarcation en bois construite par le pêcheur lui-même jusqu'à \$190,000 pour un bateau destiné à la pêche au hareng dans la province de la Nouvelle-Écosse. Toutes ces embarcations, tous ces navires coûtent au moins \$25,000. De sorte que vous pouvez voir qu'il y a ici bonne cause pour augmenter le maximum de prêt disponible aux termes de cette loi à \$25,000.

Cette loi intéresse les pêcheurs et non pas les sociétés ou les corporations. Il s'agit donc de navires et d'outillage qui pourraient être achetés par des groupes d'individus plutôt que par des sociétés. Nous nous intéressons donc particulièrement au bas de l'échelle. Le long de la côte Est, en particulier, beaucoup de pêcheurs se sont orientés vers des domaines plus nouveaux, comme la pêche au crabe et au pétoncle. Un tel transfert, et il est possible de transformer les navires qui existent à

[Texte]

scallops. Such a conversion—and conversions are possible on existing vessels as well as the purchase of new vessels—frequently requires an expenditure ranging from a low of \$15,000 to a high of \$50,000, the actual figure depending on the size of the boat and the equipment required. As conversions are desirable it is necessary that sufficient credit facilities also be available to help effect these changes, thereby improving the income of fishermen who are prepared to switch from one sector in the fishery to another.

The fisheries department, through its various programs, has encouraged the movement of fishermen towards larger and more efficient fishing vessels in an effort to improve their capacity and income. These vessels of course require more expensive gear and equipment, including navigational and fishing aids and more expensive catching gear. All of these items contribute to the fishermen's need for expanded credit facilities from the Federal Government.

Now the Federal Government has participated in various ways in the financing of the capital requirements of fishermen. It has subsidized and continues to subsidize the construction of fishing vessels. This perhaps has been the largest single item of assistance which the fisherman has received in respect of new boats, new equipment and new gear. The Federal Government began its subsidies back in 1947 and these have continued up to the present time. The rate of subsidy—and this is an outright grant—has changed over the years. At the present time wooden vessels 35 to 55 feet in length are eligible for a subsidy of 25 per cent of approved cost—in other words there is an outright grant in that amount. Vessels 55 feet up to 100 gross tons receive a subsidy of 30 per cent and vessels in excess of 100 gross tons a subsidy of 40 per cent.

In total 1,481 fishing vessels have been built with this federal aid and over the years this had added up to \$15,209,000. Of these 1,481 vessels 856, or more than half, have been built in the last three fiscal years—1965-66, 1967-68—and over \$10 million of the total subsidy was paid out during this latest three-year period. The proportion of cost represented by subsidy over the years has varied because the arrangements themselves have changed but on the average the subsidy has amounted roughly to 20 per cent of total construction costs of vessels built by fishermen.

A further 178 steel fishing vessels—these are the larger vessels built in commercial yards—and 87 larger wooden vessels also qualified for subsidy under the steel vessel construction subsidy program during the peri-

[Interprétation]

l'heure actuelle, ces transformations nécessitent des sommes d'argent qui peuvent s'échelonner entre 15 et 50 milles dollars. Le chiffre réel varie selon la grosseur du navire et de l'outillage requis. Les transferts sont souhaitables et il est nécessaire qu'on puisse offrir du crédit suffisant, afin de permettre aux pêcheurs de changer de domaine et d'améliorer leurs revenus.

Le ministère des Pêcheries par ses multiples programmes a encouragé les pêcheurs à se procurer des navires de pêche plus considérables et plus efficaces, afin d'améliorer leurs revenus. Ces navires nécessitent un grément plus complet, y compris certaines aides de la navigation. C'est la raison pour laquelle ils ont besoin d'un appui particulier de la part du gouvernement fédéral.

Le gouvernement fédéral a participé, de plusieurs façons, au financement des opérations de pêche. Il a subventionné et continue de subventionner la construction de navires de pêche. C'est peut-être là le domaine où l'aide la plus considérable a été accordée, en ce qui concerne l'achat de nouveaux gréments et de nouveaux navires. En 1947, le gouvernement fédéral a commencé à accorder ces subventions et il l'a fait jusqu'à maintenant. Il s'agit d'une subvention pure et simple. Le taux s'est modifié au cours des années. A présent, les navires en bois longs de 35 à 55 pieds peuvent faire l'objet d'une subvention de 25 p. 100 du coût approuvé. En d'autres termes, c'est une subvention directe établie à ce montant. Les navires de pêche de 55 pieds jusqu'à 100 tonnes reçoivent une subvention de 40 p. 100.

Au total, 1,481 navires ont été construits avec cette aide du gouvernement fédéral et cette aide fédérale au cours des années s'établit à \$15,209,000. De ces 1,481 navires, 856, ou plus de la moitié de ces navires, ont été construits depuis les trois dernières années financières, et plus de 10 millions de dollars ont été versés pendant cette période de 3 ans. La proportion des coûts consacrée aux subventions au cours des années a varié du fait que les dispositions elles-mêmes ont changé, mais s'établit à environ 20 p. 100 du total des coûts des navires construits par les pêcheurs.

Il y a également 178 navires d'acier construits dans des chantiers maritimes, et 87 navires de bois plus gros ont aussi reçu des subventions en vertu du programme conçu pour aider à la construction des navires de

[Text]

od 1961 to 1967. This program was initially administered by the Canadian Maritime Commission of the Department of Transport and more recently by the Department of Industry, Trade and Commerce. The total amount of federal subsidy to fishing vessels under this program—and this is in addition to the earlier program I mentioned—has been \$72,336,000. This amount represents roughly 50 per cent of the total cost of the 265 fishing vessels which were built during this period.

In other words, the 50 per cent subsidy has been available on larger vessels and the total number of tax dollars being paid out has been much larger than in respect to the smaller vessels mentioned earlier. This program, up to the end of 1967, has cost \$72,336,000 and in addition we have the \$15,209,000 spent in respect to smaller vessels, many of which were made of wood. Total federal assistance then amounts to \$87 million over the last decade or two.

In addition to this direct federal support or subsidy, which is varied according to the size of the vessel and the materials from which vessels are built, there are the loan programs. We are dealing today with the Fisheries Improvement Loans Act, which is federal legislation. As I said in the House, it is background legislation and is supplementary in many ways to loans made available by the provincial governments. You have also received a tabulation of the various loan arrangements made by the provincial governments. You will see that in some cases these involve terms which are highly desirable. Often the terms are preferable to the loans available under the Federal Government's Fisheries Improvement Loans Act. This is one of the reasons that in the Atlantic region in particular much greater use has been made of provincial legislation than the federal legislation. By contrast, in British Columbia, there is no provincial government loan board in existence and consequently much greater use has been made of the Fisheries Improvement Loans Act.

Mr. Chairman, I think this broadly covers the subject and concludes my preliminary remarks. No doubt there are a number of questions. As I said before, we have two people here, Mr. Renwick and Mr. Proskie, who will help me answer some of the queries.

The Chairman: Mr. Minister, perhaps we should have these incorporated as Appendix A and Appendix B.

Mr. Davis: Yes, I would like to have the capital cost information re selected Atlantic coast fishing vessels included as Appendix A to today's proceedings and the other tabula-

[Interpretation]

métal de 1961 à 1967. Ce programme est maintenant sous l'égide de la Commission canadienne des transports maritimes du ministère des Transports, et plus récemment du ministère de l'Industrie et du Commerce. Les sommes totales des subventions, dans le cadre de ce programme, en plus du programme précédent, s'établissent à \$72,336,000. Cette somme représente environ 50 p. 100 du coût total des 265 navires de pêche qui ont été construits pendant cette période.

En d'autres mots, la subvention de 50 p. 100 a été consacrée à la construction de navires plus considérables et la somme déboursée est beaucoup plus considérable que dans le cas des plus petits navires. Jusqu'à la fin de 1967, ce programme a coûté \$72,336,000, en plus des \$15,209,000 qui ont été consacrés à la construction de petits navires, mais dont la plupart étaient faits de bois. La somme totale de l'assistance fédérale accordée s'établit à 87 millions de dollars depuis environ 10 ans.

En plus de cette aide directe fédérale, qui varie d'après les dimensions du navire et des matériaux, il y a également les programmes de prêts. Nous sommes à étudier aujourd'hui la Loi sur les prêts aidant aux opérations de pêche, une loi fédérale. Comme je l'ai dit en Chambre, il s'agit d'une loi de base et d'un supplément qui s'ajoute de plusieurs façons aux prêts fournis par le gouvernement provincial. Vous avez également reçu un tableau des divers genres de prêts fournis par les gouvernements provinciaux. Vous verrez que les conditions sont tout à fait intéressantes. Elles sont certainement plus intéressantes que les conditions des prêts consentis par le gouvernement fédéral aux termes de la Loi sur les prêts aidant aux opérations de pêche. C'est la raison pour laquelle dans la région de l'atlantique, en particulier, on a plus souvent recours à la loi provinciale qu'à la loi fédérale. En Colombie-Britannique, toutefois, il n'y a pas de commission de prêts du gouvernement provincial et on a eu beaucoup plus recours à la Loi sur les prêts aidant aux opérations de pêche.

Je crois, monsieur le président, que ceci décrit assez bien la situation. Ceci termine donc mon exposé préliminaire. J'ai avec moi M. Renwick et M. Proskie qui m'aideront à répondre à certaines des questions.

Le président: Monsieur le ministre, vous pourriez peut-être introduire ces documents comme annexe A et annexe B.

M. Davis: Je voudrais que les renseignements sur les frais d'immobilisation, au sujet des navires de pêche de l'Atlantique, soient ajoutés comme annexe A au compte rendu de

[Texte]

tion entitled Principal Features of Assistance Schemes to Fishermen by the Five Atlantic Provincial Governments included as Appendix B, if that is agreeable to the Committee.

The Chairman: Is it agreed that these be appended to today's proceedings?

Some hon. Members: Agreed.

(See Appendix A and Appendix B attached)

The Chairman: Shall Clause 1 carry?

• 1040

Mr. Crouse: Mr. Chairman, I must first apologize for my delay in arriving at this Committee. It came about as a result of two committees being scheduled to sit at practically the same time—the Public Accounts Committee and the Committee on Fisheries and Forestry. It is impossible to be in two places at one time.

I know that all of us listened with interest to the Minister's statement this morning. We welcome his statement as well as the views of the material which he has provided to the Committee. However, I am just a bit concerned over our manner of procedure.

The Fisheries Improvement Loans Act was introduced in the House by the Minister on January 21, 1969—which is the bill we presently have before us—and at that time the Minister stated that he hoped he would hear submissions with regard to raising the maximum amount of the loans which may be made. We were subsequently informed by way of a release from his Department that he made a speech in Vancouver on Saturday, February 1, at which time he stated:

This Act, which has recently been updated, is geared to finance loans of up to \$25,000. You can borrow up to 75% of the cost of a new boat, or new gear, or a new shore installation. You can borrow up to \$25,000 from any bank, or credit union, or insurance company. And you will be able to borrow this money at a lower rate of interest than is available to anyone else in Canada—anyone that is except the Government of Canada itself.

Mr. Chairman, I think you will agree there is some reason for my confusion because the Minister's statement to the fishermen in Vancouver would imply that this is already a *fait*

[Interprétation]

la réunion d'aujourd'hui. Et, les autres calculs intitulés Caractéristiques de l'aide accordée aux pêcheurs par les cinq gouvernements provinciaux de l'Atlantique soient ajoutés comme annexe B, si le Comité est d'accord.

Le président: Êtes-vous d'accord que ces documents soient placés en annexe aux délibérations de la séance d'aujourd'hui?

Des voix: D'accord.

(Voir les annexes A et B ci-après)

Le président: L'article 1 est-il adopté?

M. Crouse: Monsieur le président, je veux d'abord m'excuser d'être arrivé en retard au Comité. Il y avait deux comités qui devaient siéger à peu près en même temps, le Comité des comptes publics et le Comité des pêches et des forêts. Il est impossible d'être à deux endroits à la fois.

Je sais que nous avons tous écouté avec beaucoup d'intérêt la déclaration du ministre ce matin. Nous sommes très heureux de sa déclaration. Nous sommes également satisfaits des renseignements qu'il a donnés au Comité. Je puis dire toutefois que je suis quelque peu inquiet de voir la façon dont nous procédons. La *Loi sur les prêts aidant aux opérations de pêche* a été soumise aux Communes par le ministre le 21 janvier 1969, (c'est ce bill que nous étudions présentement) et le ministre a déclaré, à ce moment-là, qu'il espérait recevoir des propositions en vue de hausser le maximum des prêts qui peuvent être accordés. Nous avons appris par la suite, par un communiqué de presse de son ministère, qu'il avait fait un discours à Vancouver le 10 février, discours dans lequel il a déclaré, et je cite:

« Cette loi qui a été modifiée dernièrement a pour but de financer des prêts allant jusqu'à 25 mille dollars. Vous pouvez emprunter jusqu'à 75 p. 100 du coût total d'un nouveau bateau, d'un nouvel équipement ou de nouvelles installations riveraines. Vous pouvez emprunter jusqu'à 25 mille dollars de n'importe quelle banque, caisse populaire ou compagnie d'assurance. Et vous pourrez emprunter cet argent à un taux d'intérêt inférieur à celui que paierait n'importe qui d'autre au Canada, n'importe qui, sauf le gouvernement du Canada lui-même. »

Vous comprendrez mon étonnement, Monsieur le président, puisque la déclaration du ministre, à Vancouver, semble faire état d'un fait accompli. Nous ne nous opposons pas à

[Text]

accompli. We are not objecting to increasing it to \$25,000, which is the amount that may be made available under the loan. In fact, if it is in order I am prepared to move that amendment this morning. However, I do take issue with the Minister's statement that this has already been done. If the Minister had this point of view in mind—a most desirable point of view—then why did he not include it in the bill when it was presented to the House on January 21. In the same speech he said this to the fishermen:

You will be able, within the next month or two, to borrow this money from a wide range of commercial sources at a lower interest rate than the rate paid by the biggest corporation in the country. In a month or two you will be able to borrow money at 7½%. This is less than the 8 to 8½% which B.C. Packers has to pay for new money. It is only 1% more than the "cost of money" to the Federal Government itself—to the Government of Canada which will be guaranteeing every loan made under our new Federal Fisheries Improvement Loans Act.

Mr. Chairman, this is also a most desirable inclusion in the bill. The recommendation in the bill which was prepared by the Minister and his departmental officials reads as follows:

to substitute for the 5% rate of interest on guaranteed loans made under the Act such rate or rates of interest as may be prescribed by the Governor in Council;

I again ask the question that if this was the government's and the Minister's intention—and, quite frankly, I think he obviously has the interests of the fishermen at heart—why did he not incorporate in the bill the words he used in his speech in Vancouver so that a fisherman when he went to the bank would not be confused by double talk or by someone charging him more than he was supposed to pay. Under the terms of this legislation he would automatically know that he was only required to pay, as the Minister has stated, 1 per cent—and I do not want to misquote him—more than the cost of borrowing to the Canadian government. These questions disturb me and, as a matter of fact, the Minister did give an example of this. He stated on page 11 of his speech:

If Ottawa pays 6 per cent on its new borrowings, then you will be asked to pay 7 per cent. If the federal borrowing rate falls to 5 per cent, then you will pay 6 per cent.

[Interpretation]

cette majoration jusqu'à 25 mille dollars. Je suis même prêt à soumettre un amendement en ce sens, mais je n'aime pas que le ministre laisse entendre qu'il s'agit d'un fait accompli. Si c'est ce que voulait le ministre, c'est évidemment un point de vue très souhaitable, je me demande pourquoi il ne l'a pas inclus dans le bill lorsqu'il l'a présenté à la Chambre le 21 janvier. Au cours du même discours, il a dit aux pêcheurs:

«Vous pourrez d'ici un mois ou deux, emprunter cet argent à un taux inférieur à celui qui accompagne les prêts consentis à la plus grande entreprise du pays. D'ici un mois ou deux vous pourrez emprunter à un taux de 7½ p. 100. La B.C. Packers doit payer de 8 à 8½ p. 100. Ce taux, que vous paierez, est de 1 p. 100 plus élevé seulement que ce que paye le gouvernement fédéral qui garantit chacun de ces prêts.»

Il serait souhaitable d'inclure ceci dans le bill. La recommandation faite par le ministre et ses fonctionnaires et incluse dans le bill se lit comme suit:

... en vue de substituer au taux d'intérêt de 5 p. 100 sur les prêts garantis consentis en vertu de la loi le ou les taux d'intérêt que peut prescrire le gouverneur en conseil ...

Si c'était l'intention du gouvernement et du ministre—et je sais que le ministre a l'intérêt des pêcheurs bien à cœur—pourquoi n'a-t-il pas dit dans le bill ce qu'il a dit aux pêcheurs à Vancouver pour que les pêcheurs qui iront s'adresser à la banque ne soient pas induits en erreur? Le pêcheur saurait automatiquement en vertu des conditions de la Loi, qu'il n'a à payer, comme l'a dit le ministre, que 1 pour 100 de plus—et je ne veux pas mal le citer—1 pour 100 de plus que ce qu'il en coûte au gouvernement canadien. Ce sont des questions qui m'inquiètent. Le ministre a donné un exemple. Il a dit, à la page 11 de son discours:

«Si Ottawa paie 6 p. 100 sur ses nouveaux emprunts, vous serez obligés de payer 7 p. 100; si le gouvernement emprunte à 5 p. 100 vous devrez payer 6 p. 100.»

[Texte]

In other words, 1 per cent more than the amount paid by the federal government. Mr. Chairman, why were these words not included in the proposed Act when it was presented to us in the House?

• 1045

My last comment on this matter at this time is that I agree with the Minister's thoughts in so far as increasing the amount of the loan which may be secured by a fisherman. We are prepared to support this. In fact, if it is in order—and I am in the hands of the Committee here—we are prepared to move that the amount of the loan would not be required to be repaid for 15 years. We could use these words, "the loan was repayable in full by the terms thereof in not more than fifteen years". In other words, we would increase the repayment period from 10 to 15 years. I am prepared to move that type of an amendment this morning but I want to be in order and I would like the direction of the Chairman in this regard because we are primarily dealing with loans that will be made on wooden fishing boats and equipment. Speaking from personal experience, if a wooden ship is properly refitted each year it will have a minimum of 20 years' usage, and if the loan period were increased from 10 to 15 years it would enable a fisherman to spread out his payments and this would be most helpful to him.

Those are the only comments I have to make at the present time. Perhaps the Minister or his officials would answer some of those questions.

The Chairman: Are you moving the amendment?

Mr. Crouse: If it is in order, Mr. Chairman, I would be prepared to move the following amendment.

Paragraphs (d) and (e) of subsection (1) of Section 3 of the Fisheries Improvement Loans Act are repealed and the following substituted therefor:

(d) the sum of the principal amount of the loan and the amount that

(i) is owing in respect of previous guaranteed loans that were made to the borrower, or to the borrower and all other fishermen with whom the borrower is associated in the same primary fishing enterprise, if made in respect of that primary fishing enterprise, and

(ii) is disclosed in the application, or of which the lender had knowledge, did not exceed twenty-five thousand dollars;

[Interprétation]

c'est-à-dire 1 p. 100 de plus que le gouvernement fédéral. Pourquoi n'a-t-on pas ajouté ces mots lorsque le projet a été présenté à la Chambre?

Je veux donc faire l'observation suivante: je suis d'accord avec le ministre pour ce qui est de hausser le maximum du prêt. Nous sommes prêts à appuyer cette mesure. Nous sommes prêts à proposer que cette somme d'argent puisse n'être remboursée que sur une période de 15 ans. Nous pourrions ajouter les mots «le prêt sera remboursé au complet, à ces conditions, en un maximum de 15 ans». Ainsi, le prêt serait remboursé en 15 ans au lieu de 10. Je suis prêt à proposer un tel amendement mais je désire demeurer dans les règles et c'est pourquoi je demanderais au président de m'indiquer la façon de procéder. Il s'agit, essentiellement, de prêt qui seront consentis pour l'acquisition de navires de pêche en bois. Un navire de bois, s'il est bien entretenu chaque année, a une durée utile d'au moins 20 ans. Si la période de remboursement est prolongée de 10 à 15 ans, ceci permettra au pêcheur de mieux répartir ses paiements et ceci l'aidera certainement. Voilà donc les seules observations que j'ai à formuler à ce moment-ci. Le ministre voudra peut-être répondre à ce que je viens de dire.

Le président: Avez-vous l'intention de proposer l'amendement?

M. Crouse: Oui, monsieur le président, si c'est recevable. Cet amendement serait le suivant:

Les alinéas d) et e) du paragraphe (1) de l'article 3 de la *Loi sur les prêts aidant aux opérations de pêche* sont abrogés et remplacés par ce qui suit:

d) la somme du principal du prêt et le montant

(i) qui est dû en raison d'emprunts garantis préalables effectués par l'emprunteur, ou par l'emprunteur et tous les autres pêcheurs avec lesquels l'emprunteur est associé dans une entreprise de pêche, si le prêt est consenti à cette entreprise de pêche, et

(ii) qui est indiqué dans la demande ou dont le prêteur a connaissance, ne doivent pas dépasser vingt-cinq mille dollars,

[Text]

(e) the loan was repayable in full by the terms thereof in not more than fifteen years.

The Chairman: Mr. Crouse, paragraph 674 of the third edition of Beauchesne's Parliamentary Rules and Forms reads as follows:

The Committee cannot agree to any clauses involving payments out of the public funds, or imposing any tax or charge upon the people unless such clauses have been previously considered by resolution in Committee of the Whole.

Mr. Crouse: Mr. Chairman, as I understand it this type of amendment does not deal with public funds. These funds are to be loaned by banks and by lending institutions. As they are not public funds, under this type of amendment we would merely be extending the period of repayment to these organizations.

The Chairman: Do you not think it is apt to be an expenditure of public funds?

I will read from Beauchesne's Parliamentary Rules and Forms, paragraph 249:

• 1050

249. (1) "No cases can be found of any private member in the Canadian Commons receiving the authority of the Crown, through a minister, to propose a motion involving the expenditure of public money. No principle is better understood than the constitutional obligation that rests upon the executive government, of alone initiating measures imposing charges upon the public exchequer. On one occasion, in the English Commons, the consent of the Crown was given to certain formal resolutions proposed by a private member with reference to charges in courts of law to be defrayed out of the consolidated fund. It was thought, however, that any resolution placing a charge on the consolidated fund should be moved by a minister of the Crown, and the more regular procedure was thereupon carried out. It was distinctly affirmed, however, that the member who proposed the motion involving the charge was within his right when he had the sanction of the Crown, but it was generally admitted at the same time that it was better, as a matter of policy, that the proposition should emanate from a responsible adviser of the sovereign." B.407.

[Interpretation]

e) le prêt sera remboursé au complet, à ces conditions en un maximum de 15 ans.

Le président: L'article 674 de la 3^e édition du *Précis de procédure parlementaire* de Beauchesne, monsieur Crouse, se lit comme suit:

Le Comité ne peut accepter aucune clause qui entraîne le paiement de certaines sommes d'argent provenant des fonds publics ou l'imposition de toute taxe ou charge à moins que ces clauses n'aient été étudiées au préalable par le comité plénier.

M. Crouse: Monsieur le président, ce genre d'amendement ne porte pas sur la dépense de fonds publics. Ces prêts seront consentis par les banques et par les institutions de prêts. Ce ne sont pas des fonds publics. Nous ne ferions que prolonger la période de remboursement.

Le président: Ne croyez-vous pas que ceci pourrait entraîner une dépense de fonds publics? Je vous citerai l'article 249 du *Précis de procédure parlementaire* de Beauchesne:

249. (1) «Jamais, à ce qu'on ait pu voir, un simple député, à la Chambre des communes du Canada, n'a obtenu de la Couronne, par l'entremise d'un ministre, le pouvoir de présenter une motion entraînant la dépense de deniers publics. Aucun principe n'est mieux compris que l'obligation constitutionnelle qui fait reposer sur le gouvernement exécutif seul le soin de présenter des mesures qui imposent des charges au trésor public. Une fois, aux Communes anglaises, le gouvernement a donné son consentement à certaines propositions de résolutions présentées par un simple député au sujet de frais de tribunaux à mettre à la charge du fonds du revenu consolidé. On considéra néanmoins qu'une proposition de résolution comportant une charge sur le fonds du revenu consolidé devrait être présentée par un ministre de la couronne et on s'en tient à la procédure régulière. Toutefois, il fut positivement affirmé que le député qui avait présenté la motion comportant la dépense en question avait agi légalement parce qu'il avait eu l'autorisation de la couronne, mais l'on reconnut tout de même qu'il valait mieux, comme question de règle, de réserver l'initiative de la proposition à un conseiller responsable du souverain.»—B. 407

[Texte]

Mr. Crouse: Mr. Chairman, if I may be permitted to comment on what you have just read, my action is really only an attempt to legalize that which has already been stated as a *fait accompli* by the Minister in his speech.

I repeat, he states this Act, which has recently been updated, is geared to finance loans of up to \$25,000. This is not a correct statement at the present time. This Act has not been geared up to finance loans of up to \$25,000. This Act is geared to finance loans up to \$10,000, and no more.

Mr. Davis: Yes. As the member knows, I mentioned this in the House of Commons. He asked why an amendment raising the \$10,000 figure to the \$25,000 figure was not contained in the bill as originally drafted. My answer to him on that has to be that it was still under discussion with the Minister of Finance, from whom I have since received authority to raise it to \$25,000. As I have said in my statement this morning, I will either move on third reading, or arrange to have moved in this Committee, an amendment to that effect.

When I was discussing this subject with the fishermen on the West Coast, I was trying to interest them in the greater use of this loan, and I did say that the legislation was currently being updated, and I did say in several places, certainly on several occasions, that the loans under the new provisions hopefully would be available within the next month or two. I may be pushing it a bit. Perhaps it will be two or three months before this legislation is passed and proclaimed, but I would certainly expect that the ceiling would be at least \$25,000.

Mr. Crouse: Mr. Chairman, I accept the Minister's explanation. But it would appear that his statement was, in fact, premature, although it is acceptable to our members. It is a strange manner in which to proceed, especially in view of the fact that the bill was introduced only at so late a date as January 21. And in order to eliminate this type of confusion, it might well be more desirable if the Minister and his colleague, the Minister of Finance, were to get together and prepare the legislation in a manner in which they intend us to deal with it, so that we are not faced with this type of confusion in the future.

The Minister mentioned the amount of money that was expended on subsidies and on loans, and he has provided us with material which will require some time for us to study. But I am sure that it would be most desirable if we had some indication of the plans of the Department, provided he could

[Interprétation]

M. Crouse: Monsieur le président, si on me permet de formuler des observations au sujet de ce que vous venez de dire, je veux simplement rendre légal ce qui a déjà été exposé par le ministre comme un fait accompli dans son discours.

Il a dit que cette loi qui venait d'être modifiée avait pour but d'assurer le financement de prêts jusqu'à une somme de 25,000 dollars. Or, ce n'est pas une déclaration exacte, car cette loi a pour but de financer des prêts jusqu'à une somme de 10,000 dollars et pas plus.

M. Davis: Comme le député le sait, j'ai mentionné cela à la Chambre des communes. Il a demandé pourquoi un amendement en vue de hausser cette somme de 10,000 dollars jusqu'à 25,000 dollars n'a pas été présenté. Je dois lui répondre que la question est à l'étude par le ministre des Finances qui m'a, depuis lors, dit qu'il était possible d'augmenter ce taux à 25,000 dollars. Je vais présenter soit au Comité ou lors de la troisième lecture un amendement en ce sens.

Lorsque je discutais de la question avec les pêcheurs de l'Ouest, je voulais les encourager à avoir recours à cette loi. J'ai dit que la loi était en voie de modification, j'ai dit à plusieurs reprises qu'en vertu des nouvelles dispositions, j'espérais que ces prêts seraient mis à leur disposition d'ici un ou deux mois. J'ai peut-être été trop vite. Cela prendra peut-être deux ou trois mois avant d'adopter la loi, mais je m'attends à ce que le maximum soit établi à au moins 25,000 dollars.

M. Crouse: Monsieur le président, j'accepte les explications du ministre mais il semble que sa déclaration était prématurée même si elle est acceptable pour les députés, c'est une façon un peu étrange de procéder, surtout si on tient compte du fait que le bill a été présenté à la Chambre le 21 janvier. Afin d'éliminer ce genre de confusion, il serait peut-être souhaitable que le ministre et ses collègues se rencontrassent pour préparer ensemble la loi et la présenter de façon que nous n'ayons plus à faire face à ce genre de problème plus tard.

Le ministre a parlé des frais entraînés par des subventions et nous avons ici ces chiffres, nous pourrions les étudier plus tard, mais je suis certain qu'il serait très souhaitable que nous puissions savoir quels sont les projets du ministère à la condition qu'il puisse nous faire part de ces renseignements. Quant aux pro-

[Text]

give us this information at the present time, with regard to extending this subsidy program, because obviously the present percentage of subsidy payment is not meeting with the over-all acceptance of the fishermen on the Atlantic Coast at the present time. Can the Minister give us an indication of the plans of his Department with regard to wooden shipbuilding subsidies and so on?

Mr. Davis: This is a subject which we have under very active discussion with the Department of Industry and the Department of Defence Production, which is really the purchasing department. It is a separate subject, a separate matter to the matter which is central to this particular bill. I merely referred to the direct federal grants, and the order of magnitude, in order to try to set this particular legislation in some perspective. As I said, the direct grants in the form of a subsidy are perhaps the largest single, most effective contribution which all levels of government make in respect of fishing vessels.

In addition to those grants or subsidies, there are the various loan programs which both the federal and the provincial governments have. I thought it also useful to the Committee to have a brief description of the provincial loan programs here, a number of which are more advantageous to the fishermen than the Fisheries Improvement Loans Act, in order to cast it into the right perspective for your discussion.

• 1055

Mr. Crouse: Could I have a reply, Mr. Chairman, on the amendment that was moved. What do you wish to do with this type of procedure? If my amendment is out of order, would it be the wish of the Minister to move something similar, so that we could legalize his proceedings in the West Coast and give some factual direction to individual fishermen who may wish to plan their spring construction programs?

The Chairman: Mr. Crouse, I consider that the amendment would be out of order, due to the fact that the loan would be guaranteed by the government, and in guaranteeing a loan they would become responsible for increased expenditures. As far as the Minister moving in committee, that would also be out of order because he is not a member of this committee, but it would be the prerogative of the Minister to move his amendment in the House.

Mr. Crouse: As we stand then, Mr. Chairman, this statement that the Minister has made on the West Coast is not factual.

[Interpretation]

jets du ministère, dis-je, en ce qui concerne le prolongement de ce programme de subventions car il semble que ce programme de subventions n'est pas accepté par tous les pêcheurs de la Côte Atlantique, le ministre pourrait-il nous faire part des intentions de son ministère en ce qui concerne la construction de bateaux en bois?

M. Davis: C'est un sujet qui fait l'objet d'entretiens entre le ministère de la Production de défense et le ministère de l'Industrie.

C'est un sujet bien distinct du sujet de ce bill, je n'ai mentionné que la subvention fédérale directe afin de placer cette loi dans sa propre perspective. Les subventions directes sont peut-être la contribution la plus importante faite par un gouvernement en ce qui concerne la construction de navires de pêche.

En plus de ces subventions, il y a également des programmes de prêts entrepris par les gouvernements provinciaux et fédéral, et j'ai cru qu'il serait peut-être bon de dresser un tableau de la situation provinciale surtout dans le cas où les prêts sont plus avantageux que les prêts offerts par le gouvernement fédéral pour placer la discussion dans une perspective plus juste.

M. Crouse: Puis-je avoir votre réponse au sujet de l'amendement que j'ai proposé? Qu'est-ce que vous voulez faire en ce sens si mon amendement n'est pas recevable? Le ministre voudrait-il présenter un amendement semblable pour que nous puissions légaliser en somme ce qu'il a dit dans l'Ouest et donner des directives plus précises aux pêcheurs qui voudront entreprendre leur programme de pêche?

Le président: Monsieur Crouse, j'ai jugé que l'amendement ne serait pas recevable étant donné que le prêt serait garanti par le gouvernement, et cela pourrait entraîner une augmentation des dépenses.

Si le ministre veut proposer une modification au Comité, ceci ne serait pas recevable également car il n'est pas membre du Comité. Toutefois, le ministre pourrait présenter cette modification à la Chambre.

M. Crouse: A l'heure actuelle, cette déclaration que le ministre a faite dans l'Ouest n'est pas conforme à la réalité.

[Texte]

Mr. Anderson: Could I have a point of order on this? I am confused on this. I have seen the speech. I was not present when the Minister gave it. In a number of places he did mention—in a text that I have—“in a month or two”. I think the future tense was used throughout. When talking to the fishermen he said “You will be able to do this”. I have a text here and I will read it if you like. In the middle of page 11 it reads:

You will be able, within the next month or two, to borrow this money from a wide range of commercial sources... In a month or two you will be able to borrow money at 7½ per cent.

I can go on. The future tense is used on page 12.

Mr. Crouse: Mr. Chairman, right on that point that has been made by the member. This also is not correct. This statement is not factual according to the bill. The bill does not state, Mr. Chairman, that you will be able to borrow money at 1 per cent more than the cost of money to the federal government itself. The bill states that the amount of interest payable will be at rates of interest as prescribed by the Governor in Council. I am sorry but I cannot agree with the statement that has just been made.

Mr. Anderson: Mr. Chairman, may I have my point of order back? I think it is clear from the speech that I have. I hope we are talking about the same speech. This is the one:

Notes for an Address at the Annual Meeting of the United Fishermen and Allied Workers' Union, Union Hall, Vancouver. Saturday, February 1st, 1969.

Is that the same one you are referring to?

Mr. Crouse: That is the one.

Mr. Anderson: In that, I must say I am still confused, sir. The future tense is used throughout, and it is “in a month or two”; “will”, in the future, “be able to borrow”.

Mr. Crouse: Yes, read it properly.

Mr. Anderson: I can read the whole thing if you want. I see no problem here, as you have raised, about confusion as to when this thing comes into force.

Mr. Crouse: Mr. Chairman, on that point of order. I am not questioning the desirable features which the Minister enunciated at that meeting. These are most desirable, and we endorse them. What I am questioning is the legality of the Minister going forth before a public meeting and stating that these things

[Interprétation]

M. Anderson: J'évoque le règlement. Je suis quelque peu embarrassé, même sans avoir été présent, je sais que le ministre a dit, en différents endroits, qu'il s'agissait de quelque chose qui serait mis à leur disposition dans un ou deux mois. J'ai en main le texte du discours. Le ministre s'est servi du futur à chaque fois en parlant aux pêcheurs. Il dit:

«Vous pourrez», au cours des prochains mois emprunter cet argent de plusieurs prêteurs spécialisés. Dans un mois ou deux, vous pourrez emprunter de l'argent à 7½ p. 100 d'intérêt.

Il s'est servi du futur encore plus loin.

M. Crouse: Cette déclaration ne tient pas compte des faits en vertu de la loi. Le bill ne prévoit pas qu'il sera possible d'emprunter de l'argent à un taux de un p. 100 de plus que le taux d'intérêt que doit payer le gouvernement fédéral. Le Bill prévoit simplement que les taux d'intérêt seront fixés par le gouverneur en conseil. Je suis désolé mais je ne puis pas accepter la déclaration qui vient d'être faite.

M. Anderson: Rappel au Règlement. Je crois qu'il est clair, à la lecture du discours que j'ai en main—j'espère qu'il s'agit du même discours—il s'agit des:

Notes for an Address at the Annual Meeting of the United Fishermen and Allied Workers Union, Union Hall, Vancouver, Saturday, February 1st, 1969

C'est bien de celui-là que vous parliez?

M. Crouse: C'est exact.

M. Anderson: Je suis toujours perdu. On s'est servi du futur constamment.

M. Crouse: Lisez le correctement.

M. Anderson: Je peux vous lire tout le texte si vous voulez. Je ne vois vraiment pas de contradiction ici, rien ne prête à confusion.

M. Crouse: Pour ce qui est du rappel au Règlement, monsieur le président, je ne mets pas en doute les mesures que le ministre a exposées au cours de la réunion. Je me demande toutefois pourquoi le ministre s'est adressé en public à un groupe de gens et a exposé ou promis des modifications qui n'ont

[Text]

are a *fait accompli* before they have been approved and passed by the House. He has stated in effect that this Act, which has recently been updated, is geared to finance loans up to \$25,000. This is not a fact. He has stated that the amount at which money may be borrowed will be 1 per cent more than the cost of money to the federal government itself. This is not a fact as outlined in this bill.

The Chairman: Mr. Perrault, on a point of order.

Mr. Perrault: Mr. Chairman, surely this speech was anticipatory in nature. This is a procedure adopted by politicians and those in public life from time immemorial. He was merely giving an indication, Mr. Chairman, that he believed that this would be the situation in a month or two, and I think we are spending far too much time on this point. There is nothing alarming or scandalous about this kind of speech.

• 1100

Indeed the Minister on many occasions has expressed his support for an increase of these limits. He made reference to it in the House during his initial comments on this bill, and it is a purely normal thing and the member has stated very correctly that he talked about this program being in effect in the future.

Mr. Crouse: No, Mr. Chairman, this is not correct.

Mr. Perrault: Certainly it was.

Mr. Crouse: This is not correct. If the member who just finished speaking will get a copy of the speech which he does not have in front of him, and about which he is just speaking from a memory—he has perhaps not even read the speech. I question if he has even read the speech or heard it, but I am reading, Mr. Chairman, from the speech.

Mr. Perrault: It was an excellent speech.

Mr. Crouse: I am not quarrelling. . .

The Chairman: Order, order.

Mr. Crouse: I am not quarrelling, Mr. Chairman, with the contents of the speech. I stated that explicitly. I am saying, and I said originally, that the members of this Committee are confused by the procedure which has been adopted at the present time by the Minister in introducing legislation as early as January 21, and not including these desirable features and then going forth and saying that they are a *fait accompli*.

[Interpretation]

pas été adoptées par la Chambre. Il a dit que la loi qui vient d'être modifiée a pour but de financer des prêts jusqu'à une somme de 25,000 dollars. Ce n'est pas le cas. Il a dit également que le taux d'intérêt serait fixé à 1 p. 100 de plus que le taux payé par le gouvernement fédéral. Ce n'est pas le cas non plus.

Le président: M. Perrault?

M. Perrault: Il est certain que c'était un discours qui prévoyait certaines choses à l'avance. Il est certain que les politiciens, depuis toujours, procèdent de cette façon. Il ne donnait qu'un indice, monsieur le président, que ce serait la situation dans un mois ou deux, et je pense que nous passons beaucoup trop de temps à ce sujet. Il n'y a rien de scandaleux là-dedans.

Bien souvent le ministre a exprimé son appui quant à l'augmentation du plafond. Il l'a mentionné à la Chambre dans ses préliminaires sur le bill et je crois que c'est tout à fait normal et le député le dit d'une façon très juste qu'il a parlé du programme à l'avenir.

M. Crouse: Non, monsieur le président, ce n'est pas exact.

M. Perrault: Ce l'est certainement.

M. Crouse: Non, ce n'est pas juste. Si le député qui vient de finir de parler obtient un exemplaire du discours qu'il n'a pas sous la main, il parle sans doute de mémoire, peut-être qu'il n'a pas même lu ce discours; mais moi, monsieur le président, je lis du texte.

M. Perrault: C'était un excellent discours.

M. Crouse: Je n'ai pas de querelle. . .

Le président: A l'ordre.

M. Crouse: Monsieur le président, je n'ai pas de querelle avec ce qui est contenu dans le discours. Je l'ai dit explicitement. Je l'ai dit et je le répète, les membres du comité ont été induits en erreur par la procédure adoptée par le ministre lorsqu'il a présenté la mesure au mois de janvier, qu'il n'a pas inclus ces dispositions et qu'ensuite il a laissé entendre qu'il s'agit d'un fait accompli.

[Texte]

The Chairman: Mr. Borrie.

Mr. Borrie: Mr. Chairman, I would like to know what we are accomplishing by this repartee between individuals here. I thought the purpose of the Committee was to examine the bill. If you have made a ruling with regards to an amendment that has been proposed, I would suggest that we get on with the business of the Committee. We can sit and we can argue this point for another three hours if we wish.

The Chairman: I would be very happy if this was possible. Mr. Lundrigan.

Mr. Lundrigan: Mr. Chairman, there is a very important principle at stake, and I think this is the purpose of the point of order, or the debate on the point of order. As a member of the Committee I raised certain objections last week to a number of points and my feeling about the inability of our Committee to work effectively unless we have some general understandings of what our role is and what our purpose is as a committee. And I personally feel the same as the member for South Shore.

These amendments are desirable. There is no doubt about that. They are the type of things that we want to see. In fact we have indicated our intention of moving these amendments, but it came rather as a surprise to me when I did read the Minister's speech to find that this was all done without any knowledge of the members of the Committee.

I would like to see these things at least thought about and talked about at the committee stage before statements are made such as these, and intentions at least of the Committee to have this kind of thing included in the legislation. This is all the member from South Shore is talking about. As a member of a committee I feel that I should be privileged to this kind of information, and have my say on it and talk on the desirability of it.

This is the only point. Perhaps the Minister might have been a little bit hasty in voicing his suggestions for improvements in the legislation and indicating perhaps that they would become part of the legislation. It sort of makes the work of the Committee unnecessary, because it gives the impression that this is already decided and consequently the Committee is not going to do any more than to ratify something which has already been decided. This is the only reason I speak on the point of order, that I would like to see this brought up in committee first, talked about at the committee stage, and then the Minister can be speaking on behalf of the Committee as well.

[Interprétation]

Le président: Monsieur Borrie.

M. Borrie: Monsieur le président, j'aimerais savoir ce que nous réalisons avec cet échange entre les individus. Je croyais que l'objectif du Comité était d'étudier le bill. Si vous avez rendu une décision au sujet d'un amendement proposé, permettez-moi de suggérer que nous procédions aux affaires du Comité. Nous pouvons siéger et discuter ce point pendant trois heures encore, si nous le désirons.

Le président: Cela me ferait plaisir si c'était possible. Monsieur Lundrigan.

M. Lundrigan: Monsieur le président, il s'agit d'un point très important et je crois que c'est le but du rappel au règlement et du débat à ce sujet. A certaines demandes du comité j'ai soulevé quelques objections la semaine dernière, nous en étions à l'impossibilité du comité de régler la situation à moins que nous sachions, au juste, ce qu'est notre rôle et j'ai la même question que le député de South Shore.

Les amendements sont souhaitables, nul doute. Ce sont des choses que nous voulons voir. Nous avons même dit notre intention de les proposer, mais j'ai été étonné de voir dans le discours du ministre que tout cela avait été fait à l'insu des membres du Comité.

Je crois que nous devrions en discuter à la table du Comité avant de voir exprimer ses intentions. C'est ainsi que le député de South Shore voit les choses et comme membre du comité, je crois que je dois vraiment être au courant de ces renseignements et de pouvoir en discuter.

Peut-être que le ministre a parlé trop vite dans son discours en indiquant que ces dispositions feraient parti de la mesure. Cela rend le travail du Comité peut nécessaire parce qu'il laisse entendre que c'est déjà un fait accompli et que le Comité ne fera que ratifier de nouveau quelque chose qui a déjà été discutée et c'est pour cela que je parle au sujet du rappel au Règlement, je crois que toutes les choses doivent être présentées au Comité et alors le ministre pourra parler au nom du Comité également.

[Text]

The Chairman: Mr. Osler.

Mr. Osler: Mr. Chairman, I was not confused until quite recently on this subject, but it seems to me that if Beauchesne says that if it is the accepted fact that no alteration to financial matters can be incorporated by anybody but Cabinet spokesmen, and this is a fact, then this argument becomes pretty extraneous. Because no matter how many good ideas these gentlemen might have had, they would not have been able to bring them in anyway. They would have been ruled out of order had they been brought in and had you not opened your mouth.

We are talking about a completely futile situation. If they have any other good ideas, perhaps we can get on with them and hear them, rather than argue about something that is in essence impossible in the first place.

• 1105

Mr. Davis: Mr. Chairman, I wonder if I could say a word. My approach to this has been that I was looking certainly for information and really for suggestions, particularly in respect of the ceiling on the loan. I have had to discuss this at some length with the Minister of Finance to convince him that the ceiling should be raised at all. I have succeeded in getting an understanding of a \$25,000 limit.

I think it is true that only a member of the government can move an amendment to do with the financial aspects of a bill of this kind, but I think also that a Minister in the position that I find myself in should take proposals from the Committee and if he is persuaded, endeavour to reach an understanding with his colleagues in the Cabinet. Surely these committees can effect changes, but there has to be an orderly way in which they come about.

The member from the South Shore appears really to be using a tactic to try and freeze me into a position where I cannot make any more changes, and the member for Gander-Twillingate really wants this Committee to in effect legislate. The two are taking opposite positions, really. I want to get the best possible legislation through. I am circumscribed by arrangements with the Minister of Finance and I must have the full concurrence of not the Minister of Finance, but also the rest of the Cabinet to make some of these substantial changes. But I do not think we should go away from this particular meeting feeling that a committee cannot affect any changes. I think it can.

The Chairman: Mr. Comeau.

Mr. Crouse: I am sorry, but I must disagree with the Minister's statement. We are not cir-

[Interpretation]

Le président: Monsieur Osler.

M. Osler: Monsieur le président, je n'étais pas dérouté jusqu'à très dernièrement à ce sujet, mais il me semble que si Beauchesne dit qu'un changement aux questions financières ne peut être proposé que par des membres du conseil des ministres, et si c'est un fait, notre argument devient superflu. Parce que les députés n'ayant pu présenter des modifications, alors nous parlons de choses tout à fait futiles. Peut-être que si nous avons d'autres bonnes idées, nous pourrions peut-être les présenter et faire un bon travail, mais pourquoi passer notre temps à quelque chose d'impossible.

M. Davis: Puis-je dire un mot, monsieur le président. Mon approche est celle-ci. Je cherchais des renseignements, je cherchais des suggestions surtout par rapport au plafond des prêts. J'ai dû en discuter avec le ministre des Finances pour le convaincre d'élever le plafond. J'ai réussi à obtenir de lui l'entente d'une limite de \$25,000.

Je crois qu'il est vrai que seul un membre du gouvernement peut proposer une modification ayant trait aux aspects financiers d'un bill de ce genre, mais, quand même, je crois que le ministre devrait pouvoir prendre les propositions du Comité et, s'il en est persuadé, chercher à obtenir de l'entente avec ses collègues du Conseil des ministres. Les Comités, certainement, peuvent effectuer des changements, mais il doit y avoir un ordre suivi.

Je crois que le député de South Shore tente de m'acculer au pied du mur, jusqu'au point où je ne puisse faire d'autres changements, et le député de Gander-Twillingate veut, à tout prix, que le Comité légifère. Il s'agit là de deux positions contraires. J'aimerais moi-même que la meilleure mesure législative soit adoptée. Je suis restreint par mes ententes avec le ministre des Finances et je dois non seulement avoir son accord complet, mais aussi le consentement du Conseil des ministres. Mais je ne crois pas que nous devrions quitter cette séance du Comité en pensant que nous ne pouvons pas effectuer des changements. Je crois qu'il peut en faire.

Le président: Monsieur Comeau.

M. Crouse: Je m'excuse, mais je ne suis pas d'accord avec la déclaration du ministre.

[Texte]

cumscribing him so that he cannot make any more changes.

The Chairman: Mr. Crouse, I think Mr. Comeau has indicated. . .

Mr. Comeau: Mr. Chairman, how can we approve this bill in Committee, or disapprove of it, when the intentions of the government are not as stated in this bill. As far as the interest rate is concerned, this apparently will be amended by the Minister according to his example that he gave in Vancouver and similarly the amount of the loan. The amount of the loan, this is further, this could be amended. This could be done in the House, and I would accept this because this would be an addition to the bill. But as far as the interest rate is concerned, this would not be an addition to the bill. It is in this bill now. We are asked to approve this bill with this interest rate, but the interest rate apparently will be changed to another. . .

Mr. Davis: Mr. Chairman, could I say a word on this. There is no proposal, at least emanating from myself as Minister of Fisheries and Forestry, to change the provisions with regard to interest from those which have already been incorporated in the Farm Improvement Loans Act. And I did during my submission in the House on second reading outline the manner in which the regulations were drafted under the Farm Improvement Loans Act to establish the rate of interest.

And in my speech in Vancouver I was really paraphrasing what has already appeared in *Hansard* as my statement with regards to the manner in which the interest rate would in fact be administered, namely 1 per cent above the rate charged to the federal government by lenders on loans of similar lengths of time in an immediate preceding period.

Mr. Comeau: Mr. Chairman, I have one more question for the Minister.

The Chairman: Mr. Comeau.

Mr. Comeau: Last week we were faced with a situation where the Minister said something in the House and outside the House, and people believed him and the members of the Committee believed what he was saying. But he did not want to include it in this bill.

This week we are faced with the same situation. We have a certain intention. We have the word of the Minister. He said it, and yet we do not want to include it in this bill. I am wondering whether there is any reason for this type of thing.

[Interprétation]

Nous ne le restreignons pas de sorte qu'il ne puisse pas faire de changements.

Le président: Monsieur Crouse, je crois que M. Comeau a indiqué. . .

M. Comeau: Monsieur le président, comment pouvons-nous appuyer ce bill en Comité ou même le désapprouver quand des intentions du gouvernement ne sont pas telles qu'elles sont précisées dans le bill. En ce qui concerne le taux d'intérêt, il pourra être modifié par le ministre selon l'exemple qu'il a donné à Vancouver et le montant du prêt pourra également être modifié à la Chambre. Ce serait un ajout au bill. Mais quant au taux d'intérêts ce ne serait pas quelque chose d'ajouter au bill parce qu'il s'y trouve maintenant. On nous demande d'approuver le bill avec le taux d'intérêt qui apparemment sera changé à un autre. . .

M. Davis: Monsieur le président, il n'y a pas de proposition de ma part, à titre de ministre de Pêches et Forêts, de changer les dispositions par rapport aux taux d'intérêt qui ont déjà été incorporés à la Loi sur les prêts destinés aux améliorations agricoles. Dans mon exposé à la Chambre, en deuxième lecture, j'ai décrit la façon par laquelle, on avait rédigé les règlements aux termes de la Loi sur les prêts destinés aux améliorations agricoles pour adopter les taux d'intérêt.

Et dans mon discours à Vancouver, vraiment, je ne faisais que dire ce qui avait déjà été dit dans le *Hansard* au cours de mon exposé, je décrivais la façon qu'on utiliserait pour administrer les taux d'intérêt, à savoir 1 p. 100 de plus que devait payer le gouvernement pour obtenir les fonds nécessaires pour consentir ces prêts.

M. Comeau: Monsieur le président, une autre question à poser au ministre.

Le président: Monsieur Comeau.

M. Comeau: La semaine dernière nous étions pris avec une certaine situation où le ministre a dit quelque chose à la Chambre et à l'extérieur de la Chambre; les gens l'ont cru, les membres du Comité l'ont cru. Mais il ne voulait pas l'inclure dans le bill.

Cette semaine nous sommes au prise avec une certaine situation. Nous avons la parole du ministre, et pourtant nous ne voulons pas l'écrire en toutes lettres dans le bill. Alors je me demande est-ce qu'il y a une raison pour ce genre de chose, pour cette situation?

[Text]

Mr. Davis: I will repeat. I have now got the support of the Minister of Finance to make an amendment with regards to the ceiling on loans, and my understanding also is that I can arrange for someone to make a motion to that effect in this Committee, or I can move it on third reading in the House. There may be other amendments. Those are for the Committee to dispose of as it sees fit.

• 1110

Mr. Lundrigan: Mr. Chairman, while we are thinking over that question, might I make another point?

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: First of all, the Minister indicated that it was my intention that the Committee have legislative powers and that I was at loggerheads with the member from south shore as to procedure, and that he wanted to stymie any amendments to be made or any changes to be made.

Mr. Davis: I did not use the word "stymie".

Mr. Lundrigan: I am sorry if I misquoted the Minister but he did indicate to place a freeze—I think that was the word he used, was it not—on any changes that might materialize, or something of that nature, indicating that perhaps the member from the South Shore was not willing to allow the Minister to negotiate changes outside Committee.

I think the only question has been whether the Committee should be involved in discussions of this nature. It is not my intention that the Committee have legislative powers, but I am sure all will agree that it certainly is the purpose of the Committee to make recommendations for improvements in legislation. I would like to see any recommendations which the Committee might deem necessary, if not actually made through amendments here, at least recommended to the House.

If we can not, taking Bill C-151 as an example, make recommendations for amendments, then our Committee has to rise because there is practically no provisions there which are not financial in nature.

It was going to be my suggestion based on your position, Mr. Chairman, about the ruling in Beauchesne, that if we cannot make amendments to proposed legislation, amendments such as we attempted to make on Bill C-148, then we certainly should be able to recommend that such amendments be made in the House; in other words, that our Committee

[Interpretation]

M. Davis: Bien, je vais répéter. J'ai maintenant l'appui du ministre des Finances à l'égard d'un amendement au sujet du plafond des prêts et je puis également obtenir que quelqu'un puisse proposer cet amendement en Comité ou bien je le proposerai moi-même à la Chambre. Il y aura peut-être d'autres amendements. Le Comité peut en disposer.

M. Lundrigan: Monsieur le président, pendant que nous songeons à cette question, puis-je soulever un autre point?

Le président: Monsieur Lundrigan?

M. Lundrigan: Le ministre a laissé entendre que je désirais que le comité ait des pouvoirs législatifs, que je ne m'entendais pas avec le député de South Shore au sujet de la procédure et qu'il voulait bloquer toute tentative d'amendement.

M. Davis: Je n'ai pas utilisé le mot «bloquer».

M. Lundrigan: Je crois que vous avez utilisé le terme «geler ou empêcher» pour indiquer que le député de South Shore ne voulait que le ministre négocie des changements à l'extérieur du Comité. Est-ce que le comité devrait être impliqué dans des discussions de ce genre? Je ne dis pas que le comité devrait avoir des pouvoirs législatifs, mais je crois qu'il appartient au Comité de faire des recommandations en vue de l'amélioration des lois en vigueur. J'aimerais que tout changement que le Comité juge nécessaire soit fait, sinon au moyen d'amendement, du moins par des recommandations faites à la Chambre.

Si nous ne pouvons pas faire de recommandations en vue d'amender, par exemple, le bill C-151, le Comité n'a qu'à s'ajourner parce qu'il n'y a aucune disposition qui ne soit de nature financière.

Et j'allais suggérer, que si nous ne pouvons proposer des amendements à une mesure proposée, tel que l'amendement que nous avons tenté de faire au sujet du Bill C-148, que nous pouvons certes recommander que de tels amendements soient apportés en Chambre; en d'autres mots, que notre Comité s'accorde pour recommander que ces amende-

[Texte]

agree to recommend that these amendments be brought up at the appropriate time when the Bill is referred back to the House for third reading.

In other words, even though we have not decided on the amendment, nevertheless we have agreed to recommend it as a Committee. I think this will overcome the restriction imposed on us by the particular ruling in Beauséjour or the rules of the House, or the rules under which committees operate.

My suggestion is that we can at least recommend amendments that we deem necessary, and I am sure the member from south shore was saying and agrees with me that this is the purpose of a committee. We should be able to recommend any amendments we think necessary, such as the one on the ceiling and, hopefully, the one on the interest rate. As Mr. Comeau has indicated, perhaps this could be brought in and made more definitive, rather than open as it is in the present legislation.

The Chairman: I think, Mr. Lundrigan, that recommendations would be in order, but in the event that a recommendation is in the form of a motion it would not be in order if it involves the expenditure of money.

Mr. Comeau: Mr. Chairman, what do you want us to do this morning with this Bill?

Mr. Crouse: Mr. Chairman, how can we pass this Bill section by section, which is entirely a money bill, in view of the Minister's statement made on the West Coast? It would appear to us that it is his intention to change this particular bill. He is going to bring in changes raising the amount of money that may be borrowed—a most desirable change—and I repeat it is not my purpose to circumscribe the Minister into a narrow corner where he cannot make changes.

I take issue with his statement there. I feel that any changes made which would be beneficial to the over-all industry are most desirable, but we are being asked to approve this Bill in the amount of \$10,000 being loaned to a fisherman; we are being asked to approve the words that the interest rate may be prescribed by the Governor in Council when the Minister himself has stated that it would be more in keeping with the Act that money be borrowed at 1 per cent more than the cost of money to the federal government.

If this is the type of wording the Minister proposes to put into the Bill I will be happy to endorse it, but if he is to be so, frankly I cannot see how we can go ahead and approve this Bill. This would be a retrograde step at

[Interprétation]

ments soient proposés au moment approprié, lorsque le bill sera déféré à la Chambre, en troisième lecture.

Ainsi, même si nous ne sommes pas d'accord sur l'amendement, nous pouvons nous entendre, en tant que comité, pour le recommander. Nous pouvons de cette façon, contourner cette restriction que nous impose Beauséjour, ou le règlement de la Chambre ou les règlements qui régissent les comités. Je crois que nous pouvons recommander les amendements que nous croyons nécessaires et je crois que le député de South Shore est d'accord avec moi, que c'est là l'objectif du Comité. Nous devrions pouvoir suggérer tout changement que nous croyons nécessaire, tel que l'amendement au sujet des prêts maximums qu'il est possible d'accorder et du taux d'intérêt. Comme l'a indiqué M. Comeau, nous pourrions peut-être préciser davantage, ce que le projet de loi ne fait pas.

Le président: Je crois, monsieur Lundrigan, qu'il serait permis de faire des recommandations, mais si cette recommandation prend la forme d'une résolution nous ne pourrions la faire advenant qu'elle implique une dépense d'argent.

M. Comeau: Monsieur le président, que désirez-vous que nous fassions de ce bill?

M. Crouse: Monsieur le président, comment pouvons-nous adopter, article par article, ce bill qui implique des dépenses, prenant en considération les déclarations que le ministre a faites sur la côte du Pacifique? Il semble que c'est son intention de changer ce bill. Il va proposer des changements, pour élever le plafond des prêts, et ce n'est certes pas mon intention de coincer le ministre de sorte sorte qu'il ne puisse proposer de changements.

Je crois que tout changement, dont va bénéficier l'industrie en général, est souhaitable. Mais, on nous demande d'approuver ce bill qui traite de prêts aux pêcheurs; on nous demande d'approuver un texte qui dit que le taux d'intérêt sera spécifié par le gouverneur en conseil, quand le ministre lui-même dit qu'il serait plus approprié de dire que l'argent coûterait un p. 100 de plus qu'il n'en coûte au gouvernement pour emprunter. Si c'est cela le libellé que le ministre veut insérer dans le bill, je serai enchanté de l'appuyer mais je ne vois pas comment nous pouvons approuver le bill que nous avons sous les yeux. Ce serait une mesure rétrograde. Je crois que nous devons demander que le bill soit déféré de nouveau à la Chambre, sans

[Text]

the present time. We should ask that this Bill be brought back into the House without report until the Minister has reworded it along the lines he has suggested in his speech.

The Chairman: We will hear Mr. Hogarth.

• 1115

Mr. Hogarth: Mr. Chairman, it was my understanding that we came here today to deal with the provisions of Bill C-151. That Bill has three clauses. In the first one it sets out what a lender is, the second clause as I understand it deals with fees and service charges and so on, and the third clause deals with the extent of the government guarantee.

Surely that is what we are here to consider, and if the Minister wishes further to amend the Bill when it is referred back to the House, the time to talk about that is then. Surely we can pass Bill C-151 and if any other hon. members wish to make further amendments when it goes back to the House, or if they wish to make amendments to this Bill now, we can vote on them accordingly provided they do not affect the public purse, because then they would be out of order.

Surely we should pass this Bill and have it reported back to the House. If the Minister has an amendment he makes an amendment, and I cannot see why it should be delayed in any way.

The Chairman: Mr. Perrault?

Mr. Perrault: Mr. Chairman, I would like to reiterate the remarks made by Mr. Hogarth. If we are going to do a section by section study, it is irrelevant to be discussing certain aspects of Clause 3 when we have not even dealt with Clause 1 or 2 as yet. Furthermore, the Minister has given us assurance today that at the appropriate stage he is going to move an amendment to this measure. Obviously he has been successful in negotiating higher limits, and the government is not prepared to support that. Surely it should not deter our taking action on Clauses 1 or 2 this morning instead of just talking these irrelevancies.

Mr. Crouse: Mr. Chairman, might I ask the honourable member who just finished speaking, under Clause 2 the words state:

"(f) no fee, service charge or charge of any kind other than simple interest..."

The Chairman: We are not on Clause 2, Mr. Crouse.

Mr. Crouse: I am sorry. He was referring to Clause 2 because he was saying we could pass this Bill. It deals with the amount of interest

[Interpretation]

rapport, jusqu'à ce que le ministre l'ait rédigé conformément à sa déclaration faite dans l'Ouest du pays.

Le président: Monsieur Hogarth.

M. Hogarth: Je croyais, monsieur le président, que nous étions venus ici pour étudier le bill C-151. Il contient trois articles. Le premier article définit ce qu'est un prêteur, le deuxième parle de redevances et le troisième de l'étendue de la garantie gouvernementale.

N'est-ce pas là ce que nous avons à faire. Si le ministre veut changer le bill une fois qu'il sera déposé de nouveau à la Chambre, il devrait attendre ce moment-là pour en parler. Je crois que nous pouvons quand même étudier le Bill C-151. Si quelqu'un a des modifications à proposer, qu'il le fasse, pourvu qu'elles n'aient pas trait aux deniers publics. Il me semble que nous devons approuver ce bill et faire rapport à la Chambre. Si le ministre veut apporter un amendement qu'il le fasse, car je ne vois pas pourquoi il devrait attendre.

Le président: Monsieur Perrault?

M. Perrault: Monsieur le président, j'aimerais répéter les commentaires de M. Hogarth. Si nous devons étudier ce bill article par article, rien ne sert de traiter de l'article 3 si nous n'avons pas encore étudié les articles 1 et 2. Le ministre nous a assurés, qu'au moment opportun, il soumettrait un amendement. Il semble avoir réussi à obtenir que soient repoussées les limites maximums, ce que le gouvernement n'est pas prêt à appuyer. Tout ceci ne devrait quand même pas nous empêcher d'étudier les articles 1 et 2 dès maintenant.

M. Crouse: Monsieur le président, puis-je demander à l'honorable député qui vient de parler, au sujet de l'article 2 où se trouvent les mots suivants:

f) nuls honoraires, nuls frais de service, nulle rétribution...

Le président: Nous n'en sommes pas à l'article 2, Monsieur Crouse.

M. Crouse: Je m'excuse, mais il parlait de l'article 2 lorsqu'il a dit que nous pourrions adopter ce bill. Il y est question du taux

[Texte]

to be charged so if I am out of order he was out of order in his comments, Mr. Chairman. You did not call him to order.

The Chairman: I would suggest that...

Mr. Perrault: Mr. Chairman, I am simply saying, let us get down to a section by section study of this Bill. That is all I am suggesting. I am saying, let us make the appropriate comments when the Clauses come up for review.

The Chairman: I was just going to mention that we will now come to Clause 1 and deal with it.

Mr. Perrault: I move that Clause 1 carry.

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, I still want to know what we can do as a Committee. Again, I am not going to indulge in worthless debate and conversation unless we can come to some understanding about how we can effect changes in this legislation. The Minister has already suggested that he wants to bring in certain changes. Does our Committee have authority to recommend to the House that these changes be brought in?

Mr. Chairman, it is my understanding that regardless of what changes a Committee proposes to make in proposed legislation, these have to be brought into the House and ratified by the whole House. Is this not correct? For example, let us take Clause 1 or any clause in any bill. Can we actually make an amendment which is carried by committee and have that amendment stand as an amendment, or does it have to be referred to the House as an amendment to be ratified by the whole House?

The Chairman: What we do here is to make recommendations.

Mr. Lundrigan: On any bill?

The Chairman: On any bill.

Mr. Lundrigan: Is it not in order that we make recommendations as agreed on by this Committee to the House in our report that certain amendments be made, even though they might affect financing? They have to be approved by the House anyway.

The Chairman: We have to adhere to the order of reference. If it is a recommendation that does not involve increased expenditures, I think it would be in order.

Mr. Whelan: I think the whole thing amounts to this: that the members who have spoken

[Interprétation]

d'intérêt. Si j'étais hors-d'ordre, il l'était également, Monsieur le président, et vous ne l'avez pas rappelé à l'ordre.

Le président: Je suggérerais que...

M. Perrault: J'ai tout simplement dit, monsieur le président, que nous devrions faire l'étude, article par article, du bill. Je crois que nous devrions garder nos commentaires jusqu'à ce que soit étudié l'article auquel ils se rapportent.

Le président: Je m'apprêtais justement à dire que nous allions entreprendre l'étude de l'article 1.

M. Perrault: Je propose que l'article 1 soit adopté.

Le président: Monsieur Lundrigan?

M. Lundrigan: Monsieur le président, j'aimerais savoir ce que nous pouvons faire en tant que comité. Je ne vais pas entreprendre un débat inutile à moins que nous puissions nous entendre sur la méthode à suivre pour modifier ce projet. Le ministre a déjà dit qu'il voulait proposer certains changements. Notre comité a-t-il l'autorisation nécessaire pour recommander à la Chambre que ces changements soient proposés? Si je comprends bien, monsieur le président, quels que soient les changements que propose un comité ces changements doivent être soumis à la Chambre et ratifiés par elle. C'est bien cela, n'est-ce pas? Prenons, par exemple, l'article 1, de ce bill, ou de n'importe quel bill. Pouvons-nous adopter un amendement qui demeurera adopté ou devons-nous le soumettre à la Chambre pour qu'elle le ratifie?

Le président: Tout ce que nous pouvons faire, ce sont des recommandations.

M. Lundrigan: Quel que soit le bill?

Le président: Quel que soit le bill.

M. Lundrigan: Est-ce que nous ne pouvons pas nous entendre pour soumettre des recommandations à la Chambre, même si elles devaient impliquer des dépenses, puisqu'elles doivent être, ensuite, approuvées par la Chambre?

Le président: Il faut suivre notre mandat. Alors toute recommandation qui n'a pas trait à l'augmentation des dépenses, serait recevable.

M. Whelan: Je crois que les députés qui en ont parlé sont d'accord avec le discours du

[Text]

about this speech that the Minister has made agree with it but disagree with the Minister's having made this speech, so it is obvious to me that if the bill is brought in with the amendment for \$25,000 it will be approved, and also that the interest qualifications that are the same as in the Farm Improvement Loans Act will be approved. All I can say from my knowledge of committees is that you have an order of reference that the committee has to follow. We cannot go outside that order of reference, and our order of reference, if I understand correctly, is to study this bill that is before us at this time. Am I not right?

The Chairman: That is right.

Mr. Whelan: And when you can meander all over the place, it seems nothing but an effort to go along with the Minister and get some publicity for having been those sponsoring \$25,000 loans for fishermen. They think it is a terrific thing and want to get credit for it themselves. And this is not new. It was discussed in the House at that time, and any member who says that this is brand new out of a speech made on the Coast is not correct as far as I am concerned.

The Chairman: Mr. Perrault.

Mr. Perrault: The Minister invited suggestions from the opposition in the House when he gave his own personal view that these limits should be increased. The member from Burnaby-Richmond made a suggestion about increasing these limits, so there is nothing new about this at all. The speech was purely anticipatory in nature, and is a purely normal procedure.

Mr. Lundrigan: I thought we had finished all this. I think the point was made a long time ago, and I do not see the purpose of the two honourable members going into all kinds of detail about the original remarks which came to an end some time ago. My only question to you, Mr. Chairman, was: to what extent can we recommend changes in this legislation? And the second last member who spoke indicated that our order of reference is that we study the bill. And if we cannot make recommendations on changes that we would like to see in there, I wasted five hours last week in the same Committee.

The Chairman: I think it was made clear that recommendations could be made by the members here if they did not entail increased expenditures. I would appreciate it very much if we could now deal with Clause 1.

[Interpretation]

ministre, mais ils disent qu'il n'aurait pas dû le faire. Alors il me semble clair que l'amendement visant le 25,000 dollars serait approuvé si on le propose en Chambre, ainsi que les changements apportés au taux d'intérêt.

Tout ce que je puis dire c'est que le Comité doit suivre son mandat. Nous ne pouvons pas nous éloigner de notre mandat qui est d'étudier la mesure proposée. N'est-ce pas?

Le président: C'est exact.

M. Whelan: Alors comment peut-on perdre notre temps. Il semble qu'ils soient à la recherche de publicité. Ils veulent recevoir le crédit des prêts consentis aux pêcheurs.

Le président: Monsieur Perrault.

M. Perrault: Je crois que le ministre a demandé l'opinion de l'opposition à la Chambre, il a exprimé son propre point de vue. Je crois que le député de Burnaby-Richmond a fait une suggestion au sujet de l'augmentation des prêts il n'y a donc là rien de nouveau. Le discours anticipait, mais la procédure est tout à fait normale.

M. Lundrigan: Monsieur le président, je croyais que nous en avions fini de cette question. Je ne vois pas ce que les deux députés ont à discuter. La question que je veux poser, c'est dans quelle mesure pouvons-nous recommander des changements au projet de loi? L'avant-dernier orateur a dit que notre mandat veut que nous fassions l'étude du bill. Et si nous ne pouvons pas faire de recommandations quant aux changements que nous souhaitons, j'ai perdu cinq heures au sein du même Comité la semaine dernière.

Le président: Je crois qu'on a tiré au clair que nous pouvons faire des recommandations au sein du Comité, si elles n'ont pas trait aux augmentations des dépenses. Alors je vous saurais gré si nous pouvions passer à l'article n° 1.

[Texte]

Mr. Hogarth: Mr. Chairman, this is just what I was going to suggest. If our hon. friend wants to make some changes in Clause 1, what are they? We are here to consider Bill C-151, not the whole Act. If my hon. friend has some changes he wants made in Clause 1, what are they?

Mr. Lundrigan: Mr. Chairman, that is not the question. I think it is a procedural point, and I would like to see what Beauchesne actually says about that. I thought the ruling was that we were not allowed to make amendments to proposed legislation that comes under the purview of finances. This is what I understood but my recommendation was not necessarily that we make amendments to a piece of legislation, but rather that we recommend in our report to the House that these changes be wrought. In other words, we do not make any decision but only a recommendation, and the Minister could make his recommendation on the increased ceiling.

Mr. Davis: My understanding is that this Committee can change provisions in a bill with the exception of increasing financial liability. Is that not true?

Mr. Anderson: Could we call then for any suggested changes in clause 1? I think this is perhaps the best method of operation.

Mr. Lundrigan: Mr. Chairman, I still do not have an answer to my question.

Mr. Anderson: Well, what is your recommendation in connection with clause 1?

• 1125

Mr. Lundrigan: Mr. Chairman, my question is not on a recommendation for a change in Clause 1. My question is whether this Committee as a whole can make recommendations to the House for changes relating to finance—to make recommendations, not to make amendments. If we cannot do this, how can we proceed effectively? Mr. Chairman, the purpose of the Committee and the increased emphasis on committees was to enable them to have a favourable and constructive effect on proposed legislation. This was the purpose, so that we do not have to go back to the House and wait for the whole House to come up with recommendations, to propose amendments and so on and go through the whole procedure again. The purpose was that the Committee either propose certain amendments or recommend certain changes, so that we should be able to first make amendments—I am not sure to what extent the amendments could go—and secondly, make recommendations in our reports to the House that these

[Interprétation]

M. Hogarth: C'est ce que j'allais proposer. Si le député veut apporter des changements à l'article 1, quels sont-ils? Nous sommes ici pour étudier le bill C-151 et non toute la loi. Quels sont les changements qu'il veut apporter à l'article 1?

M. Lundrigan: La question n'est pas là. C'est une question de procédure. Je croyais que selon le règlement nous ne sommes pas censés faire des modifications aux mesures d'aspect financier. Mais ma recommandation est que nous ne proposons pas nécessairement des amendements à une mesure, mais que nous fassions plutôt des recommandations à la Chambre sur la mise en œuvre des changements; voilà ma suggestion. Que nous ne présentions pas une décision, tout simplement une recommandation. Alors, le ministre pourrait recommander de hausser le plafond.

M. Davis: Monsieur le président, si je comprends bien, le Comité peut changer les dispositions d'un bill sauf s'il s'agit d'augmenter les dépenses. Ai-je raison?

M. Anderson: Alors, nous pourrions peut-être suggérer les modifications que nous désirons apporter à l'article 1.

M. Lundrigan: On n'a toujours pas répondu à ma question.

M. Anderson: Quelles sont vos recommandations au sujet de l'article 1?

M. Lundrigan: Je ne veux pas recommander un changement à l'article 1. Ma question est de savoir si nous pouvons faire des recommandations à la Chambre, en vue d'apporter des changements qui vont toucher au financement. Si nous ne pouvons pas le faire, comment pouvons-nous procéder? Monsieur le président, l'objectif du Comité et l'accent placé sur les Comités, était d'en faire un moyen efficace de traiter les mesures législatives afin qu'il ne soit pas nécessaire de retourner à la Chambre et d'attendre que l'ensemble de la Chambre propose des modifications, et répéter toute la procédure. Je crois que le but était que le Comité recommande certains changements, et, deuxièmement, de faire des recommandations à la Chambre dans nos rapports pour que ces amendements soient mis en œuvre même si nous ne pouvons pas le faire nous-mêmes au Comité.

[Text]

amendments be brought about, even though we have not necessarily made the amendments ourselves as a Committee.

When the report is made to the House, we are indicating to the House that we would like to see these changes brought about. We have not made any changes here; we are not empowered, as you have indicated, to make changes affecting financing. But certainly we can recommend to the House, I can recommend as a private member in the House that changes be brought about. As a matter of fact I can make the amendment. So what I am suggesting is that we, in actual fact, are giving notice to the House, if you wish, to bring about certain amendments.

If we cannot do this, then most of the provisions in much of the legislation are outside our terms of discussion and I cannot see how we can talk about interest rates, ceiling, terms of loans and so on. These are three changes that we are talking about, that we would all like to see. The Minister has indicated it, the member from South Shore has indicated these changes; one of his recommendations is that the years be extended; that affects financing.

The Chairman: I think that all recommendations or amendments here, as far as we are concerned, are only recommendations to the House. We recommend in our report to the House, and I think that to remain within our order or reference, anything dealing with increased expenditures would be not in order.

Mr. Lundrigan: We can, as a party caucus, decide to recommend an amendment; we can go from there to drafting an amendment and presenting it to the House with due notice, and on Third Reading it will be debated and the House will make a decision. I can do it as a private member. Do you not think that we should be able to do the same thing as a Committee? This is going to be the burden of our discussion; finances are the burden of our discussion of any proposed legislation. I think Beauchesne indicates, although I cannot remember the exact quotation that you gave us, that we cannot make amendments. This is quite natural. How can we make amendments committing the government to greater or lesser expenditure? It is not in our power to do this. But certainly we can recommend to the House. I can do it as a private member, so why cannot we do it as a Committee? I think this is a point which has to be resolved.

• 1130

Mr. Whelan: Mr. Chairman, if I understand correctly, we can make recommendations on anything that pertains to this Bill. Outside the scope of this Bill I do not know what powers

[Interpretation]

Lorsque le rapport est fait à la Chambre, nous indiquons ainsi que nous voulons que ces changements soient apportés. Vous venez de dire que nous n'avons pas l'autorisation ici de faire des changements qui intéressent les finances. Mais, à titre de simple député, je puis moi-même proposer des amendements.

Alors si nous ne pouvons pas procéder de la sorte, la plus grande partie des mesures législatives sont au-delà de notre mandat, et je ne vois pas comment nous pouvons parler du plafonnement du taux d'intérêt, de la durée des prêts, le nombre d'années, et ainsi de suite. Nous parlons de trois modifications. Le ministre en a parlé et le député de South Shore les a indiquées également; une de ses recommandations a trait au prolongement de la durée, ce qui touche aux finances.

Le président: Je crois que les recommandations que nous faisons ici ne sont que des recommandations à la Chambre. Nous recommandons des changements à la Chambre. Je dois dire que, pour respecter notre mandat, tout ce qui a trait à l'augmentation des dépenses du gouvernement n'est pas recevable.

M. Lundrigan: A titre de caucus de parti, nous pouvons décider de recommander un amendement. A partir de là nous pouvons rédiger une modification et la présenter à la Chambre, moyennant avis, et en troisième lecture, elle sera débattue et une décision sera prise. Si je puis le faire à titre de simple député, ne croyez-vous pas que le comité puisse le faire? Je crois que les finances vont constituer l'essence de notre discussion, elles le sont toujours. Je crois que Beauchesne indique, bien que je ne me souviens pas de la citation exacte, que nous ne pouvons pas faire d'amendements qui engagent le gouvernement. Mais nous pouvons faire des recommandations à la Chambre. Si je peux le faire à titre de simple député, pourquoi le Comité ne peut-il pas le faire. Je crois que c'est un point qu'il faudra régler.

M. Whelan: Nous pouvons faire des recommandations au sujet de tout ce qui a trait au projet de loi. Si l'on s'éloigne de la portée du bill, je me demande quels seront nos pou-

[Texte]

we have. I do not think we have any powers other than dealing with what is in this Bill. If we are going to recommend a change in this Bill we are in order. But if we go outside of something in this Bill we are not in order, if I understand the procedure correctly. I think we are wasting a lot of time.

The fishermen need these amendments to the Act. The Minister has intimated to us that he is prepared to go much further in view of the representations made in the House when this Bill was given Second Reading. I think this should satisfy the Committee that this will be done on behalf of the fishermen who need this money. If we want a lecture on procedure we should get that before we come in here; if we want to find out the rules it is not in this Committee that we should get our training in the new procedures of committees. We should have that before we come here.

Mr. Noble: Mr. Chairman, it seems to me that this whole thing is an exercise in futility. I sat in committee here last week and we talked in the same way as we are talking this morning. And it has been my experience that when we came into committee we made suggestions. I would not say that we moved motions or made amendments but we made recommendations and if I remember correctly, when they were agreed on the Chairman of the Committee went into the House and made these recommendations.

Therefore, it seems to me that we should be getting on with the work here. We have these new rules to save time, and these matters are to be brought up in committees to save time, but unless we can do something better than we have done so far I cannot see any point to the new rules in sending material to the Committees for discussion to try to come up with something to save time in the House.

Mr. Goode: Mr. Chairman, I have to agree, which is rather unusual, with Mr. Lundrigan's suggestion. As I understand the Committee work, we are allowed to make recommendations, even though they deal with financial matters. I think his point is valid.

Mr. Hogarth: Mr. Chairman, the point is that the ceiling on loans is not the subject matter of this Bill. Perhaps someone wants to bring in a further act to amend the Fisheries Improvement Loans Act or perhaps the Minister may be able to do that on third reading in the House. However, the ceiling on loans is not the subject matter of this Bill. Our terms of reference are the subject matter of Bill No. C-151, not the provisions of the

[Interprétation]

voirs. Nous sommes recevables si nous recommandons un amendement au bill, mais non pas si nous nous en éloignons.

Toutefois, certains changements qui ne touchent pas au bill ne sont pas recevables et je ne crois pas qu'il faille perdre notre temps.

Les pêcheurs ont besoin de ces modifications. Le ministre a laissé entendre qu'il était prêt à aller beaucoup plus loin, à la suite des recommandations qui ont été formulées en Chambre lors de la deuxième lecture. Que le comité soit donc satisfait de constater que ceci sera fait pour les pêcheurs. Je ne crois pas que nous ayons besoin d'un discours sur la procédure. Si nous voulons apprendre les règlements, ce n'est pas l'endroit pour le faire.

M. Noble: Monsieur le président, je crois que cette discussion est absolument futile. J'ai assisté à la séance du Comité la semaine dernière, et ce fut exactement la même chose qu'aujourd'hui. Normalement lorsque nous commençons une réunion de Comité, nous formulons des propositions. Il ne s'agit pas de formuler des amendements ou des motions, mais lorsque nous proposons des amendements, le président du Comité les propose à la Chambre.

Je crois que nous devrions maintenant poursuivre notre travail. Les nouveaux règlements ont été adoptés afin d'épargner du temps. Ces questions sont renvoyées au Comité afin d'épargner du temps et à moins d'en arriver à faire un travail plus fructueux, je ne vois vraiment pas pourquoi on enverrait ces règlements au Comité pour en discuter.

M. Goode: Monsieur le président, je dois exprimer mon accord avec M. Lundrigan. Nous pouvons formuler des recommandations, même si elles portent sur des questions financières. Je crois que l'observation est valable.

M. Hogarth: Le problème, c'est que le maximum des prêts n'est pas l'objectif du bill en question. Si quelqu'un veut modifier la Loi sur les prêts aidant aux opérations de pêche, ou si le ministre veut proposer une modification à la Chambre, il peut le faire, mais il est certain que le maximum des prêts n'est pas le sujet du bill. Notre mandat est d'étudier le bill C-151 et non les dispositions de la Loi, sauf les modifications apportées par

[Text]

Fisheries Improvement Loans Act, except in so far as it is amended by this Bill.

It is my respectful suggestion that we should proceed clause by clause and accept or reject it. Now, we cannot amend it in so far as it affects the public purse but we can, if we wish, reject it. Our terms are right there; we either accept or reject it. If it does not concern the public purse, and Clause 1 does not appear to me to concern the public purse, we can amend that clause and it goes back to the House as amended.

However, to get into the other aspect of the Fisheries Improvement Loans Act in this Committee is, I would respectfully suggest, out of order, because it is beyond our terms of reference, even though the Minister has made suggestions as to what he proposes to do later.

The Chairman: I would suggest, then, that we deal with Clause 1.

Mr. Lundrigan: Mr. Chairman, could I make a recommendation? First of all, if some hon. members' minds were as open as their mouths I think we would have a lot better chance of getting through with some of these things. I recommend that members consult their House Leader concerning the terms of reference of our Committee so that we can get a clear understanding as to what our powers are.

A number of hon. members have indicated that we cannot make any kind of recommendation. Anything which is an amendment, or a suggested amendment or a recommendation for a change you can say is outside this Bill. Therefore, if we cannot make any suggestions for changes, we might as well not continue. It is not the purpose of our Committee to continue and say: "We are in favour or against Clause 1." That is not the purpose of our Committee.

The Chairman: Mr. Lundrigan, my understanding is anything that does not deal with an increased expenditure is permissible. If we could proceed with Clause 1, which I think does not deal with anything like that, I believe it would be in order.

Clause 1 agreed to.

On Clause 2...

Mr. Crouse: Mr. Chairman, on Clause 2, paragraph (f) states:

[Interpretation]

le présent bill. Je propose donc que nous procédions article par article, pour les accepter ou les rejeter. Nous ne pouvons pas apporter de modifications dans la mesure où cela entraîne la dépense de fonds publics, mais nous pouvons ou bien les accepter ou les rejeter.

L'article 1 ne touche pas à la dépense d'un fonds public. Nous pouvons l'accepter ou le rejeter ou nous pouvons y apporter des modifications, puis le renvoyer à la Chambre.

Je soumets respectueusement que ce Comité ne s'en est pas tenu à son mandat, même si le ministre a fait des propositions sur ce qu'il a l'intention de faire, plus tard.

Le président: Je propose donc que nous étudions l'article 1.

M. Lundrigan: Puis-je formuler une recommandation? Tout d'abord, si certains députés se servaient de leur tête au lieu de se servir de leur bouche, nous pourrions aller beaucoup plus vite. Je recommande que les députés consultent le leader de leur parti afin de déterminer le mandat du Comité, pour que nous sachions vraiment jusqu'où vont nos pouvoirs.

Certains députés semblent dire que nous ne pouvons pas formuler des recommandations, de quelque genre que ce soit. On pourrait toujours prétendre que ces amendements dépassent le cadre de ce bill. Et nous pourrions tout aussi bien nous arrêter là. Le Comité n'a pas pour but de dire: «Nous sommes en faveur ou contre l'article 1».

Le président: A mon point de vue, tout ce qui ne porte pas sur une augmentation des dépenses est acceptable. On a formulé une proposition au sujet de l'article 1 qui est recevable à mon avis.

L'article 1 est adopté.

L'article 2...

M. Crouse: Monsieur le président, au sujet de l'article 2, alinéa d):

[Texte]

"(f) no fee, service charge or charge of any kind other than simple interest at the rate prescribed...

Is it the Minister's intention in that section to make a recommendation, "and the rate prescribed shall be 1 per cent more than the cost of money to the federal government"?

If this were added to that particular clause it would be definitive, it would be in keeping with his statement made on the West Coast and would be acceptable to the members of the official opposition.

Mr. Hogarth: Mr. Chairman, may I ask the hon. member how to determine the cost of money to the federal government on a given day when a loan is signed? Surely, the cost of money to the federal government varies daily does it not?

Mr. Crouse: One per cent more than the cost of money, that is all.

Mr. Hogarth: I appreciate that, but my concern, Mr. Chairman, is how do you determine it? Now, here is a bank and a fisherman has come into the bank to take out a loan. The bank wants to put a rate of interest on the loan. Now, how does the bank know that day what the cost of money is to the federal government?

• 1135

Mr. Crouse: You should direct your question to the Minister of Fisheries because that is his statement, not mine.

Mr. Hogarth: I appreciate that, but what surely is done is that the Governor in Council passes a regulation—and the Minister could, perhaps, correct me if I am wrong—that the rate of interest on loans under this act shall be such and such, and periodically that is probably reviewed. To put in the legislation that the bank, when it is lending the money to the fisherman, has to put in a rate of interest that is prescribed by calculating what the cost of money is to the federal government on that day is an impossibility.

Mr. Crouse: In other words, what the Minister stated, then, on the West Coast is actually an impossibility.

Mr. Hogarth: No, because they take a general average.

The Chairman: Order, please. Mr. Anderson.

Mr. Anderson: The speech the Minister made on the West Coast made it quite clear that these things are extremely difficult to

[Interprétation]

f) nuls honoraires, nuls frais de service, nulle rétribution de quelque espèce autre que l'intérêt simple au taux prescrit...

Le ministre veut-il faire une recommandation en vue d'établir que le taux prescrit sera 1 p. 100 de plus que le taux que doit verser le gouvernement?

Si on voulait adopter cette modification, ce serait conforme à la déclaration qu'il a faite sur le côté ouest et ce serait acceptable pour les membres de l'Opposition.

M. Hogarth: Comment peut-on déterminer le coût de l'argent que doit payer le gouvernement un jour ou l'autre? Le coût de l'argent varie d'un jour à l'autre, n'est-ce pas?

M. Crouse: Un pour cent de plus que le coût de l'argent.

M. Hogarth: Très bien, mais comment peut-on le déterminer? Un pêcheur, par exemple, se rend à la banque pour emprunter de l'argent. La banque veut fixer un taux d'intérêt. Comment la banque peut-elle savoir quel est le coût que doit payer le gouvernement pour son argent, ce jour-là?

M. Crouse: Il faudrait poser cette question au ministre des Pêcheries, car c'est sa déclaration et non pas la mienne.

M. Hogarth: Ce qui se produit, c'est que le gouvernement conseille et adopte un règlement, et (le ministre pourra peut-être corriger ce que je dis) le gouverneur en conseil déclare que le taux d'intérêt en vertu de la loi sera fixé à tant ou à tant, et il y a des modifications périodiques. Mais inscrire dans la loi que la banque, lorsqu'elle prête l'argent aux pêcheurs, doit fixer un taux d'intérêt prescrit en calculant le taux d'intérêt que doit payer le gouvernement ce jour-là, est absolument impossible.

M. Crouse: Ce qui a été déclaré par le ministre sur la côte ouest est impossible, donc.

M. Hogarth: Non, car on fait une moyenne générale.

Le président: A l'ordre! Monsieur Anderson.

M. Anderson: La déclaration que le ministre a faite dans l'Ouest exposait bien que ce coût serait calculé à tous les six mois, car ces

[Text]

calculate day by day, and therefore they are calculated every six months which presumably is some weighted average or something like that. It is extremely difficult to do every day of the year, so they do it on two days of the year six months apart to give some framework on which things like this can operate.

The Chairman: Yes, Mr. Davis?

Mr. Davis: Could I explain the regulations, regulations which will be very similar to those introduced in respect of the Farm Improvement Loans Act. In respect of the latter I read certain clauses from the regulations as promulgated under the Farm Improvement Loans Act on November 15, 1968 regarding the rate of interest. The regulations read:

...the rate of interest per annum payable to a bank in respect of a guaranteed farm improvement loan made on or after the coming into force of this section is the aggregate of one per cent per annum and the base rate calculated pursuant to subsection (2) for the interest period in which the loan is made. The base rate for each interest period shall be equal to the simple arithmetic mean of the Wednesday closing mid-market yields for all Wednesdays in the averaging period immediately preceding the interest period as computed from the yields as published by the Bank of Canada on all Government of Canada bonds payable in Canadian currency and due to mature...

In other words, and as I said in my preamble today, the rate of interest which the bank, the credit union or the caisse populaire, and so on, can charge is 1 per cent more than the borrowing rate of the Government of Canada as established in a preceding six-month period. We said in the House, and I will say again, that the regulations drafted under this act will be strictly in parallel with those under the Farm Improvement Loans Act.

On the West Coast when I was endeavouring to describe this system and put numbers on my calculations instead of just generalizing, I was trying to get a message across about the way this system would work. I did say that the increment over and above the Canadian government borrowing rate would be 1 per cent. It is 1 per cent in respect of the Farm Improvement Loans Act and it is the government's intention to draft wording for the regulations under this Fisheries Improvement Loans Act using the figure of 1 per cent.

[Interpretation]

chiffres sont très difficiles à établir chaque jour de l'année. On le fait donc à deux reprises au cours de l'année, ce qui permet d'en arriver à une façon de procéder raisonnable.

Le président: Monsieur Davis?

M. Davis: Je voudrais expliquer les règlements, semblables à ceux de la *Loi sur les prêts destinés aux améliorations agricoles*.

J'ai lu certaines dispositions adoptées dans le cadre de la Loi, le 15 novembre 1968, au sujet du taux d'intérêt. Les règlements se lisaient comme suit:

Le taux d'intérêt payable chaque année à une banque, à la suite d'un prêt garanti consenti en vertu de la *Loi sur les prêts destinés aux améliorations agricoles* correspond à 1 p. 100 de plus par an et sera calculé en conformité du paragraphe 2) pour la période d'intérêt où se fait le prêt. Le taux de base de chaque période d'intérêt doit être égal à la moyenne arithmétique des cours, à la fermeture du marché, tous les mercredis de la période moyenne précédant immédiatement la période d'intérêt calculée d'après les cours publiés par la Banque du Canada pour toutes les obligations du gouvernement canadien payables en monnaie canadienne et venant bientôt à échéance...

En d'autres mots, comme je l'ai dit aujourd'hui dans mon exposé, le taux d'intérêt chargé par les banques et les caisses populaires s'établit à 1 p. 100 de plus que le taux d'emprunt du gouvernement canadien, établi pendant une période de six mois. Nous avons dit à la Chambre, et je le répète, que les règlements établis en vertu de cette loi seront parallèles à ceux qui ont été établis en vertu de la *Loi sur les prêts destinés aux améliorations agricoles*.

Dans l'Ouest, j'ai tenté de généraliser, de donner une idée d'ensemble de ce qui va se produire; j'ai dit que l'augmentation par rapport au taux d'emprunt du gouvernement canadien sera de 1 p. 100 et le gouvernement veut formuler les règlements qui seront établis en vertu de cette *Loi sur les prêts aidant aux opérations de pêche* pour tenir compte du un pour cent.

[Texte]

Mr. Crouse: Will they be added to this section of the Bill?

Mr. Davis: Well, it was not in the Farm Improvement Loans Act in the main bill itself. The wording in the main bill of the Farm Improvement Loans Act, as perhaps the honourable member will recall, is identical to the wording which you see before you for the Fisheries Improvement Loans Act, but this qualification involving the 1 per cent and the base period for the Canadian government borrowing rate, and so on, is spelled out in the regulations which are issued and revised from time to time under the Act itself.

Mr. Osler: May I observe that I think the key there is "revised from time to time" because, as has been pointed out to these hon. gentlemen, I think that while they are trying very hard to protect the fishermen, which is a great thing to try to do, we are in a rising interest rate period. Therefore it seems obvious that if he were to spell it out and nail it down it could not do any harm to the fishermen.

However, the worm always turns, Mr. Chairman, and when we are in a falling interest rate situation—which will ultimately come, we hope—if you prescribed this and nailed it down as they are suggesting we do you could have a situation where the government felt that these people were being diddled by 1 or 2 per cent and, they can amend their regulations which I think is what you are after—something to make the situation fluid, so that they are not going to be hung with a high interest rate when interest rates finally fall and they would have to ride it out for six months, according to this act, unless you could call parliament to discuss it. . .

• 1140

Mr. Lundrigan: The Minister has indicated that the intention of the Government is to write this kind of provision into the regulations pertaining to the Act itself. He also indicated that there was no provision in the Farm Improvement Loans Act specifying interest rate; that was just about the same as. . .

Mr. Davis: Identical wording, as in this Act now.

Mr. Lundrigan: I think the recommendation of the amendment is possibly to improve this Act over the Farm Improvement Loans Act.

I cannot see any argument about our specifying a maximum of 1 per cent more than the cost of money to government. The Minister has already indicated that when the monies

[Interprétation]

Mr. Crouse: On les ajoutera à cet article du bill?

Mr. Davis: Ceci n'était pas dans la *Loi sur les prêts destinés aux améliorations agricoles*.

Les députés se souviendront que la façon dont la loi a été formulée était identique à cette loi-ci, mais le règlement au sujet de la somme de 1 p. 100 et la stipulation au sujet du droit d'intérêt du gouvernement canadien sont exposés en détail dans les règlements qu'on revise de temps à autre en vertu de la loi.

M. Osler: Ce chiffre doit être modifié de temps à autre, car il est à souligner que nous sommes dans une période où les taux d'intérêt montent si nous fixons un taux précis, et cela ne peut pas faire de tort aux pêcheurs à l'heure actuelle.

Mais si les taux d'intérêt baissent, ce que nous espérons, si nous fixons un chiffre défini, il se peut que dans certains cas le gouvernement imposerait un taux trop élevé à ces personnes lors d'une chute des taux d'intérêt, et il est important de prévoir une certaine souplesse en vertu des règlements et qu'ils aient à supporter ce taux durant six mois, selon la loi, à moins que l'on puisse en appeler au Parlement à ce sujet.

M. Lundrigan: Le ministre a dit que le gouvernement a l'intention d'inscrire ces dispositions dans les règlements qui se rapportent à la loi. Il a dit que rien dans la loi sur les améliorations agricoles ne fixait les taux d'intérêt. Nous nous sommes servis exactement des mêmes termes que dans cette loi.

M. Davis: Il s'agit des mêmes termes.

M. Lundrigan: La recommandation de l'amendement aurait pour but d'améliorer la loi par rapport à la Loi sur les prêts aux améliorations agricoles. Je ne vois pas pourquoi, si nous établissons une façon bien précise qui s'agit d'un maximum de 1 p. 100 de plus que le taux d'intérêt auquel emprunte le gouver-

[Text]

are borrowed by an individual the interest rate will not increase, assuming that the interest rate does increase on the market. The interest rate will not increase to the borrowing agent. In other words, if a person borrows \$25,000 at an interest rate of 7 per cent and next year it is 14 per cent he still has his money for the 7 per cent. This was my understanding.

I cannot see how we are doing any injustice to a fisherman by specifying that there will be a maximum of 1 per cent difference between the cost of his borrowing monies and the government's borrowing monies. Although the interest rate may change from time to time, we are only guaranteeing that he is not going to be paying more than the 1 per cent difference.

As the Bill is presently written it could mean that the interest rate could vary any number of percentage points. To give confidence to the individual fisherman borrowing, I think it would be well to spell it out. If we intend to do this, if it is going to be written into the regulations and if it is the government's intention, there must be some way of amending our proposed legislation so as to give a guarantee, and I do not see why we cannot spell it out.

I would like to see people aware that we have the interest of the fishermen at heart, and we could say it here by specifying a variation in interest rates of no more than 1 per cent.

I am delighted with this kind of commitment on the part of the government, but I would like to see it in the legislation.

Mr. Osler: Mr. Chairman, I do not know too much about administration but I suspect that if you have a large number of small banks and other lending agencies in relatively small unsophisticated places it would, in the first place, probably be mechanically impossible for them to get in touch with the source of authority on a day-to-day basis.

The only way it could work equitably would be if you laid down that on a daily basis the interest rate would be 1 per cent more than that paid by the government.

You have to use a relatively rough instrument when you are dealing with this kind of situation. In my opinion, six months is a fairly sensible type of working approach to it. This is what the government proposes to do and is, in fact, doing with the Farm Improvement Loans Act, but with the key words "amended from time to time", which mean that if, during that six-month period, it appears that an injustice is being perpetrated

[Interpretation]

nement, que cela puisse faire de tort. Le ministre a bien dit que l'intérêt ne va pas augmenter. Si le taux d'intérêt augmente sur le marché, le prêteur n'aura pas à payer un surplus d'intérêt. Si une personne emprunte \$25,000 à 7 p. 100, et que l'année suivante le taux d'intérêt est à 14 p. 100, il continue à payer 7 p. 100 d'intérêt.

Je ne crois pas qu'on ferait tort aux pêcheurs en prévoyant que le pêcheur n'aura pas à payer plus de 1 p. 100 que ce que doit payer le gouvernement fédéral pour ses emprunts. A l'heure actuelle, selon la façon dont le bill est conçu, ceci pourrait vouloir dire que le taux d'intérêt pourrait varier et pour donner confiance aux pêcheurs, je crois qu'il faudrait l'inscrire dans la loi. Si le gouvernement a l'intention de le faire, je crois qu'il serait possible de modifier le projet de loi afin de fournir une sorte de garantie. Je ne vois pas pourquoi il n'est pas possible de l'expliquer dans les détails.

Je crois que nous avons tous à cœur l'intérêt du pêcheur et nous voulons tous que la marge d'intérêt ne soit pas plus élevée que 1 p. 100. Je sais que le gouvernement s'engage à faire cela mais je voudrais bien que ceci soit stipulé dans la loi.

M. Osler: Je ne suis pas tellement au courant des questions d'administration mais il serait assez difficile de convaincre les banques et les institutions de prêts des régions éloignées de communiquer à tous les jours avec le gouvernement.

La seule façon de procéder serait de prévoir qu'à tel ou tel moment le taux d'intérêt s'établira à 1 p. 100 de plus que le taux que doit payer le gouvernement. Je crois qu'une fois tous les six mois serait suffisant et raisonnable, et c'est ce que propose le gouvernement. C'est ce que le gouvernement a établi dans la loi sur les prêts aux améliorations agricoles. Si pendant une période de six mois il semble qu'on commet une injustice, à cause de fluctuations considérables dans les taux d'intérêt, il faudrait prévoir que ces modifications soient apportées à tous les jours.

[Texte]

because of violently fluctuating interest rates, they are not restricted to six months. I suggest that the only way to solve your problem would be to allow it to be on a daily basis, and I do not really think that that would be realistic.

Mr. Comeau: May I ask the Minister who sets out the regulations? You say this could be specified in the regulations. Do we have any authority? How can we be sure that this will be in the regulations governing this legislation?

Mr. Davis: The scope of the regulations, broadly speaking, is outlined in other sections of the Fisheries Improvement Loans Act which you do not now see before you.

Essentially, the discretion is with the Minister of Finance, but the regulations are issued in the name of the Governor in Council—in other words, in the name of the Cabinet—and can be changed from time to time.

● 1145

Mr. Comeau: Yes; but we have new regulations governing the interest rate.

Mr. Davis: Yes; and immediately these changes in the Act become law the new regulations will be published; and I have been indicating the general nature of those changed regulations. Therefore, the detail to which I have alluded is spelled out in the regulations; it is not spelled out specifically in Clause 2.

Mr. Comeau: Mr. Chairman, may I ask the Minister whether he will be recommending to the Minister of Finance a change in those regulations so that that this 1 per cent above that he mentioned in Vancouver would be . . .

Mr. Davis: It is perhaps the reverse. The Minister of Finance has recommended to me that this be the form of the regulations—regulations which will be identical, at least in those clauses, with those already published for the Farm Improvement Loans Act. Therefore, I have been endeavouring to anticipate what will be a fact the moment the altered Act is published.

The Chairman: Shall Clause 2 carry?

Mr. Crouse: Mr. Chairman, relative to Clause 2, this is the only clause in this Bill that refers to section 3. It states

[Interprétation]

M. Comeau: Je voudrais poser une question au ministre responsable de la formulation des règlements. Vous avez dit que ceci pourrait être précisé dans les règlements. Qui rédige les règlements? Est-ce que nous avons certains pouvoirs? A ce sujet, comment pouvons-nous être certains que ceci va figurer au règlement?

M. Davis: Les règlements sont exposés de façon générale dans la loi sur les prêts aidant aux opérations de pêche. Ceci relève du ministère des Finances. Le ministère des Finances publie ces règlements au nom du gouverneur en conseil.

M. Comeau: Ces règlements s'appliqueront-ils aux taux d'intérêt?

M. Davis: Oui. Aussitôt le projet de loi adopté, les nouveaux règlements seront publiés. Les détails que j'ai mentionnés seront exposés en détail dans les règlements mais ils ne figureront pas spécifiquement à l'article 2.

M. Comeau: Allez-vous recommander au ministre des Finances de modifier ces règlements pour que la marge du taux d'intérêt soit fixée à 1 p. 100 de plus.

M. Davis: C'est plutôt le contraire; c'est le ministre des Finances qui m'a recommandé de formuler le règlement de telle façon. Les règlements seront donc identiques à ceux qui ont été publiés en vertu de la *Loi sur les prêts destinés aux améliorations agricoles* et j'ai donc tenté de prévoir à l'avance ceux qui entreraient en vigueur dès que la loi aurait été publiée.

Le président: L'article 2 est-il adopté?

M. Crouse: Monsieur le président, en ce qui concerne l'article 2; il s'agit du seul article de ce projet de loi qui se réfère à l'article 3; il précise:

[Text]

2. Paragraphs (f) and (g) of subsection (1) of section 3 of the said Act are repealed and the following substituted therefor:

Now, we want to make the Minister an honest man. Is it his intention, when the Bill comes before the House to move, in keeping with his statement on the West Coast, that paragraphs (d) and (e) of this section, which deal with the amount of money which may be borrowed by a borrower, or loaned by an institution—and the terms under which the loan is repayable—be somewhat in line with our motion of this morning, which was rejected because it dealt with money? When the bill comes back to the House on third reading is it his intention to move amendments dealing with paragraphs (d) and (e) of this particular section?

Mr. Anderson: Paragraph 2 refers entirely to interest rates. The Minister has made a public statement in the House as well as on the West Coast. I cannot see that any additional information he can provide this Committee can do anything to make him an honest man, or otherwise. I think it is irrelevant...

Mr. Crouse: Is it the Minister's intention to bring in another bill, covering the type of amendments to which he referred, dealing with these particular clauses in the original bill which was passed by the House of Commons in 1955, and given Royal Assent on July 11, 1955?

I ask, Mr. Chairman, because if it is not his intention to indicate to this Committee this morning that he intends to add a section to this paragraph of this bill, then, to make himself an honest man, I submit he must bring in yet another amendment and another bill—a separate bill. What does the Minister intend to do?

Mr. Davis: I have before me a draft motion which certainly is open to discussion so far as I am concerned and which I will be moving on third reading. It is to this effect: That Bill C-151, an Act to amend the Fisheries Improvement Loans Act, be amended by renumbering clause 2 thereof as subclause (2) of clause 2 and by adding as subclause (1) of clause 2 the following:

"2. (1) All that portion of paragraph (d) of subsection (1) of section 3 of the said Act following subparagraph (ii) thereof is repealed and the following substituted therefor:

"did not exceed *twenty-five* thousand dollars;"

[Interpretation]

2. Les alinéas f) et g) du paragraphe (1) de l'article 3 de ladite loi sont abrogés et remplacés par ce qui suit:

Nous sommes sûrs que le ministre est un honnête homme et je voudrais qu'il dise au comité si en vertu de cet article, lorsque le bill sera présenté à la Chambre, il veut proposer que les alinéas d) et e) qui portent sur la somme qui est empruntée par une institution et les conditions en vertu desquelles le prêt peut être remboursé. Veut-il proposer des modifications conformément à cette déclaration qu'il a faite dans l'Ouest vis-à-vis de l'amendement qui a été rejeté ce matin parce qu'il portait sur des questions financières.

Le ministre veut-il, lorsque le bill sera renvoyé à la Chambre pour recevoir la troisième lecture, apporter ces modifications aux alinéas d) et e) de cet article?

M. Anderson: L'alinéa 2 porte uniquement sur les taux d'intérêt et je ne vois vraiment pas pourquoi il faudrait que le ministre fasse une déclaration publique ici et à la Chambre des communes.

M. Crouse: Puis-je lui demander s'il est dans son intention de présenter un autre projet de loi afin d'apporter ce genre de modification au sujet des articles du bill qui a été adopté par la Chambre des communes en 1955 et qui a reçu la sanction royale le 11 juillet 1955? Il a dit qu'il avait l'intention d'ajouter une disposition à cet alinéa et qu'il fasse preuve d'honnêteté, je crois qu'il devra apporter un nouvel amendement et un autre bill. Que fera le ministre?

M. Davis: J'ai en main un projet d'amendement qui pourra faire l'objet de discussion. C'est un projet que je présenterai en troisième lecture et qui prévoit que le Bill C-151 sera modifié, donnant ainsi une autre disposition à l'article 2 et en ajoutant à l'alinéa 1:

Toute la partie de l'alinéa d) de l'article 3 de ladite loi sera révoquée et remplacée par ce qui suit: «ne dépassera pas la somme de \$25,000».

[Texte]

● 1150

Mr. Anderson: I am convinced, Mr. Chairman, that the Minister is out of order. We are dealing in Clause 2 with interest rate, not with upper limits on loans, and I think we should restrict ourselves to Clause 2.

The Chairman: It applies though because it mentions Section 3 in Clause 2.

Mr. Lundrigan: Is it the ruling of the Chair that under Standing Order 249 of *Beauchesne* we as a Committee are not permitted to make recommendations to the House affecting amendments or recommending amendments that might be of a financial nature?

The Chairman: It could be of a financial nature if it is a decrease, but not an increased expenditure.

Mr. Lundrigan: All right, your ruling, Mr. Chairman, is that we are not as a Committee permitted...

The Chairman: It is not my ruling...

Mr. Lundrigan: Is it the Chair's interpretation of Standing Order 249 that as a Committee we are not permitted to make recommendations to the House affecting amendments or to recommend amendments to the House which would result in an increased expenditure of moneys?

The Chairman: We do not make amendments to the House; we recommend to the House.

Mr. Lundrigan: That is exactly what I said, Mr. Chairman.

The Chairman: I think anything dealing with an increased expenditure is out of order here.

Mr. Lundrigan: We as a Committee cannot recommend that this be brought before the House as one of our recommendations for a change in a proposed piece of legislation?

The Chairman: As far as I know.

Mr. Lundrigan: Mr. Chairman, because the Chair has made a ruling I will accept it, and I will not make any such recommendations. We have had one recommended already which could be interpreted by the Chair as being of such a financial nature that it could result in an increased expenditure, we have another one which is going to increase the terms of the loan for 15 years which certainly could be interpreted, as an hon. Member said

[Interprétation]

M. Anderson: Je crois que la déclaration du ministre n'est pas acceptable.

Il s'agit du taux d'intérêt et non pas du montant maximum du prêt. Il faudrait s'en tenir à l'article 2.

Le président: Ceci s'applique au paragraphe 3 de l'article 2.

M. Lundrigan: La décision du président en vertu de l'article 249 du Règlement est-elle que nous ne pouvons pas formuler de recommandations à la Chambre portant sur des amendements de nature financière.

Le président: Il pourrait être de nature financière s'il s'agit d'une baisse, mais non s'il s'agit d'une augmentation.

M. Lundrigan: Nous ne pouvons pas recommander une augmentation de dépenses. Vous décidez donc, que, nous ne pouvons pas...

Le président: Ce n'est pas mon jugement, monsieur...

M. Lundrigan: L'interprétation, de la présidence, du règlement 249, est que nous ne pouvons donc pas recommander à la Chambre d'approuver un amendement qui entraînerait une augmentation des dépenses.

Le président: Nous ne pouvons pas apporter d'amendement mais nous pouvons simplement formuler des recommandations à l'intention de la Chambre.

M. Lundrigan: C'est exactement ce que j'ai dit.

Le président: Je crois que tout ce qui a trait à une augmentation des dépenses serait irrecevable.

M. Lundrigan: En tant que Comité, nous ne pouvons pas recommander de présenter à la Chambre une recommandation d'amender dans un projet de loi?

Le président: Autant que je le sache.

M. Lundrigan: Monsieur le président, vous avez rendu un jugement, et je l'accepte et je ne formulerai pas de telles recommandations. Il y a déjà eu une recommandation qu'on pourrait considérer de nature financière et qui pourrait entraîner une augmentation des dépenses. Il y a une autre recommandation qui prolongera la période de remboursement jusqu'à quinze ans ce qui pourrait, certainement, entraîner une augmentation des dépenses.

[Text]

right at the beginning, as affecting an increase in government expenditure, and we have a third one which the Minister is prepared to recommend and has already indicated that—

The Chairman: The Minister has indicated that he will be willing to bring it into the House.

Mr. Lundrigan: This is true, Mr. Chairman. That is what I started to say. The Minister is prepared to recommend in the House that this be made a part of this proposed legislation, which is going to raise the ceiling to \$25,000, and the Chair is now ruling that we as a Committee cannot recommend these changes to the House for debate and its approval.

The Chairman: You can indicate in Committee, as well as in the House, your thoughts, but making a recommendation is different than indicating.

Mr. Whelan: Mr. Chairman, if I might just give my humble opinion on this, we are dealing with paragraphs (f) and (g) in this bill under Clause 2 and I do not see how we can go beyond this and make recommendations when we are discussing this clause.

The Chairman: I have endeavoured to adhere to the paragraphs as we come to them, but we seem to be drifting off.

• 1155

Mr. Crouse: Mr. Chairman, we are only endeavouring, as I said earlier, to make an honest man of the Minister who said in his statement that the Act has been updated, and is geared to finance—

The Chairman: Order, order.

Mr. Whelan: On a point of order, could the member say that he thinks that the Minister is dishonest at this stage of the game?

Mr. Crouse: I am being facetious, Mr. Chairman. I am simply saying that we have some indication from the Minister of his intentions, that this would make his statement on the West Coast more in line with actual fact.

Mr. Lundrigan: Mr. Chairman, we wanted to make a recommendation that the Committee recommend to the House that there be some provision in Clause 2, in the form of some government definitive statement, which would indicate to the borrower of up to as much as \$25,000 the interest rates. We cannot bring this in.

I was not wandering, Mr. Chairman, when I made that observation a few minutes ago. I

[Interpretation]

ses et il y a enfin une troisième recommandation que le ministre est prêt à recommander et qu'il a déjà indiqué qu'il...

Le président: Recommandation que le ministre s'est engagé à présenter à la Chambre.

M. Lundrigan: C'est ce que j'allais dire. Le ministre est donc prêt à recommander à la Chambre que ceci fasse partie intégrante du projet de loi qui fixera la somme maximum à \$25,000. Vous décidez donc qu'à titre de comité, nous ne pouvons pas recommander ces changements à la Chambre qui en discutera?

Le président: Vous pouvez toujours nous faire part de votre point de vue mais c'est bien différent que de présenter une recommandation.

M. Whelan: Il s'agit des alinéas f) et g) du bill, en vertu de l'article 2. Je ne vois vraiment pas comment nous pouvons aller plus loin et faire ces recommandations alors que nous sommes à discuter de l'article 2.

Le président: J'ai voulu m'en tenir aux divers alinéas au fur et à mesure que nous étudions, mais on semble s'éloigner.

M. Crouse: Monsieur le président, nous tentons seulement d'obliger le ministre à s'en tenir à ses déclarations. Il a dit que maintenant que la Loi a été modifiée...

Le président: A l'ordre s'il vous plaît.

M. Whelan: J'en appel au Règlement. Le député semble sous-entendre que le ministre n'est pas honnête.

M. Crouse: Je plaisantais, monsieur le président. Je crois que le ministre devrait nous faire part de ses intentions et comparer les déclarations qu'il a faites dans l'Ouest à la réalité.

M. Lundrigan: Nous voulons formuler une recommandation, du moins ce que j'ai cru comprendre, que le comité recommande à la Chambre qu'il y ait certaines dispositions à l'article 2 qui permettront à l'emprunteur d'emprunter une somme de \$25,000, en précisant le taux d'intérêt qu'il devra payer.

Je ne m'écartais pas du sujet lorsque j'ai formulé cette observation il y a quelques

[Texte]

cannot continue to discuss these subclauses unless I understand what our powers are. If we cannot make recommendations to the House to effect these kinds of things, then there is nothing in the bill that we should be discussing. We can make our point of view known but, Mr. Chairman, are our points of view reported in the reports of this Committee to the House—or are our recommendations reported to the House? In the reports made by this Committee to the House of Commons are our points of view, our recommendations and our resolutions made known?

Is it not a fact that if we even make a resolution in this Committee there has to be a motion that that resolution be reported to the House or it can be left off the report to the House? Therefore if we have recommendations and if we want these recommendations to come before the House in our reports and to constitute part of the record on Third Reading, perhaps form part of the debate which might affect the legislation, then we have to so move in this Committee and so recommend. If we do not then I do not think our points of view can be reported to the House in the formal reports of this Committee.

Naturally they are recorded in the reports of the Committee which members received, but I do not think, Mr. Chairman, that they are reported in the reports of this Committee to the House.

Mr. Hogarth: Mr. Chairman, I move that Clause 2 carry. I am ready for the question and I would suggest that we proceed.

Mr. Osler: Mr. Chairman, I am sorry but I would like to discuss this motion for a moment. The word “prescribed” worries me. I suspect that it is a matter of form but I would like it explained to me. I used to be in the insurance business and in the dim, dark days before people saw the light and had a social conscience there used to be a trick that allowed lenders to tie somebody down to the insurance that they happened to sell and they often sold it at exorbitant rates. You use the word “prescribed” referring to money rate, which is a definite thing, and then you use the same word as far as insurance is concerned. I would like the definition of the word “prescribed” as far as insurance is concerned so that we will not force fishermen to deal with somebody in insurance that they do not necessarily want to deal with.

Mr. Davis: I will ask Mr. Renwick from the Department of Finance to answer that question, if I may.

[Interprétation]

minutes. Je n'ai pas l'intention de continuer à discuter de ce paragraphe à moins de comprendre quels sont nos pouvoirs. Si nous ne pouvons pas faire de recommandation à la Chambre à ce sujet, je ne vois vraiment pas pourquoi nous étudions le bill. Nous pouvons toujours faire part de notre point de vue, mais nos points de vue sont-ils présentés dans le rapport à la Chambre? Dans le rapport remis par ce comité à la Chambre des communes, fait-on part à la Chambre de nos points de vue ou simplement des recommandations ou des résolutions?

Si nous voulons que la résolution du comité soit présentée à la Chambre, faut-il présenter une motion à cette fin? Nous avons formulé des recommandations, et nous voulons qu'elles soient présentées à la Chambre. Si nous voulons que ces recommandations fassent l'objet d'une modification en troisième lecture et peut-être d'un débat, il faut que nous présentions un amendement en ce sens, car, autrement, nos points de vue ne seront pas exposés à la Chambre.

Bien entendu, ceci figurera au compte rendu des séances du comité mais je ne crois pas, toutefois, qu'ils paraissent au rapport du comité à la Chambre.

M. Hogarth: Je propose que l'article 2 soit adopté et qu'on le mette aux voix.

M. Osler: Monsieur Hogarth, je veux discuter de cette question. Le mot «prescrit» m'inquiète un peu. J'étais autrefois, dans le domaine de l'assurance et certaines personnes se servaient de cette expression pour abuser dans certains cas. On se sert du mot «prescrit» pour le taux d'intérêt, ce qui est un mot bien défini et on emploie ensuite le même mot par rapport aux assurances. Je voudrais qu'on définisse le mot «prescrit» dans le contexte des assurances de façon que les pêcheurs ne soient pas contraints de s'adresser à quelqu'un avec qui ils ne veulent pas traiter.

M. Davis: Je vais demander à un fonctionnaire du ministère des Finances de répondre.

[Text]

Mr. A. Renwick (Government Financing and Capital Markets Division, Department of Finance): I think the point here is that the Order in Council will establish a formula which will enable the Governor in Council to prescribe a rate of interest every six months or from time to time, and the prescription actually deals with the power given to the Governor in Council.

Mr. Osler: I understand that but I am now talking about insurance—that they will also set insurance rates.

I suspect that this is impossible because there are world insurance rates which will pay no attention whatsoever to the Canadian government. I am not questioning that. I am questioning a particular agent who may know darn well that he can get his boats insured for 5 or 10 per cent and because he has a captive market in his cove, his little fjord or wherever it is, he may load the thing and charge what he likes for insurance. So I am not talking about the money rate but “and a prescribed charge for insurance”, and the insurance charge should be no more than what the world markets were calling for at that time. It should not be prescribed by anybody. He should be free to get his insurance from whom he likes and at as low a rate as he likes. It is simply that the two words follow each other and it strikes me that you might be...

• 1200

Mr. Hogarth: Mr. Chairman, my hon. friend might be assisted by Section 2 of the Act, subsection (1), where it defines the word “prescribe”. It reads:

(1) “prescribe” means prescribe by regulation

So, when the word “prescribe” is contained in subclause (f) on this bill you can read it as “other than simple interest at the rate prescribed by regulation and a prescribed rate by regulation charge for insurance...”, and so on, so the word “prescribe” is correlated with the previous definition, and it must be prescribed by regulation.

Mr. Osler: So there will be a separate definition in the Order in Council as to how insurance is dealt with?

Mr. Hogarth: Yes. When you read that, without referring to the second section, it seems that the words “the rate prescribed in the loan”, mean that he could put in any amount he wanted, but that is not so. It should read, “at the rate prescribed by regulation”.

[Interpretation]

M. A. Renwick (Division des finances de l'État, Ministère des Finances): Je crois que le décret du conseil va établir une formule en vertu de laquelle le gouverneur en conseil pourra fixer le taux d'intérêt à tous les six mois ou de temps à autre. Le mot «prescrit» porte sur le pouvoir remis au gouverneur en conseil.

M. Osler: Je comprends, mais je parle de l'assurance.

Je crois que c'est à peu près impossible en ce sens qu'il y a des taux d'assurance universels qui se soucieront peu de ce que dit le gouvernement du Canada. Je ne mets pas cela en doute. Je me demande toutefois, ce qui peut se produire dans le cas d'un agent qui aura assuré son navire à 5 ou à 10 p. 100 mais qui, comme il n'a pas de concurrence, peut imposer le taux d'intérêt qu'il désire. Je ne parle donc pas du taux d'intérêt mais du «taux prescrit pour l'assurance». Je ne parle pas du tout d'intérêt, je parle des frais prescrits pour l'assurance. Et les taux prescrits ne devraient pas être plus élevés que le taux courant. La personne devrait être libre de s'assurer avec qui elle veut. C'est que les deux mots se suivent et...

M. Hogarth: L'article 2 de la Loi, paragraphe (1), définit le sens du mot «prescrit»:

«prescrit» signifie fixé par un règlement

Lorsque le mot «prescrit» se retrouve au paragraphe (f) du bill, on pourrait lire «autre que l'intérêt simple au taux fixé par le règlement, et le taux prescrit, par le règlement, pour les assurances» de sorte que le mot «prescrit» se rapporte à la définition antérieure, et signifie prescrit par le règlement.

M. Osler: Il y a donc une définition dans l'ordre en conseil qui porte sur le taux d'assurance?

M. Hogarth: Oui. Quand on le lit sans référence au deuxième article, il semble que «le taux prescrit pour le prêt», signifie qu'il peut préciser le taux à volonté, mais ce n'est pas le cas. Il faudrait dire «au taux prescrit aux termes du règlement».

[Texte]

Mr. Osler: One should make sure. I suggest you recommend to the Governor in Council that the insurance rate should be prescribed to be free.

Mr. Davis: I will have to rely on Mr. Renwick in this connection. I assume this has been done in respect to the Farm Improvement Loans Act, but I will defer to him on this.

Mr. Renwick: Speaking off the top of my head, I would think that probably the prescribed insurance fee is already contained in the regulations under the Fisheries Improvement Loans Act, but at the moment I am unable to put my finger on the exact reference.

Mr. Osler: Do you get my point?

Mr. Renwick: Yes, I do.

Mr. Osler: This was done throughout Western Canada. They used to actually stick a clause in the mortgage to the effect that you have to deal with our captive insurance company and they would charge higher rates than might have been possible on the open market, and I am sure the same racket could be worked with fishermen. As far as farms are concerned, a mortgage is no longer allowed to have that clause in it, but I do not know if there is such an internal policeman in the fisheries business as well. If there is not, I suggest that the federal government should do the policing.

Mr. Whelan: There is a certain prescribed charge and they can get the insurance wherever they wish. The Farm Credit Act is that way now. There are certain set—

Mr. Osler: It is no longer legal to put that clause in a farm mortgage, but I suggest it should be illegal to put it in—

Mr. Davis: But you quite rightly want this assurance in respect to this legislation—or at least the regulations under the legislation—and we will have to check this out for you.

The Chairman: Will Clause 2 carry?

Mr. Crouse: In view of the discussion that we have had on this clause I move that:

Paragraphs (f) and (g) of subsection (1) of section 3 of the said Act are repealed and the following substituted therefor:

(f) no fee, service charge or charge of any kind other than simple interest at the rate prescribed and shall not be more than 1 per cent of the cost of money to

[Interprétation]

M. Osler: Il faudrait s'en assurer. Alors, je proposerais de recommander au gouverneur en conseil de laisser le taux de l'assurance libre.

M. Davis: Alors, je dois m'appuyer sur M. Renwick. Je crois que c'est ce qu'on a fait pour la *Loi sur les prêts destinés aux améliorations agricoles*, mais je m'en remets à lui.

M. Renwick: Au pied levé, je crois que la prime prescrite est déjà convenue dans le règlement de la *Loi sur les prêts aidant aux opérations de pêche*, mais je ne puis trouver la référence exacte.

M. Osler: Mais, vous comprenez où je veux en venir?

M. Renwick: Oui.

M. Osler: C'est ce qu'on a fait dans l'Ouest canadien où on intercalait dans les hypothèques un article précisant que le propriétaire devait s'adresser à telle société d'assurance dont le taux d'intérêt était probablement plus élevé que celui du marché libre, et je ne doute pas qu'on pourrait faire le même coup aux pêcheurs. Je crois qu'on ne peut plus intercaler cet article dans les hypothèques, mais je ne sais pas si les pêcheurs sont ainsi protégés. S'ils ne le sont pas, il faudrait y voir.

M. Whelan: Ils doivent verser certains droits et ils peuvent choisir la société d'assurance qu'ils veulent. Je sais qu'il en est ainsi dans le cas de la *Loi sur le crédit agricole*.

M. Osler: Je crois qu'il est illégal de mettre cet article dans les hypothèques agricoles, mais je propose...

M. Davis: Mais, vous avez raison d'exiger que l'assurance soit réglementée par cette mesure. Alors, il faudrait vérifier.

Le président: Est-ce que l'article 2 est adopté?

M. Crouse: Vu la discussion, je propose que les alinéas (f) et (g) de ladite *Loi* soient abrogés et remplacés par ce qui suit:

«f) nuls honoraires, nuls frais de service, nulle rétribution de quelque espèce autre que l'intérêt simple au taux prescrit et ne serait pas plus qu'un pour cent de ce qu'il

[Text]

the federal government and a prescribed charge for insurance was, by the terms of the loan, so long as the fisherman was not in default on the loan.

I will either move or make a recommendation to the House, Mr. Chairman, that it be added to this particular clause.

Mr. Whelan: This would be different, Mr. Chairman, from any other loan, such as a Farm Improvement Loan, CMHC, or any of them that provide the rates of interest will be those prescribed by regulation.

Mr. Lundrigan: Mr. Chairman, did you call the debate on the motion?

Mr. Whelan: It was moved and seconded. Debate is open unless it is otherwise decided.

Mr. Lundrigan: Mr. Chairman, is the motion that we recommend this in order?

Mr. Osler: I suggest it is in order, Mr. Chairman. It has nothing to do with money; it is just the way the money is handled.

The Chairman: I will accept it. It is debatable. Mr. Anderson.

Mr. Anderson: I think we should think of the general principle here. The public and the provincial legislatures criticize us often enough for tax jungles, conflicting regulations and regulations which are not uniform. I think wherever possible this legislation should be uniform with legislation that deals with farmers and other groups. I think it is most important that we do not get into a position where every bit of government legislation comes up with a different way of dealing with things. If it is possible to standardize, if it is possible to have uniformity, we should do so. I do not think this would affect the rate of interest the fishermen pay. I do not think it could affect the amount they will ultimately have to repay at all. However, I do think it can lead to a situation where there is more confusion and more uncertainty.

The rate as prescribed by the Governor in Council is perfectly simple. It governs loans under the Farm Credit Act, it will govern fishermen and presumably it governs things about which I do not know. It may well govern CMHC as well.

This is the type of situation where we have a fairly standard approach and I think wherever possible we should continue that. I appreciate the suggestion that the fishermen might find it more concrete if it was all written into the legislation, but I do not think this would be the case. Fishermen will get loans

[Interpretation]

en coûte au gouvernement pour obtenir le prêt, tant que le pêcheur n'a pas été en défaut à l'égard du prêt;»

Je proposerai ou ferai une recommandation à la Chambre, qu'on ajoute cet amendement à l'article en question.

M. Whelan: Ce serait différent de tout autre prêt aux agriculteurs où le taux d'intérêt est fixé par le règlement.

M. Lundrigan: Le débat est ouvert, je crois, sur la motion?

M. Whelan: Il en fut ainsi proposé. Le débat est ouvert à moins qu'on en décide autrement.

M. Lundrigan: Monsieur le président, est-ce que la motion est recevable?

M. Osler: Je crois que la proposition est recevable. Elle n'a pas trait à l'argent, seulement à la façon de la manipuler.

Le président: Je déclare la motion recevable. Le débat est ouvert.

M. Anderson: Je crois qu'il faut songer au principe général. Le public et les gouvernements provinciaux nous accusent d'avoir un fouilli dans les impôts, des règlements qui entrent en conflit et qui ne sont pas uniformes. Cette mesure doit, si possible, se conformer aux autres mesures législatives qui se rapportent aux agriculteurs et aux autres groupes. Je crois qu'il importe de ne pas se trouver dans une situation où toute mesure législative ait une façon différente d'aborder les choses. Je ne crois pas que cette mesure affectera le taux d'intérêt payé par les pêcheurs. Je ne crois pas qu'elle touche aux montants qu'ils auront à rembourser, mais je crois que cela pourrait créer encore plus de confusion et d'incertitude.

Le taux tel que prescrit par le gouverneur en conseil est très simple. Il régit les prêts aux agriculteurs en vertu de la Loi sur les crédits agricoles, les pêcheurs, et d'autres choses, et peut-être même la Société centrale d'hypothèques et de logement. C'est une approche assez uniforme qu'il faudrait conserver. Je reconnais que le pêcheur trouverait la situation plus concrète si tout était écrit, en blanc et noir, dans la mesure, mais je ne crois pas que c'est le cas. Les pêcheurs obtiendront des prêts en vertu de la Loi, simplement parce qu'ils sont disponibles, ou

[Texte]

simply because money is available under this bill and because others are doing it and because the form is set up. They will not go to the original Act to get an idea for getting money; they will get it because the institutions advertise that it is available at this rate.

My personal view is that while it is laudible in intent, it simply adds confusion to an area which is already fairly confused.

Mr. Lundrigan: Mr. Chairman, may I ask a question of the Minister of Fisheries? The Minister has given sort of an understanding to the fishermen of the West Coast of Canada—I read his speech and I was impressed with it—that there would be a 1 per cent differential. He indicated today there would be regulations providing for this differential of 1 per cent. I would like to ask him if he objects to writing this kind of a guarantee, which perhaps makes the piece of legislation more definitive and also builds confidence in its usage, and does he object to indicating this in the legislation and would he be prepared to accept it?

Mr. Davis: This is a bill which I am bringing forward in the name of the Minister of Finance, so you are really directing your question and these details to the Minister of Finance. If I were sitting here today as the Minister of Finance I would say that I would want this legislation to closely parallel that of the Farm Improvement Loans Act, the Veterans Land Act, the CMHC legislation, and so on. I would perhaps also say that I would want maximum flexibility, particularly when interest rates were rising, because the fishermen should want to take advantage of the lower rates when the government's borrowing rate begins to decline. This flexibility comes about as a result of the government's freedom through regulation to make changes, whereas in the Act you have to go back to Parliament.

Those are the main reasons that I can think of now for being opposed to detailing in any way the level of interest rate to be prescribed.

Mr. Lundrigan: As a follow-up question, how could a commitment to the fishermen—who could borrow \$25,000—in any way affect the flexibility of the legislation? Is there not some way that we can ensure flexibility and still guarantee that he will not, as I indicated earlier, be going on a blind date?

I think a major point which has been raised by the representatives of the farmers of western Canada is as to the guarantee relating to interest rates, and I wonder how it can affect flexibility of the government in

[Interprétation]

que d'autres le font. Ils ne consulteront pas la loi, mais obtiendront un prêt à cause de la publicité qui est faite.

Alors, je crois que bien que cette suggestion soit bien intentionnée, je crois que cela prête à une plus grande confusion.

M. Lundrigan: Une question au ministre des Pêcheries. Le ministre a laissé entendre aux pêcheurs du littoral ouest, j'ai lu son discours qui m'a fortement impressionné, mais il a indiqué qu'il y aura une différence de 1 p. 100. Aujourd'hui, il dit que le règlement prescrira une différence de 1 p. 100. J'aimerais lui demander s'il s'oppose à mettre cette garantie par écrit ce qui rendrait la mesure législative plus définitive et inspirerait plus confiance dans sa mise en œuvre? S'oppose-t-il à indiquer tout cela dans le bill et accepterait-il de le faire?

M. Davis: Voici un bill que je propose au nom du ministre des Finances. Alors, votre question s'adresse, en réalité, au ministre des Finances. Si j'étais le ministre des Finances, j'exprimerais le souhait que cette mesure législative suive le plus près possible la *Loi des prêts destinés aux améliorations agricoles*, la *Loi créant la Société centrale d'hypothèques et de logement*. Je voudrais également assurer le maximum de souplesse, surtout lorsque les taux d'intérêt sont à la hausse. Les pêcheurs voudraient profiter des taux inférieurs lorsque le gouvernement peut emprunter à un taux inférieur. Et, je crois que cette souplesse vient de la liberté dont jouit le gouvernement pour apporter des changements au règlement, tandis que dans la *Loi*, il faut chaque fois retourner au Parlement pour effectuer des changements.

C'est pour cela que je m'oppose à préciser d'une façon ou d'une autre le niveau du taux d'intérêt à prescrire.

M. Lundrigan: Comment un engagement envers le pêcheur qui veut emprunter jusqu'à 25,000 dollars, peut-il toucher la souplesse de la mesure? Ne pourrait-on pas assurer la souplesse tout en garantissant qu'il n'aura pas à s'aventurer les yeux clos?

Je crois que les représentants des fermiers de l'Ouest du Canada désirent une certaine garantie au sujet de leur taux d'intérêt, et je me demande comment la souplesse du gouvernement concernant les prêts sera atteinte si

[Text]

making commitments to loans when all we are doing is guaranteeing that he will not be paying more than a certain amount. This argument about flexibility has been advanced by about three members. I cannot understand it.

• 1210

The Chairman: Just a moment, please.

Mr. Lundrigan: Mr. Chairman, I have asked a question of the Ministry of Fisheries.

Mr. Davis: I have outlined as well as I can the reasons for flexibility in the legislation.

You talk about a blind date. The fisherman who is negotiating a loan with the bank will know what the rate is before he takes it out, and the actual interest rate will have been prescribed by the regulations. He will not be signing before he knows what the interest rate is. Indeed, there will have been advertisements, and so on, which probably have attracted his attention; so that the actual rate in effect at any given point in time, and certainly at the time a loan is entered into, will be well known to those involved; and the proof of that will be in the actual practice.

Mr. Smith (Northumberland-Miramichi): I just wish to comment, Mr. Chairman, that if you put the 1 per cent in that section you will also have to enlarge it and say how you arrive at the 1 per cent. You cannot simply leave it at that.

Mr. Osler: Frankly, I think the amendment as proposed, as you say, is inadequate; it is not complete. I suggest to these gentlemen, however, that they are really discussing a matter of principle which applies to a great many acts. They have made their point, and I do not think they are going to get anywhere with it.

Rather than bog this Committee down on it indefinitely I suggest to them that this is a matter of principle affecting a broad range of things and that it would be debatable.

On one of their days when they have control of the House they could introduce the subject of whether or not the means of adjusting this rate, as proposed by the government, are adequate, and ask whether it is going to be on a daily basis, a 30-day basis, a 6-month basis—which is, in fact, what the government is operating on—or what it is going to be. This would be a constructive subject for debate.

Mr. Whelan: I just have one comment. I remember when the interest rates were frozen for the last two years or so, whether they

[Interpretation]

tout ce que nous faisons c'est que nous garantissons qu'il n'aura pas à payer plus qu'un certain montant. Je crois que 3 députés ont parlé de souplesse du Règlement, mais je ne peux le comprendre.

Le président: Un instant, s'il vous plaît.

M. Lundrigan: Monsieur le président, j'avais posé une question au ministre. Peut-il me répondre?

M. Davis: J'ai exposé du mieux que j'ai pu la raison de la souplesse de la Loi. Vous parlez de quelque chose d'imprévu pour le pêcheur. Le pêcheur, lui, connaîtra le taux d'intérêt lorsqu'il obtiendra son prêt et il ne signera pas son engagement avant de savoir ce que sera le taux du prêt. De plus, il y aura les annonces qui attireront d'abord son attention. Le taux actuel de l'intérêt en vigueur au moment où il empruntera, sera connu de tout le monde. On peut en trouver la preuve dans la façon de procéder actuellement en vigueur.

M. Smith (Northumberland-Miramichi): Je voudrais dire, monsieur le président, que si l'on fait figurer cette question du 1 p. 100 dans l'article, il faudrait alors décrire comment on définirait ce 1 p. 100.

M. Osler: Je crois que la modification, telle qu'elle est proposée, est insuffisante, elle n'est pas complète. Et, je ferais remarquer aux membres du Comité qu'ils sont en train de discuter une question de principe qui s'applique à bon nombre de lois. Ils ont dit ce qu'ils avaient à dire, et je ne crois pas qu'ils iront bien loin avec ces idées. Et, plutôt que de retarder le travail du Comité, je crois que ce sujet est une question de principe s'appliquant à une foule de chose, et qu'on peut en débattre.

Le jour où ils auront le contrôle de la Chambre, ils pourront introduire le sujet à savoir si le moyen proposé par le gouvernement pour ajuster les taux d'intérêt est adéquat. Est-ce que ce taux variera au jour le jour, tous les 30 jours ou tous les 6 mois; comment le gouvernement procèdera-t-il; quel sera ce taux? Voilà des sujets constructifs qui pourraient alimenter un débat.

M. Whelan: J'ai un seul commentaire à faire. Je me souviens que lorsque les taux d'intérêt étaient gelés, au cours des deux der-

[Texte]

were fishermen's loans, farm equipment loans, or small business loans. We know that the lending agencies refused to lend money to many of these people under that system of set rates and that these people borrowed money at a rate of interest much higher than the rate provided for by regulation in this Bill. I am sure it will be much more satisfactory to them. I know of fishermen in my area who borrowed a year ago at 9 per cent and 10 per cent in many cases for engines, and so on. They could not borrow money from any kind of loan agency that we as a government had provided for them.

This is true of farmers, too. They were paying interest rates to farm implement and machinery establishments that were as high as 14 per cent, because the banks would not go along with the system. They were "rooked"—let us put it that way.

As far as I am concerned, this is a much fairer system than the one they have been operating under for the last two or three years.

Mr. Comeau: This is not going to constitute a freeze on the interest rate. How can it? It varies according to the rate at which the government borrows. If that goes down the interest rate to the fisherman goes down; if it goes up, it goes up. This does not create a freeze. We do not want this freeze to exist.

As was said by one of the members on the other side, one might say that we are arguing a matter which should be argued relative to all acts, but we are here to consider fisheries.

The Chairman: Shall I put the question?

Mr. Lundrigan: Mr. Chairman, I wish to make a comment, if I may. First of all, the monies we are talking about would be loaned by banks and loan companies, not by the Government of Canada. Is that correct?

• 1215

Mr. Osler: Do you want to...

Mr. Lundrigan: Mr. Chairman, would the Chair rule on these kinds of interruptions? I am not at all impressed with the attitude which permeates this meeting at times. It would be much more orderly if some members would get permission from the Chair before they make their comments and would listen when somebody else is perhaps making a point that is worth listening to.

Mr. Chairman, my point is that the loans will be made by banks and loan companies

[Interprétation]

nières années, qu'il s'agisse des prêts aux pêcheurs ou aux petites entreprises, aux agriculteurs nous avons su que les sociétés prêteuses ont refusé de leur prêter de l'argent au terme de ce régime et que ces gens-là ont emprunté à des taux beaucoup plus élevés que celui que l'on propose dans cette loi. Et, j'ai la certitude qu'ils auraient été beaucoup plus satisfaits, car j'en connais qui ont emprunté à raison de 9 et 10 p. 100 dans plusieurs cas. Dans ma région, des pêcheurs ont dû emprunter pour acheter des moteurs et ils n'ont trouvé personne pour leur prêter à un taux moindre. Ceci est vrai aussi pour les agriculteurs. On a même chargé 14 p. 100 d'intérêt à ces derniers lors de l'achat d'équipement agricole parce que les banques ont refusé de prêter en vertu de ce régime. Si l'on peut dire, ils se sont fait «avoir». Pour moi, le système que nous proposons est beaucoup plus équitable que le système suivi au cours de ces dernières années.

M. Comeau: Cela ne va-t-il pas geler le taux d'intérêt? Ce dernier va varier selon le taux auquel le gouvernement emprunte. Si le taux est à la baisse, il baissera aussi pour les pêcheurs, et s'il est à la hausse, il suivra la même tendance. Nous ne voulons pas de gel du taux d'intérêt, et cela n'en est pas un. Et comme le disait un des membres de ce comité, ce sujet devrait être discuté quand nous parlons de lois en général... Mais, nous, nous sommes ici pour étudier la situation des pêcheurs.

Le président: Puis-je passer au vote?

M. Lundrigan: Monsieur le président, j'aimerais faire un commentaire, si j'en ai le droit. En premier lieu, les fonds dont nous parlons seront prêtés par les banques et les sociétés de prêts, et non par le gouvernement du Canada. Ai-je raison?

M. Osler: Voulez-vous...

M. Lundrigan: Monsieur le président, pourriez-vous, peut-être, mettre un peu d'ordre quant à ces interventions? Je crois que si les députés pouvaient obtenir la permission de la présidence avant de faire le commentaire... Alors, quelqu'un pourrait peut-être parler en paix. Les prêts seront consentis par les banques et les sociétés de prêts et non par le gouvernement, et le ministre a indiqué que les règlements vont garantir, du moins il en discute avec le ministre des Finances, que le

[Text]

and not the government. This is my understanding.

The Minister has indicated that the regulations will guarantee—at least this is being discussed with the Minister of Finance—that the fisherman will be paying no more than 1 per cent above the cost of monies to the government. All we are asking is that this kind of commitment in the regulations also be written into the legislation.

Perhaps instead of making a statement I should ask a couple of questions which come to mind. First of all, how will the regulation guaranteeing the differential of only 1 per cent be affected if we put it into the Act? Some members are saying that there are all kinds of things, such as inflexibility and the fluctuation of interest rates, and so on. Why should we guarantee it through regulation and not through the legislation?

Perhaps members with a greater insight into financing and the whole business of economics could reflect on my other question: Can we compel a company to make a commitment that it will lend monies at an interest rate only 1 per cent higher than the rate the government is paying? I am hazy on this point. I am uncertain of what it is all about. This is why I am in support of the commitment being in the legislation.

These are my two questions: (1) how can regulations guarantee it, and how is that different from having it in the legislation; and, (2) how can we be sure that the fisherman can go into a loan company and get monies at only 1 per cent higher than the rate the government is paying for money? What guarantees do we have that this will take place?

Mr. Hogarth: You will get a guaranteed certificate that it is above the rate.

The Chairman: Order.

Mr. Davis: It is true that the loans will be made by commercial lenders and not directly by the government. The government does, however, guarantee these commercial lenders against loss up to a substantial amount. As I understand it, discussions have been held with these lending institutions from time to time, not only in relation to the Fisheries Improvement Loans Act but to the Farm Improvement Loans Act, and so on.

[Interpretation]

pêcheur n'aura pas à payer plus qu'un p. 100 de ce qu'il en coûte au gouvernement pour emprunter de l'argent. Tout ce que nous demandons c'est que cet engagement dans les règlements fasse aussi partie du projet de loi.

Alors, plutôt que de faire une déclaration, j'aurais une question à poser. Comment les règlements garantissant la différence de 1 p. 100 pourraient-ils être touchés si nous n'inscrivons cette disposition dans la loi? Certains d'entre nous disent que cette loi contient toutes sortes de choses, qu'elle manque de souplesse, et que les taux d'intérêt peuvent varier. Comment peut-on le garantir par le règlement si nous ne pouvons le garantir grâce à une disposition?

Peut-être que certains députés, ayant une grande connaissance des choses de la finance et de l'économie pourraient commenter ma deuxième question? Comment peut-on forcer une société à prêter de l'argent à des taux supérieurs de 1 p. 100 seulement au taux jugé par le gouvernement? Tout cela est vague pour moi. C'est pour cela que je suis en faveur d'un engagement pris en vertu d'une loi.

Voici mes deux questions: Comment peut-on s'assurer que le pêcheur peut s'adresser à une compagnie de prêts et obtenir un prêt à 1 p. 100 de plus qu'il n'en coûte au gouvernement? Comment les règlements peuvent-ils garantir, et pourquoi cela serait-il différent si cette garantie figurait dans la loi?

M. Hogarth: Vous recevrez un certificat garantissant que l'intérêt est supérieur au taux!

Le président: A l'ordre. Monsieur Davis.

Mr. Davis: Il est vrai que les prêts sont consentis par des prêteurs commerciaux et non par le gouvernement. Le gouvernement, toutefois, va garantir ces prêteurs commerciaux contre les pertes éventuelles jusqu'à un montant substantiel. Je crois que des réunions ont eu lieu avec ces institutions prêteuses de temps à autre, non seulement au sujet de la *Loi sur les prêts aidant aux opérations de pêche*, mais aussi sur la *Loi sur les prêts destinés aux améliorations agricoles*.

[Texte]

Under similar legislation we have nearly \$2½ billion worth of loans made by commercial establishments over a period of years. Obviously this works, and obviously farmers, and to a lesser extent fishermen, have been able to get money at lower interest rates because of this federal government guarantee.

You have suggested including the figure of 1 per cent in the Act as distinct from the regulations. What if the government at some stage wished to reduce it to ¾ of 1 per cent? This can be done at any time by regulation; it could not be done at any time by legislation.

Mr. Lundrigan: "Not more than 1 per cent" gives you a flexibility.

Mr. Hogarth: Mr. Chairman perhaps in five, or six, or seven years they may have to go to 1½ per cent to get the money out. I really cannot understand the idea of fixing it at "not more than 1 per cent", because in two years' time it may be that no loan of this nature could be made to fishermen unless they go to 1¼ or 1½ per cent.

Mr. Lundrigan: Therefore there is no commitment.

Mr. Hogarth: There is a commitment on the present policy of the government, but surely the Minister cannot be asked to commit the government in relation to what the position might be four or five years from now.

If the money does not get into the hands of the fishermen to build boats they might have to go to 1¼ per cent to get the insured mortgage loan people to lend the money.

• 1220

Mr. Borrie: Mr. Chairman, I am afraid I could not support this recommendation that has been presented. Having a great deal to do with farmers, I also have to support the comments of Mr. Whelan because at one time prior to the Farm Improvement Loans Act the farmers could not obtain loans from lending institutions simply because there was a complete freeze—there was a freeze on the amount of interest that could be gained from them. Since the Farm Improvement Loans Act was passed, farmers are not finding any difficulty in operating under the same set of circumstances as the proposed paragraph (f) of the Act; it is worded exactly the same. They are not having any difficulty; they are not finding that their sources have dried up again. As a matter of fact it is working to their advantage.

Immediately after ratification by the other place of the Farm Improvement Loans Act, the Minister of Finance issued a press release

[Interprétation]

Je crois que nous avons deux milliards et demi de dollars qui ont déjà été consentis par des institutions commerciales en vertu de lois semblables, et il est évident que les agriculteurs et les pêcheurs ont reçu de l'argent à meilleur compte, grâce à cette garantie du gouvernement. Vous avez dit que le chiffre de 1 p. 100 ne serait pas le même au terme de la loi, qu'au terme des règlements. Qu'arriverait-il si un jour le gouvernement veut réduire cette différence à 0.75 p. 100, peut procéder ainsi n'importe quand, grâce aux règlements, ce qui ne pourrait être fait si cette disposition figurait dans la loi.

M. Lundrigan: Si l'on mentionne «pas plus de 1 p. 100», cela vous donne-t-il assez de souplesse?

M. Hogarth: Peut-être que dans 6 ou 7 ans le gouvernement devra porter la différence à 1½ p. 100. Alors, je ne vois pas comment on pourrait fixer le taux à 1 p. 100 ou moins. Car il se peut très bien que dans deux ans, un pêcheur ne pourra obtenir un prêt à moins de payer 1¼ ou 1½ p. 100 de plus qu'il n'en coûte au gouvernement.

M. Lundrigan: Ainsi le gouvernement ne s'engage à rien.

M. Hogarth: Le gouvernement s'engage à court terme. Je crois que le ministre ne peut engager le gouvernement plus avant parce qu'il ne sait pas ce que sera la situation dans 5 ou 6 ans. Les pêcheurs devront peut-être payer jusqu'à 1¼ p. 100 de plus afin que les compagnies prêteuses consentent à leur fournir les fonds nécessaires à la construction des bateaux.

M. Borrie: Monsieur le président, je ne puis appuyer la recommandation qui a été proposée. Ayant beaucoup affaire aux cultivateurs, je dois également appuyer le commentaire de M. Whelan parce qu'avant que la Loi sur les prêts aux améliorations agricoles ait été promulguée, les agriculteurs ne pouvaient obtenir les prêts des institutions parce qu'il y aurait eu un gel complet sur les prêts. Depuis la Loi sur les améliorations agricoles, les cultivateurs n'ont aucune difficulté à obtenir des prêts. Et la loi a été rédigée tout à fait de la même façon que celle-ci. Ils n'ont pas de difficulté. Tout cela s'est effectuée en leur faveur.

Immédiatement après la rectification de la Loi sur les prêts aux améliorations agricoles, le ministre des Finances a, dans un communi-

[Text]

stating that the loan interest would be $7\frac{1}{2}$ per cent for farm improvement loans, which was 1 per cent higher than for what the government was borrowing money at that time. It will be reviewed on April 1, and precisely what this Bill is attempting to do is to tie it in with the Farm Improvement Loans Act.

The Chairman: Gentlemen, you have heard the pros and cons we will put it to a vote. Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, before we take the vote may I say that I think there is a very important principle at stake here. There has been, if not in fact by suggestion, a commitment by the government through the Minister of Fisheries to the fishermen that they will be paying no more than a differential of 1 per cent. We have had members argue that there could be in two years from now—they did not say six months from now but we can understand this to be the case—a need to adjust it to $1\frac{1}{2}$ per cent or—they did not say this—but it could be $2\frac{1}{2}$ per cent or 3 per cent.

Therefore, I think it is not very much along the lines of the principles of the Committee not to support the amendment, because the Minister has already indicated this and it is almost like voting against a statement by the Minister—a commitment by the Minister to the fishermen—that there is this commitment by the government, and if we do not support it we are actually saying to the fishermen that: "We will give you no guarantee but we will make a promise to you that we hope we can keep, but we are not right sure."

It has no permanence at all; it could change next week; it could change before the act is even ratified, and this is why I say that I think we will be voting against the Minister if we do vote against this proposed amendment.

The Chairman: Now that we have heard everybody's opinions shall I read the amendment? It reads as follows:

That paragraphs (f) and (g) of subsection (1) of section 3 of the said Act are repealed and the following substituted therefor:

(f) no fee, service charge or charge of any kind other than simple interest at the rate prescribed, shall not be more than one per cent of the cost of money to the federal government, and a prescribed charge for insurance was, by the terms of the loan, so long as the fisherman was not in default on the loan.

[Interpretation]

qué de presse, dit que le taux d'intérêt serait de $7\frac{1}{2}$ p. 100 pour les prêts aux améliorations agricoles. Ce taux va être révisé au 1^{er} avril. C'est précisément ce que le présent bill veut dire.

Le président: Messieurs, nous allons passer au vote.

M. Lundrigan: Monsieur le président, avant que nous ne passions au vote, j'aimerais dire qu'il y a un principe en question. S'il n'y a pas eu engagement de la part du gouvernement par l'entremise du ministre des Pêcheries aux pêcheurs que le pêcheur n'aura pas à payer plus qu'une différence de 1 p. 100, certains députés ont dit que peut-être dans deux ans, ils n'ont pas dit six mois, ce pourrait être là-dedans qu'il faudrait peut-être ajuster le montant à $1\frac{1}{2}$ p. 100 jusqu'à 2 ou même 3 p. 100.

Par conséquent, je ne crois pas qu'il soit conforme aux principes du Comité de ne pas appuyer l'amendement. Il semble qu'il faille voter contre une déclaration, un engagement du ministre aux pêcheurs, un engagement du gouvernement. Et si nous ne l'appuyons pas, nous disons aux pêcheurs: «Nous ne garantissons rien, nous vous promettons quelque chose que nous espérons pouvoir tenir, mais il n'y a aucune permanence. Tout pourra être changé dans une semaine ou un mois». Alors je crois que nous votons contre le ministre si nous votons contre la modification.

Le président: Maintenant que nous avons entendu l'opinion de tout le monde, dois-je lire la proposition d'amendement?

Que les paragraphes f) et g) du paragraphe (1) de l'article 3 de ladite loi soient abrogés et remplacés par ce qui suit: «f) nul honoraire, nul frais de service, nulle rétribution de quelque espèce autre que l'intérêt simple au taux prescrit de 1 p. 100 de plus qu'il n'en coûte au gouvernement fédéral est une rétribution prescrite pour l'assurance aux termes de la loi au prêteur selon les conditions du prêt relativement à ce dernier tant que le pêcheur n'a pas été en défaut à l'égard du prêt.»

[Texte]

All in favour signify by raising your hands. Against? I declare the amendment lost. Shall Clause 2 carry?

Mr. Crouse: Mr. Chairman, before Clause 2 carries there has been a statement made by the Minister this morning that deals directly with Clause 2. You all have a copy of it or you heard him read it. It states;

That Bill C-151, An Act to amend the Fisheries Improvement Loans Act, be amended by renumbering clause 2 thereof as subclause (2) of clause 2 and by adding as subclause (1) of clause 2 the following:

"2. (1) All that portion of paragraph (d) of subsection (1) of section 3 of the said Act following subparagraph (ii) thereof is repealed and the following substituted therefor:

"did not exceed *tewney-five* thousand dollars;" "

My question is: Is it the intention of this Committee before Clause 2 carries to make a recommendation in our report to the House that this type of amendment to the Fisheries Improvement Loans Act be added to this section with the understanding that it will be moved by the Minister? Is that in order and is this the intention of the Committee?

• 1225

The Chairman: That is not a motion on the part of the Minister.

Mr. Crouse: If we pass this paragraph, Mr. Chairman, as it is written without indicating that this recommendation be added thereto, I feel that we would not be acting in accordance with what has been stated here this morning and with the Minister's statement that he made in his speech. I am back again at my original approach to this matter. The Minister stated in his speech that the Act which has recently been updated is geared to finance loans up to \$25,000. I submit if we are not prepared to add that as a recommendation to this paragraph before it passes, the Minister's speech was not correct as he made it on the West Coast.

Mr. Anderson: On this particular point I think there is some confusion in the honourable member's mind about this particular bill, which is C-151, and any future amendments which may come in, or, indeed, the original Fisheries Improvement Loans Act. This Bill—C-151—in clause 2 refers specifically to this rate of interest. The Minister may well add other amendments later, but we are dealing now with this particular aspect of rate of interest.

[Interprétation]

Tout ceux qui sont en faveur, levez la main droite. Contre l'amendement... l'amendement est rejeté

M. Crouse: Monsieur le président, avant d'en venir à l'article, je rappellerai que le ministre a fait ce matin une déclaration à propos de cet article. Vous en aurez un exemplaire, ou il vous en fera lecture. En voici la teneur:

que le Bill C-151, Loi modifiant la Loi sur les prêts aidant aux opérations de pêche soit amendé en dénommant l'article 2 paragraphe (2) de l'article 2 et ajoutant la paragraphe (1) de l'article 2 suivant: 2 (1) Dans l'alinéa (d) du paragraphe (1) de l'article 3 de ladite Loi, tout ce qui suit le sous-alinéa (ii) est annulé et remplacé par: «ne dépassait pas vingt-cinq mille dollars.»

Ma question est celle-ci. Le Comité a-t-il l'intention, avant d'adopter l'article 2, de recommander dans notre rapport à la Chambre que ce genre d'amendement à la Loi sur les prêts aidant aux opérations de pêche, que chaque article soit adopté, la proposition étant bien sûr faite par le ministre? Est-ce recevable et est-ce l'intention du Comité?

Le président: Ce n'est pas là une motion de la part du ministre.

M. Crouse: Eh bien, si nous adoptons le paragraphe ainsi qu'il est rédigé sans indiquer que la recommandation y soit ajoutée, j'ai le sentiment que nous n'agissons pas conformément à ce que nous avons dit ici ce matin ou avec les déclarations du ministre dans son discours dans l'Ouest du Canada. Je reviens à ma première idée, à savoir que le ministre dans son discours, a dit que la loi qui vient d'être mise à jour est ici pour financer les prêts jusqu'à 25 mille dollars. Et je crois que, si nous ne sommes prêts à l'ajouter à l'article avant de l'adopter, le discours du ministre n'était pas exact.

M. Anderson: Je crois qu'il y a confusion dans l'esprit du député par rapport à ce bill C-151, et tout amendement à l'avenir. Le bill C-151 dans l'article 2 parle de ce taux d'intérêt, annonce ce taux d'intérêt. Et ce qui nous intéresse pour le moment, c'est l'aspect du taux d'intérêt. Nous ne parlons pas du plafond. C'est quelque chose de distinct, et je ne vois pas comment, aux termes de l'article 2, nous pouvons étudier cette question du plafonnement et recommander au ministre de

[Text]

We are not dealing with the upper limit. It is something separate, and I just cannot see under this particular item how we can consider upper limits and how we can attempt to recommend that the Minister do what he says he is going to do. I do not think it makes any sense at all. What we should do here and now is decide whether or not we accept Clause 2 (f) of Bill C-151 and nothing else.

Mr. Osler: I have nothing to add because I think these gentlemen are confusing capital and interest which are the two subjects under discussion, and Clause 2 is dealing with interest only and I suggest, sir, that we put the question.

Mr. Comeau: Mr. Chairman, may I ask Mr. Anderson a question? Let us suppose we have a particular bill—any type of bill—and we have a clause and we want to put in another clause. Are we allowed to do that in a Committee, because this is what we are doing here?

Mr. Hogarth: I do not think we are.

Mr. Anderson: This depends on the Chairman's decision, but I do not see, when you are discussing rates of interest, how you can start talking on upper limits of loans. I think it is most unfair and the reference to the Minister's speech in Vancouver is strictly a red herring, if I can use a fisheries' term; it is irrelevant.

What we are discussing here is rate of interest. We have had good discussion on whether or not we should have a fixed rate 1 per cent higher than the government's rate and I think this has been a good discussion, but now we are getting into an area which is ridiculous; we are getting into something else entirely.

We can come up with other recommendations, any we like, within the limits that the Chairman lays down, but I do not see how we can do it right here and now. We either accept or reject Clause 2, paragraph (f) which is in Bill C-151. We can suggest other changes along the lines that the Minister stated in Vancouver or anywhere else, or anyone else has stated in Vancouver or anywhere else, to the Fisheries Improvement Loans Act, but now we are dealing with Clause 2, paragraph (f) of C-151.

Mr. Crouse: To bring this matter to a head, you have a copy of the statement which has been read by the Minister and which is before me at the present time, and I am prepared to move:

That Bill C-151, An Act to amend the *Fisheries Improvement Loans Act*, be amended

[Interpretation]

faire ce qu'il a dit qu'il ferait. Je crois qu'il faut décider si oui ou non nous acceptons 2f) du bill C-151, et rien de plus.

M. Osler: Je n'ai rien à ajouter parce que je crois qu'il y a une confusion ici entre le capital et l'intérêt, à l'article 2 où il n'est question que du taux d'intérêt.

M. Comeau: J'aimerais poser une question. Supposons que nous voulions remplacer un article de loi. Le pouvons-nous en comité?

M. Hogarth: Je ne le pense pas.

M. Anderson: Ceci va dépendre de la décision du président. Si tout dépend de la décision du président, je ne vois pas comment, lorsqu'on discute de taux d'intérêt, comment on peut aborder la limitation maximum des prêts. Je crois que ceci n'a rien à voir avec la question. Nous discutons ici des taux d'intérêt. Nous nous sommes demandés s'il valait la peine de fixer le taux d'intérêt à 1 p. 100 de plus que le taux d'intérêt payé par le gouvernement. Mais je crois que tout ce que nous avons dit dernièrement n'a rien à voir avec la question.

Je ne vois pas comment nous pourrions y arriver dès maintenant. Nous devons accepter ou rejeter l'alinéa qui figure au bill C-151. Nous pouvons apporter des changements; mais maintenant, nous en sommes à l'alinéa (2) f) de la Loi C-151.

M. Crouse: Vous avez un exemplaire de la déclaration du ministre, déclaration qui a été lue par le ministre et que j'ai en main. Et je suis prêt à proposer:

Que le Bill C-151, Loi modifiant la Loi sur les prêts aidant aux opérations de

[Texte]

by renumbering Clause 2 thereof as subclause (2) of clause 2 and by adding as subclause (1) of clause 2 the following:

"2. (1) All that portion of paragraph (d) of subsection (1) of section 3 of the said Act following subparagraph (ii) thereof is repealed and the following substituted therefor:

"did not exceed *twenty-five* thousand dollars;" "

I move that this be added to Clause 2 on page 2 in the Bill.

• 1230

Mr. Hogarth: It is not that I disagree in principle with what is being proposed—and this precise problem is coming up in the Justice and Legal Affairs omnibus bill—but if you have an Act that is being amended I would respectfully suggest that you are confined to the provisions of the bill that proposes to amend it. In the Justice and Legal Affairs Committee somebody will probably want to move an amendment to the omnibus bill to abolish corporal punishment. That bill has nothing whatsoever to do with corporal punishment. It is my respectful suggestion that a motion of this nature is not in order and—if I may speak, with respect, to the Minister—I doubt that it can be done on third reading. I think it would take a new bill. I do not know, but certainly in the omnibus bill this is the position that is developing and I am informed that an amendment of that nature cannot be made.

The Chairman: I am of the opinion that in committee we are allowed to add a paragraph to any clause if it does not deal with an increase in expenditure. I think our terms of reference are such that we cannot deal with increased expenditures. It is only a Minister of the Crown who can do that in the House. By raising the amount to \$25,000 it would be asking the government to take on that much more responsibility, perhaps, in expenditure. That is the way I look at it.

As an example of what I mean, I could co-sign somebody's note at the bank for \$5. I am not lending him the money, I am guaranteeing it. Perhaps I would hesitate to say that I would co-sign his note for \$500. It would just be a responsibility. It would not be money loaned but I would be responsible for it.

Mr. Lundrigan: Mr. Chairman, it is my understanding that you are disallowing the motion.

The Chairman: I do not think our terms of reference allow it.

[Interprétation]

pêche, soit modifié en faisant en sorte que l'article 2 devienne le paragraphe (2) de l'article 2 et en ajoutant en guise de paragraphe (1) de l'article 2 ce qui suit:

2. (1) Toute cette partie de l'alinéa (d) du paragraphe (1) de l'article 3 de ladite Loi faisant suite au sous-alinéa (ii) est abrogée et remplacée par ce qui suit: «n'a pas dépassé \$25,000;»

Je crois que ceci devrait être ajouté à l'alinéa 2 à la page 2 du bill.

M. Hogarth: Monsieur le président, je ne suis pas contre ce qui vient d'être proposé, en principe; mais nous aurons exactement le même problème au sujet du bill omnibus. S'il y a une loi qui fait l'objet de modifications, je suggère respectueusement, que l'on se limite aux dispositions du projet de loi qui modifie la loi. Au Comité de la Justice, on voudra probablement apporter une modification afin d'abolir les châtiments corporels. Une telle proposition ne serait pas recevable et je doute qu'elle puisse être passée en troisième lecture. Cela prendrait certainement un nouveau bill. Il semble que c'est ce qui se prépare au sujet du bill omnibus, et je crois qu'un amendement de ce genre ne peut être apporté.

Le président: Je suis d'avis que nous pourrions ajouter un alinéa à un article au niveau de comité, si cet alinéa n'entraîne pas une augmentation des dépenses. Je crois que ceci reste dans les cadres de notre mandat. Nous ne pouvons pas, toutefois, adopter une augmentation des dépenses. Seul un ministre peut le faire en Chambre. En fixant la somme à \$25,000, nous demanderions au gouvernement d'accepter la responsabilité éventuelle de ces dépenses, et ceci constituerait une augmentation de dépenses.

Je vais vous donner un exemple: je peux signer une caution de \$800 à la banque; je ne prête pas d'argent, mais mon geste atteste que je suis responsable de ce prêt.

M. Lundrigan: Monsieur le président, c'est ce que je comprends, c'est que vous refusez la motion.

Le président: Je ne crois pas que notre mandat nous y autorise.

[Text]

Mr. Lundrigan: Mr. Chairman, may I make a suggestion? It is now 12.30 p.m. and we have been sitting for about two and a half hours. I think we have accomplished something in the sense of having on record some of our positions, points of view, and so on. However, we have not achieved much in the way of recommending any changes or amendments to the House.

May I suggest that this whole matter be referred to our Standing Committee for discussion and investigation in order to get a really clear position of where we are going and what our terms of reference are.

I think it is unfair of the Committee members to expect the Chairman to give a definitive ruling on Standing Order 249 as it applies right now. Bearing in mind the changes in the rules and the suggestions offered by Mr. Hogarth and others I think it is unfair for us to expect the Chairman to take a definitive position and stand, and perhaps it would be best if our Steering Committee were to meet to have a discussion on this matter and perhaps even to consult their House leaders as to the new interpretations of new Standing Orders which might govern our discussions in this Committee. I think it is a constructive suggestion that might be of some use, bearing in mind the fact that we have already spent two and a half hours on this. Perhaps the Committee should rise in any event.

Mr. Anderson: I think those are excellent suggestions, but I do not think they should pre-empt continued voting on this particular bill. This bill is something which we can deal with here and now, despite the decisions which come down as a result of the suggestions of Mr. Lundrigan. I do not think Mr. Lundrigan's suggestion is to adjourn; I think it is simply to get on with the work and then later we can have references such as he suggests.

Mr. Lundrigan: That was not my suggestion, Mr. Chairman. My suggestion was that the Committee rise and that the Standing Committee have a discussion on what I said.

Mr. Anderson: I oppose any adjournment at this time, at least until we have considered subclause (2) if not subclause (3).

Mr. Crouse: Mr. Chairman, in view of the discussion and the comments by Mr. Hogarth, it may well be necessary for the Minister to introduce another bill. Is this his understanding of the Act, or is it possible for him to move this type of amendment to this bill since, as we have been told, there is no reference to it whatever in the existing Act?

[Interpretation]

M. Lundrigan: Il est maintenant midi et demi. Nous siégeons depuis deux heures et demie. Je crois que nous avons exprimé nos points de vue. Nous n'avons pas pu, toutefois, recommander d'amendements ou de modifications à la Chambre. Puis-je proposer que toutes ces questions soient renvoyées au Comité permanent, qui en fera étude et enquête, afin de voir quel est notre mandat. Je crois qu'il n'est pas juste de demander au président, un jugement définitif, en tenant compte des modifications qui ont été apportées au Règlement.

Il n'est pas juste de s'attendre à ce que le président puisse prendre une décision définitive. Il vaudrait peut-être mieux que le sous-comité de direction se réunisse pour discuter de la question afin de demander aux leaders des partis quels sont les règlements qui gouvernent nos discussions en comité. Je crois que ceci serait peut-être très utile, surtout si on tient compte que nous avons déjà consacré deux heures et demie à étudier la question.

M. Anderson: Je crois que c'est une excellente proposition, mais ceci ne nous empêche pas de voter au sujet des dispositions de ce bill. A la suite de la proposition de M. Lundrigan, nous pourrions continuer l'étude du bill.

M. Lundrigan: Je crois que le Comité devrait ajourner ses travaux et le comité de direction...

M. Anderson: Je m'oppose à tout ajournement, à ce moment-ci, à moins que nous ayons étudié les articles 2 et 3.

M. Crouse: Monsieur le président, je voudrais demander au ministre s'il a l'intention, à la suite des observations de M. Hogarth, de présenter un autre projet de loi. Est-ce son point de vue quant à la Loi? Ou pourrait-il présenter une modification semblable à cette Loi, car il n'en est pas fait mention dans le bill actuel?

[Texte]

Mr. Davis: My understanding, Mr. Chairman, is that I can make the motion on third reading, which I have already outlined to the Committee.

Mr. Osler: Mr. Chairman, I would suggest that any arguments we have heard back and forth are matters of principle that are quite irrelevant to subclause (2), which deals with interest rates and is before us now. I move that this paragraph be passed in its entirety.

• 1235

Mr. Hogarth: If the Minister proposes to make the motion and he has been assured that it is in order, why do we not pass subclauses (2) and (3) and recommend that the Minister's motion be adopted by the House? If the Minister is satisfied that it is within the purview of his authority at the time of third reading it is all right by me.

Mr. Lundrigan: Mr. Chairman, has there been any decision on my recommendation that the Committee rise?

The Chairman: That is a decision for the Committee to make.

Mr. Anderson: In my view it is unnecessary and it would just be a sheer waste of time to rise now when we have this matter relatively simplified. We can easily decide it now and adopt the suggestion of Mr. Hogarth, which is endorsement of the Minister's proposed amendment.

The Chairman: Mr. Lundrigan, are you moving an adjournment?

Mr. Lundrigan: Yes, Mr. Chairman. There must be some understanding that we rise at some time or other, and we have been sitting for two and a half hours. I thought it was a good suggestion that the Chairman not be put in a position where he has to make rulings on matters that are as technical as the ones we have here, and it would be very embarrassing for the Chairman to have members rising on points of privilege in the House when the question is that perhaps it is within our terms of reference—

The Chairman: Are you moving an adjournment?

Mr. Lundrigan: I am moving an adjournment based on these arguments.

The Chairman: Is it agreed?

[Interprétation]

M. Davis: Je crois comprendre, monsieur le président, que je peux présenter cet amendement en troisième lecture, après l'avoir déjà exposé au comité.

M. Osler: Je crois, monsieur le président, que tous les arguments qui ont été échangés à droite et à gauche, touchent une question de principe qui n'a rien à voir avec l'alinéa 2, qui porte, lui, sur les taux d'intérêt. Et je crois que ledit alinéa devrait être adopté.

M. Hogarth: Le ministre a l'intention de présenter son amendement? Il croit qu'il est recevable. Pourquoi n'adopterions-nous pas les alinéas 2 et 3 et recommander ensuite que la proposition du ministre soit acceptée à la Chambre. Si le ministre en est satisfait, nous pourrions aller de l'avant.

M. Lundrigan: Monsieur le président, est-ce qu'une décision a été prise à la suite de ma recommandation concernant l'ajournement de la séance?

Le président: C'est au comité de décider.

M. Anderson: Ce n'est pas nécessaire. Ce serait perdre notre temps que d'ajourner la séance immédiatement. Nous pouvons facilement prendre une décision maintenant et adopter la proposition de M. Hogarth.

Le président: Monsieur Lundrigan, avez-vous l'intention de proposer l'ajournement de la séance?

M. Lundrigan: Je crois qu'il faudra que nous levions la séance à un moment ou à un autre. Nous siégeons depuis deux heures et demie. Je ne crois pas que le président devrait rendre des jugements sur des questions aussi techniques que celles dont nous sommes saisis à l'heure actuelle. C'est très embarrassant pour le président et...

Le président: Proposez-vous l'ajournement?

M. Lundrigan: Oui. Je propose l'ajournement pour ces raisons.

Le président: Que ceux qui sont en faveur de l'ajournement de la séance, lèvent la main. Que ceux qui sont contre la motion d'ajournement, lèvent la main.

[Text]

Motion defeated.

Mr. Anderson: May I propose that we now vote on subclause (2)?

The Chairman: Yes.

Subclauses (2) and (3) agreed to.

Mr. Lundrigan: Now that the Committee has agreed in some form or order on the proposed legislation, are we now prepared to accept—

The Chairman: Shall I report this bill to the House?

Mr. Lundrigan: Mr. Chairman, there are all kinds of recommendations and the Minister has indicated one recommendation that he would like to make. Why can we as a Committee not bring these recommendations to the House? You have ruled that perhaps they are out of order and my question is that we—

The Chairman: On one proviso.

Mr. Lundrigan: Yes, on one proviso. Can we not hold the report until we have some understanding of our terms of reference in respect to being able to make recommendations? There are three recommendations that the Minister thought should be made to the House. One of them was discussed, debated and voted down. There is one which Mr. Crouse indicated respecting the term of the loan—15 years—which perhaps should be made to the House. This would be a recommendation from the Committee to the House. All of these recommendations are of a financial nature and perhaps they all have implications for an increase in moneys to be committed or guaranteed. Therefore before we make our report could the Standing Committee not meet to determine whether or not, according to Standing Order 249, we can make such recommendations—not amendments, recommendations—to the House, and meet to consider these recommendations before such a report is made.

Mr. Borrie: Mr. Chairman, my understanding of the new regulations with regard to committees is that the opposition still has the opportunity in the House to bring forth any amendment they desire on any bill they wish, and that the ruling will be made by the Speaker on whether it is acceptable or not. If we do not come forth with a recommendation in our own Committee this still does not prevent a member of this Committee who feels very strongly from bringing an amendment to the House in its entirety. For us to meet to deliberate again as to what should happen to this Bill C-151 I think would be a complete

[Interpretation]

La motion est rejetée.

M. Anderson: Pourrions-nous voter maintenant au sujet de l'alinéa 2?

Le président: Oui.

Les paragraphes 2 et 3 sont adoptés.

M. Lundrigan: Il semble que nous sommes d'accord, ou du moins, que le comité est d'accord, d'une façon ou d'une autre, au sujet du projet de loi.

Le président: Dois-je faire rapport de l'adoption du bill?

M. Lundrigan: Nous avons une foule de recommandations à apporter. Pourquoi, en notre qualité de comité, de membres du comité, en pourrions-nous pas faire part de ces recommandations à la Chambre?

Le président: Sous réserve?

M. Lundrigan: Sous réserve. Ne pourrions-nous pas retenir le rapport jusqu'à ce que nous sachions exactement quel est notre mandat, en ce qui concerne les recommandations. Il y a trois recommandations qui, d'après nous, devaient être présentées à la Chambre et qui ont été jugées irrecevables. Et ces recommandations auraient dû être présentées à la Chambre. Chacune d'entre elles porte sur des questions financières et il s'agit d'une augmentation des sommes d'argent qui doivent être garanties. Avant de présenter notre rapport, le comité ne pourrait-il pas se réunir afin de déterminer si en vertu de l'alinéa 249 du Règlement, nous pouvons présenter de telles recommandations à la Chambre et étudier ces recommandations avant que le rapport ne soit présenté.

M. Borrie: Monsieur le président, si je comprends bien les règlements qui s'appliquent au comité, l'opposition a toujours la possibilité de présenter les amendements qu'elle veut présenter à la Chambre. Si notre comité ne présente pas de recommandations, ceci n'empêche pas un membre du comité ou un député de présenter des modifications à la Chambre lorsqu'il le désire. Je crois que ce serait perdre notre temps que de nous réunir de nouveau afin d'étudier cette question des recommandations. Il y a toutefois une recommandation de M. Hogarth qui veut que l'amendement du ministre soit accepté et qu'on

[Texte]

waste of The Committee's time. However, there was a recommendation made by Mr. Hogarth—I do not know whether that was included—that the Ministers' amendment be accepted by the Committee and recommended to the House for acceptance.

• 1240

Mr. Anderson: If that is a motion, I will second it.

Mr. Crouse: That was proposed. I moved that and it was rejected by the Chair, so this type of motion is out of order.

Mr. Borrie: No. The Minister has told the Committee what he intends to provide within the Act on third reading and we either accept or reject it. I think that we in Committee have the right to accept or reject anything that the Minister states pertaining to this or any bill brought forth in Committee. As I say, we have the opportunity of either accepting or rejecting it. I move that we accept.

The Chairman: I disallowed it because a motion from this Committee that the Minister proceed would be in the same nature of this Committee making a recommendation that the amount be increased to \$25,000.

Mr. Borrie: No, Mr. Chairman. The Minister is the one who has brought this to the Committee. We are not taking it to the Minister. We are now in a position to accept or reject the Minister's presentation. Whether it is money or not, he is the one who is bringing it—he is the only one who can.

The Chairman: He has made plain his intention of what he will do in the House. This is out of our hands because we do not decide what he will do in the House.

Mr. Whelan: Mr. Chairman, I suggest that we finalize this bill today—and I make this suggestion for several reasons. The Dominion-Provincial Conference will be taking place next week and we will be lucky if there are any committee rooms available.

I suggest that we expedite this legislation so it can come before the House. Then if any hon. members wish to propose amendments they can do so when it is in committee in the House. I say, again, that if we delay today, it probably will be delayed another week because of the shortage of committee rooms. In the meantime there is the possibility of stymieing our fishermen from obtaining loans. Many of them, even in my area, have made

[Interprétation]

en recommande l'acceptation par la Chambre.

M. Anderson: Si c'est une résolution, je l'appuie.

M. Crouse: J'ai fait cette proposition et le président l'a rejetée.

M. Borrie: Le ministre a dit au comité ce qu'il avait l'intention d'inclure dans le bill lors de la troisième lecture et que nous pourrions alors l'accepter ou le rejeter. Nous pouvons ici accepter ou rejeter ce que le ministre déclare au sujet d'un bill, de n'importe quel bill. Nous avons le droit d'accepter ou de rejeter et je propose que nous acceptions.

Le président: Je l'ai refusée parce que si le comité demande au ministre d'aller de l'avant nous nous plaçons dans la même situation dans laquelle nous nous placerions en suggérant que le plafond soit établi à 25 mille dollars.

M. Borrie: C'est le ministre qui a présenté une proposition au comité et nous pouvons, soit refuser, soit accepter son exposé. Qu'il s'agisse d'argent ou non c'est lui qui a abordé la question.

Le président: Il a indiqué ce qu'il ferait en Chambre. Il ne nous appartient pas de décider ce qu'il fera en Chambre.

M. Whelan: Je propose que nous terminions l'étude du bill aujourd'hui. Il faut songer à la conférence fédérale-provinciale qui aura lieu la semaine prochaine. Je crois qu'il faudra accélérer l'étude du bill car la semaine prochaine nous n'aurons pas de pièce à notre disposition.

Je propose que nous nous hâtons pour référer le tout rapidement à la Chambre. Et si certains députés désirent apporter des amendements, ils pourront le faire lorsque la Chambre l'étudiera en comité. Si nous ne nous hâtons pas nous enregistrons probablement un autre délai d'une semaine. Entre-temps nous empêchons les pêcheurs d'obtenir des prêts. Plusieurs d'entre eux, dans ma région, ont déjà fait des demandes et aime-

[Text]

applications and have asked when we are going to finalize this.

The hon. member—I forget his constituency—talked about one and a half hours. All we have done this morning is talk.

As far as I am concerned, I know from past experience and from the new changes in procedure what responsibility this Committee has. It is this member's responsibility to find out before he comes to this committee what the procedure is.

As I said, Mr. Chairman, the longer we delay the more we are stymieing many fishermen from getting loans. They need this money now—not a month from now. They need it right now to make repairs and to outfit their boats before the fishing season starts.

Mr. Crouse: Mr. Chairman, I submit that the lecture we have just heard is a bit out of order.

An hon. Member: Not any more than the lecture that we heard earlier.

The Chairman: Order, please.

Mr. Crouse: As to the three clauses of the bill, I am wondering just...

Mr. Whelan: I am talking about passing legislation. That is what is before the Committee now.

Mr. Lundrigan: Mr. Chairman, there is a very important principle at stake. I am aware of the new standing orders which govern committee operations on the House. I am not coming here to seek advice on how to proceed.

We have already had the hon. member here indicate that the recommendation of the Minister should be accepted by this Committee. It was seconded by another hon. member. This was my point. The Chair ruled that it was out of order. This is quite fine for the Chair. I suggested, because of the importance of this principles that the standing committee discuss it—because you are going to get people rising on points of privilege in the House and it is going to be a bit embarrassing for the Chairman to have to make a ruling on the spot without having time to deliberate with some of his colleagues on this matter. This is the principle which is so important: if the only purpose for our coming here is to ratify something, to rubberstamp something, then this is a complete waste of time. I am saying that unless we can make certain recommendations for improvements in legislation—and these recommendations might even be very basic changes in the proposed legislation—

[Interpretation]

raient savoir quand le bill sera adopté. Nous n'avons fait que parler, ce matin. Je sais, par mon expérience personnelle, et en me basant sur les modifications apportées à la procédure, quelles sont les responsabilités de ce comité. Un député doit se renseigner au sujet de la procédure avant de se rendre au comité. Et à l'heure actuelle, nous sommes à retarder les prêts aux pêcheurs. Beaucoup d'entre eux en ont besoin immédiatement pour réparer leurs navires avant la saison de pêche.

M. Crouse: Monsieur le président, les commentaires que nous avons entendus n'auraient pas dû être permis.

Une voix: Pas plus que ceux qui nous ont été servis plus tôt.

Le président: A l'ordre, messieurs.

M. Crouse: Au sujet des trois articles du bill, je me demande...

M. Whelan: J'ai parlé de l'adoption de la loi. C'est ce qui nous occupe présentement.

M. Lundrigan: Monsieur le président, il y a un principe très important qui est en cause. Je connais les nouveaux règlements qui s'appliquent au fonctionnement du comité. Je ne suis pas venu ici pour qu'on me dise quoi faire. L'honorable député a déjà dit que la recommandation du ministre devrait être acceptée par la comité. La recommandation a été appuyée. Le président a déclaré que la motion n'était pas recevable. Le président peut toujours faire cela, mais à cause de l'importance de ce principe, je crois que le comité permanent devrait en discuter, car la question sera soulevée en Chambre et il pourrait être embarrassant pour le président d'avoir à rendre une décision sans pouvoir consulter ses collègues à ce sujet. Si nous ne venons ici que pour approuver une mesure déjà décidée, nous perdons notre temps. J'affirme qu'à moins que nous puissions apporter certaines modifications aux projets qui nous sont soumis, nous perdons notre temps. Tant que nous n'aurons pas réglé ce point, le reste peut attendre. J'admets que les pêcheurs ont besoin de prêts et nous n'y sommes pas opposés. Nous avons déjà promis notre appui à cette mesure.

[Texte]

then it is a waste of my time. Until we can settle that question the rest is almost irrelevant. Granted fishermen need loans—they do need loans—and we are not against this; we have already indicated our support of this.

• 1245

A more important principle is that our role here on committee is nothing more than that of a rubberstamp unless we can make recommendations which basically affect the proposed legislation. Otherwise, it is a waste of my time. I argued this last week, I got a little huffy, but I say the same thing again—it is a waste of time to come in and support it because we have already indicated our support of the basic principles.

The purpose of the rule changes, as stated by the House Leader of your party, Mr. Whelan, and the House Leader of the Committee is to make the Committee stage a more important one in the legislative process so it can effect changes. And if we cannot make recommendations such as the Minister and other hon. members are suggesting—recommendations which will be reported from this Committee—then the committee stage of the legislative process is a damned waste of time—and I am not prepared to waste any more time. Unless we can settle that then we are wasting every hour.

Mr. Chairman, as you well know, only recommendations from this committee are reported—all resolutions or motions are reported in a formal report to the House—and this is why I was suggesting that unless we formalize our positions and our stands on certain things by motions, resolutions or recommendations, then it is a waste of time to come here. We have already agreed to this in the House. What are we wasting our time for?

The Chairman: Mr. Lundrigan, I think that any motion other than pertaining to an increase in expenditure is allowed in committee—and we have said this. But in this case there was one that I judged to be an increase in expenditure or an added responsibility of the government, which I think that our terms of reference do not allow us to accept.

Mr. Lundrigan: Mr. Chairman, I accepted your ruling and I said that the motion would be out of order. But I thought a recommendation might be in order. I have read Standing Order No. 249 and I question whether we cannot make a recommendation. Perhaps we can.

I suggest, before we report to the House on this bill, that the steering committee meet and come to some agreement on whether we

[Interprétation]

Il est un principe plus important en jeu, savoir que nous ne jouons qu'un rôle insignifiant s'il ne nous est pas permis de soumettre des recommandations aptes à améliorer les projets de loi qui nous sont soumis. Autrement, ce serait une perte de temps. Je répète ce que j'ai dit la semaine dernière, nous avons déjà dit que nous étions en faveur du bill dans son ensemble.

Le leader a déclaré que l'étude en comité était une étape importante de l'étude du bill. Si nous ne pouvons pas faire de recommandations qui feront l'objet du rapport, à ce moment-là le processus législatif est une perte de temps. Nous avons perdu deux heures. Le président sait que ce ne sont que les recommandations qui sont présentées à la Chambre. Et à moins de rendre officielle notre attitude, notre point de vue sur certains sujets, sous forme de résolutions, nous perdons notre temps.

Le président: Monsieur Lundrigan, je crois que toute motion, à part une motion qui porte sur une augmentation de dépenses, est acceptable en comité. Mais il se trouve que les recommandations que vous avez proposées supposent une augmentation des dépenses du gouvernement. Et je ne crois pas que ce soit acceptable.

M. Lundrigan: Je crois que la motion ne serait pas recevable, mais une recommandation le serait peut-être. J'ai lu le règlement 249 et je me demande si nous ne pourrions pas faire une recommandation. Avant de présenter un rapport à la Chambre au sujet de ce bill, je crois que nous devrions nous entendre afin de déterminer s'il ne serait pas possible de formuler une recommandation à la Chambre et vous n'aurez pas à prendre une

[Text]

can—not motion something to the House but make a recommendation so that it will not put you, sir, in a position of having to make a decision which could very well be an embarrassing one. I think that is fair enough. Before we make a recommendation to the House or report to the House we should have a clear indication whether we can make recommendations of the nature indicated in 249.

Mr. Anderson: Has a ruling been made on Mr. Borrie's motion which I understand is before the Committee?

Mr. Borrie: That point is very debatable under 249. Is this not a Standing Committee of the House of Commons?

The Chairman: Yes.

Mr. Borrie: All right then. Now I could be overruled or you could be right in your ruling, but for goodness' sake, if the Standing Committee of the House of Commons cannot bring in a recommendation on money then I think I would have to go along with Mr. Lundrigan—that we may be wasting our time here in committee because all bills deal with money.

Mr. Crouse: Mr. Chairman, when Clause 2 of this bill was up for discussion I moved a recommendation that the Minister's statement be added to Clause 2. This hon. gentleman voted against it because we were told that it was out of order as it dealt with money. So this discussion is irrelevant and not pertinent at the moment.

Mr. Anderson: I think there is a difference between the bill itself, Bill C-151, and any other recommendations we wish to make. I think that when we considered Bill C-151, Clause 2, we were right in not adding anything to it which did not specifically refer to interest rates. I think that is fair enough. The general point as to whether we can make other recommendations is obviously up for discussion. But I do not think that under any circumstances we could have included the Minister's statement in Bill C-151—we just could not have done it. This is the thing we were to examine and that is what we should have examined—not other things. However, once having examined that I see no reason personally why we should not make other recommendations.

Mr. Crouse: Mr. Chairman, we are right back to where we started from. If you search the records you will find that I asked if we could make that recommendation by attaching it and this Committee voted it down.

[Interpretation]

décision qui pourrait tre embarrassante. Je crois que, avant de faire une recommandation à la Chambre, nous devrions savoir si nous pouvons formuler des recommandations comme celles qui sont indiquées à l'article 249.

M. Anderson: A-t-on établi une réglementation sur la proposition de M. Borrie, qui, à ce que je comprends, est présentée au Comité?

M. Borrie: C'est discutable. N'est-ce pas un comité permanent de la Chambre des communes?

Le président: Oui.

M. Borrie: Mais si un comité permanent de la Chambre des communes ne peut pas présenter de recommandations sur les questions financières, je crois que je serais d'accord avec M. Lundrigan pour admettre que nous perdons notre temps ici. Car tous les bills entraînent une dépense d'argent.

M. Crouse: Lorsque la question était à l'étude, j'ai proposé que la déclaration du ministre soit ajoutée à cet article. L'honorable député a voté contre la mesure, car on nous a dit que c'était irrecevable car ceci est une décision inutile.

M. Anderson: Il y a une différence entre le Bill C-151 et toutes les recommandations que nous voulions faire. Lorsque nous avons étudié l'article 2, nous avons eu raison de ne pas ajouter un article qui ne touchait pas au taux d'intérêt. Toutefois, il s'agit de savoir si nous pouvons formuler d'autres recommandations et je ne crois pas qu'en quelques circonstances que ce soient nous ayons pu ajouter la déclaration du ministre ou incorporer, à la la déclaration du ministre au Bill C-151. Toutefois, ceci dit, je ne vois pas pourquoi nous ne pourrions pas formuler d'autres recommandations.

M. Crouse: Monsieur le président, nous en sommes à notre point de départ. J'ai demandé au début si je pouvais faire cette recommandation en l'attachant au Bill C-151.

[Texte]

• 1250

Mr. Anderson: No, we are not attaching it to Bill C-151. You constantly refer to Section 2 of Bill C-151. I do not think we should include the Minister's statement and suggestions in this bill.

The Chairman: Order.

Mr. Crouse: Mr. Chairman, my suggestion was that a recommendation be made and it was termed out of order because it deals with an increase from \$10,000 to \$25,000. That is exactly what the hon. gentlemen are discussing at the moment. If it was out of order when a member of the Opposition moved it I submit it must be out of order when a member supporting the government moves it.

The Chairman: Gentlemen, I still maintain that any recommendation on our terms of reference is out of order if deals with an increased expenditure of money. It is not within our terms of reference.

Mr. Lundrigan: If that is your ruling, I wonder could the Committee agree that before we do report to the House we or the steering committee members will have a meeting of minds on this, as to sanctioning the ruling of the chair. We know that we can make such recommendations. We do have recommendations to make one of them is that we have already indicated our intention of supporting the Minister.

The Chairman: I am in the hands of the Committee.

Mr. Whelan: May I say something, Mr. Chairman? I have attended many committee meetings since I have been a member, and when the Minister gave that committee assurance that he was going to do something, it was generally accepted. What you are suggesting, Mr. Lundrigan, is that you are not accepting the Minister's word here that he is going to bring in the amendments and that he is going to do these things. Furthermore, the Minister will show who was lectured here today and who was not.

Mr. Lundrigan: I certainly hope so, Mr. Chairman, because there is a great need for lecturing on the part of somebody in order to enlighten some members. My point is this, Mr. Chairman: I am not saying that we are not accepting the Minister's words, but the Minister's amendment is not the only one; the recommendation by the Minister might be one of a number that we might recommend. I suggest that if we are going to make such recommendation it should be done through the Committee. This is what I am saying.

[Interprétation]

M. Anderson: Je ne crois pas que nous devions inscrire la proposition du ministre dans le bill.

Le président: A l'ordre.

M. Crouse: Monsieur le président, je croyais que la recommandation devait être faite. Et cette proposition a été rejetée parce que cela supposait une augmentation des dépenses. Je crois que si la mesure a été jugée irrecevable lorsque c'était un député de l'Opposition qui la proposait, elle le sera également si c'est un député du gouvernement qui le fait.

Le président: Messieurs, je continue à soutenir que toute recommandation sur nos attributions est irrecevable, si elle propose des modifications qui supposent une augmentation des dépenses.

M. Lundrigan: C'est votre jugement. Le Comité pourrait-il accepter l'idée d'une réunion du comité directeur ou de notre Comité avant la présentation du rapport à la Chambre? Nous avons des recommandations à formuler. Nous avons déjà exprimé le désir d'appuyer le ministre.

Le président: Je suis à votre disposition.

M. Whelan: J'ai assisté à bien des réunions du Comité et lorsque le ministre s'engage à faire quelque chose, sa parole est acceptée. Mais il semble que vous n'acceptez pas la parole du ministre. Le compte rendu du Comité va bien prouver qui accepte et qui n'accepte pas la parole du ministre.

M. Lundrigan: Je crois qu'il faudra peut-être éclairer certains députés. Je ne dis pas que nous n'acceptons pas la parole du ministre, mais la recommandation du ministre est peut-être une parmi plusieurs que nous avons l'intention de recommander. Je crois que si nous avons l'intention de faire des recommandations dans ce sens, elles devraient être faites au Comité.

[Text]

Mr. Anderson: Mr. Chairman, I still think, though, that despite the area we have been discussing now which, I think, rightly you are going to consider with others and come down with a ruling on next time, nevertheless on this Bill C-151, we have agreed to it and it is perfectly proper and correct to present that to the House.

Mr. Goode: Mr. Chairman, as I understand it now, have we completely voted the bill through?

The Chairman: Except for reporting it to the House.

Mr. Goode: Perhaps I could suggest that we move to report it to the House subject to a final perusal by the steering committee.

Mr. Anderson: There is no point in that at all, because we have approved this bill. Anything else that we may discuss, such as the Minister's statement, is something else again. This, in itself, is a bill; it has three clauses; we agreed to it. Let us send that to the House and then have the other matter decided.

The Chairman: Shall I report this Bill to the House?

Mr. Lundrigan: You are correct in that, that we have finished with the bill, but I am suggesting that in a report to the House we should include certain recommendations from our Committee to the House, recommendations which might affect the final nature of the bill itself. This was my suggestion. I felt that it would be more orderly that we do this in the report. If not, what provisions do we have as a Committee to report to the House on recommendations we make affecting such legislation? What provision do we have?

Mr. Anderson: Mr. Chairman, it is quite easy to make more than one recommendation to the House. As the hon. member mentioned earlier, we have a cut-off time; I do not when, but it will be probably fairly soon.

Nevertheless, in the time we have spent here this morning we have done one thing. We have not agreed to the Minister's statement, but we have agreed to Bill C-151. There is no reason in the world why this should not go before the House. Other things, such as referring to Bill C-151 or commenting on it, can come later if necessary, but I think we are doing a disservice to the fishermen of this country if we do not get on with Bill C-151.

The Chairman: Shall I report this Bill to the House. Agreed.

[Interpretation]

M. Anderson: Monsieur le président, je crois qu'en dépit du problème que nous avons tenté d'évaluer et au sujet duquel vous allez devoir prendre une décision, il n'en reste pas moins qu'au sujet du bill C-151, nous sommes d'accord et qu'il est tout à fait convenable de présenter le bill à la Chambre.

M. Goode: Si je comprends bien, monsieur le président, l'étude du bill est-elle entièrement terminée?

Le président: Sauf en ce qui concerne l'étape du rapport à la Chambre.

M. Goode: Je proposerais donc que nous fassions rapport à la Chambre, à la condition que le comité directeur puisse faire une étude définitive.

M. Anderson: Non, car nous avons déjà approuvé le bill. C'est un bill qui comporte trois articles, nous l'avons accepté, renvoyons-le à la Chambre.

Le président: Êtes-vous en faveur de faire rapport de l'adoption du bill?

M. Lundrigan: D'accord, le bill a été adopté, mais je crois que notre rapport devrait contenir certaines recommandations qui peuvent porter sur la nature définitive du bill. Je crois qu'il conviendrait de procéder de cette façon dans le rapport.

M. Anderson: Quelle disposition s'applique au sujet de nos recommandations? Comme l'a dit l'honorable député plus tôt, je ne sais pas quand notre temps sera expiré.

Nous avons fait une chose ce matin, nous avons accepté le bill C-151. Il n'y a aucune raison pour laquelle ce bill ne pourrait pas être renvoyé à la Chambre. Toutes les autres observations qui concernent le bill C-151, pourraient être formulées plus tard. Mais je crois que nous ferons tort aux pêcheurs si nous n'acceptons pas tout de suite le bill C-151.

Le président: Dois-je faire rapport de l'adoption du bill? D'accord.

[Texte]

Mr. Lundrigan: Mr. Chairman, I want to go on record as being against reporting it, and have it on record that I am against it because I do think there are important recommendations affecting the nature of this bill which are not going to be recorded in the report of this Standing Committee to the House.

The Chairman: The Committee is adjourned.

[Interprétation]

M. Lundrigan: Je voudrais qu'on redise que je suis contre la présentation du rapport à la Chambre car je crois que certaines recommandations qui touchent la forme définitive du bill ne seront pas renvoyées à la Chambre.

Le président: La séance est levée.

APPENDIX D

TABLE I

PRINCIPAL FEATURES OF ASSISTANCE SCHEMES TO FISHERMEN BY THE FIVE ATLANTIC PROVINCIAL GOVERNMENTS

- (a) *Administering Authorities and Funds*—Fishermen's Loan Boards in Nova Scotia, New Brunswick, Prince Edward Island, Newfoundland, and a similar agency in Quebec.
- (b) *Purpose of Loans*—Acquisition of fishing vessels; purchase of engines and auxiliary equipment; purchase of fishing gear and equipment.
- (c) *Assistance*.

Item	Newfoundland	Nova Scotia	New Brunswick	Prince Edward Island	Quebec
1. <i>Deposit</i> (a) <i>on vessels</i>	10% of the total cost on new vessels and 25% on used vessels.	30% of cost for boats under 45 ft. 30% of cost for subsidized boats over 45 ft.	40% of cost on boats under 45 ft. 15% of net cost after subsidy on large company vessels, 10% of net cost for subsidized fishermen on boats over 45 ft.	5% of net cost after subsidy for wooden vessels and 10% for steel vessels; 50% of net loan for unsubsidized boats.	10% of net cost after subsidy.
(b) <i>on engines and auxiliary equipment</i>		30% of cost and installation on gas engines; 20% on diesel engines; 30% for other equipment.	40% of cost on gas engines; 20% on diesel engines; 30% on hull and other equipment.	40% of cost on gas engines; 20% on diesel engines; 30% of diesel engines and 50% for other equipment.	
2. <i>Maximum Loan</i> (a) <i>on vessels</i>	up to 90% of net cost on new vessels and 75% on used vessels.	up to 75% of net cost after subsidy.	to 85% for company vessels and up to 40% of net cost for individual fishermen.	to 50% of cost for wooden unsubsidized boats. Up to 90% of net cost of subsidized vessels.	to 90% of net cost after subsidy.
(b) <i>on engines and auxiliary equipment</i>		up to 70% on gas engines; 80% on diesel engines; 70% other equipment.	up to 70% on gas engines; 80% on diesel engines; up to 30% on hull and other equipment.	up to 50% on gas engines; 70% on diesel engines; on other equipment.	
3. <i>Interest on loans</i>	3½%	6½% on subsidized vessels and 4½% on unsubsidized vessels.	4%	6½% on subsidized vessels and 5½% on unsubsidized boats.	0% interest free

Boat Conversion

Trawler to Trawler Seiner.....	\$100,000	—	\$125,000
--------------------------------	-----------	---	-----------

Impact of New Technology

With the introduction of new types of fishing operations the conversion of existing boats permits an increasing problem for fishermen. Technological developments are coming so quickly that the need for fishermen to modify and adapt existing boats is likely to increase rapidly.

For Example

A fisherman wants to convert his 65 ft. boat to allow him to engage in the very profitable crab fishery which is now developing. He is likely to encounter the following expenditures:			
Remodelling.....	\$	7,000	
Crab Traps (40).....		5,000	
Refrigerated Sea Water Installation.....		5,000	
Winches, Power Block and Fish Finder.....		3,000	
			\$ 20,000

January 28, 1969.

Convertibilité du bateau

Chalutier—Chalutier-sennier.....	\$100,000	—	\$125,000
----------------------------------	-----------	---	-----------

Effet de la nouvelle technologie

Avec l'introduction de nouvelles méthodes de pêche, la conversion des bateaux actuels offre de nouvelles difficultés aux pêcheurs. Les développements de la technologie se succèdent à un rythme si rapide que les pêcheurs voient augmenter rapidement les besoins de modifications et d'adaptation des bateaux existants.

Exemple:

Un pêcheur veut convertir son bateau de 65 pieds pour lui permettre de s'engager dans la pêche au crabe qui s'avère très rentable et qui est en plein développement. Il est probable qu'il doive faire face aux dépenses suivantes:

Reconversion.....	\$7,000
Nasses à crabes (40).....	5,000
Installation de réfrigération à l'eau de mer.....	5,000
Treuil, groupe moteur et détecteur de poissons.....	3,000
	\$ 20,000

The Clerk of the House of Commons.

ORDRE DE RENVOI

CHAMBRE DES COMMUNES
Le JEUDI 20 février 1969

Il est ordonné,—Que les crédits n^{os} 1, 5, 10, 15, 20, 25, 30, 35 et 40 concernant le ministère des Pêches et des Forêts soient renvoyés au comité permanent des pêches et des forêts.

ATTESTÉ:

REPORT TO THE HOUSE

FRIDAY, February 7, 1969.

The Standing Committee on Fisheries and Forestry has the honour to present the following as its

FIFTH REPORT

Your Committee considered Bill C-151, An Act to amend the Fisheries Improvement Loans Act, and has agreed to report it without amendment.

A copy of the Minutes of Proceedings and Evidence relating to this Bill (Issue No. 12) is tabled.

Respectfully submitted,

Le président,
Guy Crossman,
Chairman.

RAPPORT À LA CHAMBRE

Le VENDREDI 7 février 1969

Le Comité permanent des pêches et des forêts a l'honneur de présenter son

CINQUIÈME RAPPORT

Le Comité a étudié le Bill C-151, intitulé: «Loi modifiant la Loi sur les prêts aidant aux opérations de pêche», et il est convenu de rapporter ledit bill sans modification.

Un exemplaire des procès-verbaux et des témoignages relatifs à ce bill (Fascicule n° 12) est déposé.

Respectueusement soumis,

[Text]

MINUTES OF PROCEEDINGS

TUESDAY, March 18, 1969.

(14)

The Standing Committee on Fisheries and Forestry met "*in camera*" this day at 10.30 a.m., the Chairman, Mr. Crossman presiding.

Members present: Messrs. Breau, Comeau, Crossman, Goode, Lundrigan, McBride, McQuaid, Murphy, Noble, Osler, Rose, Whelan—(12).

The Chairman read the Order of Reference.

The Chairman called for nominations for the election of a Vice-Chairman.

Moved by Mr. Breau,

That Mr. Goode be elected Vice-Chairman of this Committee.

On motion of Mr. Murphy,

Resolved,—That nominations be closed.

The Chairman put Mr. Breau's motion and it was resolved in the affirmative.

Mr. Goode thanked the Committee for the honour conferred on him.

The Committee considered an itinerary of their visit to the Pacific Coast.

The Chairman read a letter from Mr. Leonard S. Marchand, Member of Parliament, respecting conditions in the Shuswap area.

On motion of Mr. Rose, it was *agreed* unanimously,—

That if possible the Committee hearings be extended one day for the purpose of visiting the Shuswap area, Monday, April 28, 1969.

It was *agreed* that the Clerk advertise in the daily newspapers in British Columbia the purpose of the Committee's visit and invite the submission of briefs.

[Traduction]

PROCÈS-VERBAL

Le MARDI 18 mars 1969.

(14)

Le Comité permanent des pêches et des forêts se réunit à «*huis clos*» à 10 h 30 ce matin. Le président, M. Crossman, occupe le fauteuil.

Présents: MM. Breau, Comeau, Crossman, Goode, Lundrigan, McBride, McQuaid, Murphy, Noble, Osler, Rose et Whelan—(12).

Le président donne lecture de l'Ordre de renvoi.

Le président demande des candidatures au poste de vice-président.

Il est proposé par M. Breau,

Que M. Goode soit élu vice-président du Comité.

Sur la proposition de M. Murphy,

Il est décidé de ne pas accepter d'autres candidatures.

La proposition de M. Breau, mise aux voix par le président, est adoptée.

M. Goode remercie les membres du Comité de l'honneur qu'ils viennent de lui conférer.

Le Comité étudie l'itinéraire de sa visite sur la côte du Pacifique.

Le président donne lecture d'une lettre de M. Leonard S. Marchand, député, au sujet des conditions qui prévalent dans la région de Shuswap.

Sur la proposition de M. Rose, *il est convenu* à l'unanimité,—

Que, si possible, les audiences du Comité soient prolongées d'une journée afin de visiter la région de Shuswap le lundi 28 avril 1969.

Il est convenu que le secrétaire du Comité fasse publier, dans les quotidiens de la Colombie-Britannique, le but de la visite du Comité en invitant la population à soumettre des mémoires.

It was also *agreed* that Mr. Goode prepare the revised itinerary for approval of the Sub-committee on Agenda and Procedure.

Mr. Lundrigan referred to the Seal Fisheries problem and it was *agreed*,—

That this would be referred to the Sub-committee on Agenda and Procedure.

At 12.30 p.m. the Committee adjourned to the call of the Chair.

THURSDAY, March 27, 1969.
(15)

The Standing Committee on Fisheries and Forestry met this day at 8.20 p.m., the Chairman, Mr. Crossman, presiding.

Members present: Messrs. Breau, Comeau, Crossman, Hogarth, Howard (*Skeena*), Lundrigan, McGrath, Pringle, Rose, Smith (*Northumberland Miramichi*), St. Pierre, Turner (*London East*)—(12).

Also present: The Honourable Jack Davies, Minister of Fisheries; and Messrs. Anderson, Carter and Peddle, M.P.'s.

Witnesses: From the Department of Fisheries: Mr. S. V. Ozere, Assistant Deputy Minister (International and Jurisdictional); and Mr. C. R. Levelton, Director, Conservation and Protection Service.

The Chairman read the Seventh Report of the Subcommittee on Agenda and Procedure:

WEDNESDAY, March 19, 1969.

Your Subcommittee met this day with the following members present: Messrs. Crossman, Goode, McQuaid, Rose and Whelan.

Details of the Committees trip to British Columbia and the Seal Fisheries in the Gulf of St. Lawrence were considered.

It was recommended: that a meeting be arranged for Thursday, March 27, 1969, to hear the opening statement from the Minister of Fisheries on Item

Il est aussi convenu que M. Goode prépare l'itinéraire remanié pour le faire approuver par le sous-comité du programme et de la procédure.

M. Lundrigan aborde le sujet de la pêche aux phoques et *il est convenu*,—

que la question soit déferée au sous-comité du programme et de la procédure.

A midi et demi, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le JEUDI 27 mars 1969
(15)

Le Comité permanent des pêches et des forêts se réunit ce soir à 8 h 20. Le président, M. Crossman, occupe le fauteuil.

Présents: MM. Breau, Comeau, Crossman, Hogarth, Howard (*Skeena*), Lundrigan, McGrath, Pringle, Rose, Smith (*Northumberland-Miramichi*), Saint-Pierre et Turner (*London-Est*)—(12).

Aussi présents: L'honorable Jack Davies, ministre des Pêches, et MM. Anderson, Carter et Peddle, députés.

Témoins: du ministère des Pêches: M. S. V. Ozere, sous-ministre adjoint aux Affaires internationales et juridictionnelles, et M. C. R. Levelton, directeur du Service de la conservation et de la protection.

Le président lit le Septième rapport du sous-comité de l'ordre du jour et de la procédure:

Le MERCREDI 19 mars 1969

Votre sous-comité se réunit aujourd'hui, les membres suivants étant présents: MM. Crossman, Goode, McQuaid, Rose et Whelan.

Il délibère sur les détails des voyages à entreprendre en Colombie-Britannique et dans le golfe du Saint-Laurent, ce dernier relatif à la chasse aux phoques.

Il est proposé que le Comité se réunisse le jeudi 27 mars 1969 pour entendre l'exposé préliminaire du ministre des Pêches sur le crédit n° 1—Adminis-

1—General Administration, Estimates 1969-70 of Fisheries and Forestry, when the question of the Seal Fisheries in the Gulf of St. Lawrence might be raised.

The Committee agreed unanimously, that the above recommendation of the Subcommittee on Agenda and Procedure be adopted.

Mr. Howard (*Skeena*) suggested certain changes in the itinerary of its trip to British Columbia.

It was agreed that this question be referred to the Subcommittee on Agenda and Procedure.

The Chairman called Item 1—Departmental Administration, Fisheries and Forestry Estimates 1969-70 \$4,161,000.

The Honourable Jack Davis, Minister of Fisheries addressed the Committee.

It was agreed unanimously,—That the statement of the Minister of Fisheries be printed as an appendix to today's Minutes of Proceedings and Evidence. (See APPENDIX D)

The Minister of Fisheries assisted by the witnesses was questioned.

On the question of the Seal Fisheries in the Gulf of St. Lawrence

Debate arose and

On Motion of Mr. McGrath, it was resolved, unanimously—To call Mr. Brian Davies and Mr. Serge Deyglun to appear before the Standing Committee on Fisheries and Forestry before Easter 1969, if possible or as soon after the Easter recess as possible. Also that the Committee have Mr. Davies present his film to the Committee and that it be arranged for a showing of the C.B.C. film Artek. Also that the Committee call Mr. Henri Stadt of Montreal.

Debate continuing.

On motion of Mr. Hogarth, it was resolved—That the Honourable, The Secre-

tration centrale, du Budget des dépenses de 1969-1970 du ministère des Pêches et des Forêts; la question de la chasse aux phoques dans le golfe du Saint-Laurent pourra être soulevée à cette occasion.

Le Comité convient à l'unanimité d'adopter la proposition émise dans ce rapport par le sous-comité de l'ordre du jour et de la procédure.

M. Howard (*Skeena*) propose certaines modifications à l'itinéraire du voyage en Colombie-Britannique.

Il est convenu que cette question soit déferée au sous-comité de l'ordre du jour et de la procédure.

Le président met en délibération le crédit n° 1—Administration centrale, du budget des dépenses de 1969-1970 du ministère des Pêches et des Forêts\$4,161,000

Le ministre des Pêches, l'honorable Jack Davis, prend la parole.

Le Comité convient à l'unanimité de faire imprimer l'exposé du ministre des Pêches en appendice au compte rendu des délibérations de ce jour (voir l'appendice «D»).

Le ministre des Pêches, avec l'aide des témoins, répond aux questions qui lui sont posées.

Sur la question de la chasse aux phoques dans le golfe du Saint-Laurent,

Il y a débat et,

sur une proposition de M. McGrath, il est décidé à l'unanimité d'inviter M. Brian Davies et M. Serge Deyglun à comparaître devant le Comité permanent des pêches et des forêts avant Pâques si possible, ou aussitôt que possible après le congé de Pâques. Il est également décidé que le Comité invitera M. Davies à faire la projection de son film et qu'on prendra des dispositions pour faire passer le film intitulé *Artek*, réalisé par Radio-Canada. Le Comité convoquera en outre M. Henri Stadt, de Montréal.

Les délibérations se poursuivent.

Sur une motion de M. Hogarth, il est décidé que l'honorable secrétaire d'État

tary of State for External Affairs, be invited to appear before this Committee to advise why the Government has not established headland to headland baselines to protect Canadian Territorial Waters and Canadian Fishermen on the Eastern and Western Coasts and also in the Arctic.

At 9.55 p.m., debate continuing, the Committee adjourned to the call of the Chair.

aux Affaires extérieures soit invité à comparaître devant le Comité et à expliquer pourquoi le gouvernement n'a pas établi de ligne de base de cap en cap, pour protéger les eaux territoriales du Canada et les pêcheurs canadiens sur les côtes est et ouest et dans l'Arctique.

A 21 h 55, les délibérations sont interrompues et le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
J. H. Bennett,
Clerk of the Committee.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Thursday, March 27, 1969

● 2018

The Chairman: Gentlemen, I see a quorum. At a meeting of the Subcommittee on Agenda and Procedure on March 9, 1969, the question of seal hunting in the Gulf of St. Lawrence was considered and it was recommended that a meeting be arranged on Thursday, March 27 to hear a statement from the Minister of Fisheries on Item 1, General Administration, when the question of seal hunting might be raised. Is this agreeable?

Some hon. Members: Agreed.

The Chairman: I shall now call Item 1, General Administration, 1969-70 Estimates, Fisheries and Forestry and invite the Minister, Hon. Jack Davis to address the Committee.

Department of Fisheries and Forestry
1 Departmental Administration, including grants as detailed in the Estimates—\$4,161,000

Mr. Howard (Skeena): Mr. Chairman, you will recall I spoke to you earlier about a certain item and I also spoke to the Minister about it. I wonder if I could raise it before Mr. Davis...

The Chairman: Mr. Howard?

Mr. Howard (Skeena): What I want to raise, Mr. Chairman, is the itinerary for the visit by the Committee to British Columbia. I do not think it permits us too much ease of access to fishermen and others who may want to make presentations to the Committee in so far as Vancouver Island is concerned. I would like to suggest a rearrangement of the time schedule—I do not want it considered now—for consideration by the Steering Committee. To emphasize my point I will read the itinerary as it now stands.

On Wednesday, April 23, the Committee will be proceed from Vancouver to Victoria, which is on Vancouver Island, in the afternoon. There is an indication that that will be an evening free from any Committee hearings and so on. Then on the following day, Thursday, April 24, the Committee will proceed from Victoria by chartered bus to Nanaimo

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le jeudi 27 mars 1969

Le président: Messieurs, nous sommes en nombre. Lors de la réunion du Sous-comité du programme et de la procédure, le 9 mars dernier, il a été question de la chasse aux phoques dans le golfe du Saint-Laurent et il a été recommandé qu'une réunion soit tenue le jeudi 27 mars afin d'entendre la déclaration du ministre des Pêcheries au sujet du crédit 1, Administration centrale, alors que nous pourrions soulever la question de la chasse aux phoques. D'accord?

Des voix: D'accord.

Le président: Je propose donc, maintenant, qu'on en vienne au n° 1 *Administration centrale*, Budget des dépenses, 1969-1970, ministère de Pêches et Forêts, et je demande au ministre, l'honorable Jack Davis, de nous adresser la parole.

MINISTÈRE DES PÊCHERIES ET FORÊTS
1 Administration centrale, y compris les subventions selon le détail des affectations—\$4,161,000

M. Howard (Skeena): Je vous ai parlé auparavant, monsieur le président, d'un certain poste et j'en ai aussi parlé au Ministre. Je me demande si je pourrais soulever cette question auprès de M. Davis?

Le président: Monsieur Howard?

M. Howard (Skeena): Ce que je veux soulever, monsieur le président, c'est l'itinéraire de la visite de notre Comité en Colombie-Britannique. Je ne crois pas qu'il nous permette assez d'accès aux pêcheurs et aux autres qui veulent faire des représentations au Comité quant à l'île Vancouver. J'aimerais proposer que l'itinéraire soit remanié, pas maintenant, et soumis au Comité de direction.

Pour souligner, je vais maintenant lire le présent itinéraire.

Le mercredi 23 avril 1969, le Comité partira de Vancouver à Victoria, qui est sur l'île de Vancouver, dans l'après-midi. Il est prévu que ce mercredi soir nous aurons la soirée libre. La journée suivante, jeudi le 24 avril, le Comité se rendra de Victoria, en autobus, à Nanaimo, et nous visiterons le matin, la station de biologie de l'Office des recherches sur

[Text]

and in the morning will visit the Fisheries Research Board of Canada Biological Station from 10.30 to 12.30. Lunch will be eaten in Nanaimo and the Committee will come back to Victoria for hearings between 6.30 and 9.30 p.m. in Victoria on Thursday 24.

Nanaimo is the most central spot on Vancouver Island to those who are involved in the fisheries, Mr. Chairman, and I think, with respect, that perhaps the Committee might consider rearranging the schedule—I am sure this would be convenient to the people there—so that we will have a meeting in Victoria on Wednesday, April 23—the evening that we arrive—instead of having the evening free.

Then on Thursday we could proceed as planned to Nanaimo, visit the Biological Station and have an afternoon meeting in Nanaimo so that people from places on the West Coast such as Ucluelet and Port Alberni and Campbell River on the East Coast would have a better opportunity to get to those hearings in the afternoon of Thursday, April. 24. The Committee could proceed following the conclusions of those afternoon meetings back to Victoria where the proposed free evening, as it were, could be enjoyed on Thursday, April 24. We then could be in Victoria for the morning of April 25, in order to take the plane to Prince Rupert.

I have spoken with people at home about this since it was drawn to my attention and there seems to be general agreement, at least with the Native Brotherhood of British Columbia through Guy Williams its President and the United Fishermen and Allied Workers Union through Homer Stevens, the Secretary-Treasurer. I was not able to get in touch with the Pacific Trollers Association about this, but knowing the area, I am sure there would not be any disagreement with the proposed change.

I would like to put it to the Committee to see what we can do about it. I realize, Mr. Chairman, in talking to the Clerk of the Committee, that there have been advertisements placed in certain newspapers about the proposed meetings and it may take a corrective type of advertisement to change the arrangements, but I think it is absolutely necessary to provide an easier access to the Committee by people on Vancouver Island than is allowed by the schedule as it is now.

Mr. Comeau: Mr. Chairman, was it not agreed at the last meeting that Mr. Goode and the steering committee would deal with this schedule and that we would leave it up to them? It is unfortunate that Mr. Howard was not there.

[Interpretation]

les pêches du Canada de 10h.30 à 12h.30. Le déjeuner sera à mangé à Nanaimo et le Comité reviendra à Victoria pour une réunion de 6h.30 à 9h.30 à Victoria, le jeudi 24 avril.

Nanaimo est le point le plus central de la Colombie-Britannique, pour ce qui est des pêches, et le Comité pourrait peut-être envisager de modifier son itinéraire, ce serait tellement commode, de telle sorte que nous ayons une réunion à Victoria, le mercredi 23 avril, le soir de notre arrivée, au lieu d'avoir la soirée libre.

Et jeudi, nous irions à Nanaimo, ainsi que prévu, pour visiter la station de biologie, puis tenir une réunion à Nanaimo l'après-midi, de sorte que les gens de la côte Ouest venant de Ucluelet et de Port Alberni, et de Campbell River sur la côte Est, auraient l'occasion de se rendre à cette réunion dans l'après-midi du jeudi 24 avril. A la fin de ces réunions, nous pourrions revenir à Victoria, et à ce moment-là, nous aurions la soirée libre, le 24, de sorte que nous serions à Victoria le 25 au matin pour prendre l'avion à destination de Prince Rupert.

J'en ai parlé à certaines gens depuis que j'en ai eu connaissance et il semble que tout le monde en convient au moins avec la *Native Brotherhood of British Columbia*, dont M. Williams est le président, ainsi que le *United Fishermen and Allied Workers Union* qui est présidé par M. Hower Stevens. Malheureusement, je n'ai pu me mettre en rapport avec la *Pacific Trollers Association* à ce sujet, mais connaissant la région, je crois qu'il n'y aura aucun désaccord concernant le changement proposé. Aussi, j'aimerais le proposer au Comité pour voir ce que nous pouvons faire. Je me rends compte, monsieur le président, en parlant au greffier du Comité que deux annonces ont été placées dans les journaux de la région à propos de réunions envisagées et il y aurait peut-être lieu d'insérer un autre article pour annoncer ce changement, mais je pense qu'il est absolument nécessaire de rendre plus facile l'accès des gens de l'île de Vancouver aux réunions du Comité.

M. Comeau: Monsieur le président, n'avait-on pas convenu, au cours de la dernière réunion, que M. Goode et le comité de direction s'occuperaient de cet horaire et qu'il leur laisserait le choix? C'est regrettable que M. Howard n'était pas présent.

[Texte]

The Chairman: That was the consensus at the last in camera meeting.

Mr. Comeau: I think we should stick by that decision.

• 2025

Mr. McGrath: I do not think we should consider this matter now. We have kept these people waiting long enough. It is now 8.25 p.m. and I think we should proceed with the business of the meeting, Mr. Chairman. The Committee can take cognizance of what Mr. Howard has said.

The Chairman: Is it Mr. Howard's wish that this be referred to the steering committee?

Mr. Howard (Skeena): If that seems to be agreeable, of course; I am concerned about trying to get it corrected.

The Chairman: Is it agreed that this be referred to the steering committee?

Some hon. Members: Agreed.

The Chairman: I will now call on the Minister of Fisheries.

Hon. Jack Davis (Minister of Fisheries): Thank you, Mr. Chairman. I think if it is suitable to you and to the Committee I will make a few very general remarks and then possibly we could proceed by way of question and answer and thereby cover some of the problems which are of more concern to the members individually.

I would like, first, to dwell on some of the problem areas in our fishery, the areas which present the greatest challenge to all of us—the areas of low income and under-employment. Not all of the segments of our fishery are in trouble, but as a broad generalization the fishing industry in Canada is in difficulties. However, there are a few bright spots. We have the Pacific salmon fishing industry which compared with the fishery on the East Coast is in good shape, we have the new Queen crab industry in the Gulf of St. Lawrence and we have a rapidly growing herring fishery in the Gulf of St. Lawrence. Those represent real prospects for the future, but on the other hand we have other situations, particularly in relation to the ground-fish on the East Coast where incomes are low and there is a good deal of under-employment, where people over the long term, at least, should be shifted out of the industry and employed in other higher paying vocations.

This general situation in the fishery should not come as any surprise. In affluent countries

[Interprétation]

Le président: C'est ce que nous avons convenu à notre dernière réunion à huis-clos.

M. Comeau: Je pense que nous devrions nous en tenir à cette décision.

M. McGrath: Je ne crois pas que nous devrions étudier la question maintenant. Nous avons fait attendre les gens assez longtemps. Il est 20h.25 et je crois que nous devrions maintenant procéder aux délibérations et prendre connaissance de ce que M. Howard vient de dire.

Le président: M. Howard voudrait-il que la chose soit déferée au comité de direction?

M. Howard (Skeena): Volontiers, si cela vous convient. Ce qui m'inquiète, c'est que notre itinéraire soit remis en question.

Le président: Êtes-vous d'accord que la chose soit déferée au comité?

Des voix: D'accord.

Le président: Maintenant, je demanderais au Ministre de prononcer sa déclaration.

L'hon. Jack Davis (Ministre des Pêcheries): Merci, monsieur le président. Je crois que si la chose est appropriée pour le Comité, je ferai quelques remarques d'ordre général, puis nous pourrions passer aux questions et par la suite, toucher à certains sujets qui intéressent les députés.

D'abord, j'aimerais toucher à quelques-uns des problèmes qui affectent les pêches, dans les domaines qui posent un défi à nous tous, des régions de faible revenu et de sous-emploi. Ce n'est pas tous les secteurs de nos pêches qui ont des ennuis, mais en général, l'industrie des pêches est en difficulté. Il y a bien certainement des endroits où tout va bien, par exemple, la pêche au saumon du Pacifique qui, par rapport à l'industrie de la pêche de la Côte de l'Atlantique, est en bonne situation. Nous avons une nouvelle industrie du crabe araignée dans le Golfe du Saint-Laurent où l'on constate une expansion rapide de l'industrie du hareng. Voilà qui représente de bonnes perspectives pour l'avenir, mais d'un autre côté la situation est différente en ce qui concerne l'industrie du poisson de fond sur la côte est où les revenus sont bas et le sous-emploi assez considérable et où les gens après une longue période, devraient au moins être employés dans un autre secteur industriel qui les paierait mieux.

Cette situation générale dans le domaine des pêches ne devrait pas vous surprendre.

[Text]

the commercial fishery tends to be down near the bottom of the scale, indeed, in the most affluent countries the commercial fishery barely exists.

In the United States today it is very difficult to recruit people into the commercial fishery at all. Young people certainly are looking for regular jobs, eight-hour days, fringe benefits, pensions at age 65 and TV in the evening. They certainly do not go out to sea as their fathers did and, generally speaking, it is very difficult to recruit commercial fishermen there. This is one of the reasons why Canadians on both coasts are out-fishing the Americans. The Americans just are not going to sea in the fishery.

The sports fishery, of course, is a different proposition, but basically this is what is happening in high income areas and certainly in high income countries.

This is happening in Canada. It is happening on the West Coast. It is happening to some extent on the East Coast. A recent report covering the economic situation in the Atlantic Provinces indicates that the average value of output per fisherman is about \$2,000 a year. In forestry the net value of his output is something like \$6,000 or three times as much and in mining it could be as high as \$15,000. In other words, if there is an opportunity in the woods or at a pulp mill or, better still, in a mine, a smelter or a metal refinery the individual is going to move out of the fishery and into these other industries.

The situation, again, in the Atlantic region is one of under-employment. There are 45,000 fishermen in the Atlantic region as a whole. Of these 45,000 only about 6,000 can be said to be employed on a full-time or year-round basis. Some 27,000 are employed five or six months in the year and the remaining 12,000 are occasional workers who, while their major source of income is in the fishery, get by on a very small income indeed.

● 2030

Under these circumstances one might well ask what the role of the Department of Fisheries should be. I think the role of the Department of Fisheries can only be judged in the context of the government as a whole. As I see it, the Department of Fisheries should concern itself with the development of essentially an economic fishery that can pay a good living wage and working in concert with the Departments of Manpower and Regional and Economic Expansion endeavour to pinpoint where the surpluses of manpower, equipment

[Interpretation]

Dans certains pays favorisés, les pêches commerciales tendent à être au bas de l'échelle, il semble même que dans la plupart des pays favorisés, ces pêches sont presque inexistantes.

Aux États-Unis par exemple, il est très difficile de recruter des gens dans le secteur des pêches; les jeunes gens préfèrent un emploi régulier, huit heures de travail par jour, des avantages marginaux, un régime de pension de retraite à l'âge de 65 ans. Ils ne veulent certainement pas aller à la mer à l'instar de leurs pères, et généralement, il est très difficile de recruter des pêcheurs. Voilà l'une des raisons pour lesquelles les Canadiens sur les deux côtes dépassent les Américains dans la pêche.

Pour ce qui est de la pêche sportive, c'est tout à fait différent. Mais voilà essentiellement ce qui arrive dans les pays industrialisés où les revenus sont élevés. La même chose se passe au Canada, sur la côte ouest et, dans une certaine mesure, sur la côte est. Tout récemment, un rapport couvrant la situation économique dans les provinces de l'Atlantique a indiqué que la moyenne de la production du pêcheur est d'environ \$2,000 par an. Dans l'exploitation forestière, c'est environ 6,000 dollars, c'est-à-dire trois fois plus et dans l'industrie minière, elle pourrait s'élever à \$15,000. Par conséquent, il y a plus d'avenir dans l'exploitation forestière ou dans une usine de pâte à papier, ou encore mieux dans une usine, une fonderie ou une raffinerie métallurgique, l'individu quittera les pêcheries pour l'une ou l'autre de ces industries.

Dans la région de l'Atlantique règne le sous-emploi. Il y a 45,000 pêcheurs dans cette région. De ce nombre, 6,000 seulement sont employés à plein temps. Environ 27,000 travaillent pendant 5 ou 6 mois de l'année, et les 12,000 qui restent sont des travailleurs occasionnels. Quoique leur principale source de revenu soit les pêches, ce revenu est très faible en fait.

Dans ces circonstances, on pourrait bien se demander quel est le rôle que doit jouer le ministère des Pêcheries. Il ne peut être jugé que dans le contexte gouvernemental dans son ensemble. À mon avis, le ministère devrait se préoccuper de mettre sur pied une industrie des pêcheries économiquement viable qui peut payer de bons salaires et, de concert avec les ministères de la Main-d'œuvre et de l'Expansion économique régionale, il devrait essayer de savoir où il y a un surplus de main-d'œuvre et d'équipement, et d'aider si possi-

[Texte]

and so on are and assist, if possible, in the process of getting people relocated or at least re-employed in other lines of endeavour which will pay better and which, in the long run, will be a more satisfactory source of employment in any case.

In very general terms, we not only have too much manpower in the fishery, we also have far too much equipment. Certainly we could produce the same volume and value of fish with half the labour force and perhaps with less than half the investment in vessels and equipment that we have.

This varies from one fishery to another, but if one were not concerned with the people, were not concerned with the social conditions and so on, the process could be a relentless one of reducing the numbers of vessels and making sure that the most efficient gear was used, but certainly a much smaller value of gear would be involved. Using fewer people to harvest the same number of fish would automatically produce a higher income to those left in the fishery.

On the West Coast we have started a process in this direction whereby, hopefully, over the next decade or so, certainly by the early 1980's, we will have cut the number of vessels in the salmon fishery to less than half and, presumably, the number of fishermen employed in the Pacific salmon fishery will be down to less than half. If we can maintain the output of fish and we should be able to do this and maybe increase it, this will mean that the average income of the salmon fisherman on the West Coast will have more than doubled.

This will be a remarkable development because in the last 20 years, that is essentially since the end of World War II, we have seen roughly the same number of salmon being caught by roughly the same number of fishermen, but by now we have three times the investment in boats and gear.

In other words, if you just take numbers of fish as your test of economic efficiency clearly this much greater investment in gear reflects a decline in productivity and this is the basic reason why the income of fishermen on the West Coast has not gone up as rapidly as the income of people in most other industries.

It is good, relative to fishermen on the East Coast, but it is very low when compared with the people in the logging industry. The logging industry on the West Coast probably

[Interprétation]

ble à relocaliser les gens ou tout au moins leur trouver un autre emploi mieux rémunéré.

D'une façon générale, non seulement avons-nous trop des gens dans le secteur des pêches mais aussi trop de matériel. Il est sûr que nous pourrions produire le même volume de pêches avec un personnel réduit de moitié et peut-être également avec une réduction de moitié des investissements en bateaux et en équipement.

Ceci varie d'un endroit à un autre, mais si nous ne nous préoccupons pas des conditions sociales des gens, nous serions aux prises avec un procédé impitoyable de réduction du nombre des bateaux et aurions à nous assurer que l'équipement le plus efficace est utilisé, mais il est évident que la valeur du matériel utilisé serait moindre. Si moins de personnes pêchent la même quantité de poissons, leurs revenus seront automatiquement plus élevés.

Sur la côte Ouest, nous avons entrepris un programme de ce genre et nous espérons qu'au cours des 10 prochaines années, que d'ici 1980 en tout cas, nous aurons réduit de moitié le nombre de bateaux utilisés pour la pêche au saumon et je suppose que nous aurons également réduit de plus de la moitié le nombre de personnes qui s'adonnent à la pêche au saumon dans le Pacifique. Si nous pouvons maintenir la production à son niveau actuel, ou l'accroître, le revenu du pêcheur aura au moins doublé.

Ce serait remarquable, car depuis vingt ans, c'est-à-dire depuis la fin de la seconde guerre mondiale, la production de saumon est à peu près la même et le nombre des pêcheurs également. Mais par contre, les investissements en bateaux et en équipement sont trois fois plus élevés.

En d'autres termes, si vous considérez la quantité de poissons comme étant votre test d'efficacité économique, il est clair que cet investissement beaucoup plus important est un indice de déclin de productivité, c'est pour cette raison que les revenus sur la côte Est n'ont pas augmenté aussi rapidement que sur la côte Ouest.

C'est assez bien sur la côte Est mais beaucoup moins par rapport, par exemple, à l'exploitation forestière qui paie sans doute les meilleurs salaires au monde, mais on ne peut

[Text]

pays the highest wages anywhere in the world, but one certainly cannot say that of the income of the fishermen on Canada's West Coast.

In other words, over this last 20 years with the most valuable fishery in Canada, the Pacific salmon, we have seen roughly the same number of fish caught by roughly the same number of fishermen, but with three times the capital investment.

This is a decline in productivity and clearly a development which is not helpful. The fishing season has had to be cut back and cut back and cut back and there has been more and more red tape as we have introduced more and more restrictions on the operations of fishermen individually and collectively. The new system that we have introduced out there will, in effect, reduce the number of vessels over the next decade. The government will be buying up the older less productive boats and those which remain will obviously be able to fish for longer periods in each year. Then the average income per fisherman will go up more or less automatically.

If we are fortunate enough as the result of very heavy investments in new spawning facilities, hatcheries and so on to be able to

● 2035

expand the runs of salmon and make a much greater volume of salmon available, clearly this will be all to the good. The catch will go up and if the number of boats is also going down then incomes will automatically go up faster than otherwise would be the case.

There has been concern, I think naturally, about who will own the boats, five, ten and fifteen years from now. In the system we have introduced we have also insured that the government will know month by month about changes in ownership. I have already expressed my concern publicly about this and I have told the companies privately and publicly, at least the big processing companies, that I want to see their participation in numbers of boats go down and go down drastically. I think it makes sense and stands to reason that if the taxpayer of Canada is going to pay for the expansion of the resource or, under the worst circumstances, just the maintenance of the resource then the means of exploitation should not fall into the hands of a few companies.

We would want to maximize the participation in the fishing activity itself and presumably if we go down from some 5,500 boats in 1969 to 2,000 in 1980 we do not want to see

[Interpretation]

sûrement pas dire la même chose du revenu des pêcheurs sur la côte Ouest.

Ces 20 dernières années, en ce qui concerne la plus importante pêche au Canada, celle du saumon du Pacifique, à peu près la même quantité de poisson a été prise par à peu près le même nombre de pêcheurs, mais cela a pris trois fois plus d'investissements.

Cela signifie une baisse de productivité, et cela n'aide sûrement pas. Il a fallu réduire la campagne de pêche continuellement. Il y a plus de procédures bureaucratiques et nous avons introduit des restrictions qui ont affecté chaque pêcheur en particulier et tous en général. En fait, le nouveau système réduira le nombre des bateaux de pêche d'ici dix ans. Le gouvernement achètera les bateaux moins productifs et ceux qui resteront pourront pêcher plus longtemps pendant l'année et le revenu moyen des pêcheurs par le fait même sera plus élevé.

Nous sommes assez heureux vu les investissements qui se font actuellement de pouvoir donner une expansion à la pêche du saumon,

d'ailleurs aujourd'hui les apports sont plus élevés, ce qui est très bien. Ces efforts continueront de s'accroître et par le fait même le revenu des pêcheurs s'accroîtra.

On s'est préoccupé bien sûr, pour savoir à qui appartiendront les bateaux dans 10 ou 15 ans. Dans le système que nous avons introduit, nous nous sommes assurés que le gouvernement saura chaque mois qui détient les bateaux, j'ai déjà exprimé mon opinion à ce sujet publiquement et j'ai même fait savoir aux sociétés, surtout aux grandes compagnies de pêche que je voulais que leur part de propriété sur les bateaux baisse d'une façon radicale. Si les contribuables doivent payer pour l'expansion de cette pêche, il semble alors que les moyens d'exploitation ne devraient pas tomber dans les mains de grosses sociétés.

Nous voulons augmenter au maximum la participation à la pêche et si nous réduisons le nombre de bateaux, de 5,500 en 1969 à 2,000 en 1980 nous ne voulons pas que plus

[Texte]

more than a few hundred in the hands of the big companies at the end of that period, especially since they are the ones buying the fish and marketing them in other parts of the world.

On the East Coast the best fishery in dollar terms is the lobster fishery. It is also an ideal fishery from several other points of view. It is fully controllable in the sense that the resource is totally within Canadian territory and jurisdiction. The resource has been declining slowly in quantity, but not dramatically. Unfortunately, the number of fishermen has been rising slowly and obviously productivity again is going down slowly. We have moved in there to limit the total number of boats and indirectly the number of fishermen.

We are setting up a scheme whereby the government, again, can progressively buy boats from the market which will automatically increase the income of the average lobster fisherman. This, from now on, will be a fully controlled situation. One of the best features of the lobster fishery has been the rising price per pound of lobster and it has largely been as a result of the rising market price that the incomes of lobster fishermen have actually gone up. It certainly has not been physical productivity because obviously that has not been improving. The total catch has been sliding downward and the number of fishermen has been going up.

The Department of Regional Economic Expansion moving in on a situation such as that could choose to buy up boats or provide funds for the Department of Fisheries to buy up boats and this could happen to the point where the income of the average lobster fisherman was equal to or above that of people in the rest of the community at which point, I suppose, we would hold off. However, it would be a controllable situation, a thoroughly tolerable one and a well managed one. That is an inshore fishery, one that I think now is under control and where incomes, while not really satisfactory, can be improved over the next decade.

The other major inshore fishery in the Atlantic region, that of the salt cod-fish industry principally located in Newfoundland, by comparison, is in very difficult straits indeed. The average incomes are the lowest of all the fisheries in Canada. The numbers of inshore fishermen have been rising—have risen appreciably in the last 15 years. The total volume of the catch, on the other hand, has gone down appreciably.

In other words, there are more inshore fishermen but a smaller catch and both of these trends appear to be continuing. The

[Interprétation]

d'une centaine de ces bateaux appartiennent en exclusivité aux sociétés. Nous voulons que ce poisson soit vendu dans tous les coins du monde.

Par ailleurs, sur la côte Est, la meilleure pêche est celle du hareng, c'est aussi une pêche idéale à divers points de vue. Les ressources sont tout à fait exclusives au territoire canadien. Le homard a diminué en quantité mais pas de façon sensible, le nombre de pêcheurs, par contre, s'est élevé lentement, ce qui veut dire que la productivité descend donc. Nous essayons de limiter le nombre global de bateaux et indirectement le nombre de pêcheurs.

Selon le régime que nous avons instauré le gouvernement achète un certain nombre de bateaux et par conséquent, nous essayons d'accroître le revenu moyen des pêcheurs de homards. La situation n'est pas tout à fait encore réglée, mais le point saillant de la pêche au homard, c'est le prix payé pour le fruit de mer. D'autre part la productivité ne s'est pas accrue parce que la pêche diminue et le nombre de pêcheurs augmente.

Le ministère de l'Expansion régionale pourrait avoir le choix, soit d'acheter des bateaux, soit de fournir des fonds au ministère des Pêches afin d'acheter des bateaux et à la longue, jusqu'à ce que le revenu moyen du pêcheur augmente par rapport au reste de la collectivité. Je crois que la situation pourrait être contrôlée et bien administrée.

L'autre aspect majeur est celui des pêches côtières de l'Atlantique de la morue salée, principalement à Terre-Neuve, qui en comparaison, sont en très mauvaise posture. Le revenu moyen est le plus faible de toutes les pêches canadiennes. Le nombre des pêcheurs côtiers a augmenté d'une façon significative au cours des quinze dernières années. Cependant, le volume total des prises s'est réduit d'une façon appréciable.

En d'autres mots, il y a un plus grand nombre de pêcheurs côtiers, mais des prises plus petites, et ces tendances paraissent se

[Text]

decline in the catch is due in part to a much more intensive offshore effort, not only by Canadians, but by vessels of other countries offshore. Their catch per unit of effort is also going down, but they are using bigger and bigger trawlers, more and more efficient equipment and this, of course, is bad news and to the extent that the offshore fishery

● 2040

expands, foreign and Canadian, this is more bad news for the salt fishery.

We have to do something dramatic, I think, in this case. I do not think there is any alternative to setting up a salt fish development corporation, somewhat along the lines of the Freshwater Fish Marketing Corporation, but one which does not involve the provinces—the Province of Newfoundland in this case. It would be totally a federal operation. One which also was oriented more to development instead of marketing. Development in the sense of redevelopment with a much greater emphasis on quality. I gather that we will find it much easier to sell our salt fish if we can improve the quality or guarantee better quality.

I would hope, also, that this operation would be similar to the Freshwater Fish Marketing Corporation in another respect, that we would be able to announce at the beginning of each year—this time each year—a price schedule to which the fishermen could work through the season from, say, May until the end of September.

If a greater return were eventually realized by selling the salt fish abroad then a further amount of money would be paid at the end of the season to the fishermen. The fishermen would be paid as they produced and they would know what their minimum incomes were likely to be. In total, it would be a more predictable situation.

We would also over the long pull rationalize production to a much greater extent and, of course, very slowly and over the long pull ship more of the fish into the fresh and frozen category. This also has to happen.

Moving over on to the fresh and frozen side, I think we have a much happier outlook, certainly a much more optimistic one even in the short run. There our production has been rising and our efficiency in general

[Interpretation]

poursuivre. Le déclin des prises est dû en partie à l'effort intensif de la pêche en haute mer, non seulement par les Canadiens mais par les bateaux de différents pays. Leurs prises par bateau diminuent elles aussi, mais ils utilisent des chalutiers hauturiers de plus en plus grands, et un équipement de plus en plus efficace; et ceci, en fin de compte, constitue une malheureuse nouvelle pour l'industrie de la morue salée autant et aussi longtemps que

la pêche hauturière étrangère et canadienne se développe.

Nous avons à prendre des mesures dramatiques dans ce cas. Je ne pense pas qu'il y ait de solutions autres que celle de mettre sur pied une société de développement des pêches de morue salée, un organisme qui serait semblable à celui de l'Office de commercialisation du poisson d'eau douce. Mais qui, cette fois-là, ne s'appliquerait qu'à la province de Terre-Neuve. Cette société serait une entreprise entièrement fédérale. Elle serait orientée plus vers l'expansion que vers la commercialisation. L'expansion, dans le sens du redéveloppement, avec une plus grande emphase sur la qualité. Je suis certain que nous pourrions vendre notre poisson salé beaucoup plus facilement si nous étions à même d'améliorer et de garantir une qualité supérieure.

J'espère que cette opération serait semblable à celle de l'Office de commercialisation du poisson d'eau douce dans un autre secteur aussi, afin que nous puissions énoncer au début de chaque année, c'est-à-dire à peu près à cette époque, une échelle de prix sur laquelle les pêcheurs pourraient compter tout au cours de la saison, c'est-à-dire de mai jusqu'à la fin de septembre.

Si des profits supérieurs pouvaient être éventuellement réalisés lors de la vente des poissons salés à l'étranger, ainsi un montant supplémentaire pourrait être payé à la fin de la saison aux pêcheurs. Les pêcheurs seraient payés sur la base de leur production et pourraient ainsi connaître quel serait leur revenu minimum chaque année. Il s'agirait ainsi d'une situation beaucoup plus enviable.

Nous voulons aussi sur une période plus étalée rationaliser la production et très lentement introduire sur les bateaux l'équipement nécessaire à la pêche de poisson frais et congelé. Ceci doit être aussi entrepris. Si l'on parle maintenant du poisson frais et du poisson congelé, je pense que nous avons là un avenir beaucoup plus brillant. En tout cas, certainement, une vue beaucoup plus optimiste à court terme.

[Texte]

has been improving though it is still low. Our main market, the United States, has been expanding steadily and the retail price has held up well for our principal frozen ground-fish products.

We have been up against in the last 18 months to two years one of these classic Canadian situations where the retail price in the United States stayed up, but the price to Canadian exporters went down. In this case, if I can generalize, the price for cod blocks which had risen to as high as 30 cents per pound two years or two and a half years ago dropped and through most of 1968 was down to around 21 cents. The retail price, on the other hand, has been up in the order of 65 cents, 75 cents and 80 cents per pound.

If the fishermen received, say, 12 cents of those 30 cents and then the price dropped to 21 cents, clearly someone got hurt. A number of processing companies have been in serious difficulties because of this drop in the export price—the delivered price, Boston. Several have closed their doors; one very large one backed by Unilever in the United Kingdom just decided to close up shop and leave. It left behind a very substantial investment and never really looked back over its shoulder at the plant in Newfoundland, the government has had to move in and do something about it.

Last year we paid what were called deficiency payments which really amounted to a direct cents per pound subsidy. We could not continue that because we were faced with a countervailing duty in the United States, whereby had we reintroduced it, say, April 1, 1969, we would have been faced within 24 hours with a court action in the United States. Automatically a comparable duty would have been levied in the U.S. offsetting our support and it would have annulled anything we could have done along the same lines as in 1968.

So we have done several other things, all of which are generally, I think, acceptable in the eyes of other countries, not just the United States, but other countries. The main thing we have done or are in the process of doing is this: We have said that the federal government—the Canadian Government—through the

[Interprétation]

Notre production a augmenté d'une façon considérable et l'efficacité s'est améliorée en général, même si elle est encore au-dessous des normes. Notre principal marché, les États-Unis, s'est agrandi d'une façon suivie, et les prix de détail se sont maintenus d'une façon raisonnable pour les principaux produits congelés de poisson de fond.

Nous avons passé au cours des dix-huit derniers mois une de ces périodes classiques au Canada où les prix de détail aux États-Unis se sont maintenus ou ont augmenté légèrement, mais où les prix payés aux exportateurs canadiens ont baissé. Dans ce cas, si je peux généraliser, les prix pour la morue congelée qui avaient augmenté jusqu'à un sommet de 30 cents la livre, il y a deux ans ou deux ans et demi, a baissé considérablement et tout au cours de l'année 1968, s'est maintenu autour de 21 cents la livre. Le prix de détail, d'autre part, a augmenté sensiblement jusqu'à 65, 75 et même 90 cents la livre.

Si le pêcheur avait reçu disons 12 cents sur les 30 cents payés en gros et que, par après, le prix ait baissé jusqu'à 21 cents, il est clair que quelqu'un a été lésé. Un grand nombre de compagnies de préparation ont été dans de sérieuses difficultés financières à cause de cette baisse de prix dans nos exportations. Plusieurs ont dû fermer leurs portes. Une très grande manufacture faisant partie du groupe Unilever au Royaume-Uni vient juste de décider de fermer ses entreprises et d'abandonner le domaine. Elle a laissé derrière elle des investissements substantiels et n'a jamais regardé en arrière pour voir ce qu'elle avait abandonné à Terre-Neuve. Ainsi, le gouvernement doit passer à l'action et prendre en main les opérations.

Au cours de l'an passé, nous avons payé ce que nous avons appelé des paiements d'appoint, ce qui était en fait des subventions directes par livre. Nous ne pouvons pas continuer ces subventions car nous avons à faire face à une taxe compensatoire aux États-Unis et si nous avions réintroduit ces mêmes subventions, disons au 1^{er} avril 1969, en moins de vingt-quatre heures, nous aurions fait face à une réaction aux États-Unis, et automatiquement, des droits comparables auraient été imposés aux États-Unis contrebalançant notre appui. Nous aurions pu faire la même chose qu'en 1968.

Nous avons pris plusieurs autres mesures qui sont généralement acceptables aux yeux d'autres pays, mais non pour les États-Unis. Ce que nous avons fait surtout et que nous essayons de faire c'est ceci: nous avons dit que le gouvernement canadien, par l'entremise de l'Office de soutien des prix des pro-

[Text]

Fisheries Prices Support Board will go into the market and will support and endeavour to stabilize the export price of our principal ground-fish products.

We will be doing this on a selective basis; we will be doing it only in respect of those products, the price of which are well below some long-term trend. We are going to endeavour to take the big swings out of the market price for our principal ground-fish products—our frozen ground-fish products—and we are going to do it in the sense of supporting the price.

The Fisheries Prices Support Board legislation which was set up some years ago is ideally suited for this purpose. There is a \$25 million fund there. In theory the moneys involved through the purchase of ground-fish at one stage are recovered at a later stage when the fish is resold, so that over the long pull the operation should break even. It certainly should break even if we are in the market only when the price is below the long-term trend, never in the market when the price is above the long-term trend.

This announcement that the federal government would go into the market and support the price for Canadian produced frozen ground-fish products already has had a beneficial effect, the price has begun to move upward.

As long as the price is moving upward, I think we would be unwise to say at what point we are going to enter the market, but you can be sure that we would have to enter the market if the price remained for any protracted period of time below that of the cost of our more efficient producers in Canada. I am informed that the costs of our more efficient producers, for example, in the case of cod—frozen cod blocks—is in the order of 25 to 26 cents, per pound, which is one rough indication of the level below which the Fisheries Prices Support Board would be inclined to enter the market. That is one product. Of course, there are red fish, for which another price, another set of costs and another target price, if you like, would have to be determined. In the case of the flat fish or flounders, the price has already risen to a point where it is well above the long-term trend and there is certainly no immediate reason why the Fisheries Prices Support Board should begin to pick up flat fish.

That is the biggest move, the most important one that the federal government, I think, can take. In other words, back the Canadian exporter of frozen ground-fish with the credit of the nation and by picking up fish which otherwise might be sold at distress prices by

[Interpretation]

duits de la pêche s'occupera de commercialisation et tentera de stabiliser les prix d'exportation de nos prises de poisson de fond.

Nous le ferons pour que certaines catégories dont les prix sont inférieurs à certaines tendances à long terme. Nous allons essayer de donner vraiment un élan aux prix du poisson de fond, nous allons le faire sous forme de soutien des prix.

La loi sur l'Office de soutien des prix des produits de la pêche, au point de vue du poisson est idéalement appropriée. Il y a une caisse de 21 millions de dollars. En théorie, les fonds en cause, par l'entremise de l'achat de produits de pêche, seront récupérés au moment de la vente, de sorte qu'à la longue l'opération devrait être payante, devrait être rentable. Surtout si on considère que nous nous occuperons de commercialisation que lorsque le prix sera inférieur aux tendances à long terme. Cette déclaration à savoir que le gouvernement fédéral appuierait, supporterait les prix pour les poissons de fonds canadiens a déjà eu des effets salutaires. Les prix ont commencé à monter.

Pour autant que les prix montent, je crois que nous ne serions pas avisés de dire à quel moment précis nous allons nous occuper de commercialisation en particulier, mais vous pouvez être sûrs que nous allons nous occuper du marché si les prix restent pendant assez longtemps inférieurs aux prix des producteurs les plus efficaces du Canada. On me fait savoir que les coûts de nos producteurs les plus efficaces dans le cas, par exemple, de la morue, serait de l'ordre de 25 à 26 cents la livre. Ce n'est là qu'une indication du niveau en bas duquel le gouvernement fédéral ou l'Office de la commercialisation s'occuperait du marché. Il y aura un prix de soutien pour le saumon, un autre prix devrait être déterminé pour chaque cas. Dans le cas des poissons plats, les prix ont déjà monté, et dépassent déjà les tendances à long terme, et il n'y a aucune raison maintenant pour que l'Office de commercialisation intervienne.

Voilà quelle est la meilleure initiative que puisse prendre le gouvernement canadien. En d'autres mots, les exportateurs canadiens de poissons plats congelés, en achetant des poissons qui autrement pourraient être vendus à des prix de sacrifice, cela empêche, je crois,

[Texte]

the companies in poor financial shape, prevent the market price from being eroded by Canadians who just have to have cash and who just have to sell.

The Europeans have complained that the Canadians always break the price. This move into the market by the Fisheries Prices Support Board will offset that and I hope in the future Canadians will not be accused of being the price leaders in the downward trend. We have had meetings—exploratory meetings—both in Washington and Copenhagen with the Scandinavian countries on both the manner of this stabilization function and the way in which we could co-operate with the suppliers of the market in maintaining reasonable prices in the United States.

The upward price adjustment which is already under way is the best news that the industry could get, it is in the direction of a relatively free market and it also does not involve any tax dollars on a continuing basis. This is not a subsidy, it is simply an attempt to stabilize and, in effect, put a floor under prices for export.

There are various other things which we are doing in the nature of loans for the reorganization of plants to make them more efficient, both in the short-term and the long-term. One program has already been announced and several others will be announced, so we will have not only a better market price situation, but I hope a better cost situation as time goes by.

I could go on; I could talk about a number of other sectors of the fishery; I am tempted to say a word about seals before the questions start. Perhaps I could elude to the correspondence we have been getting, in my office alone on this subject. We have already had 1,260 letters in the English language and 580 in the French language which we have answered. We have a backlog, I am told, that has really begun to pile up in the last few days of about 7,000, so we have a long way to go, but we are getting there.

This is probably the biggest volume of mail that anyone has been getting in Ottawa recently, but it is nothing when compared with some of the mail that our embassies have been getting overseas. As a result of *Paris Match*—

Mr. McGrath: Is the Prime Minister's mail included in that figure?

Mr. Davis: No, that is just my own.

Mr. McGrath: Do you have a figure on what the Prime Minister's mail has been?

[Interprétation]

les prix du marché de baisser par suite de ventes de liquidation des pêcheurs qui ont besoin de liquidité à tout prix.

Les Européens se plaignent que les Canadiens font baisser les prix. L'action de l'Office de la commercialisation pourrait contrebalancer cela et on ne pourrait pas accuser les Canadiens de faire baisser les prix. Nous avons eu des réunions exploratoires à Washington et à Copenhague sur la façon de stabiliser les prix et sur la façon de collaborer avec les fournisseurs pour maintenir des prix raisonnables aux États-Unis.

Ce rajustement vers la hausse qui s'opère déjà, c'est la meilleure nouvelle que l'industrie pouvait obtenir. Cela va, je crois, dans le sens d'un marché libre, et ne met en cause aucune étape de façon continue. Il ne s'agit pas d'une subvention, il s'agit simplement d'un élément de stabilisation pour imposer un maximum aux prix à l'exportation.

Nous accordons aussi des prêts pour la réorganisation des usines, des conserveries, à long terme et à court terme. Ces programmes ont déjà été annoncés, plusieurs autres le seront bientôt. Nous aurons non seulement, je crois, de meilleurs prix mais une situation prix de revient qui sera favorable avec le temps. Je pourrais continuer indéfiniment et parler d'un certain nombre de secteurs des pêches. J'aimerais dire un mot maintenant des phoques. Peut-être pourrais-je parler de la correspondance que nous avons reçue à mon bureau, à ce sujet. Nous avons déjà 1,260 lettres en anglais et 580 lettres en français auxquelles nous avons répondu. Nous avons environ 7,000 lettres d'accumulées. Il nous reste encore beaucoup de correspondance à faire et nous y arriverons. C'est sans doute le volume le plus considérable de lettres reçues sur une question à Ottawa, récemment. Mais ce n'est rien comparativement aux lettres que certaines de nos ambassades ont reçues outre-mer.

M. McGrath: Est-ce que cela comprend la correspondance du premier ministre?

M. Davis: Non, seulement la mienne.

M. McGrath: Avez-vous les chiffres pour la correspondance que reçoit le premier ministre?

[Text]

Mr. Davis: It runs into the thousands.

Mr. McGrath: I know that, yes.

The Chairman: Did you not notice the expansion of the East Block?

Mr. Davis: I am told that as a result of the several pages of coloured reproductions in the European publication *Paris Match* there has been a tremendous outburst of concern, particularly in France, Switzerland and Belgium. I am told that in Belgium our Embassy has had to deal not only with many thousands of protest calls and letters, but the Ambassador has had to defend our cause publicly against editorial criticism by the major Brussels newspapers. The Embassy has received protesting delegations, one of which delivered a petition purportedly containing 400,000 signatures of school children and they have had to seek police protection against one bomb threat. In France this protest delegation marched into the Chancery two or three weeks ago led by a man who has since gone on a much publicized hunger strike. The group was later disbursed by the police. In Geneva our Consulate was similarly visited by student protest groups, et cetera, et cetera. There was picketing in New York, Washington and so on and our Embassy in Washington has been getting letters at the rate of 600 a day.

Much of this activity has been caused by publications like the one in *Paris Match* or by a several page article which is appearing in the current edition of *Life* magazine—and also, I think to an even greater extent by television. I was particularly concerned about a television program which was shown in New York City a few weeks ago—I will find the particulars as I will have to be careful about this—on February 20, in which Mr. Brian Davies who is Executive Secretary of the New Brunswick Society for the Prevention of Cruelty to Animals was interviewed and in which he said in answer to a question at the beginning of the television program that all of the young seals were skinned alive.

We have the text of that interview and I think this Committee—certainly a committee of the House of Commons—should invite Mr. Brian Davies to come here and confront him with the transcript of that particular interview. It was part, as I said, of a television program in which the seal hunt was shown in colour for a considerable period of time. As many of you know who have been to the hunt, it is a very gory happening and the film itself causes a good deal of consternation especially among women and children. If the

[Interpretation]

M. Davis: Il s'agirait de 1,000 lettres au plus.

M. McGrath: C'est ça.

Le président: Y compris son bureau de l'Édifice de l'Est.

M. Davis: On m'a dit qu'à la suite de quelques pages de reportage en couleur de *Paris-Match*, il y a eu des manifestations d'inquiétude notamment en France, en Suisse et en Belgique. On me dit qu'en Belgique, notre ambassade a dû, non seulement répondre à des milliers de lettres et d'appels, mais l'ambassadeur a dû répondre aux critiques, de réfuter les critiques d'un journal, d'un quotidien de Bruxelles. On a livré une pétition qui contenait les noms de 400,000 écoliers. Il a fallu demander la protection de la police contre une menace de bombe. En France, il y a eu une marche de protestation sur l'ambassade, il y a deux ou trois semaines, menée par un homme qui avait fait une grève de la faim, le groupe a été dispersé par la police. A Genève, notre consul a été visité par des groupes d'étudiants qui ont fait des démonstrations, etc. . . . Il y a eu du piquetage à New York. Notre ambassade à Washington a reçu 600 lettres par jour, à certains moments.

Cette activité dans une bonne part, a été causée, je crois, soit par des publications comme *Paris-Match*, soit par l'article paru dans la revue *Life*. Et aussi dans une plus grande mesure encore, à cause de certaines émissions de télévision. J'ai été notamment préoccupé à la suite d'une émission qui a été diffusée à New York il y a quelques semaines; il s'agissait d'une télémission qui a été présentée dans la ville de New York le 20 février, et dans laquelle M. Brian Davey, secrétaire exécutif de la Société du Nouveau-Brunswick pour la prévention de la cruauté envers les animaux, a répondu à une question au début de l'émission, que tous les jeunes phoques étaient épluchés vivants.

Nous avons le texte. Je crois que ce Comité des Communes devrait inviter M. Brian Davey à venir témoigner devant lui. Nous avons la transcription de cette entrevue. C'était lors d'une émission où l'on montrait la chasse aux phoques en couleur, et comme bon nombre d'entre vous le savent, il s'agit de tout un «happening», le film a semé la consternation, notamment chez les femmes et chez les enfants, et pourtant l'expert qui a été interviewé et dont on entend la voix pendant le film explique des choses qui ne sont pas tout

[Texte]

expert who was interviewed and whose voice was heard along with the film made claims such as that which were untrue, it certainly hurts not only the seal hunt and, then, the fishery of Eastern Canada, but I suggest even more important it hurts Canada's reputation.

I looked up the administrative budget of the Department of External Affairs for this current year and it is about \$50 million. I think it would take quite a few million dollars to offset the adverse publicity which Mr. Brian Davies has given Canada as a result of his recent activities, not only in New York but abroad. He has been to all these countries and he and the organization which has financed ads in virtually all of our Canadian dailies recently have certainly created for Canada a reputation as a country populated by people who are not only unreasonable but care little about the feelings of human beings and animals, and so on.

The society that has put up the money for all these ads must have spent a considerable sum—many of you have seen this advertisement—and the society asks that donations to help this cause be sent to the Association for the Protection of Fur-Bearing Animals, PO Box 274, Vancouver 1. That is for Vancouver. Below that it says that all such donations will be sent to Save the Seals Fund, New Brunswick and that receipts will be issued for income tax—which appears at the bottom. I do not know—I have not checked that aspect of it yet.

Mr. Lundrigan: I thought I would get that off my chest before anyone asked questions about seals, fish or anything else.

The Chairman: Thank you, Mr. Davis. Would you like to have your statement attached as an appendix to tonight's proceedings?

Mr. Davis: Whatever you suggest.

The Chairman: Is it agreed that the Minister's statement be made an appendix to tonight's proceedings?

Some hon. Members: Agreed.

The Chairman: Before we proceed with questions I wish to draw your attention to the agreement at the first meeting that we would have a ten-minute period for each questioner on the first round and entertain supplementary questions only on the second round. That will give everybody an even chance. I have first on my list here, Mr. Lundrigan.

[Interprétation]

à fait vraies. Cela fait sûrement du tort, non seulement à la chasse aux phoques comme telle et aux pêcheurs de l'Est du Canada, mais ce qui est plus important encore, à la réputation du Canada.

Si je jette un coup d'œil au budget administratif du ministère des Affaires extérieures, pour l'année en cours, je vois que c'est environ 50 millions de dollars. Et je crois qu'il faudrait plusieurs millions de dollars pour contrebalancer les effets de cette publicité adverse que M. Brian Davey a donnée au Canada par suite de son activité, non seulement à New York, mais aussi à l'étranger. Dans tous ces pays, lui-même et l'organisation qui a financé les annonces dans presque tous nos quotidiens canadiens, récemment, ont sûrement fait beaucoup de tort à la réputation du Canada, comme pays peuplé par des gens qui sont non seulement censés être peu raisonnables, mais qui s'intéressent peu au bien-être des animaux et des hommes. La Société qui a dépensé de l'argent pour ces annonces doit avoir dépensé une somme considérable, et elle demande que des dons soient envoyés à l'Association pour la protection des animaux à fourrure, case postale 274, Vancouver 1. Tous ces dons seront envoyés pour renflouer la caisse du fonds de protection des phoques au Nouveau-Brunswick, et on donnera des reçus aux fins de l'impôt sur le revenu. Je ne sais pas... Je n'ai pas encore étudié toute l'affaire.

M. Lundrigan: Je voulais dire ce que j'avais sur le cœur, avant que quelqu'un pose des questions sur les phoques, les poissons, etc.

Le président: Merci, monsieur Davis. Aimerez-vous que votre déclaration soit publiée en annexe au compte rendu de la séance de ce soir?

M. Davis: Comme vous voudrez.

Le président: Êtes-vous d'accord pour que la déclaration du ministre soit publiée en annexe au compte rendu de nos délibérations de ce soir?

Des voix: D'accord.

Le président: Avant que nous ne passions aux questions, je désire vous signaler l'entente que nous avons prise au cours de la première séance, savoir, que nous aurions une période de dix minutes pour chaque interrogateur, lors du premier tour de questions, et celui qui aura des questions supplémentaires les posera seulement au deuxième tour. Cela donnera une chance égale à tout le monde. Le premier inscrit sur ma liste est M. Lundrigan.

[Text]

Mr. Lundrigan: First of all, Mr. Chairman, I wish to ask you a question which I hope will not affect my ten minutes because it is a procedural one. Was it the feeling of the Steering Committee that we should consider the seal fishery particularly right now? I ask because I think the whole matter of the estimates and the general statement of the minister, which was certainly welcome, ought perhaps to be put off until a later date. Was this the general feeling of the Steering Committee?

The Chairman: The Steering Committee asked that we deal in part with the seal hunt.

Mr. Lundrigan: Thank you, Mr. Chairman. I wish to thank the Minister for his statement. I will not waste time by mentioning particular references to aspects of the Canadian fisheries generally, West coast as well as the East coast, salt and fresh cod fishery, and other aspects of the fishery. I think some of the statements have been made previously, and undoubtedly we will have a chance to discuss these in more detail.

I am going to push the matter of the seal fishery because it is an issue that has to be clarified. We have on our hands an international problem, not merely a national problem, or an east coast Canadian problem.

The minister was quite frank—and I am very happy that he was—in bringing out some of the incidents such as the one in New York and the other kind of publicity leading up to the international black eye that we have received.

First of all, may I ask the Minister if it would be possible for this Committee to get a transcript of the remarks made in New York? Perhaps we could agree to have it included as part of the discussion here this evening.

Mr. Davis: I think so. I have part of the transcript. I received a photocopy of the first three minutes of the meeting at which the allegation was made about the skinning of the young seals alive. It identifies the station, and so on. I would have thought that the Committee could get a complete transcript from the station.

Mr. Lundrigan: Mr. Chairman, may I suggest that the Committee get this transcript and have it made part of our minutes? Undoubtedly we are going to have to call Mr. Davies, or some members of his group, to get at the root of the matter.

[Interpretation]

M. Lundrigan: Monsieur le président, j'aimerais d'abord poser une question qui, je l'espère, ne réduira pas mes dix minutes, car c'est une question de procédure. Le comité directeur croit-il que nous devrions étudier dès maintenant la question de la chasse aux phoques? Je demande cela car je crois que toute la question du budget et de la déclaration générale du ministre devrait peut-être alors être remise à une date ultérieure. Qu'en pense le comité directeur?

Le président: Le comité directeur nous a demandé d'étudier en partie la chasse aux phoques.

M. Lundrigan: Merci, monsieur le président. Je tiens à remercier le ministre de sa déclaration. Je ne parlerai pas de certains aspects des pêcheries canadiennes, pêche à la morue d'eau salée ou d'eau douce, tant sur la côte Est que sur la côte Ouest. Je crois que certaines déclarations ont été faites auparavant et, sans doute, aurons-nous l'occasion d'étudier cela plus en détail.

Je vais, pour ma part, soulever la question de la chasse aux phoques, car il s'agit là d'un problème qu'on doit clarifier, d'un problème international; c'est plus qu'un simple problème national, c'est plus qu'un problème de la côte Est du pays.

Je crois que le ministre a été très franc, et je suis content qu'il n'ait pas mâché ses mots et qu'il ait soulevé certains incidents, comme celui de New York et la publicité qu'on nous fait dans les autres pays.

Je vais d'abord demander au ministre s'il serait possible d'obtenir, tout d'abord, une copie, une transcription des observations faites à New York? Et, est-ce qu'il y aurait moyen de faire incorporer cette transcription au compte rendu de nos délibérations de ce soir?

M. Davis: Je crois que oui. J'ai une partie de la transcription. J'ai reçu une photocopie du texte des trois premières minutes, au sujet de l'épluchement des jeunes phoques vivants. On peut identifier la station, etc. Il me semble que le Comité pourra obtenir le script intégral de cette station.

M. Lundrigan: Est-ce que, monsieur le président, le Comité pourrait obtenir cette transcription et l'incorporer à notre compte rendu, car nous allons devoir appeler M. Davies, ou d'autres membres de son groupe, afin d'aller à la racine du problème.

[Texte]

The Chairman: Is it agreed?**Some hon. Members:** Agreed.

Mr. Lundrigan: Mr. Chairman, may I ask the Minister, through you, whether the government or the Department of Fisheries has taken any action to try to reshape public opinion internationally? The statement from the minister today is the strongest one I have heard on the seal fishery, in the sense of calling a spade a spade. Can the Minister tell us whether his department, or the government, has taken any action, or plans any action, to have some of these matters refuted in such a way as to reshape public opinion, because, as has been admitted, we have suffered an international black eye.

This would not be so bad if we deserved it, but when it is realized that much of the publicity has been the result of fabrications and, as I understand it, fraudulent manufacturing of films and other such procedures to get attention—I will not give any examples. I want to be fair. As a result of this, has any action been taken, or is any action contemplated?

Mr. Davis: First, on action taken, you will recall that when members went down to the hunt on March 7 we took along the press. We let CBC and CTV and all of the Press Gallery know about it. We took as many as could be accommodated in the Viscount plane. They were down there for two days. They had an opportunity to see the hunt for themselves. I think I am right in saying that, without exception, they reported the hunt accurately. There were none of the scare stories or fabrications that have generally been dispensed abroad such as those emanating from their reporting of the hunt that occurred this year.

Other than endeavouring to involve as many people as possible and certainly as many of the press and other news media as possible, the Fisheries Department has not at least up until this moment, been attempting to shape the picture in one way or another.

First of all, we did not have a good, clear picture of how many seals were in fact in the gulf, or how many young seals were being born, and so on, for another week to ten days. We closed the fishery, reopened it briefly and closed it finally in the gulf because of the relatively small number of seals that in fact appeared there this year,

[Interprétation]

Le président: Est-ce entendu?**Des voix:** D'accord.

M. Lundrigan: Puis-je demander au ministre, monsieur le président, si le gouvernement, ou le ministère des Pêcheries, a fait quoi que ce soit pour essayer de redorer le blason du Canada devant l'opinion internationale? Cette déclaration du ministre, aujourd'hui, est la plus ferme que j'aie entendue sur la chasse aux phoques, en ce sens qu'elle appelle les choses par leur nom. Le ministre peut-il nous dire si son ministère, ou le gouvernement, a fait quoi que ce soit, ou compte faire quoi que ce soit, en vue de réfuter certaines de ces allégations et de ces remarques et de refaire la réputation du Canada devant l'opinion publique, car nous avons souffert, je crois, d'un œil au beurre noir international, pour ainsi dire.

Ce ne serait pas si mal si on le méritait, mais quand on voit qu'une bonne partie de la publicité résulte de films qui ont été fournis frauduleusement afin d'attirer l'attention—je ne donnerai pas d'exemples. Je tiens à être juste. Est-ce qu'on a pris quelques mesures, en conséquence, ou est-ce qu'on songe à en prendre?

M. Davis: D'abord, en ce qui concerne les mesures prises, vous vous souvenez sans doute que lorsque les députés sont allés voir la chasse aux phoques, le 7 mars, ils ont amené des journalistes avec eux. Nous en avions informé la tribune de la presse, Radio-Canada et CTV. Nous en avons amené avec nous, autant que l'avion pouvait en contenir, et ils sont restés deux jours. Ils ont pu voir la chasse aux phoques de leurs propres yeux. Et je ne pense pas exagérer lorsque je dis que, sans exception, ils ont fait un reportage exact de la chasse. Il n'y avait pas d'histoires d'horreur ou de pures fabrications que l'on a diffusées à l'étranger, comme celles qui ont découlé de leurs reportages de l'an dernier.

Mais, outre qu'il ait essayé d'y impliquer autant de personnes que possible, surtout les journalistes et les autres moyens de communications, le ministère des Pêcheries n'a pas, du moins jusqu'à ce moment, essayé de présenter les faits sous un angle ou un autre.

Tout d'abord, nous ne savions pas exactement le nombre de phoques qui se trouvaient dans le golfe, quel était le taux de naissances des jeunes phoques, pour les prochains sept à dix jours. Nous avons fermé la chasse pour l'ouvrir de nouveau et la refermer tout de suite dans le golfe, à cause du nombre restreint de phoques que l'on y a trouvés cette

[Text]

which, as you know, was because of the limited amount of ice there.

Those actions to close, open and re-close were dictated entirely by the number of seals observed by our fisheries inspection officers, and it was on their recommendation that I made those announcements. I did not make them for any reason such as widow-dressing or concern about public opinion abroad. I do not think that that, in the short-run, would have had any effect at all on people at any distance from the hunt.

Mr. Lundrigan: There are so many questions, Mr. Chairman, that it might be wise to allow members to put supplementaries. A number of members want to explore this a little further and as all the questions are really inter-related I would certainly agree to anybody cutting into my ten minutes to ask a supplementary. Would that meet with general agreement?

The Chairman: Quite a few have indicated that they wish to question. You can have a second turn then.

Mr. McGrath: On a point of order, Mr. Chairman. Surely Mr. Lundrigan's point is well taken. We have limited time at our disposal tonight. Nobody wants to dominate the floor for a full ten minutes. Surely the best and most expeditious way to develop the questioning and the evidence which we will hear from the Minister would be to entertain supplementary questions. Because of the time limitation on the Committee I think there would be general agreement on that.

Mr. Anderson: Let me point out, Mr. Chairman, that at no time in this Committee has it not been possible to turn over one's time to another member. It is quite easy for Mr. Lundrigan to turn to another member and ask him to use up the rest of his ten minutes. I think that is fair enough. I do not see that we should waste time now on unnecessary discussion of a procedural point.

Mr. McGrath: No; we do not want to waste time.

Mr. Lundrigan: I think it is generally understood that we can ask a supplementary when we want.

Mr. Chairman, I would like to ask the Minister if any action at all has been taken on the report of the drowning of a significant number of young seals. I understand that a

[Interpretation]

année par suite du manque de glace. L'ouverture et la fermeture de la chasse ont été dictées seulement par le nombre restreint de phoques qu'on y comptait cette année. Le compte était fait par les agents d'inspection du ministère des Pêcheries, et c'est sur leur recommandation que les décisions ont été prises. Il ne s'agissait pas de faire bonne figure et de rétablir notre bonne réputation à l'étranger. Je ne pense pas qu'à court terme, cela aurait eu une influence sur les gens que la chasse ne touche pas directement.

M. Lundrigan: J'ai tellement de questions à poser que je pense qu'il serait peut-être sage de permettre aux députés de poser des questions supplémentaires. Un certain nombre de députés veulent approfondir cette question davantage et comme toutes ces questions sont reliées les unes aux autres, je n'ai pas d'objection, si quelqu'un veut poser des questions supplémentaires pendant les dix minutes qui me sont réservées. Est-ce que tout le monde est d'accord?

Le président: Plusieurs députés ont manifesté le désir de poser des questions. Vous aurez droit à un deuxième tour.

M. McGrath: J'en appelle au Règlement, monsieur le président. Je pense que M. Lundrigan a raison. Nous avons très peu de temps à notre disposition. Personne ne veut monopoliser le droit de parole pendant dix minutes. La meilleure façon de procéder et d'élaborer les questions et les témoignages du ministre serait certainement d'entendre des questions supplémentaires. A cause des limites de temps, je pense que le Comité serait d'accord pour adopter cette méthode.

M. Anderson: Je voudrais faire remarquer, monsieur le président, qu'il a toujours été possible à ce Comité de céder son droit de parole à un collègue. Il est facile pour M. Lundrigan de se tourner vers un autre député et lui demander d'écouler ce qui reste de son dix minutes. Je crois que c'est juste et que nous ne devrions pas perdre notre temps à discuter de la procédure.

M. McGrath: Non. Il ne faudrait pas de temps à discuter de ces questions. Je crois qu'il est entendu qu'on peut poser des questions supplémentaires n'importe quand.

M. Lundrigan: Monsieur le président, je voudrais demander au ministre si on a pris des mesures quelconques au sujet du rapport des noyades d'un nombre important de jeunes phoques. Ces jeunes phoques doivent avoir au moins deux semaines avant de pouvoir nager dans l'Atlantique. Est-ce que des mesures ont

[Texte]

seal has to be at least two weeks old before it can take to the Atlantic and be relatively sure of survival. Has any action been taken regarding the number of drownings resulting, as I understand it, from the use of helicopters mainly by Mr. Brian Davies and some of his colleagues in connection with the seal fishery. There have been reports of this happening. I wonder if there has been any action taken against Mr. Davies. Has there been an established case against him on this particular point?

Mr. Davis: No, for several reasons. One is that there were a large number of helicopters operating over a relatively small amount of ice where the seals were in the Northumberland Strait. Obviously the mother seals were much disturbed by the helicopters and I think we must seriously consider whether helicopters should ever be used directly in the seal hunt. But it was interesting to me to note that most of the sealing ships themselves were equipped with helicopters. We used helicopters; Brian Davies' people used helicopters, and so on. It was the quick way to get out from Charlottetown a few miles across broken ice on to the main ice flows.

The ice was so broken up that fixed-wing aircraft has great difficulty landing, and only one was landing at all at any time. Otherwise, you had to walk out four or five miles. It would take a whole day to go out and get a few seals and get back again.

Mr. Lundrigan: Was there any evidence that young seals were in fact drowning? Was there evidence that young seals were taking to the water prematurely and thereby drowning?

Mr. Davis: I will ask Mr. Levelton, who is here, but my observation would be that there were very few, if any, young seals which took to the water as a result of overflying by aircraft or even people walking among them and touching them. The mothers took to the water, and undoubtedly many of the mothers stayed in the water, and I gather if the young seals are born in the water they drown automatically. An undetermined number of young seals have been lost. Now, a great many may have been lost because the mother seals could not find ice in the first place, but the mother seals were taking to the water. They were very frightened by helicopters.

Mr. Lundrigan: And pupping in the water.

Mr. Davis: Well, I do not know about that, but maybe Mr. Levelton can tell you about this.

[Interprétation]

été prises au sujet du nombre de noyades résultant, si j'ai bien compris, de l'emploi d'hélicoptères, surtout, par M. Brian Davies et certains de ses compagnons par rapport à la chasse aux phoques. On a eu certains rapports à ce sujet. Est-ce que l'on a pris certaines mesures contre M. Davies? Est-ce qu'on a porté des accusations contre lui à ce sujet?

M. Davis: Non, et cela pour plusieurs raisons. La première raison c'est qu'il y a eu un grand nombre d'hélicoptères qui survolaient un territoire assez restreint où les phoques se trouvaient dans le Détroit de Northumberland. Évidemment, les mères ont été dérangées par ces hélicoptères et nous nous demandons si on devrait permettre l'utilisation d'hélicoptères pour la chasse aux phoques. Mais j'ai remarqué avec intérêt que la plupart des bateaux qui font la chasse aux phoques eux-mêmes étaient équipés d'hélicoptères. Nous avons utilisé des hélicoptères. Les employés de Brian Davies ont aussi utilisé des hélicoptères, c'est une façon rapide de se rendre de Charlottetown aux masses de glaces flottantes.

La glace était tellement brisée qu'un avion avait beaucoup de difficulté à atterrir, il n'y en avait qu'un sur les glaces à la fois. Autrement il fallait marcher quatre ou cinq milles et prendre toute une journée pour s'y rendre, capturer quelques phoques et en revenir.

M. Lundrigan: Est-ce qu'il est vrai que ces jeunes phoques se sont aventurés dans l'eau prématurément et se sont noyés?

M. Davis: Je demanderai à M. Levelton ici présent, mais d'après ce que j'ai vu, il y a très peu de jeunes phoques qui se sont aventurés dans la mer à cause des avions et des hélicoptères, ou même des gens qui s'en approchaient et les touchaient. Les mères l'ont fait et plusieurs sont restées dans la mer sans doute, et j'imagine que les jeunes phoques nés dans l'eau se sont noyés immédiatement. On a perdu beaucoup de phoques. Un grand nombre, cependant, peuvent avoir été perdus parce que les mères n'ont pu trouver de glace, mais il demeure que les mères ont été très effrayées par les hélicoptères.

M. Lundrigan: Et ont mis bas dans l'eau.

M. Davis: Je ne le sais pas. Peut-être que M. Levelton pourrait vous en parler plus longuement.

[Text]

Mr. C. R. Levelton (Director, Conservation and Protection Service, Department of Fisheries): Mr. Chairman, I do not think it is right to say that they were quite close to drowning as a result of the action of the helicopters. There was undoubtedly a loss of the young just two or three days prior to the opening of the season when there was a very heavy northwest gale which lasted for approximately $2\frac{1}{2}$ days and broke up the ice and subsequently put a number of the young into the water where they would drown, of course. Now, of the numbers involved, we cannot be sure.

Mr. Lundrigan: Could you give an approximation of the numbers?

The Chairman: Mr. Lundrigan your time has expired so I recognize Mr. McGrath:

Mr. McGrath: Mr. Chairman, I will defer to Mr. Lundrigan if he wants to continue.

Mr. Lundrigan: I have used up eight of my minutes, Mr. McGrath, so I do not mind.

Mr. McGrath: Mr. Chairman, the Minister will recall that on the adjournment debate—I do not recall the specific date—I read into the record a memorandum from a senior official in his Department—I know who the official is but I will not name him—to his predecessor in 1968, in which some very strong charges were made, and I would like to ask several questions in relation to that document.

In this document there is reference to the fact that the people who made this film, the *Artek* film, back in 1964, went to the ice without the permission of the fisheries officer before the hunt officially opened, and in fact killed seals out of season. My question is, why was action not taken against them? I realize this probably concerns your predecessor, but perhaps you may have the information.

• 2110

Mr. Davis: I do not happen to have reread that memorandum in the last few hours so I cannot really comment on it. But let me say this. First, up until this year and indeed through this year—I do not think we shall allow it in the future—it has been possible for landmen to hunt for seals at any time. In other words, a person walking out from land—presumably on his own—can pick up seals at any time, whereas there has been a starting date for so-called big commercial

[Interpretation]

M. Levelton (Directeur du Service de la conservation et de la protection, ministère des Pêches et des Forêts): Monsieur le président, je ne pense pas que l'on ait raison de dire qu'il y a eu beaucoup de noyades par suite de l'arrivée des hélicoptères. Sans doute on a perdu beaucoup de jeunes phoques, deux ou trois jours avant l'ouverture de la chasse à cause d'un grand vent du nord-ouest qui a duré deux jours et demi environ et qui a brisé les glaces et par conséquent un grand nombre de mères ont mis bas dans l'eau où les jeunes se sont noyés, mais on ne sait pas le nombre exact.

M. Lundrigan: Pourriez-vous nous donner une idée du nombre?

Le président: Monsieur Lundrigan, votre période de questions est terminée. Je donne la parole à monsieur McGrath.

M. McGrath: Monsieur le président, si M. Lundrigan veut continuer, je lui cède la parole.

M. Lundrigan: Non, monsieur McGrath, j'ai épuisé ma période de questions et je me retire.

M. McGrath: Monsieur le président, le ministre se souviendra sans doute que lors du débat de l'ajournement, je ne me rappelle pas de la date précise, j'ai lu un memorandum d'un haut fonctionnaire de son ministère à son prédécesseur, en 1968. Je sais quel est son nom mais je ne le nommerai pas. Ce mémo portait des accusations assez graves et j'aimerais poser plusieurs questions au sujet de ce document.

Dans ce document, on a parlé du fait que les gens qui ont fait le film «Artek» en 1964 sont allés sur la glace sans la permission de l'agent du ministère des Pêches avant l'ouverture de la saison et ont tué des phoques hors saison. Pourquoi n'a-t-on pas pris des mesures ou porté des accusations contre ces personnes? Je sais que cette question touche probablement votre prédécesseur, mais vous avez peut-être les renseignements.

M. Davis: Je n'ai pas relu ce mémoire au cours des dernières heures, je ne peux donc pas faire de commentaires. Mais voici. Jusqu'à cette année et pendant toute l'année, je ne pense pas que cela soit permis à l'avenir, mais jusqu'à présent les chasseurs qui portaient de la terre ferme, de faire la chasse au phoque, à n'importe quel moment. Autrement dit, une personne qui part de la terre, en supposant qu'il est seul, peut prendre des phoques à n'importe quel moment. Tandis

[Texte]

operations by ship and more recently by aircraft. So, as to whether it was legal or not would depend on who actually killed the seal.

Mr. McGrath: I am just reading what he says here and he makes no bones about it. I quote right from the memo:

The fact that seals were killed before the opening of the season, however, constituted an illegal act.

Now he is talking about the season in the gulf.

Mr. Davis: Yes, that is right. The season, as I understand it, back in 1964 was a season which applied to ships and aircraft but was not a season that would have applied to landmen; is that right? It depends whether you are licenced or not. What does the statement say? Was he a licenced landsman?

Mr. McGrath: I will just read this particular article and I do not want to spend too much time on this because I have more serious...

Mr. Davis: A landsman, to be free to take a seal, has to have a licence but he can walk out any time and take a seal. There is no date involved.

Mr. McGrath: I will not pursue this particular item although it does strike me as rather passing strange that action was not taken against these people in view of the very serious damage that followed from their activity on the ice at that time.

Mr. Davis: I can answer one part of that question. The memorandum to which you refer was dated early in 1968

Mr. McGrath: That is right.

Mr. Davis: About a year ago.

Mr. McGrath: Yes.

Mr. Davis: By which time the time limit for prosecution had long since elapsed. Is that right? The time limit is two years so the prosecution should have taken place by 1966. You can still ask the question as to why prosecution was not pursued before 1966.

Mr. McGrath: That is right. That question and answer makes a lot of sense.

Mr. Chairman, on another question—and I am sure that the Minister by his very forthright and strong statement tonight certainly would be in agreement with this proposi-

[Interprétation]

qu'avant il y avait une date d'ouverture pour les opérations commerciales menées au moyen de navires et, récemment, par avions. Par conséquent, tout dépend, au point de vue juridique, qui a tué le phoque.

M. McGrath: Je dis simplement ce qu'il dit ici et il ne s'en cache pas. Je cite le mémoire:

Le fait que les phoques ont été tués avant l'ouverture de la saison constitue un acte criminel.

M. Davis: Oui, c'est exact. Si je comprends bien, en 1964, la saison s'appliquait aux navires et aux avions, mais non pas aux chasseurs qui portaient de la terre ferme, n'est-ce pas? Tout dépend alors si le chasseur est détenteur d'un permis ou non. Que dit le mémoire? Est-ce qu'il détenait un permis?

M. McGrath: Je vais simplement lire cet article et je ne veux perdre trop de temps sur cette question car j'ai des choses plus sérieuses...

M. Davis: Un chasseur qui part de la terre ferme doit avoir un permis pour chasser le phoque, mais il peut aller chasser à tout moment. Il n'y a pas de date fixe.

M. McGrath: Je ne poursuivrai pas plus loin dans cet ordre d'idée, bien qu'il me semble un peu étrange que l'on n'ait pas pris de mesures contre ces personnes vu les dégâts graves qui ont résulté de leur activité.

M. Davis: Je pourrais répondre à une partie de la question. Le mémoire dont vous parlez a été présenté au début de 1968.

M. McGrath: C'est exact.

M. Davis: Il y a environ un an.

M. McGrath: Oui.

M. Davis: Alors que la date limite pour intenter des poursuites était déjà passée depuis longtemps. N'est-ce pas? Comme le délai est de deux ans, les poursuites auraient dû être entamées à la fin de 1966. Vous pouvez toujours poser la question à savoir pourquoi n'y a-t-il pas eu de poursuites avant 1966?

M. McGrath: Je comprends. La question et la réponse sont très sensées.

Monsieur le président, une autre question. Je sais qu'à la suite de sa déclaration très franche et nette de ce soir, le ministre sera d'accord avec cette proposition; il semble y

[Text]

tion—it would seem to me that there is a certain amount of confusion about this whole matter because we do not really know what films we are talking about.

Mr. Davis: Well there is one clue, if it is black and white, it could be the *Artek* film. If it is a coloured film it is not the *Artek* film.

Mr. McGrath: I see.

Mr. Davis: Mr. Brian Davies is showing a coloured film; he is not showing the *Artek*.

Mr. McGrath: I see. Mr. Chairman, I put this to the Committee, that if we are going to pursue this matter, and I presume it is the wish of the Committee—certainly it would appear to be the wish of the Minister that we do so—then it would seem to me to be in order for us to consider the witnesses that we should call.

Now, Mr. Chairman, I am really directing my remarks at you: if it is the intention of the Committee to pursue this investigation into the seal fishery and the consequences of some of the films that have been produced and some of the activities of Mr. Brian Davies whom I presume is not related to the Minister...

An hon. Member: A different spelling; D-a-v-i-e-s. There is quite obviously no relation.

Mr. McGrath: ...that we should now decide to call these people, and if you would entertain a motion, Mr. Chairman, I would move...

The Chairman: Would you excuse me just a moment before you do so. We were discussing that with the legal authority this afternoon, and it is not a matter of being out of order; that is not what I mean. However, the time available to us has to be taken into consideration. We are leaving the first part of this week for an Easter recess.

• 2115

When we return after the Easter recess we will be going to the West Coast from the 19th to a date in the latter part of the month at which time we will be asked to finish the estimates that are returned to the House at that time. However, if we get other terms of reference from the House to go into this seal business—well, there is no time available before that.

[Interpretation]

avoir un peu de confusion parce que nous ne savons pas exactement de quels films nous parlons.

M. Davis: Nous avons un indice. Si c'est un film en noir et blanc, ce serait le film d'*Artek*, mais si c'est un film en couleurs, il n'est pas d'*Artek*.

M. McGrath: Je vois.

M. Davis: Monsieur Brian Davies a projeté un film en couleurs donc ce n'est pas celui d'*Artek*.

M. McGrath: Je vois. Monsieur le président, je propose au Comité, que si nous allons nous attarder à cette question, et je suppose que le Comité le désire, je pense du moins que le ministre le souhaite, il me semble qu'il serait dans l'ordre que nous songions aux témoins que nous allons faire comparaître.

Monsieur le président, si c'est l'intention du Comité de poursuivre cette enquête sur la chasse aux phoques et les conséquences de certains films qui ont été montrés et certaines des activités de M. Brian Davies qui, je présume, n'est pas parent avec le ministre...

Une voix: Son nom s'épelle D-a-v-i-e-s; il n'y a évidemment aucun lien de parenté.

M. McGrath: ... que nous devrions, dès maintenant, décider de faire comparaître ces personnes, et si vous me permettez de présenter une proposition, monsieur le président, je propose...

Le président: Voulez-vous m'excuser un instant, M. McGrath, avant de faire votre proposition. Nous en avons discuté avec les conseillers juridiques, cet après-midi, et ce n'est pas une question d'admissibilité, ce n'est pas ce que je veux dire, mais il faut tenir compte du temps qui est à notre disposition. Nous partons au début de la semaine pour le congé de Pâques.

Lorsque nous reviendrons après Pâques, nous irons sur la côte du Pacifique, à partir du 19 jusqu'à la fin du mois, et à ce moment-là on nous demandera de terminer l'étude des crédits afin de faire rapport à la Chambre. Mais si nous obtenons un autre ordre de renvoi de la Chambre pour étudier la question de la chasse aux phoques, nous n'avons pas le temps de le faire avant cela.

[Texte]

Mr. McGrath: Mr. Chairman, with great respect, we have the terms of reference now under the general heading of the estimates of the Department of Fisheries and the House certainly will be sitting until Wednesday. There is no reason why, for example, the Committee could not meet on Monday or Tuesday or even tomorrow. I think it is very important to Canada that we have this matter cleared up as quickly as possible. I would therefore suggest that we have Mr. Davies and his film, the CBC film and some of the people mentioned in this statement give evidence before the Committee as soon as possible. There is no reason why we cannot call them for next Tuesday or next Monday.

Mr. Smith (Northumberland-Miramichi): On a point of order, Mr. Chairman.

The Chairman: On a point of order, Mr. Smith.

Mr. Smith (Northumberland-Miramichi): As far as calling them is concerned, surely all we can do is invite them. We cannot...

An hon. Member: Get them in here!

The Chairman: Order, order.

An hon. Member: ...by the scruff of the neck!

The Chairman: We can subpoena them, that is fine.

Mr. McGrath: I am going to make a motion, Mr. Chairman, that this Committee call Mr. Brian Davies, the executive secretary of the New Brunswick SPCA to bring his film with him to this Committee before the House recesses for Easter. I would further add to that that we call Mr. Serge Deyglun, who I think is the outdoor editor of the *La Presse*.

The Chairman: Would you please present this in writing, Mr. McGrath?

Mr. McGrath: ... the outdoor editor of *La Presse*, that we call him as well in connection with the *Artek* film, which is mentioned in this document, this document now being on the parliamentary record, to give evidence before the Committee, again, with the proviso that this be done before the House recesses for Easter.

The Chairman: This is open for debate.

Mr. Hogarth: Mr. Chairman.

[Interprétation]

M. McGrath: En toute déférence, monsieur le président, nous avons déjà un ordre de renvoi sous la rubrique générale des prévisions budgétaires du ministère des Pêcheries. Je suis à peu près certain que la Chambre siégera jusqu'à mercredi. Je ne vois pas pourquoi nous ne pourrions pas nous réunir lundi, mardi ou même demain. Je pense qu'il importe pour le Canada que nous réglions cette question aussitôt que possible. Je propose donc que M. Davies vienne ici nous montrer son film, qu'on projette le film de Radio-Canada et qu'on fasse venir certaines des personnes mentionnées dans ce mémoire. Il n'y a pas de raison pour que nous ne puissions pas les convoquer pour lundi ou mardi prochains.

M. Smith (Northumberland-Miramichi): J'en appelle au Règlement, monsieur le président.

Le président: Oui, monsieur Smith.

M. Smith (Northumberland-Miramichi): On ne peut vraiment les sommer de comparaître, mais simplement les inviter. On ne peut pas.

Une voix: Qu'on les amène de force!

Le président: A l'ordre.

Une voix: Qu'on les tire par le collet!

Le président: On peut les assigner, c'est bien.

M. McGrath: Je voudrais proposer que le Comité convoque M. Brian Davies, le secrétaire exécutif de la Société protectrice des animaux du Nouveau-Brunswick à comparaître devant le Comité avec son film avant le congé de Pâques. Je propose également que nous convoquions M. Serge Dayglun qui est, je crois, rédacteur à *la Presse*...

Le président: Est-ce que vous pourriez nous présenter cela par écrit, monsieur McGrath?

M. McGrath: ... au sujet du film de l'*Artek* mentionné dans le document qui fait maintenant parti du compte rendu des débats de la Chambre, et que ces personnes viennent témoigner devant le Comité, à condition que ce soit avant le congé de Pâques.

Le président: Je mets cette question en discussion.

M. Hogarth: Monsieur le président.

[Text]

The Chairman: Mr. Hogarth.

Mr. Hogarth: On this point, I think we should be very careful here. With respect, the motion might be more happily worded if it were "before the House adjourns at Easter, if possible". As far as I am concerned, after hearing the Minister, I certainly want to hear from Mr. Davies and I want to hear from the gentleman who made the *Artek* film. I do not want to prejudge this situation. If there were practices in the past which are not now being repeated, then let us hear about them. At the same time, I think that if that motion were phrased to read "as soon as possible, and before the Easter recess if it can be done", it would be far more acceptable.

Mr. McGrath: I accept that. That is a reasonable suggestion.

The Chairman: Mr. Howard on the motion.

Mr. Howard (Skeena): No, I was going to support this point of view but it has been accepted.

An hon. Member: Question.

Mr. Anderson: Can we not delay the vote until it is written out and you have it in your hands? I think Mr. Lundrigan is now carefully writing it out.

Mr. McGrath: Are you writing my motion?

Mr. Lundrigan: Yes.

The Chairman: Mr. Breau.

Mr. Breau: I wonder if Mr. McGrath is speaking specifically to the motion that we want to see the films?

Mr. McGrath: Yes. Incidentally, while we are waiting for the motion to be written out, Mr. Chairman, it is worth nothing that a gentleman who was involved in that *Artek* film of 1964, a gentleman by the name of Mr. Henri Stadt, who arranged some of the background music for the film, was so disgusted by what he saw and what took place in the putting together of that film that he went to the ice himself to produce a proper, true document and he has this film available which he is prepared to bring to us showing the actual killing of seals as it is really done, and not staged.

• 2120

Mr. Hogarth: That would be most valuable because I take it it was done at the same time as the *Artek* film was made or within a short period of time thereafter.

[Interpretation]

Le président: Monsieur Hogarth.

M. Hogarth: Je pense qu'il faut procéder avec soin. Sauf votre respect, la proposition serait beaucoup mieux exprimée si on disait «avant que la Chambre s'ajourne pour Pâques, si possible». En ce qui me concerne, après avoir entendu le ministère, je voudrais certainement entendre M. Davies et la personne qui a préparé le film de l'*Artek*. Je ne veux pas faire un jugement prématuré. Si certaines pratiques passées ont été éliminées, qu'on nous le dise. Mais en même temps, je pense que si votre proposition disait «aussitôt que possible, et avant le congé de Pâques, si possible» elle serait beaucoup plus acceptable.

M. McGrath: Je suis d'accord. Votre suggestion est raisonnable.

Le président: Monsieur Howard?

M. Howard (Skeena): Non, j'allais appuyé son point de vue, mais on l'a déjà accepté.

Une voix: Une question.

M. Anderson: Est-ce qu'on ne pourrait pas attendre qu'il écrive sa proposition avant de mettre la question aux voix? Je crois que M. Landrigan est en train de la rédiger soigneusement.

M. McGrath: Êtes-vous en train de l'écrire?

M. Lundrigan: Oui.

Le président: Monsieur Breau?

M. Breau: Je me demande si M. McGrath précise dans sa proposition que l'on veut voir les films?

M. McGrath: Oui. Soit dit en passant, en attendant que l'on mette par écrit la proposition, je dois faire remarquer qu'une personne qui a travaillé en 1964, M. Henri Stadt, qui a collaboré à la musique de fond du film, a été tellement dégoûté par ce qu'il a vu et ce qui s'est passé au cours du montage du film, qu'il est allé lui même sur les glaces pour préparer un véritable documentaire. Il est prêt à venir projeter ce film pour nous faire voir comment la chasse aux phoques se fait en réalité, et non pas du théâtre.

M. Hogarth: Ce serait une très bonne chose car je pense qu'il a été tourné en même temps que le film de l'*Artek*, ou peu de temps après.

[Texte]

Mr. McGrath: That I am not sure of. I think so but I am not sure.

You see, Mr. Chairman, there is a very strong charge here, which is a great paradox, that this man, Mr. Davies, the executive secretary of the SPCA, in trying to further his cause would be a party to this tremendous cruelty that was perpetrated in the production of this film where they staged the skinning of the seal alive, and I would like to have Mr. Davies before the Committee to establish whether that is a fact or not. I would also like to know where the money is coming from for this very substantial worldwide advertising campaign which is hurting the seal hunt in Eastern Canada. The Minister forgot to mention what it is doing to our Indians and Eskimos as well who depend on seals as a supplementary source of income in the production of leather and leather goods.

The Chairman: Mr. McGrath, if I were you I would not prepare Mr. Davies too much in advance. He might have favorable answers.

Mr. McGrath: Mr. Davies will be well prepared.

Mr. Hogarth: While Mr. Lundrigan is writing out his motion, I wonder Mr. Chairman if Mr. McGrath would be good enough to circulate what information he has with respect to these matters that he has spoken of, so that all of us will be apprised of the situation when Mr. Davies comes to give evidence. It would help a great deal if we had that information.

Mr. McGrath: You are suggesting that I do it through the Committee?

Mr. Hogarth: I suggest that you give it to the Clerk. He can duplicate it and send copies to all members of the Committee.

Mr. McGrath: I will give it to you later on. I am not finished with it.

Mr. Hogarth: Mr. Chairman, could we entertain another subject?

The Chairman: Yes, Mr. Hogarth, you are next.

Mr. Hogarth: Mr. Minister, leaving for the moment the question of seals which is extremely important, I understand that in 1964 the Parliament of Canada passed a statute pertaining to our territorial waters, and particularly for the establishment thereof and also the establishment of certain fishing zones, is that correct?

[Interprétation]

M. McGrath: Je ne suis pas certain. Je crois que oui, mais je ne suis pas certain.

L'accusation qui est portée ici est très grave et vraiment paradoxale, à savoir, que ce Monsieur Davies, le secrétaire exécutif de la SPA en voulant plaider sa cause, participerait en quelque sorte à cette énorme cruauté qui a été perpétrée dans la réalisation du film où on a vu un phoque écorché vivant, et je voudrais que M. Davies établisse ces faits auprès du Comité. Je voudrais aussi savoir d'où vient l'argent pour ce qui est de cette publicité mondiale qui nuit à la chasse au phoque dans l'est du Canada. Le ministre a oublié de mentionner ce que cette publicité fait aux Esquimaux et aux Indiens qui vivent de la chasse aux phoques qui est pour eux une sorte de revenu supplémentaire dans la production de cuir et d'articles en cuir.

Le président: Monsieur McGrath, si j'étais à votre place, je ne parlerais pas trop en avance de M. Davies. Il pourrait avoir des réponses favorables.

M. McGrath: M. Davies, sera, lui, bien préparé.

M. Hogarth: Monsieur le président, pendant que monsieur Lundrigan rédige sa motion, je me demande si M. McGrath pourrait faire diffuser les renseignements qu'il a dit avoir en mains à ce sujet pour que nous puissions tous (lorsque M. Davies comparaitra) l'interroger de façon pertinente.

M. McGrath: Vous suggérez que je le fasse par l'entremise du Comité?

M. Hogarth: Oui, je suggère que vous donniez ce document au secrétaire qui pourra le reproduire et en donner des exemplaires à tous les membres du Comité.

M. McGrath: Je vous le donnerai plus tard. Je n'ai pas encore tout à fait fini.

M. Hogarth: Monsieur le président, pourrions-nous passer à un autre sujet?

Le président: Oui, monsieur Hogarth, vous êtes le suivant.

M. Hogarth: Monsieur le président, laissons de côté pour un moment la chasse aux phoques—(qui est d'ailleurs très importante); si je comprends bien, en 1964 le Parlement du Canada a passé une loi ayant trait aux eaux territoriales et surtout cette loi stipulait l'établissement de certaines zones de pêches, n'est-ce-pas?

[Text]

Mr. Davis: That is right.

Mr. Hogarth: And I understand, sir, that at the time that law was passed and the statutory provision made, it was anticipated that on the coasts of Canada where it was applicable and in the Arctic certain baselines would be established from headland to headland, is that correct?

Mr. Davis: The legislation in 1964 declared that Canada's territorial waters were measured out 3 miles and its fishing zone a further 9 miles from baselines, the baselines to be determined. Baselines have subsequently been drawn down the coast of Labrador, and down the east and along the southern coasts of Newfoundland, but they have not otherwise been drawn around Canada.

Mr. Hogarth: And you would agree with me that the places where these baselines have been drawn are relatively minor situations in the coastal waters of Canada, is that not so?

Mr. Davis: I am sorry, how do you mean?

Mr. Hogarth: Well, where we have drawn these lines, these are relatively minor places on the coast lines of Canada.

Mr. Davis: Well, I think if you come from Newfoundland you think they are important.

Mr. Hogarth: I see. Have those baselines which were drawn pursuant to the statute in 1964 been challenged in any way by any other nation in the world?

Mr. Davis: I will say no, but I think I will have to ask Mr. Ozere.

Mr. Hogarth: All I want to establish is whether there has been any action taken by—

Mr. Davis: Have any of the baselines which have been drawn since 1964 been challenged, Mr. Ozere?

Mr. S. V. Ozere (Assistant Deputy Minister): No, Mr. Chairman, they have not been challenged by any legal procedures through the courts.

Mr. Hogarth: Thank you, that is all I want to know for this question. Now, Mr. Minister, as you know, Russian and Japanese fishing vessels have been intruding into the waters of

[Interpretation]

M. Davis: Oui, c'est exact.

M. Hogarth: Si je comprends bien, à l'époque, où cette loi a été adoptée, il était prévu que sur les côtes canadiennes où ces dispositions s'appliquaient et dans l'Arctique, des lignes de base serait appliquées du cap au cap, n'est-ce-pas?

M. Davis: La Loi de 1964 stipulait que les eaux territoriales du Canada seraient mesurées à partir de 3 milles et que la zone de pêche s'étendrait à 9 milles de plus selon la détermination de la ligne de base. Plus tard les lignes de base ont été établies de long de la côte du Labrador et le long de la côte est et de la côte sud de Terre-Neuve, mais ailleurs elles n'ont pas été établies au Canada.

M. Hogarth: Par conséquent, vous en conviendrez avec moi que là où ces lignes de base ont été établies sont tout à fait d'importance secondaire pour nos pêches?

M. Davis: Je m'excuse, qu'entendez-vous par là?

M. Hogarth: Où ces lignes ont été établies, il s'agit d'eaux plus ou moins importantes le long des côtes du Canada.

M. Davis: Non, je dirais qu'à Terre-Neuve, c'est très important.

M. Hogarth: Je vois. Est-ce que ces lignes de base qui ont été établies selon les dispositions de 1964 ont été mises en demeure par aucun autre pays?

M. Davis: Je dirais «non». Je demanderais à M. Ozere de le confirmer.

M. Hogarth: Ce que je veux savoir: est-ce que aucun autre pays n'a pris des mesures?

M. Davis: Est-ce que les lignes de base qui ont été établies depuis 1964 ont été mises en cause par certains pays, monsieur Ozere?

M. S. V. Ozere (sous-ministre adjoint): Non, monsieur le président. Personne ne l'a fait. Il n'y a pas eu de poursuites judiciaires à ce sujet.

M. Hogarth: Merci, c'est tout ce que je voulais savoir. Maintenant, monsieur le ministre, comme vous le savez, les Japonais et les Russes pêchent dans les eaux du détroit de la Reine Charlotte dans l'Ouest mais ils le font depuis beaucoup d'années, surtout depuis 1964, n'est-ce-pas?

Queen Charlotte Sound on the West Coast of Canada, and have been taking fish there for some years, and particularly since 1964, is that not so?

[Texte]

Mr. Davis: I understand they have come in in numbers since 1964 especially into Queen Charlotte Sound.

Mr. Hogarth: The fish they are taking there are fish that could be caught and marketed by Canadian fishermen if they were available to Canadian fishermen, is that not so?

Mr. Davis: Yes, some of the fish certainly are. Whether the Canadian market or the markets available to the Canadian commercial fishery are remunerative-enough that fish would have been taken in the same quantities may be opened to question. But nevertheless we have hopes of developing a fishery on the West Coast on some considerable scale. And those hopes have been reduced, shall we say, by the fishing activities of the Russians and the Japanese in that area.

Mr. Hogarth: What action has the government taken to establish the baseline between the Northern Cape of Vancouver Island and the Southern Cape of the Queen Charlotte Islands to prohibit or prevent Russian and Japanese fishing vessels from fishing in those waters?

Mr. Davis: There has been no baseline of any length declared on Canada's West Coast and indeed around the Maritime Provinces either. So the answer would have to be that no action has been taken as yet.

Mr. Hogarth: Can you give any explanation, Mr. Minister, why the government has not taken any action with respect to establishing that baseline?

Mr. Davis: I can give several reasons. I think the main one would stem from the nature of the legislation in 1964. That legislation gives the government of the day, the Cabinet, the authority to draw baselines without defining length. In other words, they could be short or long. Essentially they would be from headland to headland. It is debatable from which headlands to which headlands, but nevertheless they could be of undetermined length.

There was no distinction in the legislation however, as between baselines for determining territorial waters and baselines for determining fishing zones, so that automatically if any baseline were to be drawn under this legislation, it did two things. It not only defined Canadian exclusive fishing zones, but it also defined Canadian territorial waters.

Mr. Hogarth: Well, in your opinion, Mr. Minister, and I am dealing for the moment only with Queen Charlotte Sound, in your

[Interprétation]

M. Davis: Si je comprends bien, ils pêchent dans ces eaux depuis 1964, surtout dans le détroit de la Reine Charlotte.

M. Hogarth: Et la pêche qui se fait pourrait être prise par les bateaux canadiens, n'est-ce pas?

M. Davis: Oui, évidemment. Une partie de la pêche pourrait être prise par des Canadiens. Mais pour ce qui est des marchés concernant ces poissons, dans certaines circonstances, les mêmes quantités auraient été prises peut-être par les Canadiens mais nous espérons mettre en valeur les pêches de fond sur la côte ouest; Mais nos espoirs à ce sujet sont beaucoup plus atténués depuis que les Russes et les Japonais pêchent dans ces régions.

M. Hogarth: Quelles mesures le gouvernement a-t-il prises pour établir les lignes de base entre le cap nord de l'île Vancouver et le cap sud des îles de la Reine Charlotte pour empêcher les Russes et les Japonais de pêcher dans ces eaux?

M. Davis: Il n'y a pas eu de ligne de base d'établie sur la côte ouest, et non plus, d'ailleurs, le long des provinces Maritimes. Par conséquent on pourrait dire qu'on a pris aucune mesure?

M. Hogarth: Est-ce que vous pourriez expliquer pourquoi le gouvernement n'a pris aucune mesure afin d'établir ces lignes de base?

M. Davis: Je pourrais vous en donner plusieurs raisons. Mais, la principale, à mon avis, découle de la nature de la Loi adoptée en 1964. Cette Loi de 1964 donnait au Parlement d'alors, l'autorité d'établir des lignes de base, mais, sans en définir la longueur. Autrement dit, elles pouvaient être courtes ou longues, mais essentiellement elles allaient d'un cap à l'autre. La question est de quel cap à quel cap, mais toutefois, aucune longueur n'est déterminée.

Mais on ne faisait aucune distinction dans la loi entre lignes de base pour la détermination des eaux territoriales et les lignes de base pour la détermination des zones de pêche, par le fait même, si toutes lignes de base devaient être établies selon la loi, il fallait deux choses. Non seulement définir les zones de pêche canadiennes, mais aussi les eaux territoriales du Canada.

M. Hogarth: A votre avis, monsieur le Ministre (et je parle uniquement des eaux de la Reine Charlotte en ce moment), ne croyez-

[Text]

opinion should such a baseline be drawn for fishing purposes for the protection of the Canadian fishing industry on the West Coast?

Mr. Davis: Well, I do not hesitate in saying that I would like to see a baseline drawn from Vancouver Island to the Queen Charlottes for fishing purposes, but not for territorial water purposes.

Mr. McGrath: Mr. Chairman, I hesitate to do this, but I wonder if I could raise a point of order.

The Chairman: Mr. McGrath, a point of order?

Mr. McGrath: It is my understanding that we were going to deal with the subject of the seal fishery tonight Mr. Hogarth has opened up a new area of questioning in which a number of us have a great deal of interest. I have some very interesting questions I would like to put to the Minister—I do not think tonight is the night to do it—on the same subject on the East Coast vis-a-vis the French Government and the Isles of St. Pierre Miquelon and the difficulties we are having trying to impose our territorial jurisdiction there. But I hesitate to do so because my understanding is the Committee was meeting tonight to discuss this question of the seal fisheries.

Mr. Hogarth: Well, on this point of order, Mr. Chairman, I think you will recall at the earlier stage of our meeting tonight, I asked you if we were going to be exclusively confined to seal fishing, and you replied that we were not. Now, as much as I am interested in seal fisheries, for present purposes I am most anxious to get this subject opened. I am not suggesting that it could possibly be concluded tonight, and I think Mr. McGrath will have ample opportunity, at future meetings of this Committee to explore it, particularly in consequence of a motion that I am about to make depending upon the Minister's further answers.

Mr. Lundrigan: Mr. Chairman, could I speak to the point of order? At the last meeting we had, which was just over a week ago, on the suggestion made by myself and other members, we agreed that we would try and get some way to have the subject of the seal fishery brought into this Committee, and the way which was agreed by the Steering Committee was to call the first vote. This was the

• 2130

agreement made by the Steering Committee, that we would call the first vote and this would give us the right to discuss the seal fishery before the whole Committee.

[Interpretation]

vous pas qu'une telle ligne de base devrait être établie pour la protection des pêcheurs canadiens sur la côte ouest?

M. Davis: Non, je n'hésite aucunement à dire que j'aimerais voir une ligne de base partir de l'île de Vancouver jusqu'à l'île de la Reine Charlotte pour les besoins de la pêche. Mais, pas pour la détermination des eaux territoriales?

M. McGrath: Monsieur le président, j'hésite à le faire, mais je me demande si je pourrais faire appel au règlement.

Le président: Monsieur McGrath, un appel au règlement?

M. McGrath: Si je comprends bien, nous devions traiter de la question de la chasse aux phoques ce soir. M. Hogarth a abordé une autre question qui nous intéresse bien sûr. Moi-même j'aimerais poser beaucoup de questions au Ministre à ce sujet, que les problèmes se répètent sur la côte est. Les difficultés qui se posent à Terre-Neuve pour ce qui est de la compétence canadienne, mais j'hésite à le faire, parce que je croyais que le Comité se réunissait ce soir pour discuter de la chasse aux phoques?

M. Hogarth: A ce sujet, monsieur le président, on se rappellera qu'au début j'ai demandé si nous discussions exclusivement de la chasse aux phoques, et on m'a répondu que «non». Bien sûr je m'intéresse à cette chasse, mais pour les besoins présents, je suis très intéressé à ce qu'on en parle et je sais bien qu'on ne pourra épuiser la discussion ce soir. Il y a d'autres questions à soulever à ce sujet et surtout à l'égard de la motion que je voudrais déposer dans quelques instants.

M. Lundrigan: Monsieur le président, autre rappel au Règlement? Lors de notre dernière réunion il y a une semaine, suivant la proposition que j'ai faite, nous voulions faire introduire la discussion de la chasse aux phoques et nous avons décidé d'en parler lors de l'appel du premier poste. Et cela a été approuvé par le Comité de direction et nous donnait l'autorisation d'en parler ici en Comité. Par conséquent, je ne voudrais pas soulever un argument, mais si nous pouvons parler de la chasse aux phoques ce soir, nous pourrions épuiser la discussion mercredi? Si nous com-

[Texte]

We do not want to get into an argument on it, but it might be all right if we could get the seal fishery over, and we might very well have it over before Wednesday if we can get these people in from New Brunswick or from New York or Paris or wherever they happen to be at the moment, and get the seal fishery over and get into the other matters which are certainly crucial.

The Chairman: Mr. McGrath?

Mr. McGrath: Mr. Chairman, the Minister in his opening statement did not confine himself to seals but covered a very wide range of topics in connection with fishing, and this also, I think, provides...

Mr. Lundrigan: I have no objection.

Mr. McGrath: No, I just want to make a point, that is all.

Mr. Hogarth: I will not be too much longer, and I realize you are anxious to get back to the former subject. Now, Mr. Minister, in the light of what you have said, is it within the prerogative of your ministry to establish these baselines? If not, in what ministry does the responsibility lie?

Mr. Davis: I would have to answer that the establishment of the baselines would be as a result of a government decision. It would be a decision by the whole Cabinet. But I would also say that since it involves not simply fishing zones but territorial waters, and obviously involves the activities of other countries, that the Department of External Affairs is very much concerned. If I were trying to place emphasis I would say in this area it is perhaps more a matter of External Affairs than it is a matter for the Department of Fisheries. The Department of Fisheries must be concerned about the optimum management of our fisheries, which is a vital concern, but I think the actual drawing of baselines, the declaring of boundaries of Canada for purposes of relations with other countries, is even more a matter for the Department of External Affairs.

Mr. Hogarth: That would encompass not only the Queen Charlotte Sound situation but the Arctic and the East Coast.

Mr. Davis: I think that follows—

Mr. Hogarth: I would like to move that the hon. the Secretary of State for External Affairs—

[Interprétation]

mençons à digresser en amenant des gens du Nouveau-Brunswick ou de New-York ou de Paris, nous ne le ferons jamais. C'est une question très importante, il me semble.

Le président: Monsieur McGrath?

M. McGrath: Monsieur le président, le Ministre dans sa déclaration ne s'est pas limité à la chasse aux phoques? Il a abordé diverses questions qui ont trait aux pêches et je crois...

M. Lundrigan: Je n'ai pas d'objections.

M. McGrath: Je ne veux que soulever cette question.

M. Hogarth: Je ne parlerai pas plus longtemps. Je sais que vous voulez revenir à la chasse aux phoques.

A la lumière de ce que vous avez dit, est-ce que le ministère pourrait établir des lignes de base ou enfin, quel ministère pourrait le faire?

M. Davis: Je crois que pour répondre à votre question, l'établissement des lignes de base découle d'une décision gouvernementale mais je dirais aussi que puisqu'un tel établissement n'implique pas seulement les eaux de pêche mais les eaux territoriales, vu qu'il implique l'activité de pêche d'autres pays, je crois que cela intéresse le ministère des Affaires extérieures. Et si je voulais mettre l'accent sur l'un ou l'autre ministère, je dirais plutôt que c'est une question qui intéresse bien plus les Affaires extérieures que le ministère des Pêches et Forêts qui doit voir à ce que nos pêcheries, qui sont d'un intérêt vital, soient administrées de la meilleure façon possible. Mais pour ce qui est des lignes de base, pour ce qui est de l'établissement des eaux territoriales du Canada et des relations avec les autres pays, je crois que cette question relève du ministère des Affaires extérieures.

M. Hogarth: Et cela s'appliquerait non seulement aux îles Reine-Charlotte, mais aussi à l'Arctique et à la côte est.

M. Davis: Je pense que cela en découlerait.

M. Hogarth: J'aimerais proposer que le Secrétaire d'État aux Affaires extérieures...

[Text]

The Chairman: Have you a motion, sir?

Mr. Hogarth: Yes.

The Chairman: We have a motion before the Committee.

Mr. Hogarth: That motion has not been formally put though.

The Chairman: The motion is formally here.

Mr. Hogarth: Then I would ask that Mr. McGrath withdraw his motion so I could put this one and he can consequently put his.

Mr. McGrath: Agreed.

Mr. Hogarth: I move that the hon. the Secretary of State for External Affairs be invited to appear before this Committee to advise why the Government has not established headland to headland baselines to protect Canadian Territorial Waters and Canadian Fishermen on the Eastern and Western Coasts and also on the Arctic.

Mr. Anderson: I move that the question be put. I do not think it needs discussion.

Motion agreed to.

The Chairman: Now we will go to Mr. McGrath's motion, that we call Mr. Brian Davies and Mr. Serge Deyglun to appear before the Committee on Fisheries and Forestry before Easter, if possible, or as soon after the Easter recess as possible, that the Committee have Mr. Davies present his film to the Committee and that the Committee arrange for a showing of the CBC film, and further that the Committee call Mr. Henri Stadt of Montreal.

Motion agreed to.

Mr. St. Pierre: Mr. Chairman, I think I can ask one or two questions and not take my full ten minutes. They are in connection with the motion we have just heard. It may be that the answers are not available to us tonight

• 2135
but they would be a factor in the discussion when the Minister appears.

This question relates to the Arctic waters. As we know, at present there is an Arctic fishery which is of importance to a few Eskimos but of no commercial importance beyond this. Is the Arctic Ocean under the control of your department, Mr. Minister, in so far as fisheries are concerned?

[Interpretation]

Le président: Vous avez une motion à présenter?

M. Hogarth: Oui.

Le président: Le comité est saisi d'une proposition.

M. Hogarth: La motion n'a pas été présentée dans les formes.

Le président: La motion est présentée dans les formes.

M. Hogarth: Je demanderais alors à M. McGrath de retirer sa motion afin que je puisse présenter la mienne. Il pourra ensuite présenter la sienne.

M. McGrath: D'accord.

M. Hogarth: Je propose que le secrétaire d'État aux Affaires extérieures soit convoqué devant le Comité pour nous dire pourquoi le gouvernement du Canada n'a pas établi de lignes de base pour protéger les eaux territoriales et les pêcheurs du Canada sur les côtes est et ouest du Canada et aussi dans l'Arctique.

M. Anderson: Je voudrais qu'on mette la question aux voix. Je ne crois pas qu'il faille discuter la question.

La motion est adoptée.

Le président: Selon la motion de M. McGrath, MM. Briau Davies et Serge Deyglun devront comparaître devant le Comité avant Pâques ou le plus tôt possible après Pâques. Il faudrait aussi que M. Davies présente son Film au Comité et par ailleurs, que le Comité fasse comparaître M. Henri Stadt de Montréal.

Motion adoptée.

M. St-Pierre: Monsieur le président, je crois que je pourrais poser une ou deux questions sans prendre les 10 minutes qui me sont allouées. C'est au sujet de la motion qu'on vient d'entendre. Il se peut que nous ne connaissions pas les réponses ce soir, mais elles pourront être utilisées lorsque le ministre comparaitra.

C'est au sujet des eaux de l'Arctique. Vous savez qu'à présent, il y a des pêches dans cette région qui sont importantes pour bien des esquimaux mais qui n'ont aucune importance commerciale. Est-ce que l'océan Arctique est sous la régie de votre ministère, monsieur le ministre, pour ce qui est de la pêche?

[Texte]

Mr. Davis: Fisheries, under our constitution, is a matter for the nation. I would say that fisheries, wherever the nation extends, is a matter of concern to the Department of Fisheries for Canada. The question you are really asking is how far does Canada extend. I would have to say that until we draw base-lines, in this case base-lines for the determination of exclusive Canadian fishing zones, our Canadian waters in the north for fishing purposes will be confined to lines following the coastline of the northern islands and Continental Canada, but 12 miles out from the coastline. In other words, our fishing limits in the north, as off our West Coast and much of our East Coast, at the moment I think are 12 miles out from shore, without benefit of base-lines.

Mr. St. Pierre: Yes, I understand. Has your Department at any time made a survey to discover the extent of the potential Arctic fishery?

Mr. Levelton: There have been surveys by the Fisheries Research Board of Canada from the Western to the Eastern Arctic, but I do not have the details of the results at my fingertips. I am not sure that Dr. Hayes would even have them at this point. But they have been surveyed by the Fisheries Research Board of Canada.

Mr. St. Pierre: Can you tell us if there is a potential for a fishing industry of some size there?

Mr. Levelton: I do not think there is a fishery of any real size. There are some substantial numbers of capelin in Hudson Bay. There are, of course, rather large numbers of marine mammals and various types of seals, some limited numbers of tomcod, and in some of the Arctic rivers of course Arctic char which are now being commercially exploited by the Eskimo population under the auspices of the Department of Indian Affairs and Northern Development.

Mr. St. Pierre: There is some commercial possibility in the North beyond the present very limited operations largely by Eskimo co-operatives.

Mr. Levelton: There are some possibilities but they are rather limited.

Mr. St. Pierre: Thank you. I will not pursue this any further tonight, Mr. Chairman.

The Chairman: Mr. Carter.

Mr. Carter: Mr. Chairman, I would like to ask the Minister two or three questions. I could start off perhaps with the seal fishery.

[Interprétation]

M. Davis: Selon notre constitution, les pêches sont de caractère national. Mais je dirais que les pêches tombent sous le coup de notre ministère. Mais où va le territoire du Canada, c'est ce qu'il faut établir. Et jusqu'au moment où nous établirons une ligne de base dans ce cas-ci, pour l'établissement d'une zone de pêche exclusive, les eaux de pêche dans le nord suivront la ligne des côtes, jusqu'à 12 milles au large. Par conséquent, les limites de pêche au nord, comme sur la côte est et sur la côte ouest, s'étendent jusqu'à douze milles de la côte.

M. St-Pierre: Oui, je comprends. Est-ce que votre ministère a déjà fait une étude sur les pêches de l'Arctique et sur le potentiel qu'elles pourraient représenter?

M. Levelton: Oui, il y a eu des études qui ont été faites par l'Office des recherches sur les pêches du Canada, de l'ouest à l'est de l'Arctique mais je n'ai pas les détails de cette étude devant moi. Je ne crois pas que le Dr. Hayes les ait non plus. Mais l'Office a fait des relevés.

M. St-Pierre: Est-ce que le potentiel serait assez important d'après vous?

M. Levelton: Je ne crois pas qu'il y ait des pêches assez importantes dans cette région. Il y a du capelan dans la Baie d'Hudson. Il y a aussi de nombreux mammifères marins dans cette région, plusieurs variétés de phoques; également du poulamon et, bien sûr, dans quelques rivières de l'Arctique, de l'omble arctique, que les Esquimaux exploitent commercialement sous les auspices du ministère des Affaires indiennes et du Nord canadien.

M. St-Pierre: Il y a donc des possibilités commerciales à part les exploitations tout à fait limitées des coopératives esquimaudes.

M. Levelton: Oui, il y a certaines possibilités mais elles sont très limitées.

M. St-Pierre: Monsieur le président, je vais passer maintenant.

Le président: Monsieur Carter?

M. Carter: J'aimerais maintenant poser quelques questions au ministre, tout d'abord au sujet de la chasse aux phoques.

[Text]

Representing as I do, Mr. Chairman, a province that probably depends to a large extent on the seal fishery, I might say at the beginning that I am getting a little sick of this man Davies and some of the charges he has been making. Realizing the impact this is having and the fact that it has and still is giving Canada, especially the people on the East Coast of this country, a black eye by branding them a bunch of barbarians, my reaction is—and this is my opinion—that this man Davies has become a national nuisance.

I agree with the motion put by my colleague, Mr. McGrath, that he should be brought in and taken to task. With evidence being submitted that a certain film was made and that certain very unorthodox procedures were followed in trying to make this film, one wonders who is being skinned alive.

I would like to ask the Minister if, as a result of his trip to the ice in the helicopter, he saw any evidence to substantiate or at least to back up Mr. Davies' evidence. Are

• 2140

the sealers off the East Coast actually skinning seals alive? Are they misbehaving in that respect. Can the Minister tell me if, from his trip, he saw any evidence of this happening?

Mr. Davis: Mr. Chairman, I would have to say that I saw no evidence whatsoever of seals being skinned alive or, indeed, being mistreated in any way. The regulations were being followed very carefully, and I think they are the best regulations we can devise. Of course, my experience in the seal fishery is very limited. Perhaps I should ask Mr. Levelton, who is in charge of our development service, to comment.

I would also suggest that one person which your Committee may want to eventually call before it is Mr. Dudka who has been in charge of our seal fishery for some years and still is. His knowledge in the field of fishery and the practices and so on would be very helpful, particularly as he has had a number of encounters with Mr. Davies and others over the years. Perhaps Mr. Levelton would like to comment on this charge of skinning seals alive.

Mr. Carter: Mr. Chairman, could Mr. Dudka, to whom the Minister referred, be invited to meet with the Committee and be subjected to questioning?

Mr. Levelton: He is one of our staff in the Fisheries Protection Service and I am sure he would be glad to come.

[Interpretation]

Vu que je représente une province qui dépend dans une grande mesure de la chasse aux phoques, je dirai au départ que je suis fatigué de ces accusations portées par M. Davies. Je réalise l'effet de cette mauvaise publicité qui donne au Canada et à ses habitants de la côte est une mauvaise réputation à l'échelle internationale en nous faisant passer pour une bande de barbares et je suis d'avis que ce M. Davies est devenu une nuisance publique.

Je suis d'accord avec la motion de mon collègue, M. McGrath, selon laquelle il devrait être cité à comparaître devant le comité et réprimandé. Avec les preuves qui ont été soumises selon lesquelles un certain film a été tourné et que, pour ce faire, on a eu recours à certains procédés peu orthodoxes, on peut se demander qui se fait écorcher vif.

Je voudrais demander au ministre si, à la suite de son voyage en hélicoptère, il a vu des preuves pouvant corroborer ou au moins appuyer les dires de M. Davies. Est-ce que les chasseurs de phoques écorchent vraiment les phoques à vif? Leur comportement à ce sujet est-il aussi cruel qu'on le dit? Le ministre peut-il me dire si, au cours de son voyage, il a vu ces choses se produire?

M. Davis: Monsieur le président, je devrais dire que je n'ai pas vu de phoques écorchés vifs ou traiter cruellement. Il y a des règlements qui ont été suivis à la lettre et je crois que c'est le meilleur règlement que nous puissions élaborer. Eh bien sûr, je connais très peu de choses à ce sujet. Je devrais peut-être demander à M. Levelton de faire des observations à ce sujet!

Je pourrais aussi demander à M. Dudka de venir témoigner devant le Comité. M. Dudka est en charge de la chasse aux phoques depuis quelques années et il détient toujours son poste. Ses connaissances dans pratique de la chasse aux phoques pourraient être utiles, particulièrement au sujet de ces nombreuses rencontres avec M. Davies et des autres personnes au cours des années. Peut-être que M. Levelton commentera aussi cette attaque au sujet des phoques qui sont dépeçés vivants.

M. Carter: Monsieur le président, est-ce que M. Dudka, la personne dont le ministre a parlé, pourrait être invité à venir témoigner devant le Comité?

M. Levelton: C'est un de nos employés au service de la protection des pêcheries et je suis certain qu'il serait heureux de venir.

[Texte]

Mr. McGrath: We would like to have him here, especially when we are hearing these witnesses, Mr. Chairman.

Mr. Carter: Mr. Chairman, I think for the sake of Canada as the Minister has mentioned the embassies have been flooded with mail, picketing and all this sort of thing, plus the fact that he has received hundreds of letters, plus those received by the Prime Minister—that Canada's version of Carry Nation should be called in here, put on the spot and made to put up or shut up when it comes to the seal fishery.

I am getting a little sick of this. A lot of people in my province are the people to which these charges are directed. As I said, I am getting a little sick of it, and Canada's Carry Nation should be made come here and prove what he is saying, or for all times shut up. That is my feeling on the seal fishery.

The Minister mentioned in his speech the Salt Cod Marketing Board or the salt fish development corporation. Could the Minister tell us when he hopes to make an announcement as to the timing of the establishment of this Board. Will it be established in time for the 1969 salt fish catch?

Mr. Davis: It will not be established in time for this year's catch. We have been holding discussions both with the fishermen's federations and with the trade concerning this year's operations. I hope that the development corporation legislation will be one of the first items dealt with in the fall, and at this time next year we will have a full-blown corporation ready to go in every respect.

Mr. Carter: Mr. Chairman, could the Minister tell us if he has any interim arrangement of which the salt fish fishermen could avail themselves in 1969?

Mr. Davis: We will have a program which I hope we will be able to announce in the next week or two. I hope we will be able to announce a price, for example, or schedule of prices which the salt fishermen will be receiving in 1969. In future years they will be able to go out and fish knowing what prices they are going to get for their product.

Mr. McGrath: Mr. Chairman, I have a supplementary question. I was intrigued with the Minister's statement, because it would seem

[Interprétation]

M. McGrath: Nous aimerions l'avoir devant le Comité spécialement quand nous entendrons ces témoins, monsieur le président.

M. Carter: Monsieur le président, je pense que pour la réputation du Canada, tel que le ministre l'a mentionné—car nos ambassades ont été submergées de courrier, ont été l'objet de manifestations et de piquetage, ainsi que des centaines de lettres reçues par le ministre, plus celles reçues par le premier ministre—que la version canadienne de Carry Nation devrait être appelée à témoigner devant nous, et ainsi nous dire si oui ou non elle a raison lorsqu'il s'agit de la chasse aux phoques.

Je commence à être un peu fatigué de toute cette question. De nombreuses personnes dans ma province sont directement visées par ces attaques. Et comme je l'ai déjà dit, j'en ai vraiment assez, et la version canadienne de Carry Nation devrait apparaître devant ce Comité et prouver ce qu'elle avance, ou alors se taire à tout jamais. Voilà ce que je pense de la chasse aux phoques.

Le ministre a mentionné dans son exposé la création de l'Office de commercialisation de la morue salée ou la Société de développement du poisson salé. Le ministre peut-il nous dire s'il espère faire une annonce quant à l'époque à laquelle sera créé cet Office? Sera-t-il établi à temps pour la prise de 1969?

M. Davis: Il ne sera pas établi à temps pour les prises de cette année. Nous avons tenu de nombreuses discussions tant avec les fédérations de pêcheurs qu'avec le commerce, concernant les prises de cette année. J'espère que la loi concernant cette société d'expansion sera l'objet des premières délibérations de cet automne, et d'ici le printemps de l'année prochaine, nous aurons une société prête à entrer en fonction.

M. Carter: Monsieur le président, est-ce que le ministre pourrait nous dire s'il a prévu un arrangement intérimaire sur lequel les pêcheurs de poisson salé pourraient se baser en 1969?

M. Davis: Nous aurons un programme dont j'espère faire l'annonce d'ici une semaine ou deux. J'espère que nous serons capables d'annoncer un prix, par exemple, ou une échelle de prix sur lesquels les pêcheurs de poisson salé pourront compter en 1969. Au cours des années futures, ils seront capables d'aller en mer et de pêcher en connaissant le prix qu'ils recevront pour leur pêche.

M. McGrath: Monsieur le président, j'ai une question supplémentaire. J'ai été intrigué par l'exposé du ministre car il me semble

[Text]

to me to be the type of statement that we have been expecting the Minister to make in the House.

There one thing he said which rather calls for some further elucidation. He said that the proposed salt fish development corporation will be oriented to development, rather than to marketing.

Could you explain that, sir?

Mr. Davis: Well it is more a matter of emphasis. The Freshwater Fish Marketing Corporation covers a joint federal-provincial arrangement. The provinces are responsible for the activities within the province, particularly processing and transportation and so on. The federal activity, on the face of it at least, is confined to the export side. As you will notice it was brought in under the Trade and Commerce authority and so on, by the Trade and Commerce Minister.

In this other case, it will not simply be a marketing agency; it will be concerned with the supply and it will deal with the fishermen. We hope to improve the collection and processing of the fish and to be concerned more with quality. However, marketing will be very much a part of the operation.

Mr. Smith (Northumberland-Miramichi): I have a short supplementary, Mr. Chairman. I would like to ask the Minister if the Fisheries Prices Support Board will meet with any objection from the United States by this possibly being considered as a subsidy? Do you expect any objections?

Mr. Davis: We have had discussions at the official level with the United States and we explored a number of different avenues with them. This seemed to be the one least likely to cause repercussions on the U.S. side. I think if the price support operation is as I have outlined it, where we are in the market supporting the price when it is below a long term trend and only when it is below, we cannot really be accused of subsidizing the industry. Indeed, over the long run it is hoped that we would recover our costs from time to time by selling it at a higher price.

Mr. Smith (Northumberland-Miramichi): Thank you.

Mr. Carter: Mr. Chairman, if I may have one more question. The Minister announced

[Interpretation]

qu'un tel exposé est celui qu'on attendait du ministre devant la Chambre.

Il y a une autre chose qu'il a mentionnée et qui nécessite certaines explications. Il a dit, entre autres, que la société proposée quant au développement du poisson salé serait orientée principalement vers l'expansion plutôt que vers la commercialisation. Pouvez-vous nous expliquer ceci, monsieur?

M. Davis: Il s'agit là d'une question de détail. Par exemple, l'Office de commercialisation du poisson d'eau douce constitue une entente fédérale-provinciale. Les provinces sont responsables des activités à l'intérieur de la province, particulièrement en ce qui regarde la préparation et au transport. La responsabilité du gouvernement fédéral est confinée aux problèmes de l'exportation. Comme vous avez pu le remarquer, cet organisme est du ressort du ministère du Commerce et de l'Industrie.

Dans le cas qui nous concerne, il ne s'agit pas seulement d'une organisation de commercialisation. Il s'agit aussi d'un organisme qui s'intéresse aux gréments des navires et qui traite avec les pêcheurs. Nous espérons améliorer la pêche et la préparation du poisson. Nous essaierons aussi d'améliorer les normes de qualité. Cependant, la commercialisation restera une grande partie du travail de l'Office.

M. Smith (Northumberland-Miramichi): J'ai une petite question supplémentaire, monsieur le président. J'aimerais demander au ministre si l'Office du soutien des prix des produits de la pêche rencontrera certaines objections de la part des États-Unis, si l'on considère son activité comme une aide financière? Pensez-vous rencontrer des réticences?

M. Davis: Nous avons eu plusieurs discussions au niveau du gouvernement entre les États-Unis et nous, et nous avons considéré un certain nombre de voies. Il semble que cet organisme sera l'un de ceux qui causera le moins de répercussion aux États-Unis. Je pense que si le soutien des prix, comme je l'ai mentionné, lorsque nous sommes dans une situation commerciale où le soutien des prix est indispensable sur une longue période, nous ne pouvons vraiment pas être accusés de subventionner l'industrie. En fait, à long terme, il y a des chances que nous puissions recouvrer nos coûts en vendant le produit des pêches à un prix supérieur.

M. Smith (Northumberland-Miramichi): Je vous remercie.

M. Carter: Monsieur le président, j'aimerais poser encore une autre question. Le ministre

[Texte]

some time ago the government's plan for the ground fish industry. I would like at this time to congratulate him; I think it is an excellent program. However, in his announcement he made reference to the fact that loans would be made available to fish plant operators. To what extent will the people applying for these loans have to prove their justification? In other words, will they be required to reveal to the governments the complete financial structure of their companies? I think this is essential, because, at least in my opinion, there have been cases where this was not done in a certain province.

Does the Minister or his Department have any plans to require this of the people applying for these loans? Are they going to be asked to reveal the complete financial structure of their companies to justify the loans for which they are applying?

Mr. Davis: First, they will not qualify for loans if, in the discussions, it turns out that they could have obtained the money from a commercial source. Secondly they will not get the loans unless they commit themselves to pay prices to fishermen which were equal to, or above the prices experienced in the last couple of years.

Thirdly, those same companies will be back for another category of loan which will undoubtedly involve reequipping plants and improving efficiency, at which time they will have to make a complete submission as to costs and their expected profit position, and so on. Remember however, that the loans which are immediately available on April 1 are the loans which are most likely to be picked up by the companies in the most serious financial straits. The first category of loans is essentially a working capital loan at rates of interest which are not that attractive to companies which are broadly based and in good shape. The companies who are in real trouble are going to grab these loans regardless of the conditions attached.

Mr. Carter: Thank you, Mr. Chairman.

The Chairman: Mr. Lundrigan is your question based on a supplementary?

Mr. Lundrigan: No, Mr. Chairman.

The Chairman: Mr. Pringle.

Mr. Pringle: I have a very short question, Mr. Chairman which may even be irrelevant. For quite a number of years we people involved in the production of livestock were required to submit all our advertising to

[Interprétation]

a annoncé il y a quelque temps déjà, un plan du gouvernement concernant la pêche des poissons du grand fond. J'aimerais ici le féliciter de cette initiative. Je pense qu'il s'agit là d'un programme excellent. Cependant, dans son annonce, il s'est référé au fait que les prêts pourraient être disponibles pour les usines à poisson. Jusqu'à quel point est-ce que les gens qui font une demande vis-à-vis de ces prêts doivent prouver leurs besoins? En d'autres mots, est-ce qu'ils devront révéler au gouvernement la structure financière complète de leur compagnie? Je pense que c'est essentiel, car, au moins dans mon opinion, il y a plusieurs cas où ça n'a pas été fait dans certaines provinces.

Est-ce que le ministre ou son ministère ont certains plans pour exiger des gens qui demandent ces prêts de fournir ces renseignements? Est-ce qu'ils devront fournir les états financiers complets de leur compagnie afin de justifier leur demande d'emprunt?

M. Davis: Premièrement, ils n'obtiendront pas de prêt si au cours des discussions on découvre qu'ils auraient pu obtenir cet argent d'une source commerciale. Deuxièmement, ils ne recevront pas de prêt sans qu'ils s'engagent eux-mêmes à payer aux pêcheurs les prix qui sont égaux ou supérieurs aux prix pratiqués au cours des dernières années.

Troisièmement, les mêmes compagnies devront revenir devant le gouvernement pour demander un autre prêt d'une catégorie différente qui, lui, impliquera sans aucun doute le rééquipement et l'amélioration de l'exploitation. A ce stade-là, ils devront soumettre une complète étude des coûts et des profits, etc. Cependant, souvenez-vous que les prêts qui sont consentis le 1^{er} avril sont des prêts qui sont prêtés pour la plupart à des compagnies qui sont en sérieuses difficultés financières. La première catégorie de prêt est essentiellement un prêt de fonds de roulement à un taux d'intérêt qui n'est pas intéressant pour les compagnies qui sont en bonne condition financière. Cependant, les compagnies qui sont en difficulté prendront ces prêts sans regarder aux conditions qui y sont attachées.

M. Carter: Merci, monsieur le président.

Le président: Monsieur Lundrigan, votre question est-elle une question supplémentaire?

M. Lundrigan: Non, monsieur le président.

Le président: Monsieur Pringle.

M. Pringle: J'ai une question très courte, monsieur le président, qui est peut-être hors de propos. Pour de nombreuses années, les personnes qui sont engagées dans la production de viande, doivent soumettre toutes leurs

[Text]

the government agency for approval before we were permitted to publish it in any magazine or paper.

There has been some change on this: you might call it a lessening of requirements. In so doing, all of us were charged with a very deep responsibility of being in a position at all times to back up our advertising and to ensure that any of the statements made in the advertising were accurate and true. I think this is going to be adopted by the Department of Consumer and Corporate Affairs, we will find as time goes on it will be more valid with regard to the control of people advertising in the newspapers.

It is my understanding, from listening to the discussion tonight, that there has been a lad by the name of Brian Davies, who, under some other name, has been placing advertisements in newspapers across the country which actually, in my opinion, come under the heading of an advertisement. I do not know whether that could be classified as an advertisement or not.

It seems to me that one of the steps that should be taken, as soon as possible, is that he be required to submit proof positive that all statements made are true in every respect and if he is unable to do so, that he should be required to print a retraction, the same as newspapers are required to do when they inadvertently, accidentally, or on purpose print a statement of any kind which cannot be verified.

Is any department in our government at the present time charged with this responsibility which could make a fast inquiry here, because this is a very serious thing.

Very serious charges have been made against our country. In the past there have been laws that have dealt rather severely with someone who made statements in an advertisement which could not be proven.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: The Minister mentioned that there was quite a bit of activity around certain of Canada's embassies and diplomatic establishments abroad, and clarification of our position apparently made by one of our representatives in some part of Europe.

I just caught the end of the Minister's statement, but did I understand that quite a number of people were protesting the situation? There was quite a bit of false publicity. Did one of our representatives make a statement, or take a position, to clarify the misrepresentation of our seal fishing industry? Was this the situation?

[Interpretation]

annonces à l'approbation d'une agence du gouvernement, avant qu'on leur permette de publier ces annonces dans un magazine ou un journal quelconque.

Ces règlements ont été récemment adoucis. Ainsi, chacun d'entre nous supporte une grande responsabilité afin d'être en tout temps dans une position où il peut soutenir la qualité de ses annonces et où il doit assurer que toutes les déclarations faites dans la publicité sont véridiques et exactes. Je pense que c'est la ligne de conduite adoptée par le ministère de la Consommation et des Corporations. Et plus nous allons de l'avant, plus cette ligne directrice est valable en ce qui concerne les gens qui publient des annonces dans les journaux.

Selon ce que j'ai cru comprendre de la discussion de ce soir, il y a depuis quelque temps une personne nommée M. Brian Davies qui, sous d'autres noms, publie certaines annonces dans les journaux à travers tout le pays, qui, selon mon opinion, sont comparables à une annonce commerciale. Je ne sais pas si une telle annonce est classée comme annonce commerciale ou non.

Il semble pour moi cependant que l'une des démarches qui devrait être entreprise aussitôt que possible est celle de prouver ce que l'on avance d'une façon positive et dans tous les aspects avant de faire imprimer cette annonce, sinon il doit être soumis à la décision visant à lui faire imprimer une rétractation des faits avancés, comme on le demande de la part des journaux lorsqu'ils font accidentellement une erreur. Y a-t-il un service de notre gouvernement qui est actuellement chargé de cette responsabilité et qui pourrait faire une enquête rapide car il s'agit là de choses très sérieuses?

Des plaintes très sérieuses ont été faites envers notre pays. Il y a eu, dans le passé, des lois très sévères concernant les gens qui publiaient des déclarations dans des annonces qui ne pouvaient pas être prouvées.

Le président: Monsieur Lundrigan?

M. Lundrigan: Le ministre a dit qu'il y avait beaucoup d'activités autour de certaines ambassades et dans les missions diplomatiques du Canada à l'étranger. Apparemment, l'un de nos représentants en Europe a réfuté ces accusations. C'était vers la fin de la déclaration du discours du ministre. Dois-je croire qu'il y a beaucoup de fausse publicité et que l'un de nos représentants a fait une déclaration publique en vue de réfuter ces opinions fausses qui avaient été répandues.

[Texte]

Mr. Davis: All our embassies abroad received information, descriptive material, Fisheries Department Regulations, and so on, from the government at Ottawa and they were well briefed. I imagine that very few of our people abroad had ever attended the seal hunt, but they endeavoured to persuade people that things were not quite as bad as they had been represented.

Mr. Lundrigan: This is commendable, Mr. Chairman. If it is not privileged, can we get some of the information which was used in briefing the representatives of Canada abroad and which might have emanated from the Minister's office?

Mr. Davis: We will send you anything we sent to External Affairs.

Mr. Lundrigan: I have not seen any of it. This is partly what I was asking when I differed about what the Department had done.

I knew the Minister had gone east and visited the seal fishery. I also knew that he had come back and made a very positive statement about the behaviour of our sealers from the Atlantic region. This has been published quite extensively in various news media.

What I would like to see, however—and I think this is going to have to be done—is a counter-campaign that will once and for all clear Canada's name, because it is not only the sealers of Newfoundland or the Magdalen Islands or of Nova Scotia, or wherever the sealers come from, who are getting the black eye.

Normally, we are prepared to take this. We have been getting black eyes for years and years, and we do not worry too much about it—a little bit of misrepresentation never hurts. But when you have a situation where, as Mr. Carter has said, it is an international black eye, then we all have responsibility and all Canadians have to be concerned.

I do not think the people in Germany would worry so much about the sealers being from Bonavista, Trinity-Conception or Gander-Twillingate as they would about the fact that they are Canadians, therefore our friends from all parts of Canada have received the same kind of misrepresentation.

Consequently, I would like to see the Department of Fisheries, or the government—perhaps the Department of External Affairs—take the responsibility of taking a very strong

[Interprétation]

M. Davis: Nos ambassades à l'étranger ont reçu de la documentation descriptive de la part du ministère des Pêcheries, description du matériel, etc. et elles étaient bien documentées. Je suppose que très peu de nos représentants à l'étranger sont au courant de ce que c'est que la chasse aux phoques. On a essayé de persuader les gens que les choses n'étaient pas aussi mal, aussi pire que ce qu'on le pensait.

M. Lundrigan: Je trouve que c'est digne d'éloges, monsieur le président. Si ce n'est pas trop confidentiel, je me demande, si nous pouvons avoir les renseignements qui ont été utilisés, pour les représentants du Canada à l'étranger et qui auraient pu émaner du bureau du Ministre.

M. Davis: Nous vous ferons parvenir tout ce qui a été envoyé au ministère des Affaires extérieures.

M. Lundrigan: Je n'en ai rien vu. C'est en partie ce que je demandais quand je me suis renseigné sur ce que le Ministère avait fait. Je sais que le ministre était dans l'Est et visitait les terrains de chasse aux phoques. J'ai su également qu'il était de retour et qu'il avait fait une déclaration très catégorique sur le comportement des chasseurs de phoques de la région de l'Atlantique.

Il a été largement question de plusieurs média d'information. Cependant, j'aimerais voir, et très bientôt, le lancement d'une contre-campagne qui rétablira une fois pour toute le renom du Canada car ce ne sont pas seulement les chasseurs de phoques de Terre-Neuve, des Îles-de-la-Madeleine ou de Nouvelle-Écosse ou de quelque autre partie du pays qui feront les frais de cette mauvaise réputation.

Nous sommes généralement prêts à assurer cette responsabilité. Pendant des années, nous avons vu notre réputation ternie et cela ne nous inquiète pas outre mesure. Un peu de déformation des faits ne nuit pas. Mais lorsqu'il s'agit d'une situation où, comme l'a dit M. Carter, notre réputation internationale est ternie, c'est notre responsabilité à tous et nous devons tous nous en occuper.

Que les chasseurs de phoques soient de Bonavista, de Trinity-Conception ou de Gander, Twillingate, ils sont tous des canadiens, ainsi, tous nos amis des quatre coins du Canada ont été soumis au même genre de publicité, et par conséquent, j'aimerais que le ministère des Pêcheries ou le gouvernement, peut-être même le ministère des Affaires extérieures adopte des mesures concrètes et très fermes, peut-être de faire une déclaration officielle, j'ignore comment on procède,

[Text]

stand, perhaps even to the extent of issuing a strong official statement—I do not know how these things are done—so that countries will know officially where we stand.

This has been done in part, undoubtedly, but I think we should have our friend from down East here and find out why he has been doing this—and this is only one part of the approach—and, in other words, to expose Mr. Davies for what he really is.

• 2155

The other part of the approach is to make an all-out effort to present information which is the real story on the seal fishery; that it is a romantic story rather than the tragic one that has been represented.

The Chairman: Are there any further questions?

Gentlemen, I think progress has been made here tonight. The meeting was called for the purpose of starting the discussion of the procedures pertaining to the seal hunt, or the seal fishery. I think we have made progress tonight. I hope that in the very near future we will have our witnesses here.

Mr. Hogarth: Mr. Chairman, before we adjourn may I ask when the steering committee will meet? Perhaps I could precipitate the answer by suggesting that the steering committee meet tomorrow?

The Chairman: I had that in mind.

Mr. McGrath: And perhaps we could arrange a meeting for Monday or Tuesday so that the witnesses can be called before the weekend.

The Chairman: Before we call the meeting we will have to be certain when the witnesses can be present.

Mr. McGrath: Mr. Davies is going to suggest to you that he can never come. He is being called by the Committee; he is being subpoenaed. He has to come when we want him.

The Chairman: Is he in the country, though?

Mr. McGrath: Bring him back; no matter where he is bring him back.

The Chairman: There is always the time factor. In calling a meeting...

• 2157

Mr. McGrath: You can find him anywhere in the world. Bring him back.

The Chairman: We will make arrangements to have meetings on Monday and Tuesday in case we can have our witnesses here.

Mr. McGrath: That is fine.

The Chairman: The meeting is adjourned.

[Interpretation]

afin que les pays étrangers sachent exactement quelle est notre position.

Cela a été fait dans une certaine mesure, mais je crois que nous devrions demander à ce monsieur de l'Est de venir nous voir et nous expliquer les raisons de son comportement, et ce ne serait là qu'une partie seulement des moyens à prendre, et en d'autres termes, exposer M. Davies pour ce qu'il faut. Une autre partie de la procédure serait de nous efforcer de présenter les faits sur la chasse aux phoques, c'est-à-dire que c'est une histoire plus romantique que tragique.

Le président: Y a-t-il d'autres questions? Bien, messieurs, je crois que ce soir nous avons fait des progrès. La réunion avait été convoquée pour lancer le débat sur la chasse aux phoques. Je pense que nous avons fait des progrès ce soir. J'espère que nous aurons nos témoins dans un avenir très proche.

M. Hogarth: Monsieur le président, avant que nous ajournions, puis-je savoir quand le comité directeur va-t-il se réunir. Je pourrais peut-être suggérer que le comité directeur se réunisse demain.

Le président: C'était mon intention.

M. McGrath: On pourrait peut-être suggérer que le comité directeur se réunisse lundi ou mardi, pour que l'on convoque les témoins avant la fin de la semaine.

Le président: Avant de convoquer la réunion, nous devons savoir quand les témoins pourront se présenter.

M. McGrath: Monsieur Davies évidemment ne voudra jamais venir témoigner. Il est appelé à comparaître par le Comité; c'est une assignation. Il faut qu'il compareisse lorsqu'on l'appelle.

Le président: Est-il dans le pays?

M. McGrath: Faites-le venir, où qu'il soit.

Le président: Il y a toujours le facteur temps. Lorsque l'on convoque une réunion...

M. McGrath: Il faut le ramener.

Le président: Nous prendrons les dispositions pour nous réunir lundi et mardi au cas où les témoins sont disponibles.

M. McGrath: C'est parfait.

Le président: La séance est levée.

[Texte]

APPENDIX D

THE CHALLENGE FACING CANADA'S FISHERIES TODAY

Mr. Chairman, Members of the House of Commons Committee on Fisheries and Forestry:

Tonight I am going to talk about Canada's fisheries. I am going to talk about problem areas in our fisheries and I am going to talk about challenges. I am going to talk about challenges in the sense of good management and the benefits which wise decision making at the government level can bring to the fishermen in this country.

Canada's fishing industry is in difficult straits. Not all of it mind you. There are some success stories like the Pacific Salmon and the lobster fishery on Canada's East Coast. The herring industry is booming in the Gulf of St. Lawrence and the Queen crab shows every likelihood of being a winner on the eastern seaboard as well. But, in total, things are grim. They are still grim despite large confusions of capital and research. As whole industries go, our Canadian fishery is overmanned and overequipped. Incomes are low and productivity is lagging far behind most other types of economic activity. No wonder that fishing is thought to be synonymous with hardship, with overexploitation and with inefficiency in the modern, industrial sense of the word.

Affluent societies don't have commercial fisheries in the old-fashioned hard hitting sense of the word. They have sports fisheries and they may even have fish farms. But they don't send their young men out to sea in the thousands to take their chances along with foreign fishermen. They can't get them to go. Commercial fishing, except in the most ideal circumstances, is too uncertain. It is too seasonal. The income is too unpredictable. There are few fringe benefits and, often, there is no pension at the end of the road. Little wonder that each succeeding generation of fishermen's sons has taken to the land where he could work regular hours in a factory or an office building and go home to his family and his TV set at the end of an eight hour day.

[Interprétation]

APPENDICE D

LE DÉFI QUI SE POSE À L'INDUSTRIE CANADIENNE DE LA PÊCHE

Monsieur le président, messieurs les membres du Comité des pêches et des forêts de la Chambre des communes.

Je vais vous parler ce soir des pêches du Canada, des problèmes qui l'affligent et des défis qui se posent. Je vais vous parler des défis à relever dans le domaine de l'exploitation rationnelle et des avantages qui peuvent découler pour les pêcheurs canadiens de décisions éclairées de la part du gouvernement.

L'industrie de la pêche du Canada traverse une période difficile. Pas toute l'industrie, remarquez bien. Nous avons quelques grandes réussites à notre actif, comme l'industrie du saumon du Pacifique et celle du homard sur la côte Est du Canada. L'industrie du hareng est florissante dans le golfe du Saint-Laurent et la pêche du crabe araignée promet de devenir une industrie de tout premier plan de la côte Est. Toutefois, dans l'ensemble, la situation est mauvaise. Elle reste mauvaise malgré les importants apports sous forme de capitaux et de recherches. Dans son ensemble, l'industrie canadienne de la pêche possède trop d'hommes et de matériel. Les revenus sont faibles et la productivité est bien inférieure à celle de la plupart des autres secteurs économiques. Il n'est donc pas étonnant que le mot pêche soit synonyme, pour bien des gens, de privations, de surexploitation et d'inefficacité, pris dans le sens moderne, industriel du mot.

Les sociétés riches ne possèdent pas de pêche commerciale telle qu'on la comprenait autrefois. Elles ont des pêches sportives et même des piscifactoreries. Mais elles n'envoient pas leurs jeunes hommes en mer, par milliers, pour y affronter la concurrence de flottes de pêche étrangères. Elles ne peuvent pas les convaincre de partir. La pêche commerciale, sauf lorsqu'elle se pratique dans des conditions exceptionnellement favorables, est trop aléatoire, trop saisonnière. Les revenus sont trop incertains. La pêche offre trop peu d'avantages sociaux et, bien souvent, aucune pension ne vient récompenser le pêcheur à l'heure de sa retraite. Il n'est donc pas étonnant que, à chaque génération, un nombre croissant de fils de pêcheurs décident de rester à terre où ils peuvent travailler selon un horaire régulier dans une usine ou un bureau pour rentrer chez eux et regarder la télévision en famille à la fin d'une journée de huit heures.

[Text]

Look at the United States. There the commercial fishery is rapidly fading from view. No wonder we Canadians are outfishing the Americans. We are outfishing them because they are having great difficulty in the U.S. recruiting new entrants. Their fish boats are old and their fishermen are getting older. We, meanwhile, in Canada still have a large reserve of people who have never known anything else but privation. Living in Newfoundland and in many isolated communities in the Maritimes, they still look to fishing as a meaningful vocation. Greater mobility and a glimpse of the outside world however will often change their minds.

Sometimes the outside world isn't all that far away. At least the opportunity to earn a decent income may still be relatively close at hand. Let me quote some statistics on net value of production in some of the other primary industries in the Atlantic Provinces. There the value of the output per fisherman still only averages around \$2,000 a year. In forestry the net value of his output is more like \$6,000 and in mining it may be as high as \$15,000. No wonder that these other primary industries can pay their labour more for a year's work. And, no wonder that fishing is at the bottom end of the scale insofar as the earning power of the individual fishermen is concerned.

A recent report issued by the Atlantic Development Board makes interesting reading in this connection. Entitled "Fisheries in the Atlantic Provinces" it says, on page 4, that:

"The fishing industry is one of the few industries in the region which, historically, has absorbed part of the labour force during times of distress in the economy"

And, again on page 33:

"It is clear that the inshore fishery throughout the Atlantic Provinces is an instrument of poverty. Far too many men, boats and equipment are being applied to a basically limited resource." Underemployment of the manpower in our fishery together with too many boats and too much of the wrong kind of gear are reasons why the fishermen depend so heavily on transfer payments and Unemployment Insurance. "Over-all, 24% of

[Interpretation]

Voyez ce qui se passe aux États-Unis. La pêche commerciale disparaît rapidement. Il n'est donc pas surprenant que nous, les Canadiens, surpassions les Américains quant au volume des prises. Le volume de nos prises surpasse le leur parce que l'industrie de la pêche aux États-Unis a beaucoup de difficulté à trouver de la main-d'œuvre. Ses bateaux de pêche sont vieux et ses pêcheurs encore plus. Chez nous, d'autre part, nous avons une bonne réserve de gens qui n'ont jamais connu que les privations. Comme ils habitent Terre-Neuve et d'autres villages isolés des Maritimes, ils considèrent encore la pêche comme une vocation véritable. Toutefois, le jour où ils gagnent en mobilité et ont l'occasion d'entrevoir un autre mode de vie, ils changent souvent d'idée.

Le reste du monde n'est pas toujours bien loin. Du moins, existe-t-il d'autres moyens de s'assurer un revenu convenable, sans trop s'éloigner. Permettez-moi de vous citer quelques données statistiques de la valeur nette de la production de quelques autres industries primaires des provinces de l'Atlantique. Dans cette région, la valeur moyenne de la production par pêcheur n'est encore que d'environ \$2,000 par an. La valeur nette de la production d'un ouvrier employé par l'industrie forestière est de \$6,000, celle de la production d'un ouvrier des mines peut aller jusqu'à \$15,000. Il n'est donc pas étonnant que ces autres industries primaires puissent mieux rémunérer leur effectif ouvrier. Il n'est pas surprenant non plus que l'industrie de la pêche se classe la dernière en ce qui a trait au montant des revenus par travailleur.

L'Office d'expansion économique de la région de l'Atlantique a publié récemment un rapport qui fournit des faits intéressants à ce sujet. Dans ce rapport, intitulé «*Fisheries in the Atlantic Provinces*» (Les pêches des provinces de l'Atlantique), on lit, à la page 4, que:

«L'industrie de la pêche est l'une des rares industries de la région qui, de tous temps, a absorbé une partie de l'effectif ouvrier lors de périodes de difficultés économiques.»

Puis, à la page 33:

«Il est évident que la pêche côtière dans toutes les provinces de l'Atlantique est un facteur de pauvreté. Bien trop d'hommes, de bateaux et d'engins de pêche exploitent une ressource fondamentalement limitée.» «Si les pêcheurs comptent tant sur les apports de capitaux transférés et sur l'assurance-chômage, c'est à cause du sous-emploi de la main-d'œuvre dans une industrie de la pêche exploitant trop de bateaux et trop d'engins de pêche mal

[Texte]

the total income of the inshore fishery is from these two sources, ranging from a low of 12.9% in Western Nova Scotia, to a high of 28.5% of total income of inshore fishermen in Newfoundland from these two sources of governmental payments."

I only mention these statistics to indicate how depressed much of our Canadian fishing industry is. I could also have added that, out of a total employment in the Atlantic fishery of some 45,500 fishermen, only 6,000 can be said to be employed on a full-time or year round basis. Some 27,000 are part-time in the sense that they work at fishing for more than five months of the year. Another 12,500 are occasional workers in that their major source of income is derived from fishing for only a few weeks or months at a time.

While there is greater continuity of employment in some of the larger fish processing plants, and while they usually pay wages in excess of one dollar an hour, incomes in the processing end of the industry are also uncertain. They are uncertain, that is, as compared to incomes in most other Canadian industries. They are also low in the aggregate. For instance the average income for employee in a typical fish processing plant in the Atlantic Region is now in the order of \$2,500 per annum. It could be \$500 a year higher in Nova Scotia and \$500 a year less in Newfoundland. But few other manufacturing activities elsewhere in Canada generate smaller yearly incomes than fish processing does.

I have given you these various figures on employment and on individual incomes in order to raise a fundamental question in your minds. It is a question which comes into better focus when I also tell you that our fish resources are already heavily exploited. They are heavily exploited, not only by Canadians, but also by other foreign fishermen operating off our shores. Given a limited resource, then, given a relatively large, generally underemployed, and always poorly paid labour force, where do we go from here? What is the job of the Fisheries Department in Ottawa? And where do our other Departments like Manpower and Regional Development come in? What should we in the Fisheries Department be doing about this depressed situation in Canada's commercial fishing industry? And what should other Departments be doing in order to take part, at least, of this problem off our hands?

[Interprétation]

conçus. « dans l'ensemble, l'industrie de la pêche côtière tire 24 p. 100 de ses revenus de ces deux sources d'aide gouvernementale, variant de 12.4 p. 100 du revenu total des pêcheurs côtiers, dans l'ouest de la Nouvelle-Écosse, à 38.5 p. 100 à Terre-Neuve. »

Je ne cite ces statistiques que pour vous montrer dans quel état de marasme se trouve la majeure partie de notre industrie de la pêche. Je pourrais de plus ajouter que, des 45,000 pêcheurs employés dans les provinces de l'Atlantique, 6,000 seulement sont vraiment employés à plein temps ou à longueur d'année. Environ 27,000 sont des pêcheurs à temps partiel en ce qu'ils pratiquent la pêche pendant plus de cinq mois par an. Un autre groupe de 12,500 ne sont que des pêcheurs intermittents car la pêche ne constitue leur source principale de revenu que quelques semaines ou quelques mois à la fois.

Bien que l'emploi dans quelques grandes usines de traitement du poisson soit plus permanent et que les salaires à soient généralement de plus d'un dollar l'heure, les revenus des employés des usines de traitement sont eux aussi incertains. Ils le sont par rapport aux revenus des personnes employées dans les autres industries canadiennes. De plus, ils sont faibles en moyenne. Par exemple, le revenu moyen d'un travailleur d'usine typique de traitement du poisson dans la région de l'Atlantique est actuellement de l'ordre de \$2,500 par année. Il se pourrait qu'en Nouvelle-Écosse il soit de \$500 de plus par année et à Terre-Neuve, de \$500 de moins. De toute façon, peu d'industries ailleurs au Canada engendrent des revenus annuels plus maigres que celle du traitement du poisson.

Je vous ai donné ces différents chiffres sur l'emploi et sur les revenus individuels afin que vous vous posiez une question fondamentale. C'est une question qui prend encore plus d'acuité lorsque l'on songe que nos ressources halieutiques sont déjà largement exploitées, tant par des pêcheurs étrangers au large de nos côtes que par des pêcheurs canadiens. Étant donné que nos ressources halieutiques sont limitées, que la main-d'œuvre qui les exploite est relativement abondante, généralement sousemployée et toujours insuffisamment rémunérée, que faire? Que doit faire le ministère des Pêcheries à Ottawa? Quel rôle doivent jouer d'autres ministères, tels le ministère de la Main-d'œuvre et le ministère de l'Expansion économique régionale? Que doit faire le ministère des Pêches pour remédier au marasme qui règne dans l'industrie de la pêche? Qu'est-ce que d'autres ministères devraient faire pour s'occuper, du moins en partie, de ce problème?

[Text]

My own approach—and I am being very frank about this—is straightforward. I am attempting to map out a Canadian fishing industry of the future which will be genuinely economic. It will be genuinely economic in the sense that it will make the most of our fishery as a resource. It will also pay a good wage to the fishermen and to the fish plant workers. It will be an industry, in other words, which will be able to hold its employees because of reasonably good rates of pay, year round employment and reasonably good working conditions.

Something has to give of course. And that which has to give is employment. The total number of fishermen employed in Canada's commercial fishery in 1980 will have to be half or less of that which it is today. Fewer fishermen and fewer plant workers with better paying jobs. Half as many fishermen and many fewer plant workers with twice their present incomes. This is the target for the end of the next decade. And to the extent that we fall short of this target we will still have a large, underprivileged group of Canadians living in our less fortunate fishing communities.

Manpower and Regional Economic Development therefore have their jobs cut out for them. They will have to take roughly half of our present fishing labour force and switch it into other vocations. They will have to retrain workers for other vocations. This is a big assignment in economic terms. It is an even bigger challenge in social terms. The adjustments in individual cases will be bad enough. But, measured in the tens of thousands it represents a social revolution of major proportion, particularly on Canada's East-Coast.

SEALS

The following is part of a transcript of an interview carried on Channel 5 (WNEW-TV) on February 20, 1969 in New York. It was an interview by the News Director of that television station with Mr. Brian Davies of New Brunswick.

Announcer: Mr. Davies, explain exactly what happens in the Gulf of St. Lawrence?

Mr. Davies: Well on the Canadian seal hunt in the spring of the year, large icebreaking vessels make their way through the floating ice, floating on the sea they disgorge hundreds of hunters who then move into the

[Interpretation]

Ma façon de procéder, je vous le dis très franchement, c'est d'attaquer le problème de front. J'essaie de préparer l'avènement d'une industrie canadienne de la pêche qui soit vraiment rentable. Elle le sera dans la mesure où elle se soldera par une exploitation optimale de nos ressources halieutiques. Elle assurera un salaire convenable aux pêcheurs et aux ouvriers des usines de traitement du poisson. Cette industrie n'aura pas de difficulté à garder son personnel parce qu'elle assurera un salaire convenable, de l'emploi pendant toute l'année et d'assez bonnes conditions de travail.

Cela comporte évidemment des sacrifices. C'est l'emploi qui en souffrira. Il va falloir qu'en 1980 la pêche commerciale emploie la moitié moins de pêcheurs qu'à l'heure actuelle, et peut-être moins. Il y aura la moitié moins de pêcheurs, beaucoup moins de travailleurs d'usines de traitement, mais leur salaire sera le double de ce qu'il est maintenant. Voilà l'objectif du ministère pour la fin de la prochaine décennie. Dans la mesure où nous ne réussirons pas à atteindre cet objectif, il subsistera un grand nombre de Canadiens désavantagés qui continueront de végéter dans les villages de pêcheurs les moins fortunés.

On voit donc quel rôle doivent jouer les ministères de la Main-d'œuvre et de l'Expansion économique régionale. Ils devront réaffecter environ la moitié de nos effectifs actuels de pêcheurs à d'autres activités. Il va falloir recycler des milliers de pêcheurs et d'ouvriers. C'est une grosse tâche au point de vue économique, mais c'est un défi encore plus grand sur le plan social. L'adaptation est déjà assez pénible sur le plan individuel: lorsqu'il s'agit de dizaines de milliers de personnes, cela représente une révolution sociale majeure, particulièrement lorsqu'il s'agit de la côte orientale du pays.

LES PHOQUES

Le passage suivant est tiré d'une entrevue présentée au Canal 5 (WNEW-TV) de New York, le 20 février. Le chef des nouvelles de cette station de télévision interviewait M. Brian Davies du Nouveau-Brunswick.

Intervieweur: M. Davies, pourriez-vous nous expliquer ce qui se passe dans le golfe Saint-Laurent?

M. Davies: Voici: Lors de la chasse du phoque qui se déroule au Canada tous les printemps, de grands brise-glaces se frayent un chemin à travers la banquise et vomissent des milliers de chasseurs qui s'avancent dans les

[Texte]

breeding grounds of the harp seals, with clubs, and beat at the baby seals.

Announcer: With the intention of killing them?

Mr. Davies: With the intention of killing them; but unfortunately for the baby seals the hunters are not always successful and . . .

Announcer: So in effect they skin them alive?

Mr. Davies: Yes, in effect they skin them alive.

[Interprétation]

aires où les Phoques du Groenland mettent bas, et assomment les bébés phoques à coups de gourdins.

Intervieweur: Dans l'intention de les tuer?

M. Davies: Dans l'intention de les tuer, mais malheureusement pour les bébés phoques, il arrive que les chasseurs manquent leur coup . . .

Intervieweur: De sorte qu'ils les dépiautent vifs?

M. Davies: En effet, les phoques sont écorchés vivants.

MINUTES OF PROCEEDINGS

TUESDAY, April 15, 1969.

(16)

The Standing Committee on Fisheries and Forestry met this day at 9:42 a.m., the Chairman, Mr. Crossman, presided.

Members present: Messrs. Beaudoin, Borrie, Breaux, Crossman, Crouse, Cyr, Hogarth, Lundrigan, McGrath, St. Pierre, Stafford, Whelan (12).

Also present: Messrs. Anderson, Béchard, Carter, Hopkins, Paproski.

Witnesses: Mr. Henri Stadt, Montreal, P.Q.; Dr. P. Maurice Ollivier, Law Clerk and Parliamentary Counsel.

The Chairman read the Eighth Report of the Subcommittee on Agenda and Procedure.

Your Subcommittee met on Monday, April 14, 1969 with the following members present: Messrs. Crossman, Beaudoin, Crouse, Rose, Smith (*Northumberland-Miramichi*) and Whelan.

Following discussion it was agreed to make the following recommendations:

(1) The itinerary of the trip to British Columbia stand as previously approved.

(2) That the three films concerning sealing operations in the Gulf of St. Lawrence be shown before proceeding to the examination of the witness.

*Agreed,—*That the recommendations of the Subcommittee be approved.

The Chairman announced that word had been received that Mr. Serge Deyglun, previously called as a witness was in hospital.

On motion of Mr. McGrath

*Resolved,—*That Mr. André Fleury of Montreal be called to appear before this Committee.

On motion of Mr. Rose

*Resolved,—*That reasonable travelling and living expenses be paid to Mr. Henri

[Traduction]

PROCÈS-VERBAUX

Le MARDI 15 avril 1969.

(16)

Le Comité permanent des pêches et forêts se réunit ce matin à 9 h. 42, sous la présidence de M. Crossman.

Présents: MM. Beaudoin, Borrie, Breaux, Crossman, Crouse, Cyr, Hogarth, Lundrigan, McGrath, St. Pierre, Stafford, Whelan —(12).

De même que: MM. Anderson, Béchard, Carter, Hopkins, Paproski.

Témoins: M. Henri Stadt, de Montréal (P.Q.); M. P. Maurice Ollivier, légiste et conseiller parlementaire.

Le président lit le Huitième rapport du sous-comité du programme et de la procédure.

Le sous-comité se réunit le lundi 14 avril 1969. Sont présents MM. Crossman, Beaudoin, Crouse, Rose, Smith (*Northumberland-Miramichi*) et Whelan.

Après débat, il est décidé de faire les recommandations suivantes:

(1) Que l'itinéraire du voyage en Colombie-Britannique demeure le même que celui qui a été approuvé à l'origine.

(2) Que l'on présente les trois films relatifs à la chasse aux phoques dans le golfe du Saint-Laurent avant de procéder à l'interrogation des témoins.

*Il est décidé—*Que l'on approuve les recommandations du sous-comité.

Le président annonce qu'on lui a fait savoir que M. Serge Deyglun, que l'on avait convoqué comme témoin, est à l'hôpital.

Sur la proposition de M. McGrath,

*Il est convenu—*Que l'on demande à M. André Fleury, de Montréal, de comparaître devant le Comité.

Sur la proposition de M. Rose,

*Il est convenu—*Que l'on paie, dans une mesure raisonnable, leurs frais de dé-

Stadt of Montreal, P.Q., and Mr. Brian Davies of Fredericton, New Brunswick, who have appeared before the Standing Committee on Fisheries and Forestry today.

On motion of Mr. Crouse, it was

Agreed,—That the order of showing of films be

The C.B.C. film produced by Artek Film Production.

Mr. Brian Davies' film—The Seals of the Ice Pans.

The Film of Mr. Henri Stadt.

Following the showing of the films, the Committee proceeded to examine Mr. Henri Stadt of Montreal, Film Producer.

On motion of Mr. Rose, it was

Agreed,—That Mr. Koneman of Montreal be invited to appear before this Committee at the earliest possible time and that the Subcommittee on Agenda and Procedure be empowered to arrange the time of appearance.

Mr. Crouse asked how much the Canadian Broadcasting Corporation paid for the film of Artek.

At 12:45 p.m. the Committee adjourned to 3:30 p.m. this day.

AFTERNOON SITTING (17)

The Committee resumed at 3:35 p.m., the Chairman, Mr. Crossman, presided.

Members present: Messrs. Borrie, Breau, Comeau, Crouse, Cyr, Hogarth, Lundrigan, McGrath, Noble, Rose, Stafford, St. Pierre, Whelan (13).

Also present: Messrs. Anderson, Carter, Hopkins and Rock.

Witnesses: Messrs. Brian D. Davies, Executive Secretary, New Brunswick Society for the Prevention of Cruelty to Animals; Gordon Petrie, Legal Counsel; and P. Maurice Ollivier, Law Clerk and Parliamentary Counsel.

The witness Mr. Brian Davies claimed the protection of the House in respect of

placement et de séjour à M. Henri Stadt, de Montréal (P.Q.), et à M. Brian Davies, de Fredericton (*Nouveau-Brunswick*), qui ont comparu aujourd'hui devant le Comité permanent des pêches et forêts.

Sur la proposition de M. Crouse,

Il est décidé—Que l'on présente les films dans l'ordre suivant:

Le film de Radio-Canada réalisé par l'Artek Film Production;

Le film de M. Brian Davies intitulé "*The Seals of the Ice Pans*";

Le film de M. Henri Stadt.

Une fois la présentation des films terminée, le Comité procède à l'interrogation de M. Henri Stadt, réalisateur de films, de Montréal.

Sur la proposition de M. Rose,

Il est décidé—Que l'on invite M. Koneman, de Montréal, à comparaître devant le Comité aussitôt que possible, et que le sous-comité du programme et de la procédure ait pouvoir de décider de la date de cette comparution.

M. Crouse demande combien la Société Radio-Canada a payé le film de l'Artek.

A midi 45, le Comité lève la séance pour se réunir de nouveau à 3 h. 30 de l'après-midi.

SÉANCE DE L'APRÈS-MIDI (17)

Le Comité reprend ses travaux à 3 h. 35 de l'après-midi, sous la présidence de M. Crossman.

Présents: MM. Borrie, Breau, Comeau, Crouse, Cyr, Hogarth, Lundrigan, McGrath, Noble, Rose, Stafford, St. Pierre, Whelan—(13).

De même que: MM. Anderson, Carter, Hopkins et Rock.

Témoins: MM. Brian D. Davies, secrétaire exécutif de la Société protectrice des animaux du Nouveau-Brunswick; Gordon Petrie, conseiller juridique; et P. Maurice Ollivier, légiste et conseiller parlementaire.

Le témoin, M. Brian Davies, demande la protection de la Chambre relativement au

the evidence he would be called upon to give and also asked leave to be assisted by counsel.

On motion of Mr. St. Pierre,

Resolved,—That Mr. Davies be granted leave to be assisted by counsel.

On motion of Mr. Crouse, it was

Agreed,—That the oath be administered to Mr. Brian Davies.

The Clerk of the Committee thereupon administered the oath to Mr. Davies.

The Committee proceeded to examine Mr. Davies concerning the film—*The Seals of the Ice Pans*.

At 6:45 p.m. the Committee adjourned to 8:00 p.m. this day.

EVENING SITTING (18)

The Committee resumed at 8:10 p.m., the Chairman, Mr. Crossman, presided.

Members present: Messrs. Borrie, Breau, Comeau, Crossman, Crouse, Cyr, Hogarth, McGrath, Noble, Perrault, St. Pierre, Whelan (12).

Also present: Messrs. Anderson, Béchard, Carter, Hopkins, Marchand (*Kamloops-Cariboo*) and Stewart (*Okanagan-Kootenay*).

Witnesses: Same as at the afternoon meeting.

The Committee requested a second showing of the film—*The Seals of the Ice Pans* and then resumed their examination of Mr. Brian Davies.

On motion of Mr. Hogarth,

Resolved,—That the Executive Secretary of the New Brunswick Society for the Prevention of Cruelty to Animals be invited to appear before the Committee and bring with him all documents, resolutions and correspondence pertaining to the Seal Hunt in the Gulf of St. Lawrence.

témoignage qu'il sera appelé à donner, et demande aussi l'autorisation d'être aidé par un conseiller juridique.

Sur la proposition de M. St. Pierre,

Il est convenu—Que M. Davies reçoive l'autorisation d'être aidé par un conseiller juridique.

Sur la proposition de M. Crouse,

Il est décidé—Que l'on fasse prêter serment à M. Brian Davies.

Le secrétaire du Comité fait alors prêter serment à M. Davies.

Le Comité passe à l'interrogation de M. Davies relativement à son film, *«The Seals of the Ice Pans»*.

A 6 h. 05 de l'après-midi, le Comité lève la séance pour se réunir de nouveau à 8 h. du soir.

SÉANCE DU SOIR (18)

Le Comité se réunit de nouveau à 8 h. du soir, sous la présidence de M. Crossman.

Présents: MM. Borrie, Breau, Comeau, Crossman, Crouse, Cyr, Hogarth, McGrath, Noble, Perrault, St. Pierre, Whelan—(12).

De même que: MM. Anderson, Béchard, Carter, Hopkins, Marchand (*Kamloops-Cariboo*) et Stewart (*Okanagan-Kootenay*).

Témoins: Les mêmes qu'à la séance de l'après-midi.

Le Comité demande que l'on présente de nouveau le film intitulé *«The Seals of the Ice Pans»*, puis recommence à interroger M. Brian Davies.

Sur la proposition de M. Hogarth,

Il est convenu—Que l'on invite le secrétaire exécutif de la Société protectrice des animaux du Nouveau-Brunswick à comparaître devant le Comité, et à apporter tous les documents, toutes les résolutions et toute la correspondance relatifs à la chasse aux phoques dans le golfe du Saint-Laurent.

And the examination continuing—on motion of Mr. St. Pierre, it was

Resolved unanimously,—That this Committee try to obtain from (WNEW-TV), New York, the full and complete tapes of the interview conducted on February 20, 1969 by the News Director of that television station with Mr. Davies; and if necessary, that the said News Director be invited to appear before this Committee in order to establish the accuracy of the tapes so presented.

At 10:10 p.m., questioning continuing the Committee adjourned to Wednesday, April 16, 1969.

WEDNESDAY, April 16, 1969.
(19)

The Standing Committee on Fisheries and Forestry met *In Camera* this day at 3:45 p.m., the Chairman, Mr. Crossman, presided.

Members present: Messrs. Anderson, Beaudoin, Borrie, Comeau, Crossman, Crouse, Hogarth, Lundrigan, McGrath, Noble, St. Pierre, Whelan (12).

The Committee discussed the Agenda and Procedure.

After debate thereon, the Clerk gave the members present copies of the itinerary of the trip to British Columbia and of the briefs received to date.

At 4:35 p.m., the Committee adjourned to the call of the Chair.

L'interrogatoire se poursuivant, sur la proposition de M. St. Pierre,

Il est convenu à l'unanimité—Que le Comité essaie d'obtenir de la WNEW-TV de New York l'enregistrement complet de l'entrevue accordée par M. Davies le 20 février 1969 au directeur des informations de cette station de télévision; et qu'au besoin, on invite le directeur des informations en question à comparaître devant le Comité afin de confirmer l'exactitude de l'enregistrement ainsi présenté.

A 10 h. 10 du soir, l'interrogatoire se poursuivant, le Comité s'ajourne jusqu'au mercredi 16 avril 1969.

Le MERCREDI 16 avril 1969.
(19)

Le Comité permanent des pêches et des forêts se réunit à huis clos cet après-midi à 3 h. 45, sous la présidence de M. Crossman.

Présents: MM. Anderson, Beaudoin, Borrie, Comeau, Crossman, Crouse, Hogarth, Lundrigan, McGrath, Noble, St. Pierre, Whelan—(12).

Le Comité délibère sur le programme et sur la procédure.

Après débat à ce sujet, le secrétaire distribue aux membres du Comité présents des exemplaires de l'itinéraire du voyage en Colombie-Britannique et des mémoires reçus à ce jour.

A 4 h. 35 de l'après-midi, le Comité s'ajourne jusqu'à nouvelle convocation du président.

Le secrétaire du Comité,
J. H. Bennett,
Clerk of the Committee.

[Texte]

EVIDENCE

(Recorded by Electronic Apparatus)

Tuesday, April 15, 1969

● 0939

The Chairman: Gentlemen, I see a quorum. Your Subcommittee on Agenda and Procedure met Monday, April 14, 1969 at 8 p.m. with the following members present: myself, Messrs. Beaudoin, Crouse, Rose, Smith (Northumberland-Miramichi) and Whelan.

Following discussion of the itinerary for the trip to British Columbia and the agenda for the meeting of April 15, 1969, it was agreed to make the following recommendations:

That the itinerary of the trip stand as previously approved;

That the three films of sealing operation be shown first before proceeding to the examination of witnesses.

Is this agreeable?

Some hon. Members: Agreed.

The Chairman: We received word that Mr. Serge Deyglun will not be here today. We received word from his doctor that he had to enter the hospital.

An hon. Member: Who?

The Chairman: Serge Deyglun, one of the witnesses.

Before the showing of the films I will ask for a motion that reasonable travelling and living expenses be paid to the witnesses: Brian Davies, Executive Secretary, New Brunswick Society for the prevention of Cruelty to Animals, Fredericton, N.B.; Serge Deyglun who is not here, and Henri Stadt, who were called and have appeared before this Committee. May I have a motion to this effect?

Mr. McGrath: Before you put that, Mr. Chairman, would it be in order to suggest the calling of another witness? He might possibly be in the room, Mr. André Fleury; is he here?

The Chairman: I do not know, sir; if the Committee so wishes. Is Mr. Fleury here?

Mr. McGrath: I move that he be called as a witness, Mr. Chairman.

[Interprétation]

TÉMOIGNAGES

(Enregistrement électronique)

Le mardi 15 avril 1969

Le président: Messieurs, nous avons quorum. Le sous-comité du programme et de la procédure s'est réuni le lundi 14 avril 1969, à 8 h. du soir. Étaient présents MM. Beaudoin, Crouse, Rose, Smith (Northumberland-Miramichi) et Whelan, ainsi que moi-même.

Après débat sur l'itinéraire du voyage en Colombie-Britannique, et sur le programme de la séance du 15 avril 1969, nous sommes convenus de faire les recommandations suivantes:

Que l'itinéraire du voyage demeure le même que celui que nous avons approuvé à l'origine;

Que l'on projette les trois films sur la chasse aux phoques avant de passer à l'interrogation des témoins.

Êtes-vous d'accord?

Des voix: D'accord.

Le président: On nous a fait savoir que M. Serge Deyglun ne pourrait venir aujourd'hui. Son médecin nous a dit qu'il devait entrer à l'hôpital.

Une voix: Qui?

Le président: Serge Deyglun, l'un des témoins.

Avant la projection des films, je vais demander que l'on propose une motion en vue de payer aux témoins, dans une mesure raisonnable, leurs frais de déplacement et de séjour. Il s'agit de M. Brian Davies, secrétaire exécutif de la *New Brunswick Society for the Prevention of Cruelty to Animals* de Fredericton (N.-B.), de M. Serge Deyglun, qui est absent; et de M. Henri Stadt. Ces témoins ont été convoqués et ont comparu devant le Comité. Puis-je avoir une motion en ce sens?

M. McGrath: Avant que vous ne demandiez la motion, monsieur le président, pourrions-nous proposer la convocation d'un autre témoin? Il s'agit de M. André Fleury, et il est peut-être dans la salle. Est-il ici?

Le président: Je ne sais pas, monsieur. Si le Comité le désire, la chose est possible. M. Fleury est-il ici?

M. McGrath: Je propose qu'il soit convoqué comme témoin, monsieur le président.

[Text]

The Chairman: Would it be possible that he might be available today?

Mr. McGrath: I do not know; he lives in Montreal. He is mentioned in this memorandum.

Mr. Whelan: Mr. Chairman, I asked who he was because I do not know if everybody knows who he is.

Mr. McGrath: He was the chief cameraman.

The Chairman: Did you put that as a motion?

Mr. McGrath: Yes, sir. I move that Mr. André Fleury of Montreal be called as a witness.

The Chairman: You have heard the motion that Mr. Fleury be called as a witness. All in favour?

Motion agreed to.

The Chairman: Now I will ask for a motion that reasonable travelling expense be paid to the witnesses.

Mr. Rose: I so move.

• 0945

Motion agreed to.

The Chairman: Is there any line of preference as to which film shall be shown first or is it immaterial?

Mr. Hogarth: Could we have roughly described what films are going to be shown?

The Chairman: The first one is the CBC film, which is the Artek film, then the film by Brian Davies on the seal hunt and the one by Henri Stadt.

Mr. Borrie: I move, Mr. Chairman, that they be shown in that order. Mr. Chairman what is the sequence of the film?

The Chairman: Well, it is the seal hunt.

Mr. Borrie: Yes, but are the three here chronicled?

The Chairman: No; I think there are three different sequences on the same subject.

Now we will go to the back of the room, I think.

Mr. Borrie: I moved that they be shown in that order.

The Chairman: That is right; the CBC, Mr. Brian Davies and Mr. Henri Stadt last. The first one runs 58 minutes.

[Interpretation]

Le président: Pourrait-il être disponible aujourd'hui?

M. McGrath: Je ne sais pas; il demeure à Montréal. On mentionne son nom dans ce document.

M. Whelan: Monsieur le président, j'ai demandé qui il était car je ne sais pas si tout le monde le connaît.

M. McGrath: C'était l'opérateur en chef.

Le président: Avez-vous proposé cela comme motion?

M. McGrath: Oui, monsieur. Je propose que l'on convoque comme témoin M. Fleury, de Montréal.

Le président: Vous avez entendu la motion tendant à faire convoquer M. Fleury comme témoin. Êtes-vous tous d'accord?

La motion est adoptée.

Le président: Maintenant, je demande une motion tendant à faire rembourser aux témoins leurs frais de déplacement.

M. Rose: Je propose une motion en ce sens.

La motion est adoptée.

Le président: Est-ce que vous avez des préférences quant au film à projeter en premier, ou est-ce que cela vous est indifférent?

M. Hogarth: Pourrait-on nous dire brièvement quels sont les films que nous allons voir?

Le président: Il y a le film de Radio-Canada, qui est un film Artek, puis le film de Brian Davies sur la chasse aux phoques, et enfin celui d'Henri Stadt.

M. Borrie: Je propose, monsieur le président, que l'on présente les films dans cet ordre. Monsieur le président, quelle est la séquence du film?

Le président: Il s'agit de la chasse aux phoques.

M. Borrie: Oui, mais les trois films se suivent-ils dans un ordre chronologique?

Le président: Non; je pense qu'il s'agit de trois séquences différentes sur un même sujet.

Maintenant, je pense que nous allons nous asseoir à l'arrière de la salle.

M. Borrie: J'ai proposé que l'on présente les films dans cet ordre.

Le président: C'est cela: le film de Radio-Canada, puis celui de M. Brian Davies, et, enfin, celui de M. Henri Stadt. Le premier film dure 58 minutes.

[Texte]

Mr. Crouse: Mr. Chairman, will there be anyone giving a description of the film as it is shown, or is it intended to run it through without commentary.

The Chairman: Some of them have sound effects.

Mr. Barry MacDonald (Director of Secretariat, CBC Head Office): Mr. Chairman, I am here from the CBC. The first film to be shown was made in 1964 by a firm called Artek Productions of Montreal for the French network of the CBC, and it was shown in the spring of 1964. It is a black and white film running 58 minutes and there is a commentary.

Mr. McGrath: Would this gentleman be available to answer questions about this film after it is shown?

Mr. MacDonald: I can answer some of the superficial questions, Mr. McGrath, but some of them may be a little more difficult and we will take note of them and try to get answers for you. We were not told that we would be witnesses so we did not come...

Mr. Anderson: Mr. Chairman, could the speaker identify himself?

Mr. MacDonald: Yes, of course; my name is Barry MacDonald and I am the head of the Secretariat at the CBC Head Office.

The Chairman: Gentlemen, do any of you wish the translators here?

An hon. Member: I certainly do.

An hon. Member: I do not need one, but there are other members who do.

The Chairman: The translator tells me that it is quite difficult for him to pick up; it is much too fast and it is not amplified into the electronic apparatus.

A film is being shown.

The Chairman: Gentlemen, we saw the Artek film, and the next one will be one of Mr. Davies' films.

The film is being shown.

The Chairman: The next film will be a short one by Henry Stadt. That will be the end of the film showing this morning.

Mr. Crouse: Mr. Chairman, before we see the next film, could I ask if that was the same film that was shown in the Press Gallery, I believe in 1966?

[Interprétation]

M. Crouse: Monsieur le président, quel qu'un va-t-il commenter le film pendant la projection, ou cela n'est-il pas nécessaire?

Le président: Certains de ces films sont des films sonores.

M. Barry MacDonald (Directeur du secrétariat, bureau central de Radio-Canada): Monsieur le président, je viens de Radio-Canada. Le premier film a été réalisé en 1964 par l'Artek productions, de Montréal, pour Radio-Canada, et a été présenté au printemps 1964. C'est un film de 58 minutes, en noir et blanc, et il est sonore.

M. McGrath: Est-ce que monsieur pourrait répondre à des questions après la présentation du film?

M. MacDonald: Je pense répondre aux questions générales, monsieur McGrath. Mais certaines questions peuvent être un peu plus difficiles, et nous en prendrons note pour essayer d'obtenir les réponses pour vous. On ne nous avait pas dit que nous aurions à témoigner, et nous ne sommes donc pas venus...

M. Anderson: Monsieur le président, ce monsieur pourrait-il se présenter?

M. MacDonald: Oui, bien sûr. Je suis Barry MacDonald, et je dirige le secrétariat du bureau central de Radio-Canada.

Le président: Messieurs, est-ce que l'un de vous désire que nous ayons l'interprète?

Une voix: Pour ma part, certainement.

Une autre voix: Je peux m'en passer, mais c'est nécessaire pour certains des membres du Comité.

Le président: L'interprète me dit qu'il lui est très difficile de comprendre le commentaire, qui est beaucoup trop rapide, et dont le son n'est pas amplifié par le matériel électronique.

Présentation d'un film.

Le président: Messieurs, nous venons de voir le film d'Artek. Ou va maintenant nous présenter l'un des films de M. Davies.

Présentation du film.

Le président: Le film suivant est un court métrage d'Henry Stadt. Ce sera tout pour la présentation de films de ce matin.

M. Crouse: Monsieur le président, avant que l'on ne nous présente le film suivant, j'aimerais savoir si c'est le film que l'on avait présenté dans la Tribune de la presse, en 1966, je crois.

[Text]

The Chairman: I would have to get that information for you; I am not aware if it was.

Mr. Crouse: Thank you.

The film is being shown.

The Chairman: We will now ask for the first witness...

Mr. McGrath: If I may interrupt, Mr. Chairman, I would like to raise a point of order. At the beginning of the meeting you stated that you had heard from Mr. Serge Deyglun and that he was unable to attend. Are you satisfied that he is in fact ill, and has provision been made for his subsequent appearance before the Committee?

The Chairman: The Clerk received word from Mr. Deyglun's doctor before the meeting this morning that he had entered hospital.

Mr. McGrath: He entered hospital today.

The Chairman: Yes, St. Justine's in Montreal.

Mr. Rose: I would like to raise a further point while we are discussing the matter of witnesses, Mr. Chairman. In a memorandum to the Minister a Mr. Uwe Koneman, who is apparently an assistant with Artek, indicated that if a formal inquiry were initiated he would answer questions put to him. I feel that we should perhaps invite Mr. Koneman as a witness here as well, and I would so move.

The Chairman: Would that be for today's hearing?

Mr. Rose: Well, apparently he lives in Montreal. If he could get down I would appreciate his attending because we have an opportunity now. Since we are going away it is doubtful whether we will have much other opportunity. It depends on how we get along today.

The Chairman: Well, if it is possible to get in contact with him and have him here today I have no objection.

Mr. Rose: You are accepting the motion.

Mr. McGrath: You are presupposing, Mr. Chairman, that we are going to be finished today.

Mr. Chairman: That is right, but we do not know as of now.

Mr. McGrath: We could have a meeting tomorrow or Thursday to hear these two witnesses.

The Chairman: If arrangements can be made I have no objections.

[Interpretation]

Le président: Il faudrait que je vous obtienne ce renseignement; je ne sais pas si c'est de ce film qu'il s'agit.

M. Crouse: Merci.

Projection du film.

Le président: Nous allons maintenant appeler le premier témoin.

M. McGrath: Si vous me le permettez, monsieur le président, je voudrais en appeler au règlement. Au début de la séance vous avez dit que M. Serge Deyglun vous a fait savoir qu'il ne pouvait pas venir. Êtes-vous convaincu qu'il est vraiment malade et est-ce qu'on a pris des dispositions pour qu'il compare plus tard?

Le président: Le secrétaire a reçu une communication de son médecin avant la séance selon laquelle M. Deyglun a été admis à l'hôpital.

M. McGrath: Il a été admis à l'hôpital?

Le président: Oui, l'hôpital Sainte-Justine à Montréal.

M. Rose: Je voudrais soulever un autre point relatif aux témoins. Dans le memorandum adressé au ministre, M. Ewe Koneman qui est apparemment associé à l'Artek a indiqué que s'il y avait une enquête officielle, il serait prêt à répondre aux questions qui lui seraient posées. Nous devrions peut-être inviter M. Koneman à venir témoigner ici.

Le président: Pour la séance d'aujourd'hui?

M. Rose: Il habite apparemment à Montréal. S'il pouvait venir, j'aimerais bien qu'il compare parce que nous avons l'occasion à l'heure actuelle. Comme nous allons partir je doute fort que nous ayons une autre occasion de l'entendre. Tout dépendra des progrès que nous allons faire aujourd'hui.

Le président: S'il est impossible de le contacter et de le faire venir, je ne m'y oppose pas.

M. Rose: Vous acceptez la motion.

M. McGrath: Vous supposez que nous finirons l'étude de cette question aujourd'hui, monsieur le président.

Le président: Nous ne le savons pas encore.

M. McGrath: Nous pourrions avoir une réunion demain ou jeudi pour entendre ces deux témoins.

Le président: Si on peut le faire, je n'ai pas d'objection.

[Texte]

Mr. Rose: If I might make a suggestion, we could at least ascertain if this gentleman is available. We cannot anticipate how long it would take to hear his evidence, in any case, but I feel that this man was right on the spot and would be very valuable as a witness.

Mr. Anderson: Mr. Chairman, as there are at least two more witnesses to come before us, one man in hospital who obviously cannot come today and one man in Montreal who probably cannot come today, may I suggest that we have these motions in a form whereby we can simply call these witnesses at some future date and then we will decide at the end of today perhaps when we should have our next meeting and who we should call at that time. Would that be agreeable to you people?

Mr. Rose: Mr. Chairman, I think that perhaps we could leave it up to the Steering Committee to determine the time when these witnesses are called. But I would appreciate some investigation into if and when this man is available because there is a good chance that we might be able to have another meeting this week.

The Chairman: Are you putting that in the form of a motion?

Mr. Rose: Yes.

The Chairman: "If and when this man is available, arrangements will be made as soon as possible to hear him."

Mr. Rose: Yes.

M. Anderson: I have a feeling we will think of more witnesses when our witnesses today start suggesting names and, therefore, we will undoubtedly have to have another meeting.

The Chairman: There is a motion before the Committee now. We can deal with this motion and, if we are in favour...

Mr. Rose: There are actually two parts to the motion Mr. Chairman. The first part of the motion is that, Mr. Koneman be invited to appear before this Committee as soon as possible and the second portion is that the Steering Committee be empowered to make the necessary arrangements.

The Chairman: You have heard the motion. All in favour.

Some hon. Members: Agreed.

[Interprétation]

M. Rose: Qu'on me permette de faire une proposition. Nous pourrions au moins nous renseigner pour voir s'il est disponible, car on ne peut pas prévoir combien de temps il nous faudra pour entendre son témoignage, mais il me semble que comme la personne était sur place, son témoignage serait des plus précieux.

M. Anderson: Monsieur le président, comme il reste au moins deux témoins à entendre, un qui est à l'hôpital et qui ne pouvait pas venir, et quelqu'un de Montréal qui ne pourrait probablement pas venir aujourd'hui, est-ce qu'on ne pourrait pas simplement formuler ces propositions de façon à pouvoir les convoquer à une date ultérieure et décider ensuite à la fin de la séance quand nous aurons notre prochaine réunion et qui nous convoquerons? Est-ce que tout le monde est d'accord?

M. Rose: Monsieur le président, je crois qu'il conviendrait de laisser le comité directeur décider quand les témoins seront convoqués. Mais je crois qu'il faudrait s'informer si et quand cette personne pourrait être à notre disposition car il y a des possibilités que nous ayons une autre réunion cette semaine.

Le président: Est-ce que vous voulez en faire la proposition?

M. Rose: Oui.

Le président: «Que si et quand cette personne pourrait se présenter, qu'on prenne des dispositions pour l'entendre aussitôt que possible».

M. Rose: Oui.

M. Anderson: J'ai l'impression que nous voudrions convoquer encore d'autres témoins au fur et à mesure des témoignages que nous entendrions aujourd'hui et que nous aurons sans doute une autre réunion.

Le président: Le Comité est saisi d'une proposition déjà. Nous pourrions peut-être commencer par régler celle-là?

M. Rose: La proposition comporte deux parties. La première c'est que M. Koneman soit invité à comparaître devant le Comité aussi rapidement que possible, et la deuxième partie de la motion est que le sous-comité soit autorisé à prendre les dispositions nécessaires.

Le président: Vous avez entendu la motion. Ceux qui sont en faveur?

Des voix: D'accord.

[Text]

Mr. Whelan: Mr. Chairman, I wanted to ask a question. If they are invited and do not attend do we have the power to summon them?

The Chairman: Yes definitely. You have heard the motion.

Mr. Rose: Have you the motion down?

Mr. McGrath: It is a very simple motion. You do not have to have that in writing, Mr. Chairman.

The Chairman: It has to be in writing for the record.

Mr. Rose: If you would like to go on with something else I will submit the motion and you can come back to it.

The Chairman: In the calling of witnesses it is up to the Committee to decide what witness we will call first.

Mr. McGrath: Mr. Chairman, my suggestion would be that we call the man who produced the last film first.

The Chairman: All in favour of hearing Mr. Henri Stadt?

Some hon. Members: Agreed.

The Chairman: Mr. Stafford is first on my list.

Mr. Lundrigan: Before Mr. Stafford begins could I ask if it would be acceptable to have the witnesses here all take their seats before the Committee because, even though we might right now want to proceed with examining Mr. Stadt, there will undoubtedly be related questions we will want to ask other witnesses.

The Chairman: Well, if they are needed we could at that time call them, but I think one witness at a time would be a more orderly way of proceeding. However, that is up to the Committee.

Mr. Whelan: I suggest one at a time.

The Chairman: Unless one witness wanted to call another on something that he was not too clear on. Would that be acceptable? Mr. Stafford, will you proceed.

Mr. Stafford: Mr. Stadt, where are you from?

Mr. Henri Stadt (Montreal): France.

Mr. Stafford: And what part did you have to play in these three films we have seen this morning.

[Interpretation]

M. Whelan: S'ils sont invités et ne veulent pas comparaître, est-ce qu'on a le droit de les sommer de comparaître?

Le président: Oui, certainement. Vous avez entendu la motion de M. Rose.

M. Rose: Est-ce que vous avez rédigé la motion?

M. McGrath: C'est une motion très simple. Il n'est pas nécessaire de la coucher par écrit, monsieur le président.

Le président: Il faudrait que vous la présentiez par écrit pour le compte rendu.

M. Rose: Très bien, si vous voulez passer à autre chose, je vais présenter la motion et nous pourrons y revenir.

Le président: C'est au comité de décider quel témoin nous allons entendre le premier.

M. McGrath: Monsieur le président, je propose qu'on entende le réalisateur du dernier film que nous avons vu.

Le président: M. Henri Stadt? Ceux qui sont en faveur?

Des voix: D'accord.

Le président: J'ai sur ma liste M. Stafford.

M. Lundrigan: Monsieur le président, puis-je vous demander si le Comité accepterait que les témoins ici présents prennent place devant le Comité même si nous voulons interroger d'abord M. Stadt, il y aura sûrement des questions connexes que nous voudrions poser aux autres témoins.

Le président: Si nous désirons leur poser une question nous pourrions les faire venir alors, mais il me semble qu'il vaudrait mieux avoir un témoin à la fois, ce serait une façon beaucoup plus ordonnée de procéder mais c'est au Comité de décider.

M. Whelan: Je propose qu'on les entende un à la fois.

Le président: A moins qu'un témoin ne fasse appel à un autre témoin pour une question qui n'est pas très claire. Êtes-vous d'accord?

Monsieur Stafford.

M. Stafford: Monsieur Stadt, d'où venez-vous?

M. Stadt (Montréal): De France.

M. Stafford: Quel rôle avez-vous eu à jouer dans la réalisation des trois films de ce matin?

[Texte]

Mr. Stadi: On the Arctic film the first one, my duty was to help the director in choosing the music.

Mr. Stafford: So you had nothing to do in directing any of the three films.

Mr. Stadi: Well the last one, yes.

Mr. Stafford: The last one.

Mr. Stadi: Yes.

Mr. Stafford: Going through the last one, since you had some part to play in it, what would you say the purpose of the film is—to stop the killing of all animals and all kinds of wildlife?

Mr. Stadi: No. Well the idea is if you start thinking about the film you might start thinking about a lot of things.

Mr. Stafford: That is right.

Mr. Stadi: I took the slaughter house because it is a very common image.

Mr. Stafford: Let us just take one look at the third film first. You mention first of all, in starting the film off, "The land is plundered by man not for pleasure..." but then you go on to say that in Canadian law it is an offence to cause cruelty to animals.

Mr. Stadi: Yes.

Mr. Stafford: And then right after that you say that to skin them when wiggling is wrong. Now if it is an offence under Canadian law, which we all know, to cause cruelty to animals, why would not a far more effective thing for you to do be what every citizen of this country can do—lay charges against these men who are violating the Criminal Code?

Mr. Stadi: Well because I am a film maker and I do not have the privilege of, let us say, Mr. Brian Davies who can raise funds for his own purposes or for purposes of his philosophy. I am a film maker and I do not operate the same way.

Mr. Stafford: But the killers, as you call them...

Mr. Stadi: No, I do not call anyone a killer in my film.

Mr. Stafford: Someone did in one of the films. In one part of the film it was said that observers and inspectors were present. Do you mean to say that if these men saw these things going on they would not lay the appropriate charges?

Mr. Stadi: Well I am asking you now what they saw. There was nothing wrong with the seal hunt in my film.

[Interprétation]

M. Stadi: Dans le film de l'Arctique, le premier film, mon rôle était d'aider le directeur à choisir la musique.

M. Stafford: Je vois. Vous n'avez rien eu à faire à la réalisation de ces trois films.

M. Stadi: Oui, pour le dernier film.

M. Stafford: Le dernier film.

M. Stadi: Oui.

M. Stafford: A propos du dernier film, puisque vous y avez joué un rôle, quel était le but du film, de mettre un terme à la tuerie de tous les animaux?

M. Stadi: Non. L'idée c'est que si on commence à penser au sujet du film, on commencera à songer à beaucoup de choses.

M. Stafford: C'est exact.

M. Stadi: J'ai choisi l'abattoir parce que c'est une image très courante.

M. Stafford: Examinons d'abord le dernier film. Vous dites au début du film que «la terre est saccagée par l'homme pas par plaisir...» et vous ajoutez que dans la loi canadienne, la cruauté aux animaux est un délit.

M. Stadi: Oui.

M. Stafford: Vous ajoutez que c'est mal de les écorcher alors qu'ils bougent encore. Si c'est un délit aux termes de la loi canadienne, ce que nous savons tous, que d'être cruel envers les animaux, ne serait-il pas plus efficace pour vous de faire ce que tout citoyen canadien peut faire et de porter plainte contre ceux qui commettent une infraction au Code Criminel.

M. Stadi: Je suis cinéaste et je n'ai pas le privilège de M. Davies qui peut obtenir des fonds à ses propres fins ou pour démontrer ses idées philosophiques. Je suis cinéaste et je ne procède pas de la même façon.

M. Stafford: Mais les tueurs, comme vous les appelez.

M. Stadi: Non, je n'ai accusé personne d'être un tueur.

M. Stafford: Quelqu'un l'a fait dans un autre film. Dans une partie du film, on dit que les observateurs et les inspecteurs étaient présents. Vous voulez dire que si ces hommes avaient vu commettre ces actes, ils n'auraient pas cherché à porter une accusation.

M. Stadi: Qu'est-ce qu'ils ont vu? Il n'y avait rien de mal dans la chasse que j'ai montrée dans mon film.

[Text]

Mr. Stafford: Now listening to the narration in these films, not so much the photography would you not say the narrator is obviously biased when he mentions things like "Profits are feverishly calculated. Take note and draw the obvious conclusion. The annual massacres are as useless as they are cruel." Would you say that this was the sort of factual presentation that we should listen to?

Mr. Stadt: Excuse me, sir. Which films are you talking about?

Mr. Stafford: All of them. Well, I think this was in the second one.

The Chairman: Would you please restrict your question to the film for which Mr. Stadt is responsible for filming.

Mr. Stafford: You worked on the first one but you saw the second one, did you not?

Mr. Stadt: I just saw it today for the first time.

Mr. Stafford: Would you say that comments like that are a factual presentation of evidence or rather a biased presentation?

Mr. Stadt: I think a film like the second one is a film which stinks.

Mr. Stafford: Right.

Mr. Stadt: I cannot see any other words for it because I was on the ice, I was free to move, I did whatever I wanted to do and at no time did I see any scenes like the one we saw of a hunter with his foot on the seal waiting for it to die. I have never seen this.

Mr. Stafford: I apologize for a couple of my previous questions because I was thinking that you agreed with the second film.

Mr. Stadt: I do not agree.

Mr. Stafford: I have actually been in a slaughter house—in fact it bothers me to look at this film—pigs being pulled up by a chain and stuck one after the other, and I hate looking at this sort of thing.

Mr. Stadt: You know why though. You know why it is done that way? I will tell you. By the way, this is the way it is done in every part of the world—in France, England, Germany and so on. The heart has to beat in order to bleed the animal. They cannot kill the animal first. It is uncivilized to do it that way.

Mr. Stafford: Actually then the killing of pigs is far more cruel in reality than the killing of the seals on the ice.

[Interpretation]

M. Stafford: Quand vous écoutez le film, particulièrement dans la narration, ne pensez-vous pas qu'il y ait un certain parti-pris dans les paroles: «Les profits sont calculés fébrilement. Le massacre annuel est aussi inutile que cruel, la conclusion va de soi.» Est-ce que vous pensez que c'est une présentation très objective des faits et que nous devrions en tenir compte?

M. Stadt: Pardon, mais de quel film parlez-vous?

M. Stafford: Tous les films. Je crois que celui-ci était le deuxième.

Le président: Veuillez limiter vos questions au film que M. Stadt a produit.

M. Stafford: Vous avez collaboré au premier film, vous avez vu le deuxième, n'est-ce pas?

M. Stadt: Comme vous, pour la première fois aujourd'hui.

M. Stafford: Est-ce que vous pensez que c'est une présentation objective des faits, ou plutôt une présentation préjugée?

M. Stadt: Un film comme le deuxième est un film exécrable.

M. Stafford: Oui.

M. Stadt: Je ne peux trouver un autre mot, car j'étais sur la glace, je pouvais me déplacer, je faisais tout ce que je voulais. Jamais je n'ai vu quelque chose comme ce que nous avons vu sur l'écran, un homme avec son bâton et le pied sur l'animal, attendant que le phoque meure.

M. Stafford: Je m'excuse, je pensais que vous étiez d'accord avec le deuxième film.

M. Stadt: Je ne suis pas d'accord.

M. Stafford: En fait, j'ai vu un abattoir. J'ai vu des porcs qui étaient tirés par une chaîne et qu'on éventrait les uns après les autres. Je déteste voir ce type de choses.

M. Stadt: Vous savez pourquoi on le fait? Et cela se fait dans toutes les parties du monde, en France, en Angleterre, en Allemagne également. On doit laisser battre le cœur pour que la saignée soit complète. On ne peut tuer l'animal avant; c'est bien peu civilisé.

M. Stafford: En fait, l'abattage d'un porc est beaucoup plus cruel que l'abattage d'un phoque.

[Texte]

Mr. Stadi: Of course, but I actually do not mind either. However, some people get sentimental over such things.

Mr. Stafford: That is right.

Mr. Stadi: But I really do not mind it.

Mr. Stafford: I will go back to a question that I asked you before I realized the facts and your position here. What is the real purpose that these films are trying to get across, in your own words?

Mr. Stadi: Well, the reason I made the 1966 film was that I did not feel right about all the criticism in Canada. That was the first reason. The second reason was as follows. In 1964 I was employed by Artek film and at that time

• 1145

I saw the film coming back from the laboratory. At the time, there was about ten thousand feet of film. From the ten thousand feet of film they made a one hour program, which took about two thousand feet. Using what was cut out they could have shown both sides of the medal. They could have shown not only that part that was shown in the 1964 film but the other part as well which, according to many, indicated that the seal hunt was carried out in a proper way. So I did not like that. This was a reason for my doing a film later on the seal hunt. However, before going on the ice I did not know what kind of film I was going to do because I did not know what the seal hunt was going to look like.

Mr. Stafford: So if you took your camera to any slaughterhouse where there is a line-up of pigs, cows and sheep and took close-up shots of throat-cutting and flowing blood and asked the viewers to compare it with the seal hunt, the seal hunt would be rather moderate in comparison?

Mr. Stadi: Of course. The seal hunt is an ancestral way of killing animals, I suppose, compared to the slaughterhouse. But we could go even further. I do not know how many people are fishermen but I have run a complete film on fishing and hunting in the Province of Quebec. We were dragged down a river for three miles by a salmon. Now I asked myself how long the salmon had been suffering, but many people do not think of that.

Mr. Stafford: May I thank you. Mr. Chairman, I started my questioning thinking of course that this man had a part to play in the presentation. Actually the point is put over in these films. I think it would have been benefi-

[Interprétation]

M. Stadi: Oui, mais je n'ai rien contre ni l'une ni l'autre méthode. Il y a des gens qui sont sentimentaux à ce sujet, par ailleurs.

M. Stafford: C'est juste.

M. Stadi: Mais, je ne vois rien de mal à cela.

M. Stafford: Je reviens à la question que je vous ai posée tout à l'heure, maintenant que je sais quelle est votre position. Quelle est la leçon que ces films veulent donner?

M. Stadi: La raison pour laquelle j'ai fait le film de 1966 est que je n'étais pas d'accord avec toutes les critiques formulées au Canada. C'était la première raison. La deuxième, c'était qu'en 1964, j'étais un employé de la

ARTEK films. J'ai vu le film provenant du laboratoire; il y avait à ce moment-là une pellicule de 10,000 pieds de long dont on a fait une émission d'une heure, soit 2,000 pieds. Je me suis rendu compte qu'ils auraient pu montrer les deux côtés de la médaille en montrant les sections enlevées. Ils auraient pu montrer que la tuerie ne se passait pas seulement comme celle que nous avons montrée en 1964 mais qu'elle se faisait correctement, de l'avis de certaines personnes. Voilà pourquoi je n'ai pas aimé ce film. Et c'était la raison pour laquelle je voulais, plus tard, faire un film sur la chasse aux phoques. Mais, en me rendant sur la banquise, je ne savais pas quel genre de film j'allais faire, car je ne savais pas comment se présenterait cette chasse aux phoques.

M. Stafford: Par conséquent, si vous apportez votre caméra dans un abattoir, le braquez sur les porcs, les vaches et les moutons et puis que vous montrez aux spectateurs du sang qui coule à flot, on pensera que la chasse aux phoques est encore bien douce en comparaison.

M. Stadi: La chasse au phoque fait emploi de méthodes très anciennes, si l'on compare à l'abattoir. Je ne sais pas combien de ces gens sont des pêcheurs, mais j'ai tourné un film complet sur la chasse et la pêche au Québec; notre bateau a été traîné sur une distance de trois milles par un saumon, et je me demande quelle souffrance le poisson a subi. Bien des gens ne comprennent pas cela.

M. Stafford: Merci. Monsieur le président, je pensais que le témoin avait un tout autre point de vue lorsque j'ai commencé mes questions. Ceci me montre qu'il vaut mieux demander aux réalisateurs de films que nous

[Text]

cial to have had just a brief resumé of each witness so we know more or less what attitude they are taking before we jump into them. After seeing a film like this, naturally—the cutting, the flowing blood and so on—one feels that the witnesses here are here for the purpose of backing up these films.

The Chairman: Thank you, Mr. Stafford. Now, in fairness to all members here, I think during the first round we will have to adhere to the ten minute period. I think Mr. Stafford has done this. On the second round we will be more lenient.

Mr. McGrath: Mr. Chairman, I object to that procedure. If a member of this committee is directing a line of questioning he should be given unlimited time.

The Chairman: Well there is the matter of one member monopolizing all the allocated time.

Mr. McGrath: Mr. Chairman, we are not here to perform, we are here to examine witnesses, and I move that members of the committee be given unlimited time to examine witnesses.

The Chairman: I am in the hands of the committee. Mr. McGrath has moved that members be given unlimited time.

Mr. Anderson: Mr. Chairman, we have always allowed supplementaries in the time of other members.

Mr. McGrath: Of course we will allow supplementaries but do not stick rigidly to this ten minute rule.

Mr. Anderson: I think that will depend on your colleagues on the committee. The Chairman is in a difficult position because he has to maintain some order here. I think that if we are perhaps sympathetic and allow you to ask supplementaries it will overcome the difficulty that you envisage. I certainly think all the people in this room are interested only in finding out what did go on on the ice and I do not think we have to worry too much about people cutting you off on a line of questioning.

Mr. McGrath: I just objected to this procedure because it seemed to me to be unusual. I know of no other committee where this procedure is carried out and it makes no sense to me.

The Chairman: We agreed to this procedure when we first met. I am not insisting that we follow it. I am in the hands of the Committee. I just thought I would mention it, but if the

[Interpretation]

allons interviewer, un bref résumé de leur position avant de commencer à les interroger. Après avoir vu les films, avec le sang et la cruauté, il est facile de penser que les témoins sont ici pour appuyer leur point de vue. Merci.

Le président: Merci, monsieur Stafford. Pour être juste à l'égard de tous les membres du Comité, il me semble que pour le premier tour des questions nous pourrions nous en tenir à dix minutes. M. Stafford l'a fait, je crois. Pour le deuxième tour, nous permettrons plus de temps.

M. McGrath: Monsieur le président, je m'oppose à cette façon de procéder. Si un membre des Comités pose une série de questions, il devrait jouir d'une période illimitée.

Le président: Alors, il y a la question de monopoliser le temps alloué.

M. McGrath: Monsieur le président, nous ne sommes pas ici pour jouer un rôle, nous sommes ici pour interroger. Voilà pourquoi je propose que les députés aient un temps illimité pour poser des questions.

Le président: Je mets la question aux voix. M. McGrath propose qu'on alloue un temps illimité aux députés.

M. Anderson: Monsieur le président, nous avons toujours permis les questions supplémentaires pendant la période de questions d'un député.

M. McGrath: Nous allons autoriser le temps supplémentaire, mais sans nous en tenir à dix minutes.

M. Anderson: Naturellement, mais cela dépend de vos collègues du comité. Le président est dans une position difficile. Il doit mettre de l'ordre dans nos délibérations. Si nous sommes tolérants, nous vous laisserons poser des questions supplémentaires, ce qui évitera la difficulté que vous prévoyez. Mais, nous voulons tous, au Comité, savoir vraiment ce qui s'est passé sur les glaces. Ne vous inquiétez pas qu'on vous coupe la parole brusquement.

M. McGrath: Monsieur le président, je m'oppose à cette procédure. Elle n'est appliquée dans aucun autre comité, elle est inusitée et, à mon sens, sans fondement.

Le président: Nous avons convenu de cette procédure lors de la première réunion. Je n'insiste pas que nous la suivions, je m'en remets au Comité. Je pensais le mentionner,

[Texte]

members are in favour of giving unlimited time that is up to you.

Mr. Lundrigan: Mr. Chairman, may I suggest that we continue and be allowed to ask supplementaries and if the Committee seems to get bogged down with one person taking an unlimited or an unusual amount of time then we could certainly bring up the point again. When Mr. Stafford was questioning I know there were several supplementaries that members had in mind. If they had been put we could have continued on the same line for perhaps half an hour but Mr. Stafford actually used only his ten minutes.

The Chairman: Mr. Borrie, are you on the same question?

Mr. Borrie: Yes, Mr. Chairman. I would feel and I would hope that the Committee would agree that we have enough confidence in the chair that the time limit on questions could be at his discretion.

Mr. McGrath: I will withdraw my motion then and accept that suggestion.

The Chairman: All in favour?

Some hon. Members: Agreed.

Mr. Anderson: I am opposed to that. I think we should stick to the time limit that we always have had on other subjects that were of equal importance to western members—namely western salmon. We have always had a time limit even though we each have been subjected to easterners questioning on

• 1150

subjects on which they know nothing. I would like to see the same procedures carried on in this meeting as have carried on in the past. I have obviously lost the vote but I would like to go on record as being opposed to this waste of time on this point of procedure.

Mr. Lundrigan: That is par for the course.

The Chairman: I hope that we are bound by the rules of the House here. There is a time limit in the House and when members are in agreement that can be extended and they so do.

Mr. Anderson: Could you put that to a straight vote, Mr. Chairman. Are we in favour of the ten minute time limit or are we not?

Mr. Crouse: It has already been decided.

The Chairman: Mr. Whelan.

Mr. Whelan: On a point of order, may I say that other committees do limit their members and I think it could be very unfair to allow one member to go on for two hours—and this was the suggestion behind the word “unlimited”. I do not think this is proper or fair. All

[Interprétation]

mais si les députés sont en faveur d'une période illimitée, c'est à eux de décider.

M. Lundrigan: Nous devrions pouvoir poser des questions supplémentaires, monsieur le président. S'il semble qu'un député s'embarbe dans ces questions et prend trop de temps, il faudrait remettre ceci à l'ordre. Lorsque M. Stafford parlait, je sais que nous aurions pu poser bien des questions supplémentaires. Ainsi, si les questions avaient été posées, cela aurait pu se prolonger une heure. Monsieur Stafford n'a consommé que ses dix minutes.

Le président: M. Borrie.

M. Borrie: Monsieur le président, je pense et j'espère que le Comité sera d'accord, que nous ayons assez de confiance en vous pour vous laisser le soin de diriger la réunion et de diviser le temps d'après son jugement.

M. McGrath: Je renonce à ma proposition et accepte celle-ci.

Le président: D'accord?

Des voix: D'accord.

M. Anderson: Je m'oppose à cela. Nous avons toujours une limite de temps pour des questions qui intéressent davantage les membres de l'Ouest, notamment, la pêche au saumon. Je demande qu'on applique la même procédure. J'ai perdu le vote mais je voulais me faire entendre sur cette perte de temps,

au sujet de la procédure. Nous avons eu à perdre du temps quand les gens de l'Est posaient des questions au sujet de choses concernant l'Ouest sans savoir de quoi ils parlaient.

M. Lundrigan: C'est bien normal.

Le président: Nous devons nous en tenir au Règlement de la Chambre, ici. On accorde un certain temps à chaque député quitte à le prolonger si tous s'entendent.

M. Anderson: Monsieur le président, pourrions-nous avoir un vote direct? Est-ce que nous sommes en faveur de dix minutes ou non?

M. Crouse: Cela a été décidé.

Le président: Monsieur Whelan.

M. Whelan: En appel au Règlement, tous les autres comités mettent des restrictions quant au temps accordé à chaque député. Je crois qu'il serait injuste de laisser un député parler deux heures; c'est ce que laisse entendre le mot «illimité». Cela n'est pas juste.

[Text]

members who are entitled to a certain amount of time. They have other obligations to fulfil, and so on.

Mr. McGrath: Why not just forget it and proceed, Mr. Chairman?

Mr. Whelan: I think there should be a ten-minute limit on each, and then they can come back.

The Chairman: Mr. Borrie?

Mr. Borrie: I was under the impression that my suggestion about the discretion of a time limit would be left to the Chair. I still think it is a good idea and one with which the majority of us seem to agree. Because of dissenting voices that are now being raised...

The Chairman: A vote would show once and for all where we stand. I hear a lot of voices, but I am not sure that the majority is in favour or against.

M. Cyr: Monsieur le président, je crois que lors des séances précédentes, nous avons environ dix minutes. Mais je crois que nous devrions garder cette pratique sans nécessairement l'inscrire au procès-verbal. Si un député ne veut pas respecter ou se plier aux directives du président, je crois que les membres du Comité devront en appeler de la décision du président, et déclarer que le député enfreint le Règlement s'il ne veut pas respecter les directives du président.

Mr. McGrath: Mr. Chairman, I am going to raise a point of order. There was a consensus in the Committee some time ago on this very sensible suggestion. You have allowed this discussion to go on. I think we should proceed.

The Chairman: Mr. McGrath, at the outset a motion was made in this Committee that we be limited to ten minutes.

Mr. McGrath: I withdrew it, Mr. Chairman.

The Chairman: I am not talking about yours. I am talking about a motion at the second or third meeting of this Committee, and it was duly passed. I am powerless to change that unless the Committee wishes me to.

Mr. Crouse: Mr. Chairman, the suggestion has been made that the questioning be at the discretion of the Chair. This was unanimously accepted. I move that we proceed on that basis without wasting further time so that we get on with questioning witnesses who have come here at public expense.

[Interpretation]

Tous les membres doivent avoir le temps voulu pour poser des questions. Ils ont d'autres obligations à remplir, et ainsi de suite.

M. McGrath: Pourquoi ne pas oublier tout cela, et continuer, monsieur le président?

M. Whelan: Je crois qu'on devrait leur accorder une période de dix minutes, puis leur permettre de revenir plus tard.

Le président: Monsieur Borrie?

M. Borrie: J'avais le sentiment que ma proposition au sujet de la limite de temps serait laissée à la discrétion du président. Je crois encore que c'est une bonne idée sur laquelle la majorité d'entre nous semble être d'accord. A cause de voix dissidentes qu'on entend maintenant...

Le président: Un vote nous indiquerait une fois pour toutes où nous en sommes. J'entends beaucoup de voix, mais je ne suis pas sûr que la majorité est pour ou contre.

Mr. Cyr: Mr. Chairman, I believe that in the previous sittings we had approximately ten minutes, and I believe that we should keep to that procedure without necessarily entering it in the minutes. If a member does not want to respect or accept the rules laid down by the Chairman, I believe that the members of the Committee should appeal the decision of the Chairman, and state that the member is not complying with the Standing Orders if he does not want to respect the rules laid down by the Chairman.

M. McGrath: Monsieur le président, je vais invoquer le Règlement. Il y avait un consensus tout à l'heure sur cette proposition très judicieuse, et vous avez autorisé la poursuite de la discussion. Je crois que nous devrions poursuivre.

Le président: Monsieur McGrath, j'ai été saisi, au début, d'une motion visant à établir une limite de dix minutes.

M. McGrath: Je l'ai retirée, monsieur le président.

Le président: Je ne parlais pas de la vôtre. Je parlais d'une motion de la deuxième ou de la troisième séance de notre Comité, qui a été adoptée. Je ne peux pas la modifier, à moins que le Comité le désire.

M. Crouse: Monsieur le président, on a proposé que l'interrogatoire soit laissé à la discrétion du président. Cela a été adopté à l'unanimité. Je propose qu'on procède de cette façon, sans perdre de temps, afin qu'on puisse interroger les témoins qui sont venus ici aux frais du trésor public.

[Texte]

The Chairman: Mr. Lundrigan?

Mr. Lundrigan: Thank you, Mr. Chairman. First I would like to ask Mr. Stadt why he made the second film. The question was asked previously, but I do not think he was given a chance to answer.

Mr. Stadt: The second film is a film made by Mr. Brian Davies.

Mr. Lundrigan: No, I am sorry; the second film in which you were involved, which was the third film we saw.

Mr. Stadt: Why I did it?

Mr. Lundrigan: Yes.

Mr. Stadt: Because I am a film maker and I wanted to do a film on the seal hunt; for no other reason.

Mr. Lundrigan: You were involved in the 1964 film in what capacity?

Mr. Stadt: I helped the director to choose the music.

Mr. Lundrigan: Were you actually at the ice floes during that period?

Mr. Stadt: No. And I did not go to the Magdalen Islands in 1964.

Mr. McGrath: Did you see all of the footage of that film?

Mr. Stadt: Yes; as I explained previously, when the film came back from the laboratory it was processed.

Mr. McGrath: You objected to the final version?

Mr. Stadt: I did object.

Mr. McGrath: I have one further supplementary. Did that have any bearing on your...

M. Stadt: Le film était tendancieux. Je le dis en français parce qu'il m'est difficile de l'expliquer en anglais. Le film était à mon avis très tendancieux et je n'étais pas d'accord.

M. Cyr: J'invoque le règlement pour le témoin, monsieur le président, sa langue maternelle étant le français, je crois qu'il pourrait répondre en français à toutes les questions même si elles sont posées en anglais.

• 1155

Une voix: Certainement.

M. Stadt: J'allais soulever la question. Il m'est beaucoup plus facile de parler en français.

[Interprétation]

Le président: Monsieur Lundrigan?

M. Lundrigan: Merci, monsieur le président. Je voudrais demander à M. Stadt, premièrement, pourquoi il a réalisé le deuxième film. On lui a posé la question une première fois, mais on ne lui a pas donné la possibilité d'y répondre.

M. Stadt: Le deuxième film a été réalisé par M. Brian Davies.

M. Lundrigan: Non, le deuxième film que vous avez réalisé est le troisième que nous avons vu.

M. Stadt: Pourquoi je l'ai fait?

M. Lundrigan: Oui.

M. Stadt: Parce que je suis cinéaste. Je voulais produire un film sur la chasse aux phoques. C'est tout.

M. Lundrigan: Et vous vous êtes occupé du film de 1964 à quel titre?

M. Stadt: J'ai aidé le réalisateur à choisir la musique.

M. Lundrigan: Est-ce que vous étiez sur les glaces à ce moment-là?

M. Stadt: Non, je ne me suis même pas rendu dans les Îles-de-la-Madeleine en 1964.

M. McGrath: Avez-vous vu tout le métrage de ce film?

M. Stadt: Oui, comme je l'ai dit tout à l'heure, lorsque le film est revenu du laboratoire, on l'a développé.

M. McGrath: Vous vous êtes opposé à la version définitive?

M. Stadt: Oui.

M. McGrath: Une dernière question. Est-ce que cela a eu une influence sur votre...

Mr. Stadt: The film was tendentious. I am saying it in French because I have difficulty explaining it in English. The film was, to my mind, very tendentious and I did not agree with it.

Mr. Cyr: On a point of order for the witness, Mr. Chairman, his mother tongue being French. I believe that the witness could answer in French to all the questions even if they are put in English.

An hon. Member: Certainly.

Mr. Stadt: I was going to raise the question because I speak more easily in French.

Mr. Cyr: You may also use...

[Text]

M. Städt: Je comprends très bien les questions, mais il m'est plus facile de répondre en français.

M. Cyr: Merci.

Mr. Lundrigan: Had the sound effects in the film, which we are led to believe were paralleling the actual events on the ice, were dubbed? Were the sounds effects dubbed in? In other words, is there a one-to-one correspondence between the sounds we hear and the actual events on the ice floe?

M. Städt: Lorsque j'étais sur les glaces, j'ai moi-même enregistré quelques effets sonores qui malheureusement n'étaient pas assez bons à cause du vent. Techniquement, quand il y a du vent, le vent entre dans le micro et le résultat n'est pas bon. Alors j'ai dû prendre des effets sonores qui existaient déjà, dans une maison de montage à Montréal, effets qui étaient exactement les mêmes que ceux que j'avais pris et qui correspondaient très bien à la réalité.

Mr. Lundrigan: Thank you. You indicated that 10,000 feet of film were shot.

M. Städt: Pas moi. Pas moi.

Mr. Lundrigan: You indicated that 10,000 feet of film were shot and that the final editing left 2000 feet of film.

M. Städt: Non. C'est difficile de vous expliquer parce que tout cela relève du domaine de la cinématographie. Lorsqu'on tourne 10,000 pieds de film, en général, on tourne 10,000 pieds d'effets sonores parallèles. Et quand on choisit les 2,000 pieds de film final, on choisit aussi 2,000 pieds d'effets sonores finals.

Mr. Lundrigan: Did you dub all the sound for the whole 10,000 feet, or just for the 2,000 feet?

Do you know if Artek actually filmed all of the 10,000 feet?

Mr. Städt: Yes.

Mr. Lundrigan: Therefore all of the scenes in the film we would assume Artek would pay for and consequently the CBC perhaps paid for themselves. But are you aware whether the incidents in the film showing seals being skinned alive were actually paid for? In other words, were the fishermen involved paid to make any of these scenes, were they real scenes?

M. Städt: Malheureusement, monsieur, je ne peux pas vous répondre à cette question parce que je ne le sais pas. Tout ce que je puis vous dire, c'est que M. Uwe Koneman, un de mes amis, et qui était sur les glaces en

[Interpretation]

Mr. Städt: I understand the questions very well, but I can answer more easily in French.

Mr. Cyr: Thank you.

M. Lundrigan: Par conséquent, les effets sonores du film, qui, semble-t-il, ont été ajoutés à la pellicule, ont été doublés, n'est-ce pas? Autrement dit, le son correspond-il vraiment à ce qui se produisait sur les glaces?

Mr. Städt: When I was on the ice I recorded some sound effects that unfortunately were not good enough because of the wind. When there is wind, it gets into the mike and that spoils things. So what I had to do, was to take the sound effects that we already had in a Montreal film editing studio. These sound effects were exactly the same as those I had taken and which corresponded very well to the facts.

M. Lundrigan: Merci. Vous dites que vous avez tourné 10,000 pieds de film.

Mr. Städt: Not I.

M. Lundrigan: Vous dites qu'on a tourné 10,000 pieds de film et que la pellicule définitive en comportait 2,000.

Mr. Städt: No. It is hard to explain all this to you because here we are venturing into the field of cinematography. Generally, when we shoot 10,000 feet of film, we take at the same time 10,000 feet of corresponding sound effects. And when we choose the final 2,000 feet of film, we also choose the final 2,000 feet of sound effects.

M. Lundrigan: Avez-vous doublé tous les 10,000 pieds ou seulement les 2,000 pieds?

Savez-vous si Artek a tourné tous les 10,000 pieds?

M. Städt: Oui.

M. Lundrigan: Donc, semble-t-il, Artek paierait pour toutes les scènes du film et, par conséquent, Radio-Canada a peut-être payé pour elles. Mais je me demande si vous savez si on a payé pour les scènes où on voit des phoques écorchés vifs. Autrement dit, a-t-on payé les chasseurs pour le faire, ou s'agit-il de scènes réelles?

Mr. Städt: Unfortunately, sir, I cannot answer that because I do not know. The only thing I can tell you is Mr. Uwe Koneman, who is a friend of mine, and who was on the ice in 1964, assured me many times that they

[Texte]

1964, m'a toujours certifié que jamais ils n'ont payé un chasseur pour faire une sorte de démonstration pour le film. Cependant, je dois ajouter qu'il serait peut-être bon, un jour, d'avoir ici M. André Fleury le réalisateur du film et qui, lui, est parti sur les glaces pendant dix jours, seul.

Mr. Lundrigan: This is my last question, Mr. Chairman. At one point in the film the seals were actually moving when the sealers were attempting to skin them, and I heard the cries of baby seals—at least I imagine that is what it was. At the same time, anyone viewing the film would be led to believe that it was the actual cry of that seal. Therefore, to say that you did dub the sound is an admission, is it not, that there is a misrepresentation of the true situation? In other words, the seals were not actually crying as they were allegedly being skinned alive?

M. Städt: C'est exactement la même chose. Je vais vous dire qu'un bébé phoque ne crie pas plus parce qu'il est écorché vivant que parce qu'il voit un homme s'approcher de lui. A partir du moment où un homme s'approche d'un bébé phoque, le bébé phoque commence à crier et à pleurer. Enfin, à pleurer, je ne sais pas, mais il commence à crier. Dans mon film, de toute façon les effets sonores

• 1200

sont authentiques, c'est ce qui se passe sur les glaces, c'est ce que j'ai entendu et c'est ce que vous avez entendu dans le film.

Et j'aimerais ajouter qu'il n'y a aucune différence lorsqu'un bébé phoque est écorché vivant ou lorsqu'il est écorché, disons de la bonne façon. Il n'y a aucune différence.

The Chairman: Mr. Whelan?

Mr. Whelan: First of all, Mr. Chairman, did I hear correctly that you made this last film in 1968?

Mr. Städt: In 1966.

Mr. Whelan: That is film number 3 that we viewed this morning. Also, did I understand correctly that film number 2 which we saw, made by the New Brunswick SPCA by Brian Davies, was a money-making film?

Mr. Städt: This I will say in English so that there is no misinterpretation of what I say: I think the film is contentious, I think the film stinks and I think the man who did that film not only sold himself but all of us in all of the country—purely and simply.

Mr. Whelan: He did the country a dis-favour by making it?

[Interprétation]

never paid a hunter to make a demonstration for the film. However, I would add that it might be a good idea to have Mr. Fleury here as a witness some day. He is the producer of the film and was on the ice all by himself for 10 days.

M. Lundrigan: Je pose une dernière question, monsieur le président. Dans le film, j'ai noté qu'à un moment, les phoques bougeaient quand les chasseurs essayaient de les écorcher, et qu'on entendait les cris des bébés phoques, du moins j'imagine que c'était des cris. Le spectateur ou le téléspectateur pense donc que c'est vraiment le bébé phoque qui crie. De sorte que vous avouez que le doublage est une sorte de fausse représentation de la réalité, n'est-ce pas? Autrement dit, les phoques ne criaient pas vraiment au moment où on les écorchait vifs?

Mr. Städt: It's exactly the same. I can tell you that a baby seal does not scream more because it is skinned alive than because it sees a man approaching. A baby seal starts to scream or cry out as soon as a man approaches it. Anyhow, in my film the sound effects are authentic. That is what happens on the ice. It is what I heard and it is what you could hear on the screen.

I would like to add that there is no difference when a baby seal which is skinned alive or when it is, let's say, skinned properly. There is no difference whatsoever.

Le président: Monsieur Whelan?

M. Whelan: Tout d'abord, ai-je bien compris: avez-vous réalisé ce film en 1968?

M. Städt: En 1966.

M. Whelan: Il s'agit du film numéro 3 que nous avons visionné ce matin. Avez-vous dit que le film numéro 2 que nous avons également visionné et qui a été produit par la Société protectrice des animaux du Nouveau Brunswick et Brian Davis l'a été à des fins commerciales?

M. Städt: Je vais vous répondre en anglais pour m'assurer qu'on ne m'attribuera pas des paroles que je ne dirai pas: je crois que le film est licencieux, que tout ça sent mauvais et que l'homme qui l'a produit ne s'est pas vendu lui-même uniquement mais qu'il nous a également vendus en même temps.

M. Whelan: Il a rendu un mauvais service au pays en le réalisant?

[Text]

Mr. Städt: From what I saw in the Magdalen Islands I am entitled to say it is a mise-en-scène, to see a man with his foot on a baby seal. God only knows why he does it because he is losing time and the seal hunt is a production industry where people have to move fast. That is what I believe, anyway. So why would he stand with his foot on the baby seal unless it is a mise-en-scène?

Mr. Whelan: He was either an actor or an inexperienced hunter then?

Mr. Städt: I strongly believe that, because what was shown is not true.

Mr. Whelan: Concerning the first film, the one made by Artek, after you viewed it did you make representations objecting to the type of film that was produced from the many thousands of feet of film?

Mr. Städt: I could not say very much because André Fleury became director for the first film he ever directed in his life, I guess; it was the first one he directed. So it was very touchy to oppose, but a lot of people knew that I did not agree with it—people in the house and in Artek films.

Mr. McGrath: Mr. Städt, is it fair to suggest that you were so repelled by the final version of the Artek film and the consequent bad publicity the country received, that you undertook to make a film depicting the seal hunt as it actually is?

Mr. Städt: No, I would not put it that way. I had an intuition and I asked myself why the film was made that way, why he showed only that and not the rest? But at that point I did not decide right away, "I am patriotic and I will make a film to bring back the good image of Canada." It did not happen in that way. But I had in mind that one day I would go to the Magdalen Islands and see for myself. I did not know that I was going to do a film like this because I did not know exactly what was the truth.

Mr. Whelan: Out of the film that you produced yourself, how many feet of film did you actually take?

Mr. Städt: Very little, because we did not have a big budget. I think we did the complete film with something like 3,000 feet of film including the slaughter houses.

Mr. Whelan: How many slaughter houses did you visit to see if all the killings were the same?

Mr. Städt: Canada Packers was one, and I could not film there. If you do not mind I

[Interpretation]

M. Städt: D'après ce que j'ai vu dans les Îles-de-la-Madeleine, j'ai le droit de dire qu'il s'agit d'une mise-en-scène lorsqu'on voit un homme le pied sur un bébé-phoque. Dieu seul sait pourquoi il a agi ainsi parce qu'il perd du temps alors que les personnes qui s'adonnent à la chasse au phoque doivent agir rapidement. C'est ce que je crois. Pourquoi se mettrait-il le pied sur un bébé phoque s'il ne s'agit pas d'une mise en scène?

M. Whelan: Il est acteur ou chasseur inexpérimenté, alors?

M. Städt: Je le crois, car ce que nous avons vu n'est pas authentique.

M. Whelan: Pour ce qui est du premier film, celui qu'a réalisé Artek, vous êtes-vous élevé contre le genre de film qui a été tiré des milliers de pieds de film qui avaient été tournés?

M. Städt: Je ne pouvais pas dire grand-chose parce qu'il s'agissait du premier film d'André Fleury. Je crois qu'il s'agissait de son premier film. Il aurait été délicat de m'y opposer, mais plusieurs personnes savaient que je n'étais pas d'accord, aussi bien chez Artek qu'à l'extérieur.

M. McGrath: Est-ce qu'on peut dire que vous étiez tellement horrifié par la version définitive du film Artek et par la mauvaise publicité dont le pays a fait l'objet, que vous vous êtes engagé à faire un film montrant la chasse aux phoques de façon réaliste, telle qu'elle se produit?

M. Städt: Non, disons les choses autrement. J'avais une certaine intuition et je me suis demandé pourquoi le film avait ainsi été tourné, pourquoi le réalisateur n'avait montré que tel ou tel aspect et non le reste? Je ne me suis pas dit, à ce moment-là: «Je suis patriote et je réaliserai, moi, un film pour redorer le blason du Canada». Ça ne s'est pas produit ainsi. Mais j'ai décidé que j'irais, un jour, aux Îles-de-la-Madeleine, voir ce qui s'y passait. J'ignorais que je réaliserais un tel film parce que j'ignorais encore la vérité.

M. Whelan: Combien de pieds de film avez-vous utilisés?

M. Städt: Très peu à cause de notre budget restreint. Je crois que nous avons tourné 3,000 pieds de film. Ce chiffre tient compte des scènes tournées dans les abattoirs.

M. Whelan: Combien d'abattoirs avez-vous visité pour voir si on procédait partout de la même façon?

M. Städt: Il y avait celui de la *Canada Packers* mais je n'ai rien pu filmer à cet

[Texte]

would rather not reveal where I filmed the slaughterings.

Mr. Whelan: I do not have to know the names of the slaughter houses. I just want to know how many.

Mr. Stadt: The slaughter house in the film symbolizes what is going on in the world.

Mr. Whelan: I worked in a slaughter house.

Mr. Stadt: You did?

Mr. Whelan: Yes, so I am quite familiar with what goes on.

• 1205

Mr. Stadt: Do you agree with the scenes in the film?

Mr. Whelan: Yes, to a certain degree, but I thought some of them had been made more humane as far as stunning the animals is concerned. I have seen them using this machine in the slaughter houses I have been in. Actually in the ones that I have worked in several years ago we did not have such humane machines as they have now.

Mr. McGrath: You are defeating your own argument, Mr. Whelan.

Mr. Whelan: No, no, I am saying that they have advanced somewhat in the slaughter houses, but I do not believe that it is any worse than the seal slaughter, or whatever you want to call it, except that the seal slaughter takes place in the open where everybody can view it whereas the average slaughter house is not.

Mr. Stadt: It is very difficult to get into a slaughter house. I would mention that in 1959 in France Brigitte Bardot led a campaign to stop the suffering of animals in the slaughter houses of France, but she did not succeed.

The Chairman: Mr. Rose on a supplementary.

Mr. Rose: I would like to ask Mr. Stadt, with Mr. Whelan's permission, a supplementary. Really, the point that should concern most Canadians here is not whether the seal hunt is any less humane than the slaughter house, but the concept of the degree of inhumaneness directed towards killing all animals. I think this is really what concerns people. People are willing, perhaps, to accept the argument that the seal hunt is no more or no less humane than any other way, and that

[Interprétation]

endroit. Si vous n'avez pas d'objection je préférerais ne pas vous dire où j'ai tourné les scènes d'abattoirs.

M. Whelan: Je ne désire pas connaître les noms des abattoirs. Je désire seulement en connaître le nombre.

M. Stadt: L'abattoir qui apparaît dans le film symbolise ce qui se passe de par le monde.

M. Whelan: J'ai déjà travaillé dans un abattoir.

M. Stadt: Vraiment?

M. Whelan: Vraiment, de sorte que je sais très bien comment les choses s'y passent.

M. Stadt: Êtes-vous d'accord avec les scènes que contient le film?

M. Whelan: Jusqu'à un certain point, oui. Mais je crois que certaines scènes sont moins brutales qu'elles ne le sont en réalité, du moins en ce qui a trait à l'assommage des animaux. J'ai été témoin de l'usage que l'on fait de cet appareil dans les abattoirs que j'ai visités. De fait, dans les abattoirs dans lesquels j'ai travaillé il y a quelques années, ces appareils n'existaient pas.

M. McGrath: Là, vous vous contredisez.

M. Whelan: Non, je veux dire qu'il y a eu du progrès dans les abattoirs. Je ne crois pas que ce soit pire que ce qui se passe lorsqu'on abat un phoque, sauf que les phoques sont tués en public, au vu et au su de tous, alors que dans les abattoirs tout est caché au public.

M. Stadt: Il est très difficile de pénétrer dans un abattoir. Je vous rappellerai qu'en 1959, Brigitte Bardot a lancé une campagne pour tenter de mettre un terme aux souffrances des animaux dans les abattoirs de France et qu'elle a échoué.

Le président: M. Rose.

M. Rose: Je voudrais demander une question supplémentaire à M. Stadt si M. Whelan le permet. Je crois que ce qui devrait surtout nous préoccuper en tant que Canadiens, ce n'est pas tellement de savoir si la façon d'abattre des phoques est moins brutale que ce qui se passe dans les abattoirs mais la façon dont on s'y prend pour tuer n'importe quel animal. La population est peut-être prête à admettre que la façon de procéder dans la chasse aux phoques n'est pas meilleure ou

[Text]

we should be seeking much more humane methods of disposing of these animals.

Mr. Stadt: Well, if you are asking me my opinion, it is that I do not care. I really do not care about what concerns animals; I really do not care.

Mr. Rose: Is it your contention then—and that was the theme of your film—that you are more concerned about the economic well-being of the people on the Magdalen Islands and that they are forced into this kind of a vocation.

Mr. Stadt: Oh, yes definitely.

The Chairman: Mr. Whelan?

Mr. Whelan: That is all the questions I have, Mr. Chairman.

The Chairman: Thank you. Mr. McGrath is next.

Mr. McGrath: Mr. Stadt, are you a Canadian citizen?

Mr. Stadt: Yes.

Mr. McGrath: How long have you been a Canadian citizen?

Mr. Stadt: I became a Canadian citizen in 1964.

Mr. McGrath: What is your country of origin?

Mr. Stadt: France.

Mr. McGrath: Have you, as a Canadian, been at all concerned about the bad image that has been created by this film, in which you had a small part, a lot of which has taken place in Western Europe, of course, where you come from?

Mr. Stadt: In Germany, sir. Well, we cannot stop foreign countries getting a bad image of us, but we can react more strongly to these critics from European countries. In other words, we are trying to give a good image of ourselves when other countries have as bad an image as we have—if the seal hunt is a bad image.

Mr. McGrath: Did you try and sell your film to the CBC?

Mr. Stadt: I am not the producer of this film; I am the director. As the director of the film I am not entitled or allowed to try to sell the film, so I did not. But I know that Kone-man tried to sell this film to the CBC and the CBC's reaction is that perhaps they made a

[Interpretation]

pire que quelqu'autre méthode que ce soit, et que nous devrions peut-être tenter de trouver des moyens moins cruels pour abattre ces animaux.

M. Stadt: Si vous me demandez mon opinion, je vous dirai que cela m'importe peu. Peu importe, quant à moi, ce qu'il advient des animaux.

M. Rose: Vous vous préoccupez davantage, et c'est le thème de votre film, du bien-être des gens des Îles-de-la-Madeleine qui sont forcés de recourir à cette méthode de subsistance?

M. Stadt: Certainement.

Le président: M. Whelan.

M. Whelan: Je n'ai pas d'autres questions, monsieur le président.

Le président: Merci. M. McGrath.

M. McGrath: Est-ce que vous êtes un citoyen canadien, M. Stadt?

M. Stadt: Oui.

M. McGrath: Depuis combien de temps?

M. Stadt: Je suis devenu citoyen canadien en 1964.

M. McGrath: D'où venez-vous?

M. Stadt: De France.

M. McGrath: En tant que Canadien, est-ce que vous vous préoccupez de la mauvaise impression qu'a laissée ce film, auquel vous avez pris une certaine part, principalement dans l'ouest de l'Europe, d'où vous êtes originaire?

M. Stadt: En Allemagne. Nous ne pouvons empêcher les pays étrangers de conserver la mauvaise impression qu'ils veulent de notre pays mais nous pouvons certes réagir davantage aux critiques qui nous parviennent des pays européens. Nous tentons de faire bonne impression alors que les autres pays ont une aussi mauvaise impression que nous, si la chasse aux phoques engendre une mauvaise impression.

M. McGrath: Est-ce que vous avez essayé de vendre votre film à Radio-Canada?

M. Stadt: Ce n'est pas moi qui ai réalisé ce film, je n'ai que dirigé les prises de vues. Comme tel je n'avais pas le droit d'essayer de le vendre, donc je ne l'ai pas fait. Je sais que Koneman a essayé de vendre le film à Radio-Canada mais Radio-Canada a laissé entendre

[Texte]

mistake in 1964. This is what I think, and they do not want to be involved in that again.

Mr. McGrath: You would think that they would want to correct the mistake in judgment that they made in 1964.

Mr. Stadi: Well, they are becoming very prudent.

Mr. McGrath: Perhaps they have good reason to be. Are you aware of the March 26 edition of *Paris Match*?

Mr. Stadi: Yes.

Mr. McGrath: Have you seen the pictures in there?

Mr. Stadi: Yes.

Mr. McGrath: Were any of these pictures taken from the 1964 Artek film?

• 1210

Mr. Stadi: Yes, I guess a few; I think so. One was taken from Mr. Brian Davies' film, I think.

Mr. McGrath: One of these pictures?

Mr. Stadi: Yes, in the *Paris Match* you have there.

Mr. McGrath: I do not know whether or not members of the Committee are familiar with this, Mr. Chairman; if they are not, I will pass it around.

Mr. Stadi: Mr. Davies could correct me if I am wrong, but . .

Mr. McGrath: By the way, I would welcome any supplementaries. I must be consistent about this.

Mr. Whelan: We knew that you would be.

Mr. McGrath: Just around to the members of the Committee, if you do not mind. Mr. Stadt, according to a memorandum to the Minister which has been referred to and which will be referred to considerably during the course of this investigation, Mr. Koneman admitted that he had attempted to skin the seal alive but that this had made him ill, that one of the hunters shown in the film finished the job. Now, you are a close colleague of Mr. Koneman. Did you see that footage where Mr. Koneman tried to skin the seal alive?

Mr. Stadi: Never; of that I can assure you. I have never seen this in the remains of the 1964 film.

[Interprétation]

qu'elle avait peut-être commis une erreur en 1964. Je crois que la Société n'a aucune intention de se retrouver dans la même situation.

M. McGrath: D'aucuns auraient pensé que la Société aurait voulu corriger l'erreur commise en 1964.

M. Stadi: Ils deviennent très prudents.

M. McGrath: Ils ont peut-être raison de l'être. Avez-vous vu la livraison du 26 mars de *Paris-Match*?

M. Stadi: Oui.

M. McGrath: Avez-vous vu les photos qui y sont reproduites?

M. Stadi: Oui.

M. McGrath: Est-ce que certaines de ces photos viennent du film tourné par Artek en 1964?

M. Stadi: Je crois que quelques-unes l'ont été. Je crois que l'une a été tirée du film de M. Brian Davies.

M. McGrath: Une des photos?

M. Stadi: Oui, une de celles qui apparaissent dans cette livraison du *Paris-Match* dont vous avez un exemplaire.

M. McGrath: J'ignore si les membres du Comité ont vu cet exemplaire, monsieur le président; sinon, je pourrais le faire circuler.

M. Stadi: M. Davies pourra rectifier s'il le juge nécessaire, mais . .

M. McGrath: Je vous rappelle que quiconque désire poser des questions supplémentaires peut le faire. Je dois être conséquent avec moi-même.

M. Whelan: Nous savions que vous le seriez.

M. McGrath: Simplement aux autres membres du Comité, si vous le voulez bien. Monsieur Stadt, d'après un memorandum adressé au Ministre, duquel memorandum il a été question et dont il sera longtemps question durant cette enquête, M. Koneman a reconnu qu'il avait essayé d'écorcher le phoque encore vivant mais qu'il en avait été écœuré, et qu'un autre chasseur que l'on aperçoit dans le film avait fini le travail. On dit que vous êtes un collègue intime de M. Koneman. Avez-vous le film où M. Koneman a essayé d'écorcher le phoque encore vivant?

M. Stadi: Non, jamais; je vous l'assure. Je ne l'ai jamais vu dans les restes du film de 1964.

[Text]

Mr. McGrath: Obviously there was a seal being skinned alive in that film that we saw this morning.

Mr. Städt: Yes, but on the film you do not see Uwe Koneman doing that. Whether it was ever done, I do not know. It could have been off camera. I do not know.

Mr. McGrath: It is not a question if it was ever done; we saw it done this morning.

Mr. Städt: Yes, but the man who is doing this is not Uwe Koneman.

Mr. McGrath: You collaborated with him on the film. Did you discuss it with him? In replying to questions put by a senior official of the Department of Fisheries he admitted that he started to skin the animal alive but could not do it because it made him ill and he had to get a hunter to finish the job.

He also indicated that if a formal inquiry were initiated he would gladly answer questions put to him, but he was afraid to do so under ordinary circumstances for fear of being boycotted in the film industry. My question to you probably should be more properly directed to Mr. Koneman. I direct it to you only because of your close association with him in making the film.

Mr. Städt: He never told me that he skinned a seal alive.

Mr. McGrath: Did you see scenes worse than the scenes depicted on the Artek film this morning?

Mr. Städt: Not that I remember.

Mr. McGrath: In other words, that particular film...

Mr. Städt: *Paris Match* once had an article stating that Mr. Fleury said there was a scene in which you see the eyes of the seal pup coming out and falling down on the ice which I have at home but which unfortunately I did not bring with me. I have never seen this in the remains of the film.

Mr. McGrath: Do you remember what edition of *Paris Match* that was in?

Mr. Städt: Which issue, which year?

Mr. McGrath: Yes.

Mr. Städt: It was this year's *Paris Match*, published three or four months ago.

[Interpretation]

M. McGrath: Mais dans le film qu'on a vu ce matin, on écorchait un phoque encore vivant.

M. Städt: Oui, mais dans le film vous ne voyez pas M. Koneman faisant ce travail. Si cela a été fait ou non, je ne le sais pas. On l'aurait peut-être fait sans que les caméras prennent la vue. Je ne le sais pas.

M. McGrath: Il ne s'agit pas de savoir si cela s'est fait ou non. Nous l'avons vu faire ce matin.

M. Städt: Oui mais l'homme qui fait ce travail n'est pas Uwe Koneman.

M. McGrath: Vous avez collaboré avec lui pour le film. En avez-vous discuté avec lui? En réponse à des questions posées par un haut fonctionnaire du ministère des Pêcheries, il a avoué qu'il avait commencé à écorcher la bête encore vivante mais n'avait pu le faire car il en était écœuré et a dû faire appel à un chasseur pour finir le travail.

Il a aussi indiqué que si on décidait de faire enquête, il répondrait volontiers aux questions qu'on lui poserait, mais qu'il craignait de le faire dans des circonstances ordinaires par crainte de subir le boycottage de l'industrie cinématographique.

Je devrais peut-être poser la question à M. Koneman, mais je vous la pose parce que vous avez été étroitement associés quand vous avez tourné ce film.

M. Städt: Il ne m'a jamais dit qu'il avait écorché un phoque encore vivant.

M. McGrath: Est-ce que vous avez vu des scènes qui étaient pires que celles que nous avons vues dans le film d'Artek, ce matin?

M. Städt: Non, autant que je me souviens non.

M. McGrath: Autrement dit, ce film en particulier...

M. Städt: Il y avait dans *Paris-Match* un article affirmant que M. Fleury avait dit avoir vu une scène dans laquelle on voyait les yeux des petits qui sortaient de la tête, et qui retombaient sur la glace. Je l'ai chez moi, malheureusement je ne l'ai pas apporté ce matin. Je n'ai jamais vu cette séquence dans les restes du film.

M. McGrath: Vous souvenez-vous du numéro de *Paris-Match* où cet article a paru?

M. Städt: Quel numéro et de quelle année?

M. McGrath: Oui.

M. Städt: C'était dans le *Paris-Match* de cette année-ci, publié voilà trois ou quatre mois.

[Texte]

Mr. Lundrigan: May I ask a supplementary?

The Chairman: Yes.

Mr. Lundrigan: The second film that we saw—the Davies film as I suppose it could be classified—indicated that 36 per cent of the seals, having been skinned, had their skulls left intact, and the intimation was, if not the statement—I did not get it correctly—that approximately that percentage were being skinned alive. Would you say that is a fair statistic, or is it a little bit misleading?

Mr. Stadt: It is misleading. Really, it is not true, I have been on the ice and I did not see it even once—not even once.

Mr. Lundrigan: Perhaps they have a private...

Mr. Stadt: What I saw is what you see in the film. A hunter misses his balance and hits the seal a few times on the head. I kept that on my film. This is what I saw and it was only once. There was nothing to it; nothing that I can see in the film of Mr. Brian Davies and nothing that I could see in the films made by Artek by Mr. Fleury. I was free to move and I moved. I went all over the place on the ice, as far as I could move anyway.

• 1215

Mr. Lundrigan: Has your film been shown publicly at all?

Mr. Stadt: Yes, we showed it last week at the Cinema Verdi in Montreal and it was very well received. Some people said, why bother with seals? Why not make a film of Viet Nam? But, you know, this is another story.

The Chairman: Mr. Crouse?

Mr. McGrath: You see, Mr. Chairman, I did not even take 10 minutes.

Mr. Rose: Mr. Chairman, I have a supplementary on something that Mr. Stadt just said. Why bother with seals then, Mr. Stadt?

Mr. McGrath: Ask Mr. Davies that!

Mr. Stadt: You are asking me that question, why bother with the seals?

Mr. Rose: Yes, I take it that you are a...

Mr. Stadt: Just to answer the people who are criticizing us in Canada, that is all.

Mr. Stafford: That is what the audience...

Mr. Stadt: That is all. I mean, the film says that in slaughter houses in any part of the world the butchery goes on. This is what the text says when the slaughter house begins. So if a viewer in Europe heard this he would feel that it was directed towards him.

[Interprétation]

M. Lundrigan: Puis-je poser une question supplémentaire?

Le président: Oui.

M. Lundrigan: Le second film que nous avons vu, celui de Davies, indiquait qu'après avoir été écorchés, 36 p. 100 des phoques avaient leurs crânes intacts, et on croit savoir qu'environ ce pourcentage des bêtes étaient écorchées vivantes. Diriez-vous que cette déclaration est juste, ou la trouvez-vous exagérée?

M. Stadt: C'est exagéré. Ce n'est pas vrai. J'étais sur la glace, et je ne l'ai pas vu une seule fois.

M. Lundrigan: Ils ont peut-être...

M. Stadt: Ce que j'ai vu, c'est bien ce que vous voyez dans le film. Un chasseur perd son équilibre et frappe l'animal trois fois sur le crâne. C'est ce que vous voyez dans le film. C'est ce que j'ai vu et ce n'était qu'une seule fois. Il n'y a rien que je puisse voir dans le film de M. Fleury ou de d'autres films qui ne soit pas correct. J'étais libre de me déplacer. Comme je vous le dis, je suis allé partout sur la glace, autant et aussi loin que je le pouvais.

M. Lundrigan: Est-ce que votre film a jamais été montré en public?

M. Stadt: Oui, nous l'avons montré la semaine dernière au cinéma Verdi, et il a été très bien reçu. Certaines gens disaient: Pourquoi se préoccuper des phoques? Pourquoi ne pas tourner des films sur ce qui se passe au Vietnam? Mais c'est une autre question.

Le président: Monsieur Crouse?

M. McGrath: Vous voyez, monsieur le président, je n'ai même pas pris dix minutes.

M. Rose: Une question supplémentaire, monsieur le président. C'est à propos de ce que M. Stadt vient de dire: Pourquoi se préoccuper des phoques, monsieur Stadt?

M. McGrath: Demandez cela à M. Davies.

M. Stadt: Vous m'avez posé cette question: pourquoi se préoccupez des phoques?

M. Rose: Oui, si je comprends bien, vous êtes...

M. Stadt: Simplement pour répondre aux gens qui nous critiquent au Canada, c'est tout.

M. Stafford: C'est ce que l'audience...

M. Stadt: C'est tout. Le film indique que dans les abattoirs, dans n'importe quelle partie du monde, la boucherie continue. C'est ce que dit le texte lorsque la tuerie commence. Par conséquent si un spectateur en Europe entendait cela, il se sentirait directement visé.

[Text]

Mr. Rose: Is this a commercial film available for distribution through the normal commercial channels?

Mr. Städt: And how; of course it is.

Mr. Rose: And are films about seal slaughter since we have had all this publicity very profitable ventures? Are they in high demand, is there an excellent European market, and so on?

Mr. Städt: I tell you, we were approached by ORTF which is the French network. The ORTF wanted to buy the film by a man named Pierre or Paul Mignon. He screened the film. He liked it but he wanted to cut the beginning and he wanted to cut the slaughter house—in other words, to use only the seal hunt.

As director of the film and the author of the film I am entitled to oppose that and I opposed it. In other words, a few countries are interested in the film but the only thing they are interested in is to get from us the seal hunt alone.

Mr. Rose: Do I understand from what you have said, then, that you have not really sold the film nor rented it at all?

Mr. Städt: No, because under these circumstances, I do not agree. It caused great harm to Mr. Koneman though, and we have some money in it, but I am not going to let people cut into my film.

Mr. Rose: Then your film is a financial flop, is it not?

Mr. Städt: A financial flop?

Mr. Rose: A failure.

Mr. Städt: A failure?

Mr. Rose: A financial failure as far as your company is concerned.

Mr. Städt: No, I would not say that because if I agreed with France, I could get very easily \$1500 for one showing, and then another \$2,000 from Germany and maybe something more from England. Then it would become a very big financial success.

Mr. Rose: But at the moment it is not a financial success?

Mr. Städt: No, because we do not want it that way.

Mr. Rose: By your own choosing?

Mr. Städt: Yes, and I stick to it.

Mr. Rose: Thank you.

Mr. Crouse: Mr. Chairman, in making the third film which was shown this morning,

[Interpretation]

M. Rose: S'agit-il là d'un film commercial distribué par les voies commerciales habituelles?

M. Städt: Mais oui, certainement.

M. Rose: Et les films sur l'abattage des phoques, depuis que l'on a eu toute cette publicité, se vendent-ils bien? Y a-t-il assez de demandes et le débouché européen est-il intéressant?

M. Städt: Je peux vous dire que le réseau français, l'ORTF, nous a contactés et par l'intermédiaire d'un certain Pierre ou Paul Mignon, qui l'a fait projeter. Le film a plu mais il voulait couper le commencement ainsi que la partie où l'on voit l'abattoir, en d'autres termes, il ne voulait utiliser que la chasse aux phoques.

En tant que réalisateur et auteur du film, j'avais le droit de m'y opposer et, de fait, je me suis opposé. Certains autres pays s'y intéressent également, mais ils voudraient simplement obtenir la partie du film qui montre la chasse aux phoques.

M. Rose: Savez-vous que d'après ce que vous dites, vous n'avez ni loué ni vendu le film?

M. Städt: Non, parce que je n'accepterai pas de le faire sous ces conditions. Ceci a fait beaucoup de tort à M. Koneman, étant donné que nous y avons investi pas mal d'argent, mais je ne vais pas permettre que l'on découpe mon film.

M. Rose: Donc votre film est un fiasco financier, n'est-ce pas?

M. Städt: Un fiasco financier, vous dites?

M. Rose: Un échec.

M. Städt: Un échec?

M. Rose: Un échec financier pour ce qui est de votre compagnie.

M. Städt: Non, je ne le crois pas, parce que si j'étais d'accord avec l'ORTF, j'aurais pu facilement obtenir \$1,500 pour une séance, et une autre somme de \$2,000 de l'Allemagne et peut-être un peu plus d'Angleterre. C'aurait été vraiment un succès sur le plan financier.

M. Rose: Mais pour le moment ce ne l'est pas.

M. Städt: Non, parce que nous ne le voulons pas de cette façon.

M. Rose: De votre propre choix?

M. Städt: Oui, et j'y tiens.

M. Rose: Merci.

M. Crouse: Monsieur le président, lors des prises de vue du troisième film que nous

[Texte]

was it your intention to portray that the killing of seals is no less humane than the killing of steers or swine?

Mr. Stadi: When I left Montreal for the Magdalen Islands, I had no intention at all—no intention at all. I did not know what kind of film it was going to be. When I saw what went on, then I could see the difference between the 1964 version and the truth. Then I decided to take an example and make a parallel; that is all.

Mr. Crouse: You have informed the Committee that you arranged the background music of the 1964 film.

Mr. Stadi: Well, with the director.

Mr. Crouse: With the director?

Mr. Stadi: Yes; I did not have the final word; I suggested the music.

Mr. Crouse: This would indicate, though, that you are aware of the entire film and what was filmed. This film, as I understand it, was utilized by the CBC. Have you any idea of the amount of money the CBC paid for the showing of this film and to whom it was paid?

Mr. Stadi: I really do not know how much the CBC paid for that film.

Mr. Crouse: Mr. Chairman, could we have this information made available?

Mr. Stadi: It would be nice to know.

Mr. Stafford: Is this the Davis film that you are talking about?

• 1220

Mr. Crouse: I am talking about the first film, the Artek film, which was shown by the CBC according to Mr. Barry MacDonald, Director of Secretariat CBC Head Office, and I would like to know what amount of money the CBC paid for this film and to whom.

Mr. McGrath: I have a supplementary question.

The Chairman: Mr. McGrath?

Mr. McGrath: What became of what I think you refer to in the film business as the rushes? In other words, the CBC commissioned you to produce a film. In the production of that film you shot 10,000 feet but in the final version of the film actually only 2,000 feet were used. What became of the other 8,000 feet and who had the rights to it?

[Interprétation]

avons vu ce matin, aviez-vous l'intention de présenter l'abattage des phoques comme étant une opération pas moins dénuée de sentiments humains que l'abattage des porcs et du bétail en général?

M. Stadi: Quand je suis parti de Montréal aux Îles-de-la-Madeleine, je n'avais aucun but défini. Je ne savais pas quel genre de film nous pourrions faire. Quand j'ai vu ce qui s'est passé, j'ai pu voir la différence entre la version de 1964 et la vérité. C'est alors que j'ai décidé de prendre un exemple, et de faire une comparaison. C'est tout.

M. Crouse: Vous avez dit au comité que vous aviez arrangé la musique de fous pour le film de 1964.

M. Stadi: Je l'ai fait avec le directeur.

M. Crouse: Avec le directeur?

M. Stadi: Oui. Je n'avais pas le dernier mot. J'ai pris les arrangements pour ce qui est de la musique.

M. Crouse: Donc, vous étiez au courant de ce qu'on filmait. Si je comprends bien, Radio-Canada s'est servie de ce film. Combien Radio-Canada a-t-elle payé pour projeter ce film et à qui l'argent a-t-il été versé?

M. Stadi: Je ne sais vraiment pas combien Radio-Canada a payé.

M. Crouse: Y a-t-il moyen d'obtenir ce renseignement, monsieur le président?

M. Stadi: Il serait bon de le savoir.

M. Stafford: S'agit-il du film de Davis?

M. Crouse: Je parle du premier film, le film d'Artek que Radio-Canada a projeté, aux dires de M. Barry MacDonald, directeur du secrétariat, au bureau principal de Radio-Canada, et j'aimerais savoir combien Radio-Canada a payé pour ce film et à qui l'argent a été versé.

M. McGrath: Une question supplémentaire.

Le président: Monsieur McGrath?

M. McGrath: Qu'est-il advenu de ce qu'on appelle dans l'industrie du film, les ébauches? En d'autres termes, Radio-Canada vous a chargé de produire un film. Dans la production de ce film, vous avez tourné 10,000 pieds de film. Mais dans la version finale de ce film vous vous êtes servi de 2,000 pieds. Qu'est-ce qui s'est passé avec les 8,000 qui restaient? Qui y avait droit?

[Text]

Mr. Städt: Normally the production house keeps the remaining film. I do not know what happened to them because Artek went into bankruptcy. As far as I know everything was taken from Artek. I really do not know what became of those rushes.

Mr. McGrath: Have you ever seen them in any other film?

Mr. Städt: No.

Mr. Crouse: Why was the killer using an iron hook instead of the regulation club in Film No. 1, which was obviously intended to be a documentary film?

Mr. Städt: I cannot answer this because I do not know.

Mr. Crouse: You will recall that in Film No.1 the killer was using what was obviously an iron hook instead of a regulation club, and this would indicate that that section of the film in particular was faked or staged—you can use whatever word you wish—it was not according to...

Mr. Städt: Of course, this is not the way to kill a seal.

Mr. Crouse: And this film was purchased and shown by the CBC even though it portrayed a faked or staged method of killing seals. Is this correct?

Mr. Whelan: Mr. Chairman, may I interject. I checked on this and I found that our regulations were changed after that film was made. They could use that type of equipment then. There was really no regulation at that time which defined what type of equipment they could use to kill.

Mr. McGrath: But still there was a regulation in the Criminal Code regarding the humane slaughter of animals.

Mr. Whelan: Yes, but we made our regulations—let me put it this way—more strict.

Mr. McGrath: But they certainly were being violated at that time.

Mr. Crouse: It is also my understanding, Mr. Chairman, that this film was made on the ice prior to the opening of the season. Is that correct?

Mr. Städt: Mr. André Fleury actually left ten days, earlier and was alone on the Magdalen Islands. Whether it was before the season or not, I do not know, I cannot recall the dates. All I know is that he was alone on the ice with his camera.

Mr. Crouse: They were shooting these seals with a rifle in Film No. 1 that we were shown this morning. It is obvious that this

[Interpretation]

M. Städt: En général, celui qui produit le film retient le reste. Je ne sais pas ce qui est arrivé à ces films parce que la compagnie Artek a fait banqueroute et qu'on leur a tout enlevé. Je ne sais pas ce qui est arrivé à ces ébauches.

M. McGrath: Les avez-vous revues dans un autre film?

M. Städt: Non.

M. Crouse: Dans le film n° 1, pourquoi le chasseur se servait-il d'un crochet de fer plutôt que du bâton réglementaire? C'était un film documentaire.

M. Städt: Je ne peux vraiment pas vous répondre parce que je ne le sais pas.

M. Crouse: Vous vous souvenez que dans le premier film, celui qui abattait l'animal se servait d'un crampon de fer au lieu du bâton. Ceci semble montrer qu'il s'agissait d'un coup monté.

M. Städt: Oui, ce n'est pas la façon de tuer un phoque.

M. Crouse: Et pourtant ce film a été acheté par Radio-Canada et on l'a montré; bien que le film représentait une méthode fausse d'abattre les phoques, qu'on a fait un coup monté. Est-ce exact?

M. Whelan: J'ai vérifié la question et j'ai vu que nos Règlements ont été modifiés par la suite. A ce moment-là, il n'y avait pas vraiment de règlement pour dicter le genre d'instrument dont on devrait se servir pour abattre les phoques.

M. McGrath: Il existait quand même dans le Code Criminel des dispositions quant à l'abattage humain des animaux.

M. Whelan: Nos règlements vont plus loin, si je puis dire, que le Code.

M. McGrath: Mais on a violé le règlement.

M. Crouse: D'après ce que je comprends, ce film a été tourné sur la glace avant l'ouverture de la saison, ai-je raison?

M. Städt: Monsieur André Fleury est parti dix jours avant la saison, il était seul dans les Îles-de-la-Madeleine. Je ne me souviens pas des dates, je sais simplement qu'il était seul sur la glace avec sa caméra.

M. Crouse: Dans le premier film que nous avons vu ce matin, on abattait les phoques avec des fusils. Évidemment, ceci cause la

[Texte]

would cause the loss of many seals. Could you give us any idea of the purpose in showing the shooting of seals in this film?

Mr. Stadt: I cannot give you any answer. I really think it is ridiculous to show the hunter who is Serge Deyglun, killing the seal to demonstrate God only knows what. It is even worse than what a hunter does. At least a hunter has a reason, he is living with it, but Serge Deyglun did not live with it. Perhaps he did it for the kick of it, I do not know. The film does not explain it. They say that this is the proper way to kill a seal but why kill four or five of them in front of the camera? I cannot see the point in it.

Mr. Crouse: Mr. Chairman, it was also obvious that it terrified the seal herds when aircraft flew over them. Having witnessed the seal hunt, would you say that flying over the herds should be prohibited especially in the pupping season?

Mr. Stadt: No, they do not.

Mr. Crouse: This is just a normal reaction that we saw on the film?

Mr. Stadt: There is nothing to the seal hunt. It is an industry. As I said before, it is no worse than fishing salmon in a river or slaughtering pigs in a slaughterhouse.

• 1225

Mr. Whelan: Actually, I wanted to ask the same question Mr. Crouse asked. I think you misunderstood him. He was trying to say that when the mother seal is on the ice and a helicopter or an airplane flies low does this not frighten them into the water? They get off the ice floe as quickly as they can if a low-flying helicopter goes by.

Mr. Stadt: Yes, it scares them.

Mr. Whelan: So, if they are going to whelp or pup, whatever you want to call it, or have their young on the ice and they go into the water, the pup will drown in the water. Is that not right?

Mr. Stadt: The pup does not drown, sir. You have seen this in my film. They can swim. This is false because in my film you can see the seal pup swimming.

Mr. Whelan: How old would that seal pup be?

Mr. Stadt: I do not know.

Mr. Whelan: I mean when they are first born. Our people tell us that they die if they are born in the water. Their chances of survival are nil.

[Interprétation]

perte de beaucoup de phoques. Pouvez-vous nous dire pourquoi on montrait cette façon de chasser dans le film?

M. Stadt: Vraiment, je ne sais pas. Je trouve que c'est ridicule de montrer l'abat-tage des phoques par le chasseur Serge Deyglun, et pour démontrer je ne sais quoi. C'est pire que ce que fait le chasseur. Au moins le chasseur le fait pour une raison, et doit l'accepter, mais Serge Deyglun ne le fait pas pour gagner sa vie; peut-être pour rire, je ne sais pas, le film ne le dit pas. On dit que c'est la bonne façon de tuer un phoque, mais pourquoi en tuer 4 ou 5 devant la caméra? Je ne vois pas l'idée.

M. Crouse: Monsieur le président, il est évident qu'il n'est pas bon de survoler les troupeaux de phoques en hélicoptère. Cela les effraie. Ayant vu la chasse, monsieur Stadt, ne seriez-vous pas d'avis que ces vols devraient être défendus, surtout durant la saison où les petits naissent?

M. Stadt: Non.

M. Crouse: C'est donc une réaction normale que nous avons vue sur film?

M. Stadt: C'est une industrie, et comme je le disais ce n'est pas pire que d'aller pêcher du saumon dans les rivières ou d'abattre des animaux dans les abattoirs.

M. Whelan: Je voudrais poser la même question que M. Crouse. Vous n'avez pas très bien compris je crois. Ce qu'il dit, c'est que si les hélicoptères ou les avions passent au-dessus d'un troupeau quand les mères vont mettre bas, les phoques se sauvent vers l'eau.

M. Stadt: Oui, cela les effraie.

M. Whelan: Donc, s'ils sont sur le point de mettre bas, et qu'ils sautent à l'eau, le jeune se noie, n'est-ce pas?

M. Stadt: Non, le jeune phoque ne se noie pas; vous l'avez vu dans mon film, les jeunes peuvent déjà nager.

M. Whelan: Quel serait l'âge du petit?

M. Stadt: Je ne sais pas.

M. Whelan: On nous dit que si la mère met bas dans l'eau, les jeunes meurent. Ils ne peuvent pas survivre.

[Text]

Mr. Stadi: I cannot answer, that. I am not familiar with that matter.

Mr. McGrath: Mr. Chairman, on a point of order, the witness could not be expected to answer that question. He is a film maker; he is not a biologist, or whatever you call them.

Mr. Crouse: Mr. Chairman, I have another question and then I will pass. In Film No. 1 we saw a knife being thrown into a live seal. It is certainly not indicative of true sealing methods. Could you give us any idea why it was portrayed in this fashion? For what purpose and to serve what ends was it done?

Mr. Stadi: We are going into philosophy here. One could succeed in making a very sensational film that way. I do not see any other reason for it, actually.

Mr. Crouse: In your opinion was this film simply designed, if shown, to destroy Canada's image abroad?

Mr. Stadi: Maybe. That could be one reason. I do not say it was, but...

Mr. Stafford: I just have one question. So I understand correctly from what you told Mr. Crouse that in Film No. 1 the pups were killed for the purposes of the film only and that the pelts were actually wasted?

Mr. Stadi: I am not saying that it was done for the film. I am not accusing anyone of doing that in 1964. All I am saying is that there is a difference between what I saw in the 1964 film, or even in the film of Brian Davies and what I saw on the ice.

Mr. Stafford: Yes, but these people who were up there were not actual hunters. The killing was done for the purposes of the film and not for any hunt.

Mr. Stadi: I cannot answer you because I was not on the Magdalen Islands in 1964 and I do not know that. All I know is that Mr. Fleury went ahead before the season began and probably started to film on his own, so I do not know whether he shot those scenes then or not.

Mr. Stafford: Were they real hunters in the film or just people making believe?

Mr. Stadi: I really do not know.

The Chairman: Mr. St. Pierre.

Mr. St. Pierre: Thank you, Mr. Chairman. I just have a couple of questions. I am concerned about the 8,000 feet of film which was not used in the 1964 production. That is not an unusually large amount of film to use, is it? I notice you got 2,000 feet out of 3,000 feet

[Interpretation]

M. Stadi: Cela je ne peux pas vous répondre, je ne suis pas assez au courant de ces questions.

M. McGrath: Il ne saurait répondre à cette question, c'est un réalisateur, il n'est pas biologiste.

M. Crouse: Je voudrais simplement poser une question. On montre qu'on enfonce un couteau dans un phoque encore vivant, dans le premier film, et ceci n'est certainement pas la façon dont on s'y prend d'habitude. Pourquoi cette manière de montrer les choses? Dans quel but?

M. Stadi: C'est de la philosophie, cela. On peut amplifier les faits de cette façon; je ne vois pas d'autre raison.

M. Crouse: Une dernière question. Selon vous, ce film a-t-il été montré simplement pour détruire la bonne opinion qu'on avait du Canada à l'étranger?

M. Stadi: Peut-être, je ne dis pas que cela a été fait pour cela, mais c'est possible.

M. Stafford: Une seule question. Vous dites que les petits qui ont été abattus dans le premier film, l'ont été uniquement pour le film et qu'on a jeté les peaux?

M. Stadi: Je ne dis pas que cela a été fait uniquement pour le film, je n'accuse personne d'avoir fait cela en 1964, je dis seulement qu'il y a une différence entre ce que je vois dans le film de 1964 de M. Brian Davies et ce que j'ai vu sur la banquise.

M. Stafford: Oui, mais alors cet abattage a eu lieu simplement pour le film et pas pour la chasse; il ne s'agissait pas de chasseurs.

M. Stadi: Je ne le sais pas parce que je n'étais pas aux Îles-de-la-Madeleine en 1964. Je sais que M. Fleury s'est rendu avant le commencement de la saison de chasse, de lui-même. Je ne sais pas s'il a tourné ces scènes-là.

M. Stafford: S'agissait-il de vrais chasseurs ou d'acteurs?

M. Stadi: Je n'en sais rien.

Le président: Monsieur St-Pierre.

M. St-Pierre: Monsieur le président, j'ai simplement quelques questions à poser. Ce qui m'intéresse c'est les 8,000 pieds de pellicule qui ont été tournés et n'ont pas été utilisés pour la réalisation du film en 1964. Ce n'est pas un chiffre tellement élevé,

[Texte]

shot, but it is very exceptional, is it not to be as economic as this when you are shooting?

Mr. Stadt: Let us say that shooting 10,000 or 11,000 feet of film for a one-hour program is average for private industry. If we go to a government-sponsored outfit such as the National Film Board, that is something else. It could end up at 40,000, 50,000 or 60,000 feet, but they succeed in making good films.

Mr. St. Pierre: That leads us into still another area of philosophy. I wonder, Mr. Chairman, if this witness can tell us from his knowledge what instructions were given to the film editor. What was he told to select to make this film, or do you know?

Mr. Stadt: I cannot tell you that because Andre Fleury, who was the director of the 1964 film, worked with the editors and I was not there. I was making some other films. In fact, at that time I was doing two films at once, so I really do not know what he was told.

• 1230

Mr. St. Pierre: Even though you were not on the Magdalen Islands at that time you felt that a badly distorted piece of work was being done.

Mr. Stadt: Yes, definitely.

Mr. St. Pierre: Why did you feel this way when you had not seen a seal hunt at that time?

Mr. Stadt: As I explained, with 10,000 feet of film you would have some scenes where the hunter would be running towards the pup and he would kill it the right way. There were many scenes like this and they were not shown in the film.

Mr. St. Pierre: Even though you had not seen seal hunting at this time you knew that a bad piece of work was being done?

Mr. Stadt: By intuition I wondered why it was only shown that way.

Mr. St. Pierre: Thank you very much.

Mr. Stadt: It was intuition only.

Mr. Hogarth: Mr. Stadt, there must have been more to your intuition than that. You viewed, I take it, the whole 10,000 feet of film. Is that correct?

Mr. Stadt: Yes.

Mr. Hogarth: Then you must have seen it several times.

[Interprétation]

n'est-ce pas. Je vois que vous avez pris 3,000 pieds de pellicule pour un film de 2,000 pieds. Je crois que c'est très économique ce que vous avez fait, n'est-ce pas?

M. Stadt: Tourner 10,000 ou 12,000 pieds de pellicule pour un programme d'une heure, pour l'industrie privée, c'est normal. Si vous travaillez pour des organismes d'État, comme l'Office national du film, la question est tout à fait différente. On tourne 40,000, 50,000 ou 60,000 pieds, mais les films sont bons.

M. St-Pierre: Monsieur le président dans un autre domaine de pensée, je me demande si le témoin pourrait nous dire, d'après ce qu'il sait, quelle directive a été donnée à l'éditeur du film? Que lui a-t-on dit de choisir?

M. Stadt: Je ne puis vous le dire, car M. André Fleury, qui était directeur, a travaillé avec les éditeurs, et je n'étais pas là moi-même. Je réalisais d'autres films à ce moment-là. J'en ai même réalisé deux à la fois, de sorte que je ne sais pas vraiment quelles directives il a reçues.

M. St-Pierre: Bien que vous ne soyez pas allé aux Îles-de-la-Madeleine à cette époque, vous pensez qu'un film infidèle a été tourné.

M. Stadt: Oui, certainement.

M. St-Pierre: Alors qu'à ce moment-là vous n'aviez pas assisté à une chasse?

M. Stadt: Comme je l'ai dit tout à l'heure, avec 10,000 pieds de pellicule, il y aurait eu des scènes où la chasse se faisait selon les règlements. Il y avait de ces scènes, mais on ne les a pas montrées.

M. St-Pierre: Même si vous n'aviez pas vu la chasse aux phoques, vous saviez qu'un mauvais travail avait été fait?

M. Stadt: Par intuition oui, je me suis souvent demandé pourquoi on montrait seulement ces images, mais par intuition seulement.

M. St-Pierre: Merci beaucoup.

M. Stadt: Par intuition seulement.

M. Hogarth: Monsieur Stadt, il devrait y avoir plus que de l'intuition de votre part. Vous avez visionné les 10,000 pieds de pellicule, n'est-ce pas?

M. Stadt: Oui.

M. Hogarth: Vous les avez visionnés plusieurs fois?

[Text]

Mr. Stadi: No. I have seen it twice.

Mr. Hogarth: You mean when you were participating in the...

Mr. Stadi: No. I did not participate in anything. With everybody there, we screened the whole material.

Mr. Hogarth: Well, having seen the 10,000 feet, you must have seen the selected film from that 10,000 feet that we saw here today.

Mr. Stadi: Yes, of course.

Mr. Hogarth: Did you have any discussions with the others who were involved in the making of this film, as to why these things were cut out?

Mr. Stadi: The only one with whom I had a discussion—and it was not really a discussion—I just said that I did not agree with the way the thing was edited at the end, with what remained of the film. I did not agree with it. But I could not say more.

Mr. Hogarth: Who did you discuss that with?

Mr. Stadi: I discussed it with Andre Fleury at the time.

Mr. Hogarth: What did he tell you?

Mr. Stadi: A very good answer. "When you do a thing I do not ask, and when I do one, do not ask." And this is I think normal. I cannot say anything to someone who directs a film.

Mr. Hogarth: Well, did you not ask him why so much of this footage that showed the legitimate killing of seals, if I may use that expression, was taken out?

Mr. Stadi: The answer stops the argument. Which is what I have told you.

Mr. Hogarth: Again please.

Mr. Stadi: I was advised to mind my own business. That is all.

Mr. Hogarth: Did you conclude from your brief discussion with him that he merely wanted to show certain aspects of what had occurred on the ice without showing the truth?

Mr. Stadi: Yes, he knew I thought that.

Mr. Hogarth: And this is what he said was none of your business?

Mr. Stadi: Yes.

Mr. Rose: Are you going to proceed to another line of questioning?

[Interpretation]

M. Stadi: Non, je les ai vus deux fois.

M. Hogarth: Vous voulez dire lorsque que vous participiez...

M. Stadi: Non, je n'ai participé à rien. Nous avons visionné tout le matériel, devant tout le monde.

M. Hogarth: Ayant vu les 10,000 pieds de pellicule, vous devez avoir vu le film qui a été tiré de ces 10,000 pieds et que nous avons vu aujourd'hui.

M. Stadi: Naturellement.

M. Hogarth: Avez-vous parlé avec les autres personnes qui ont participé au tournage et au montage du film, au sujet des coupures?

M. Stadi: Le seul avec lequel je me sois entretenu, ce fut pour lui dire que je n'étais pas d'accord avec la copie finale, je n'étais pas d'accord, mais je ne pourrais pas en dire davantage.

M. Hogarth: Avez qui en avez-vous parlé?

M. Stadi: Avec André Fleury, à ce moment-là.

M. Hogarth: Qu'est-ce qu'il vous a dit?

M. Stadi: Il m'a donné une très bonne réponse: «Lorsque tu fais une chose, je n'en discute pas, alors lorsque je fais quelque chose, fais de même.» Et, à mon avis, c'est normal. Je ne pense rien dire à quelqu'un qui réalise un film.

M. Hogarth: Est-ce que vous ne lui avez pas demandé pourquoi tant de pellicules qui montraient l'aspect légitime de la chasse au phoque ont été enlevées, si je puis employer cette expression.

M. Stadi: Mais, sa réponse a mis fin à la discussion. C'est ce que je vous ai dit.

M. Hogarth: Encore, je vous prie.

M. Stadi: Il m'a prié de me mêler de ce qui me regardait. C'est tout.

M. Hogarth: Avez-vous conclu de cette brève discussion avec lui qu'il voulait montrer certains aspects de ce qui se passait sur la glace sans montrer la vérité?

M. Stadi: Oui, il savait que c'était ce que je pensais.

M. Hogarth: Et, il vous a dit de vous mêler de ce qui vous regardait.

M. Stadi: Oui.

M. Rose: Allez-vous changer de ligne d'idée?

[Texte]

Mr. Hogarth: No. It was obvious, was it not, that a great deal of the '64 film was shot during the seal hunt as opposed to shots taken two or three days before of one individual hunter. Was there any dubbing, do you know, of shots taken before the seal hunt opened in the shots taken of the seal hunt?

Mr. Städt: No. I do not think so. As far as I know there was no dubbing at all in the 1964 version.

Mr. Hogarth: What were the differences between the '64 film and what you saw on the ice? You have told us about the use of the hook, which has perhaps been explained away, and you told us about the shooting and the incident about the man prodding the seal with the knife. We recall those. Do you know of any others?

Mr. Städt: Which were not shown on the film, do you mean?

Mr. Hogarth: No, the differences between what you saw on the ice and the '64 film. You see, I have seen these films only once, and I would like you to reflect if you could and tell me what you think was staged. That is what I want to know.

Mr. Städt: When I was on the ice, I never saw a hunter running toward a seal pup and just launch the knife into the body to make sure it does not get away, then run to a next one and do exactly the same action, and so on.

Mr. Hogarth: So all the seals that you saw killed when you were on the ice were killed with a club?

Mr. Städt: All of them.

Mr. Hogarth: Now, you said that you did not know what you were going to film when you went to the Magdalen Islands.

• 1235

Mr. Städt: That is right.

Mr. Hogarth: What motivated you to go there, other than to get the truth?

Mr. Städt: Well, as I explained it before, I had an intuition in '64 that something was wrong with the film, but it was only an intuition.

Mr. Hogarth: You must have known that with this 10,000 feet, and 8,000 being cut out, and you knew what was cut out, you must have known that there was something wrong with the film.

Mr. Städt: Yes.

Mr. Hogarth: So knowing that, I take it you went to the ice in '66 to get at the truth.

[Interprétation]

M. Hogarth: Non. Il était manifeste, n'est-ce pas qu'une bonne partie du film de 1964 a été tourné au cours de la chasse au phoque par opposition au film qui avait été tourné 2 ou trois jours auparavant par un seul chasseur? Est-ce qu'au montage, on a mêlé des bouts de pellicule tournée avant et pendant la chasse?

M. Städt: Non, je ne pense pas. Non, à ma connaissance, il n'y a pas eu de montage dans la version de 1964.

M. Hogarth: Quelle était la différence entre le film de 1964 et ce que vous avez vu sur la glace? Vous nous avez parlé de l'emploi du crochet. Vous nous avez parlé du coup de fusil et de l'incident où l'homme a enfoncé son couteau dans le phoque. Nous nous rappelons de cela. En savez-vous d'autres?

M. Städt: Qui n'ont pas été montrés dans le film?

M. Hogarth: Non, la différence entre ce que vous avez vu sur la glace et le film tourné en 1964. Je n'ai vu le film qu'une fois et j'aimerais, si c'était possible, que vous me disiez ce que vous en pensez. C'est ce que je veux savoir.

M. Städt: Lorsque j'étais sur la glace, je n'ai jamais vu un chasseur courir vers un bébé phoque pour lui plonger son couteau dans le corps afin de s'assurer que l'animal ne s'enfuit et ensuite aller vers un deuxième et faire la même chose, etc.

M. Hogarth: Tous les phoques que vous avez vus morts sur la glace avaient été tués par un bâton?

M. Städt: Oui. Tous.

M. Hogarth: Vous avez dit que vous ne saviez pas ce que vous alliez filmer quand vous êtes allés aux Îles-de-la-Madeleine.

M. Städt: C'est exact.

M. Hogarth: Qu'est-ce qui vous a poussé à y aller, à part le fait d'y chercher la vérité?

M. Städt: Comme je l'ai dit tout à l'heure, j'avais l'intuition en 1964 que quelque chose clochait dans ce film. Mais ce n'était qu'une intuition.

M. Hogarth: Vous deviez savoir qu'avec ces 10,000 pieds de pellicules tournés, dont 8,000 furent inutilisés et que vous aviez vus, que quelque chose ne tournait pas rond.

M. Städt: Oui.

M. Hogarth: Conscient de cet état de choses, vous êtes allés sur la glace en 1966 pour y découvrir la vérité.

[Text]

Mr. Stadi: I did not know if the scenes when they skinned the seals alive, I did not know whether this was true or not. Do you understand what I mean? This I did not know.

Mr. Hogarth: I see.

The Chairman: One last supplementary question from Mr. Rose, and then we will adjourn.

Mr. Rose: This goes back to a phrase that Mr. Hogarth was concerned about too, and it concerns your intuition that a bad piece of work was being done. I believe I am, if not quoting you correctly, at least paraphrasing you correctly. And I think it is fair to say also that you implied that the 2,000 feet were deliberately cut so that they would be sensational. Therefore that would contribute to their market value.

Mr. Stadi: Right.

Mr. Rose: I would like to ask you a question. Can you explain to us why on the second reel all the lab sequences and inspection sequences were so incredibly dull after the sensationalism of the slaughter earlier? The two things seemed inconsistent to me.

Mr. Stadi: They had a problem in doing a one-hour program, a problem of length. So I believe they just put anything in to fill it out to make the hour.

Mr. Rose: Like the grinding of the teeth.

Mr. Stadi: All that, and the lab, and the RCMP or the Air Force demonstrating a survey on the ice, and so on. These were to fill up the film and to get an hour program. I think if you sell a half hour to the CBC you receive \$5,000, and if you sell a one-hour program you receive \$10,000. It is as simple as that.

Mr. Rose: It seems to me that with all the other film—you know the blood and guts film footage available—it is almost impossible for me to accept, in view of what you have implied, that this was sensationalism, that it did not represent the true facts. It seemed to me professionally inconsistent, if there was an aim, as you suggest...

Mr. Stadi: Yes. But there would be a contradiction. If they would have shown the scenes where the seals are killed the proper way, this leaves the question open to argument. I hope you agree with me, and you understand what I mean.

[Interpretation]

M. Stadi: Je ne savais pas si les scènes où l'on écorchait les phoques vivants étaient vraies ou non. Voyez-vous ce que je veux dire? Je ne le savais pas.

M. Hogarth: Je vois.

Le président: Encore une question, monsieur Rose, puis nous leverons la séance.

M. Rose: Cela a trait à une phrase qui a également préoccupé monsieur Hogarth. A propos de votre intuition qu'on avait fait du mauvais travail. Je crois que même si je ne vous cite pas correctement, je traduis correctement ce que vous avez dit.

Et je crois qu'il est juste aussi de dire que vous aviez le sentiment que les 2,000 pieds ont été coupés de façon délibérée pour faire quelque chose de sensationnel qui en augmenterait la valeur marchande?

M. Stadi: Oui.

M. Rose: Par conséquent, je voudrais vous poser une question. Pouvez-vous nous expliquer pourquoi dans la deuxième bobine, les séquences du laboratoire et de l'inspection, étaient si ennuyante, après les premières scènes sensationnelles du massacre? Tout cela me semble peu logique.

M. Stadi: Ils devaient faire un film pour une émission d'une heure et ils eurent ainsi à faire face à un problème de longueur. De sorte qu'ils ont dû mettre n'importe quoi pour remplir le temps.

M. Rose: Comme le grincement de dents.

M. Stadi: Tout cela, comme le laboratoire et la Gendarmerie royale et l'aviation surveillant les glaces, etc... Tout ça, c'est du remplissage pour faire un film d'une heure. Je crois que si vous vendez un film d'une demi-heure à Radio-Canada, vous recevez \$5,000 et pour une heure, \$10,000. C'est aussi simple que cela.

M. Rose: Il me semble que tout l'autre film, le film de sang et de tripes, il est presque impossible d'accepter, étant donné ce que vous avez dit; que c'était du sensationnel, que cela ne représentait pas vraiment la réalité. Cela me semble malhonnête sur le plan professionnel, s'il y avait un but, comme vous le laissez entendre...

M. Stadi: Oui, mais il y aurait une contradiction. S'ils avaient montré des scènes où les phoques sont tués comme il convient, cela laisse la question à la discussion. J'espère que vous partagez mon avis et que vous comprenez ce que je veux dire.

[Texte]

Mr. Rose: Yes. But are you also suggesting that the officials there, that the lab sequences, the inspection sequences, were there to imply Canadian legitimacy or tacit approval of what was going on?

Mr. Stadt: Well, I will tell you something. I am sure they were approached without knowing what the purpose of the film was, if I understand correctly your question about all those officials.

Mr. Rose: You said earlier that you felt that it might be made to embarrass Canada, or our country.

Mr. Stadt: It could be.

Mr. Rose: And I am just asking you, and you have answered, that that was the reason for the sequence involving the officials, to indicate to other countries that Canada tacitly approved this, approved this method.

Mr. Stadt: No. You are trying now to put me on the spot, and to accuse.

Mr. Rose: No. I am not.

Mr. Stadt: Whether it was shown as a criticism of Canada, I cannot answer you. I do not know.

Mr. Whelan: Mr. Chairman. In the first film, does the witness know who the man was who used the rifle to shoot the seal, the adult seal? Do you know who he was?

• 1240

Mr. Stadt: Yes. He is Serge Deyglun, the man who wrote the test and narrates the film.

Mr. McGrath: Perhaps there might be a consensus that we have finished with this witness, and we could agree to call the next one after lunch. I have no further questions.

The Chairman: Will he be excused then?

Mr. Lundrigan: There might be some further questions. I do not feel like holding the witness if we have completely finished. But there are questions relating to the CBC situation, and I was hoping that we could call, was it Mr. MacDonald?

The Chairman: Mr. Davies is next.

Mr. Lundrigan: No, but Mr. MacDonald is to be with us sometime today because he is here, and there are certain questions on

[Interprétation]

M. Rose: Oui. Mais insinuez-vous par là que les hauts fonctionnaires, les séquences de laboratoire, les séquences d'inspection étaient là pour montrer que le Canada légitimait ou approuvait d'une manière tacite ce qui se passait?

M. Stadt: Je suis sûr qu'on leur a demandé leur participation sans que les fonctionnaires ne sachent quel était le but du film, si je comprends bien votre question.

M. Rose: Vous disiez tout à l'heure que ceci avait peut-être été réalisé pour mettre le Canada ou notre pays dans l'embarras.

M. Stadt: Cela se pourrait.

M. Rose: Et je vous demande simplement, et vous avez répondu que la raison pour laquelle des personnes officielles figurent dans cette séquence était pour faire croire aux autres que le Canada approuvait cette méthode de manière tacite.

M. Stadt: Non, vous cherchez à m'acculer au mur et à m'accuser.

M. Rose: Non.

M. Stadt: Je ne peux pas répondre si c'était une critique formulée à l'égard du Canada. Je n'en sais rien.

M. Whelan: Monsieur le président, est-ce que le témoin saurait qui est l'homme qui a utilisé un fusil pour tuer un phoque adulte dans le premier film?

M. Stadt: Oui, c'est Deyghen, l'homme qui a rédigé le texte et qui est la narrateur du film.

M. McGrath: Nous pourrions peut-être nous entendre pour finir le questionnaire et pour appeler le prochain témoin après le repas. Je n'ai pas d'autres questions à poser.

Le président: Le témoin est-il libre de partir alors?

M. Lundrigan: Il est possible qu'il ait à répondre à d'autres questions. Je trouve qu'il est inutile de retenir un témoin si nous avons fini de lui poser des questions, mais il y aura certaines questions relatives à Radio-Canada et j'espérais que nous puissions interroger, était-ce M. MacDonald?

Le président: M. Davies est le suivant.

M. Lundrigan: Non, M. MacDonald doit être parmi nous aujourd'hui et j'aimerais lui poser quelques questions relatives à certains

[Text]

which he might be able to shed some light. And if there is a conflict in evidence, then we can iron it out.

Mr. Whelan: Are you available for the rest of the day?

Mr. Städt: Yes. I have to go back around 9 o'clock tonight.

The Chairman: With that understanding then, you will be here this afternoon if needed?

Mr. Städt: Yes.

The Chairman: We now stand adjourned till 3:30 p.m. or until after the question period in the House.

AFTERNOON SITTING

• 1537

The Chairman: Gentlemen, I see a quorum. The subcommittee met immediately after the adjournment for lunch. The motion to have Mr. Serge Deyglun and Mr. Andre Fleury appear as witnesses is being looked after, and every effort is being made to contact these gentlemen and have a meeting as soon as possible later on this week.

Mr. Crouse: I move, Mr. Chairman, that we call Mr. Davies before this Committee?

Mr. Hogarth: Mr. Chairman, prior to the calling of this witness, it would certainly assist me if we could have a review of the film that Mr. Davies is alleged to have made. Unfortunately the camera has gone, for some reason. It was only a 10-minute film, and I would like to have my mind refreshed on what was contained in that film before we examine the witness?

Mr. Stafford: I move we go with the witness. We can get the film anytime, if needed.

The Chairman: Is Mr. MacDonald here from the CBC? We took it for granted this morning that we would not be seeing the film again, and we gave him permission to take the camera away. But we could have it returned, I should think.

Mr. Hogarth: It would be of great assistance.

The Chairman: I think Mr. MacDonald from the CBC will be here shortly, and we can make arrangements to have it back.

I will call Mr. Davies to the table.

Mr. Crouse: Mr. Chairman, I would also suggest that Mr. Davies be sworn under the

[Interpretation]

sujets sur lesquels on pourrait jeter un peu de lumière. Et s'il y a preuve de conflit, nous pourrions le briser.

M. Whelan: Pouvez-vous être ici toute la journée?

M. Städt: Oui, je dois rentrer vers 21 heures.

Le président: Vous serez donc à notre disposition cet après-midi.

M. Städt: Oui.

Le président: Nous reprendrons à 3:30 ou après la période des questions à la Chambre des communes.

SÉANCE DE L'APRÈS-MIDI

Le président: Messieurs, je vois que nous avons quorum. Le sous-comité s'est réuni immédiatement après le déjeuner et la motion destinée à faire comparaître M. Serge Deyglun et André Fleury est prise en considération, c'est-à-dire que nous faisons tous les efforts pour nous mettre en rapport avec ces messieurs afin qu'ils viennent témoigner aussi tôt que possible au cours de la semaine.

M. Crouse: Monsieur le président, je propose que nous demandions à M. Davies de venir témoigner.

M. Hogarth: Avant d'appeler ce témoin, cela m'aiderait de pouvoir revoir le film que monsieur Davies est sensé avoir fait. Malheureusement, le projecteur n'est plus ici, pour une raison ou pour une autre. Le film ne dure que 10 minutes. J'aimerais me remettre à l'esprit le contenu du film avant d'interroger le témoin.

M. Stafford: Je propose que l'on interroge le témoin. Nous pouvons revoir le film à n'importe quel autre moment, au besoin.

Le président: M. MacDonald de Radio-Canada est ici présent. Nous avons décidé ce matin que nous ne visionnerions pas le film à nouveau et nous avons donné la permission d'enlever le projecteur. Mais naturellement, nous pourrions demander qu'on le rapporte.

M. Hogarth: Cela nous serait très utile.

Le président: Je crois que M. MacDonald de Radio-Canada arrivera bientôt et nous pouvons faire en sorte qu'il revienne. M. Davies sera notre prochain témoin.

M. Crouse: Monsieur le président, je proposerais que M. Davies soit assermenté aux ter-

[Texte]

Senate and House of Commons Act before he gives any testimony to the Committee. I would so move.

The Chairman: Is that the wish of the Committee?

Motion agreed to.

Mr. Brian Davies (Executive Secretary, New Brunswick Society for the Prevention of Cruelty to Animals): Mr. Chairman, would it be in order for me to make the request at this time?

The Chairman: Yes, Mr. Davies.

Mr. Davies: I would request the protection of the House, Mr. Chairman, and I would request leave to be represented by counsel. I would like to have my requests dealt with before I go on.

• 1540

Mr. Stafford: Mr. Chairman, does this mean that Mr. Davies has got to the represented by counsel. That is something we have done on only a few occasions. I would be just as happy myself to have him give his evidence in the ordinary way.

The Chairman: We have to settle the question of protection first. There were two requests.

Mr. Stafford: But I am speaking on the original motion, before the question of protection even arises. There is no doubt that he will be cross-examined and have questions put to him, and if we are going to do it in that particular way we may not get on today. Is it all that important? His words will be recorded. There are plenty of witnesses here to know what he said. I cannot see that in this particular case it will make any difference whether or not his evidence is under oath. Naturally, if his evidence is under oath, it puts a much greater onus on him.

The Chairman: I am in the hands of the Committee. The Committee has to decide whether or not he is to be under oath.

Mr. McGrath: Mr. Chairman, may I direct a question to the legal counsel of the House of Commons, Dr. Ollivier? Is it not automatic that witnesses appearing before parliamentary committees enjoy the same immunity as do Members of the House of Commons?

Dr. P. M. Ollivier (Law Clerk and Parliamentary Counsel, House of Commons): It is a little different. I have a couple of quotations here that the Chairman or I might read. They explain the protection that the witness has. Perhaps if he realizes the protection he has he might not need to have a lawyer.

[Interprétation]

mes de la Loi sur le Sénat et la Chambre des communes avant qu'il ne témoigne devant le Comité. C'est ce que je proposerais.

Le président: Est-ce le désir du Comité?

La motion est approuvée.

M. Brian Davies (Secrétaire exécutif, Société protectrice des animaux du Nouveau-Brunswick): Monsieur le président, puis-je formuler une requête?

Le président: Oui, monsieur Davies.

M. Davies: Je demanderais la protection de la Chambre et l'autorisation d'être représenté par un avocat. J'aimerais que l'on y réponde avant que je poursuive.

M. Stafford: Monsieur le président, est-ce que cela signifie que M. Davies doit être représenté par un avocat? Nous n'avons autorisé cette chose qu'en de rares occasions. Si ce n'est que de moi, il peut donner son témoignage de la manière habituelle.

Le président: Il convient de régler la question relative à la protection tout d'abord. N'oublions pas qu'il y avait deux demandes.

M. Stafford: Mais je parle de la motion originale, avant même que se pose cette question de la protection. Il n'y a aucun doute que le témoin sera interrogé et contre-interrogé, et si nous le faisons de cette façon-là, nous n'en aurons peut-être pas fini aujourd'hui. C'est aussi important que cela? Ses paroles seront enregistrées. Plusieurs témoins, ici, sauront ce qu'il a dit. Je ne vois pas, dans ce cas-ci, quelle sera la différence, que le témoin prête serment ou non. Naturellement, s'il prête serment, sa responsabilité est bien plus grande.

Le président: Tout dépend du Comité. C'est au Comité à décider si le témoin doit être assermenté ou non.

M. McGrath: Monsieur le président, je voudrais poser une question au conseiller parlementaire, M. Ollivier. Est-ce que les témoins comparissant devant les comités parlementaires jouissent de la même immunité que les députés à la Chambre des communes?

M. P. M. Ollivier (Légiste et conseiller parlementaire, Chambre des communes): C'est un peu différent. J'ai ici deux ou trois citations dont le président, ou moi-même, pourrait peut-être donner lecture. Elles expliquent la protection à laquelle le témoin a droit. S'il se rendait compte de la protection dont il jouit, il n'aurait peut-être pas besoin d'un avocat.

[Text]

Whether or not he has a lawyer is up to the Committee to decide. There are not many cases in which it has been allowed. There was one in 1793, I think, and another one in eighteen something, but still it is still up to the Committee to decide.

The Chairman: Mr. Davies?

Mr. Davies: Whether or not I have a lawyer, Mr. Chairman, has nothing to do with whether or not I am sworn. I feel that under our Bill of Rights it is a fundamental right of every Canadian to be represented by legal counsel at a hearing such as this, and I feel it would be unjust of the Committee to refuse me that right.

Thank you, Mr. Chairman.

Mr. McGrath: May I ask him why he feels he needs legal counsel? We have been hearing witnesses in committees...

The Chairman: Gentlemen, shall we deal with the requests in order?

Mr. McGrath: Mr. Chairman, I put a question to the witness, if you do not mind. I would like to ask why he feels he needs counsel at this time?

Mr. Anderson: We cannot discuss the question of whether or not the witness should be sworn...

The Chairman: As a matter of order, though, he asked for protection, and I was ready to read the relevant paragraph to enlighten the Committee and the witness. If I may do so we could then go on to the matter of legal counsel. In *Beauchesne on Parliamentary Rules and Forms*, paragraph 309 on page 246 states:

The privilege of freedom from arrest and molestation is attached to all witnesses summoned to attend before either House or Parliament, or before parliamentary Committees, and to others in personal attendance upon the business of Parliament, in coming, staying and returning.

● 1545

And paragraph 314 on page 247 of *Beauchesne's Parliamentary Rules and Forms* states:

Statements made to Parliament in the course of its proceedings are not actionable by law. (M. 133.) While the House punishes misconduct with severity, it is careful to protect witnesses from the consequences of their evidence given by order of the House; and on extraordinary

[Interpretation]

Qu'il ait un avocat ou non, c'est au Comité à décider. Il n'y a pas tellement de précédents. Il y en a eu un en 1793, je crois, un autre en dix-huit cent et quelque mais néanmoins, il incombe encore au Comité de décider.

Le président: Monsieur Davies?

M. Davies: Monsieur le président, que j'aie un avocat ou non, n'a rien à voir au fait d'être assermenté ou non. J'estime que c'est un droit essentiel de chaque Canadien, en vertu de la déclaration des droits de l'homme, d'être représenté par un avocat, lors d'une audience comme celle-ci. Et il me semble qu'il serait injuste que le Comité me refuse ce droit.

Merci, monsieur le président.

M. McGrath: Puis-je lui demander pourquoi il estime qu'il a besoin d'un avocat? Nous avons entendu des témoins aux comités...

Le président: Messieurs, est-ce que nous devons étudier cette demande?

M. McGrath: Monsieur le président, je veux poser une question au témoin. Je voudrais lui demander pourquoi il croit avoir besoin d'un avocat.

M. Anderson: Nous ne pouvons pas discuter la question de savoir si le témoin doit ou non être assermenté...

Le président: Mais, en fait, il a demandé cette protection. Je suis prêt à lui donner lecture de l'alinéa pertinent, pour éclairer le Comité et le témoin. Puis nous pourrions alors étudier la question de l'avocat. Dans le Précis de *procédure parlementaire*, de Beauchesne, au paragraphe 309, page 252, on dit:

Le privilège de l'immunité parlementaire contre toute arrestation et molestation s'étend à tous les témoins assignés à comparaître devant l'une ou l'autre des Chambres, ou devant quelque comité parlementaire, ainsi qu'à toutes les autres personnes qui doivent elles-mêmes s'occuper des travaux du Parlement, pendant qu'elles se rendent à l'endroit de leur travail, y séjournent ou en reviennent.

Au paragraphe 314, page 253, on dit:

(1) Les déclarations faites au Parlement au cours des délibérations parlementaires ne peuvent faire l'objet de poursuites judiciaires. M.133. Il est vrai que la Chambre punit avec rigueur la mauvaise conduite, mais elle prend bien soin de protéger les témoins contre les consé-

[Texte]

occasions, where further protection has been deemed necessary to elicit full disclosures, Acts have been passed to indemnify witnesses from all the penal consequences of their testimony. M. 583.

(2) A witness has been allowed the assistance of counsel when his evidence may tend to criminate himself.

Mr. Anderson: Mr. Chairman, if I may speak on this point, please, I think it is perfectly clear from what you have said that the witness may request counsel if he feels that his evidence might tend to incriminate him. I have no wish to go into that, but as the witness has suggested that he would like to be represented by counsel I see no reason why this Committee should refuse to allow it.

Mr. Hogarth: Mr. Chairman, I would like to be clear on whether the witness wants to be advised by counsel as he is questioned, or expects his counsel to answer the questions?

Mr. Davies: I expect to be advised by counsel.

Mr. Hogarth: I see nothing wrong with that.

Second, Mr. Chairman, I cannot see why the witness cannot get the protection of Section 5 of the Canada Evidence Act. It applies to all proceedings over which the Parliament of Canada has jurisdiction. I think that that is probably the protection he wants. The protection that you have read out seemed to me to apply to libel or slander suits, as the case may be.

Dr. Ollivier: I am not sure. This, of course is, not a court of law, and Parliament being sovereign is not governed by all the usual laws but rather by its own customs and constitution and the regulations that it makes. He is also protected by the Senate and House of Commons Act, so I do not think that that comes so much into the question.

The Chairman: Mr. Whelan, did you want to speak to this matter?

Mr. Whelan: As a member of the Committee, I have no objection to Mr. Davies having a lawyer. I cannot see the advantage of having one at any time, so far as that goes, but if he wants one that is up to him.

[Interprétation]

quences des témoignages qu'ils ont rendus sur un ordre de la Chambre. Il est même arrivé, mais seulement dans des cas extraordinaires, lorsqu'on a jugé une plus grande protection nécessaire pour obtenir des révélations complètes, qu'on adopte des lois pour garantir les témoins contre toutes les sanctions pénales que leurs témoignages pouvaient entraîner. M.583.

(2) On accorde à un témoin l'assistance d'un avocat-conseil lorsque ses dépositions risquent de l'incriminer.

M. Anderson: Monsieur le président, il est bien clair, d'après ce que vous avez dit, que le témoin peut demander l'assistance d'un avocat s'il pense que sa déposition risque de l'incriminer. Je ne veux pas m'aventurer sur ce terrain, mais comme le témoin a dit qu'il aimerait être représenté par un avocat, je ne vois pas de raison de le lui refuser.

M. Hogarth: Monsieur le président, je veux que ce soit clair: est-ce que le témoin veut être conseillé par son avocat au fur et à mesure que les questions lui seront posées, ou bien veut-il que son avocat réponde aux questions?

M. Davies: Je m'attends à être conseillé par mon avocat.

M. Hogarth: Je ne vois rien de mal là-dedans. Deuxièmement, monsieur le président, je ne vois pas pourquoi le témoin ne jouirait pas de la protection prévue à l'article 5 de la Loi sur la preuve au Canada. C'est ce qui s'applique à toutes les délibérations relevant du Parlement canadien, et c'est probablement là la protection qu'il veut obtenir. La protection dont il est question au paragraphe que vous avez lu semble, d'après moi, s'appliquer aux cas de diffamation, ou de calomnie, selon le cas.

M. Ollivier: Je n'en suis pas sûr. Nous ne sommes pas un tribunal, et, le Parlement étant souverain, il n'est pas régi par les lois ordinaires, mais par ses propres coutumes, sa constitution, et les règlements qu'il se donne. Il est aussi protégé par la Loi sur le Sénat et la Chambre des communes. Voilà pourquoi je ne pense pas que cela entre en ligne de compte à ce point-là.

Le président: Monsieur Whelan, avez-vous quelque chose à dire à ce sujet?

M. Whelan: A titre de membre du Comité, je n'ai aucune objection à ce que M. Davis ait un avocat. Je ne vois pas l'avantage d'avoir un avocat, de toute façon, mais libre à lui d'en avoir un.

[Text]

The Chairman: This is entirely in the hands of the Committee.

Mr. Anderson: I will make a motion, Mr. Chairman, to the effect that Mr. Davies be. . .

The Chairman: There is a motion before the House. . .

Mr. Borrie: Mr. Chairman, as I understood it, Mr. Davies did not care to take the oath until such time as he was guaranteed that his counsel would be available.

Mr. Stafford: As I understand it, he does not want to give any type of evidence, sworn or unsworn, until he has counsel. Is that right, Mr. Davies?

Mr. Davies: That is correct, sir.

Mr. Anderson: Could we then delay the motion to have Mr. Davies sworn until we vote on a motion about legal counsel? Perhaps that will get us around this difficulty that has presented itself?

I will move that. . .

The Chairman: Is that agreeable to the Committee?

Mr. Stafford: There is only one man here who understands the laws that relate to the House of Commons. I would like Dr. Ollivier to give us a little more of his expert knowledge of them.

It is all right to talk about the Canada Evidence Act and the protection under it, but as a lawyer, and having used it hundreds of times I am not at all sure how it would work here.

Dr. Ollivier: I think those two paragraphs of Beachesne explain pretty much what protection there is.

Mr. Stafford: Would you read it once again, please. I did not catch it the first time.

Dr. Ollivier:

The privilege of freedom from arrest and molestation is attached to all witnesses summoned to attend before either House or Parliament, or before parliamentary Committees, and to others in personal attendance upon the business of Parliament, in coming, staying and returning.

What that means is that the witness cannot be attacked outside of this committee room for anything that he has said—his evidence here cannot be used in another court to convict him of anything else.

[Interpretation]

Le président: C'est au Comité à décider.

M. Anderson: Monsieur le président, je vais proposer que M. Davies soit. . .

Le président: On propose que. . .

M. Borrie: Monsieur le président, si j'ai bien compris, M. Davies n'a pas voulu prêter serment jusqu'à ce qu'on ait accédé à sa demande d'être accompagné par un avocat.

M. Stafford: Si j'ai bien compris, il ne voulait témoigner, ou prêter serment, qu'en présence d'un avocat, n'est-ce pas, monsieur Davies?

M. Davies: En effet, monsieur.

M. Anderson: Est-ce qu'on peut alors mettre de côté la motion visant l'assermentation de M. Davies jusqu'à ce qu'on ait réglé cette question de l'avocat? Nous contournerons peut-être alors cette difficulté.

Je propose que. . .

Le président: Le Comité est-il d'accord?

M. Stafford: Il n'y a qu'un homme ici qui comprend les lois se rapportant à la Chambre des communes. J'aimerais que M. Ollivier nous communique un peu plus de ses connaissances en cette matière.

Il est bon de parler de la Loi sur la preuve au Canada et de la protection qu'elle prévoit, mais en tant qu'avocat, et après l'avoir utilisée des centaines de fois, je ne suis pas du tout sûr que cela va marcher.

M. Ollivier: Je crois que les deux paragraphes de Beachesne, qu'on vient de citer, expliquent très bien la protection qui existe.

M. Stafford: Pouvez-vous en donner lecture encore une fois, s'il vous plaît? Je ne l'ai pas compris la première fois.

M. Ollivier:

Le privilège de l'immunité parlementaire contre toute arrestation et molestation s'étend à tous les témoins assignés à comparaître devant l'une ou l'autre des Chambres, ou devant quelque comité parlementaire, ainsi qu'à toutes les autres personnes qui doivent elles-mêmes s'occuper des travaux du Parlement, pendant qu'elles se rendent à l'endroit de leur travail, y séjournent ou en reviennent.

Ce que cela veut dire, c'est que le témoin lui-même ne peut pas être attaqué, en dehors de cette pièce du comité parlementaire, pour tout ce qu'il a déclaré ici. Son témoignage donné ici ne peut pas être repris par un tribunal pour le condamner dans une autre cause.

[Texte]

Of course, we do not have here the theory of the fifth amendment and the witness can refuse to answer, but apart from that, if he has a lawyer I do not think that the lawyer is entirely free to interrupt members, or to create a disturbance, or to make things more difficult for the Chairman. It will be up to the Committee to say how far that lawyer can go.

• 1500

Mr. McGrath: Mr. Chairman, may I ask a supplementary question, please?

Dr. Ollivier, in your view would this be setting a precedent under the customs of the House of Commons?

Dr. Ollivier: To allow a lawyer? No.

Mr. McGrath: When was the last time it happened?

Dr. Ollivier: For example, paragraph 314, which was read previously, states:

(2) A witness has been allowed the assistance of counsel when his evidence may tend to incriminate himself.

And Beauchesne gives two examples. One was in 1873 and the other in 1887.

Mr. Stafford: Would you read that paragraph again and the case referred to?

Dr. Ollivier: He just gives the reference to the journals of the House.

(2) A witness has been allowed the assistance...

On the other hand, it is understood that a witness may ask the Committee for the protection of the House, and also to have a lawyer to represent him. But you must not forget that the Committee is a part of the House, and it derives all its powers from the House. Parliament is a sovereign institution, so that if the Committee wants to refuse it, it can refuse. But if the Committee is convinced that there is sufficient reason, then I do not see why it should not agree to the request of the witness.

Mr. McGrath: This has to do with the question I directed at the witness at the start. Why does he feel he needs counsel?

Mr. Stafford: Could we put it another way? The witness might be asked a question that he feels might incriminate him, and then he can stop us. Could we go on this way? I think this witness has given evidence enough in different places and has spoken on this enough... he knows very well. And Dr. Ollivier also knows as an impartial man. He does legal work for all the committees. We could

[Interprétation]

Évidemment, nous n'avons pas ici la théorie du cinquième amendement, et le témoin peut refuser de répondre, mais, outre cela, si le témoin prend un avocat, je ne pense pas que l'avocat a le droit d'interrompre les députés, de créer du désordre, de compliquer la tâche du président. Il incombe au Comité de dire dans quelle mesure l'avocat peut se prononcer, ou peut agir.

M. McGrath: Monsieur le président, puis-je poser une question supplémentaire?

Monsieur Ollivier, d'après-vous, est-ce que ce serait un précédent, d'après les coutumes de la Chambre des communes?

M. Ollivier: Admettre un avocat? Non.

M. McGrath: Quand cela est-il arrivé la dernière fois?

M. Ollivier: Par exemple, le paragraphe 314, dont on a déjà donné lecture, dit:

(2) On accorde à un témoin l'assistance d'un avocat-conseil lorsque ses dépositions risquent de l'incriminer.

Beauchesne donne deux exemples. Un en 1873 et l'autre en 1887.

M. Stafford: Pouvez-vous relire ce paragraphe, et le cas auquel il s'applique?

M. Ollivier: Beauchesne se réfère simplement aux journaux de la Chambre.

(2) On accorde à un témoin l'assistance...

Par ailleurs, il est clair qu'un témoin peut demander au Comité, la protection de la Chambre il peut demander aussi l'autorisation d'avoir un avocat pour le représenter. Mais vous ne devez pas oublier que le comité appartient à la Chambre des communes, il tient tous ses pouvoirs de la Chambre des communes. Le Parlement est une institution souveraine, ainsi si le comité veut refuser, il peut le refuser. Mais si le Comité est convaincu que la raison est suffisante, alors, je ne vois pas pourquoi on ne pourrait accéder à la requête du témoin.

M. McGrath: Ceci se rapporte à la question que j'ai posée au témoin au début. Pourquoi estime-t-il avoir besoin d'un avocat?

M. Stafford: Pourrions-nous poser la question autrement? On peut poser des questions qui, selon lui, pourraient l'incriminer, alors qu'il nous arrête. Pourrions-nous continuer ainsi? Je pense que ce témoin a donné suffisamment de preuves et a parlé suffisamment de ce qu'il connaît très bien. Et le Dr Ollivier sait également très bien que c'est un homme impartial. Il fait des travaux légaux

[Text]

even take a vote on the matter of giving him protection. I doubt if that would add anything to what we already have. The witness can continue on until he reaches a point where he feels that he should refuse to answer, and then if there are enough of them, he may find...

Mr. Anderson: Mr. Chairman, I will make a motion on this. I do feel...

The Chairman: Mr. Anderson, I am sorry but we can entertain motions only from members of the Committee itself.

Mr. Anderson: Am I a member now?

Mr. Lundrigan: Mr. Chairman, could I ask a question of Dr. Ollivier? In the event that our friend does get the consent of the Committee to have legal counsel, does it mean that on the advice of his counsellor my question might be refused and that I cannot proceed with my line of questions?

Dr. Ollivier: No. You can ask any question you want, and the witness is obliged to answer.

Mr. Lundrigan: Thank you, Dr. Ollivier.

The Chairman: Mr. St. Pierre.

Mr. St. Pierre: I move that the witness be permitted to have counsel.

Motion agreed to.

The Chairman: We come now to the motion concerning the oath under the Senate and House of Commons Act.

Mr. Davies sworn.

The Chairman: Mr. McGrath.

Mr. McGrath: Mr. Davies, are you a Canadian citizen?

Mr. Davies: Yes.

Mr. McGrath: How long have you been a Canadian citizen?

● 1555

Mr. Davies: Since 1958, I believe. I would like to go on and say, sir, if I may, that my grandfather was a French Canadian...

Mr. McGrath: No, Mr. Davies. It is not your grandfather I am interested in; it is you. How long have you worked for the SPCA?

Mr. Davies: Seven years.

Mr. McGrath: Do you earn your total livelihood from the SPCA?

Mr. Davies: Yes, I would say that is correct.

[Interpretation]

pour les comités. Nous pourrions mettre aux voix la question de lui donner notre protection. Je doute que cela ajoute quelque chose à ce que nous avons déjà. Le témoin peut continuer jusqu'à ce qu'il estime impossible de répondre, et s'il y a assez de questions de ce genre, alors...

M. Anderson: Monsieur le président, je voudrais proposer une motion là-dessus. Je pense...

Le président: Monsieur Anderson, je regrette. On ne peut accepter de motion que des membres du comité.

M. Anderson: Suis-je membre maintenant?

M. Lundrigan: Monsieur le président, je voudrais poser une question à M. Ollivier? Si notre ami obtient l'autorisation du Comité d'avoir un avocat, est-ce que cela veut dire que sur le conseil de son avocat ma question pourra être refusée et que je ne pourrai pas continuer à le questionner?

M. Ollivier: Non, vous pouvez poser toutes les questions que vous voulez et le témoin est tenu d'y répondre.

M. Lundrigan: Merci, monsieur Ollivier.

Le président: Monsieur St-Pierre.

M. St-Pierre: Monsieur le président, je propose que le témoin soit autorisé à être accompagné d'un avocat.

Adopté.

Le président: Venons-en maintenant à la motion concernant le serment en vertu de la loi sur le Sénat et la Chambre des communes.

M. Davies est assermenté.

Le président: Monsieur McGrath.

M. McGrath: Monsieur Davies, êtes-vous citoyen canadien?

M. Davies: Oui.

M. McGrath: Depuis combien de temps?

M. Davies: Depuis 1958 je crois. Je voudrais simplement dire encore que mon grand-père était Canadien français...

M. McGrath: Je ne m'intéresse pas à votre grand-père mais à vous, depuis combien de temps travaillez-vous pour la SPA?

M. Davies: Sept ans.

M. McGrath: C'est votre gagne pain?

M. Davies: Oui, c'est exact.

[Texte]

Mr. McGrath: Is that your full-time job?

Mr. Davies: Yes, it is.

Mr. McGrath: Would you describe your job for us?

Mr. Davies: Two-thirds of my time is involved with attempting to get the seal hunt in the Gulf of St. Lawrence stopped, and a sanctuary created in that area. One third of my time is spent doing general animal welfare work in New Brunswick.

Mr. McGrath: When did you first become interested in the seal hunt in the Gulf of St. Lawrence? Or in the seal hunt, period?

Mr. Davies: In 1965.

Mr. McGrath: What prompted this interest?

Mr. Davies: I was asked by the Canadian Federation of Humane Societies to go as an observer to the seal hunt of 1965, I believe at the expense of the Canadian Department of Fisheries.

Mr. McGrath: Since that time you have conducted a one-man crusade, pretty well. Am I correct in assuming that you have travelled extensively around the Western world in connection with your crusade to abolish the seal hunt in Canada?

Mr. Davies: I would not want to use the word "crusade". I have travelled in Europe and North America, putting forward the view of the people I work for, that the seal hunt is something that should be stopped.

Mr. McGrath: Who financed your travels around the world?

Mr. Davies: In Europe and North America?

Mr. McGrath: Yes.

Mr. Davies: The New Brunswick SPCA "Save the Seals" Fund.

Mr. McGrath: And who is behind the New Brunswick SPCA "Save the Seals" Fund?

Mr. Davies: All the people who have donated to the New Brunswick SPCA "Save the Seals" Fund.

Mr. McGrath: Is the SPCA of New Brunswick behind them?

Mr. Davies: Yes.

Mr. McGrath: You are sure of that, Mr. Davies, are you?

Mr. Davies: Had I not said that, I would not have answered yes.

[Interprétation]

M. McGrath: Est-ce que c'est votre emploi à plein temps?

M. Davies: Oui.

M. McGrath: Voulez-vous nous en faire la description?

M. Davies: Deux tiers de mon temps sont consacrés à faire arrêter la chasse aux phoques dans le golfe du Saint-Laurent et à créer un sanctuaire dans cette région. Un tiers de mon temps est consacré au bien-être des animaux au Nouveau-Brunswick.

M. McGrath: Depuis combien de temps vous intéressez-vous à la chasse aux phoques dans le golfe du Saint-Laurent?

M. Davies: Depuis 1965.

M. McGrath: Qu'est-ce qui a fait naître cet intérêt?

M. Davies: La fédération canadienne de la protection des animaux m'a demandé de me rendre, à titre d'observateur, à la chasse aux phoques de 1965 aux frais du ministère des Pêches je crois.

M. McGrath: Depuis lors, vous avez conduit seul une croisade qui a eu du succès. Vous avez voyagé beaucoup dans le monde occidental poursuivant cette campagne pour mettre fin à la chasse aux phoques au Canada?

M. Davies: Je n'utiliserais pas ce mot de croisade. J'ai voyagé en Europe et en Amérique du Nord pour exposer le point de vue des gens pour lesquels je travaille à savoir que la chasse devrait prendre fin.

M. McGrath: Qui paie vos frais de voyage à travers le monde?

M. Davies: En Europe et en Amérique du Nord?

M. McGrath: Oui.

M. Davies: La SPA du Nouveau-Brunswick, par l'intermédiaire du fonds de protection des phoques.

M. McGrath: Qui est derrière cela?

M. Davies: Tous les particuliers qui ont fait des dons.

M. McGrath: Est que la SPA du Nouveau-Brunswick est derrière cela?

M. Davies: Oui.

M. McGrath: Vous êtes sûr, monsieur Davies?

M. Davies: Si je n'étais pas sûr, je n'aurais pas dit oui.

[Text]

Mr. McGrath: I have correspondence, as I am sure other members have, from other SPCA people in New Brunswick, as indeed in other parts of Canada, which would indicate the contrary is true. A very high official in the SPCA department in New Brunswick disagrees—would take exception to that statement. Is this a fact?

Mr. Davies: There may be people in the New Brunswick SPCA, a minority, who do not agree with our stand on seal hunting. I would stress it is a minority. I would also go on to say that there are people in the House of Commons who do not agree with each other. It is a perfectly natural and normal state.

Mr. McGrath: Are you a veterinary surgeon?

Mr. Davies: No, I am not.

Mr. McGrath: Is it not a fact that one of the leading spokesmen of the SPCA in New Brunswick, who happens to be a vet, disagrees with you?

Mr. Davies: That is probably a fact, yes.

Mr. McGrath: Can you name the gentleman?

Mr. Davies: No, I do not feel that I should name the gentleman.

Mr. McGrath: Would you say that the managing director of the Saint John and District SPCA agrees with you, and he happens to be a vet?

Mr. Davies: I would say that he does not.

Mr. McGrath: Are you aware of the fact that this gentleman has since 1967 had a standing offer of \$1,000 for anybody who could produce scientific proof that it would be possible to skin a seal alive, and that that reward has not been claimed?

Mr. Davies: He has never communicated that to me directly. I seem to remember at one time reading something along those lines in the press.

Mr. McGrath: I would say that as a member of the SPCA, as a member of the executive, you would be interested in everything certainly in the New Brunswick press that pertains to the SPCA. I have clippings here from the New Brunswick press regarding this \$1,000 reward and, as I say, it is rather interesting that it has not been claimed and that it has been sponsored by the very SPCA that you claim is sponsoring you. Surely there is a contradiction there, somewhere.

Mr. Davies: Frankly, sir, I would consider it questionable to enter into any scheme that

[Interpretation]

M. McGrath: J'ai reçu des lettres, comme d'autres députés, j'en suis sûr, d'autres membres de la SPA du Nouveau-Brunswick, et du Canada en général, qui me font penser le contraire. Une personnalité importante de la SPA du Nouveau-Brunswick n'est pas d'accord. Est-ce exact?

M. Davies: Il y a peut-être certaines personnes à la Société protectrice des animaux du Nouveau-Brunswick qui ne partagent pas notre opinion à propos de la chasse au phoque. Je dirais qu'ils sont une minorité. Mais, il y a aussi, sans doute, d'autres personnes à la Chambre des communes qui ne partagent pas notre avis. Ceci est tout à fait naturel et normal.

M. McGrath: Êtes-vous vétérinaire?

M. Davies: Non.

M. McGrath: Est-il vrai qu'il y a un des membres de la Société protectrice des animaux du Nouveau-Brunswick qui est vétérinaire et qui ne partage pas votre avis?

M. Davies: Probablement, oui.

M. McGrath: Pouvez-vous le nommer?

M. Davies: Non, je ne pense pas que je dois.

M. McGrath: Admettez-vous que le gérant du district de Saint-Jean de la SPA ne partage pas votre avis et qu'il est vétérinaire?

M. Davies: Je dirais qu'il ne partage pas mon avis.

M. McGrath: Savez-vous que cette personne a depuis 1967 une offre de \$1,000, pour toute personne qui pourra fournir la preuve qu'on peut écorcher un phoque vivant et que cette offre n'a jamais été réclamée?

M. Davies: Il ne m'a jamais communiqué cette offre. Je me rappelle qu'une fois j'avais lu quelque chose à ce propos dans la presse.

M. McGrath: Je pensais qu'en tant que membre de la SPA en tant qu'exécutif, vous vous intéresseriez à toute chose qui concerne la SPA et est paru dans la presse. J'ai des coupures de la presse du Nouveau-Brunswick qui parlent de cette récompense de \$1,000 et il faut remarquer que personne n'a jamais réclamé cette récompense. Récompense offerte par la même Société protectrice des animaux qui vous parraine. Il y a une contradiction là-dedans.

M. Davies: Pour moi participer à un projet qui me paierait \$1,000 pour essayer de dépe-

[Texte]

paid me \$1,000 and involved trying to skin a live seal. Completely unethical, and I would have absolutely nothing to do with it.

• 1600

Mr. McGrath: Who sponsored the film that we saw this morning?

Mr. Davies: Which film?

Mr. McGrath: Your film.

Mr. Davies: The New Brunswick SPCA "Save the Seals" Fund.

Mr. McGrath: Unless my memory fails me, that portrayed a seal being skinned alive.

Mr. Davies: Your memory fails you, sir. It does not portray a seal being skinned alive.

Mr. McGrath: It portrays a seal being killed inhumanely, certainly.

Mr. Davies: My contention is that most seals are killed inhumanely, sir.

Mr. McGrath: Did you show your entire film this morning?

Mr. Davies: Yes, sir.

Mr. McGrath: There are no parts of that film missing.

Mr. Davies: Very little I would say.

Mr. McGrath: I mean you either showed the entire film or you did not, Mr. Davies.

Mr. Davies: I showed all the useable film, sir.

Mr. Crouse: May I ask a supplementary? Is the film that we were shown this morning, Mr. Chairman, the same film that was shown in the Press Gallery in 1966?

Mr. Davies: Yes, sir.

Mr. Crouse: If this is correct, then, Mr. Chairman, having viewed that film I would contend that over half of the film that was shown in the Press Gallery in 1966 has been removed and was not shown to the Committee this morning. Is this a correct contention or is it not, Mr. Davies?

Mr. Davies: How many films did you see at the Press Gallery, sir?

Mr. Crouse: I saw your film at the Press Gallery.

Mr. Davies: Did you see any other films?

Mr. Crouse: Not to my knowledge.

Mr. Davies: There were two films shown there, sir. I suspect that you are confusing my film with the film shown by the Canadian SPCA which I believe was longer.

[Interprétation]

cer un phoque vivant, serait contraire à l'éthique que je me suis fixée et je n'y participerais pas.

M. McGrath: Qui a commandité le film que nous avons vu ce matin?

M. Davies: Quel film?

M. McGrath: Votre film.

M. Davies: Le fonds «Sauvez les phoques» de la Société protectrice des animaux du Nouveau-Brunswick.

M. McGrath: A moins que je ne me trompe on y voyait un phoque écorché vif.

M. Davies: Vous faites erreur. Le film n'a pas montré une telle scène.

M. McGrath: On y voit tuer un phoque de façon inhumaine.

M. Davies: Pour moi, les phoques sont tués d'une façon inhumaine.

M. McGrath: Avez-vous présenté votre film en entier?

M. Davies: Oui, monsieur.

M. McGrath: Il n'en manque aucun élément?

M. Davies: Très peu.

M. McGrath: Avez-vous montré tout le film ou non?

M. Davies: J'ai montré toute la partie utile.

M. Crouse: Une question supplémentaire. Le film que nous avons vu ce matin, est-ce le même qui a été présenté à la tribune de la presse en 1966?

M. Davies: Oui.

M. Crouse: J'ai vu le film et je soutiens que plus de la moitié du film présenté à la tribune de la presse a été enlevée et n'a pas été présentée au Comité, ce matin. Ai-je raison, monsieur Davies?

M. Davies: Combien de films avez-vous vu à la tribune de la presse?

M. Crouse: J'ai vu votre film.

M. Davies: En avez-vous vu d'autres?

M. Crouse: Je ne crois pas.

M. Davies: Il y a eu deux films qui ont été présentés. Je crois que vous confondez mon film avec celui de la Société protectrice des animaux qui était plus long.

[Text]

Mr. Crouse: So you contend that the film shown this morning was complete and exactly the same as the one we were shown in 1966.

Mr. Davies: That is correct.

Mr. Crouse: With nothing removed.

Mr. Davies: To the best of my knowledge, sir, nothing removed.

Mr. McGrath: Could you tell the Committee, Mr. Davies, how much it cost to finance that film and how much it has cost to finance your campaign since you started in 1965?

Mr. Davies: I would have to guess at the cost of the film, sir, and say about \$2,000. I have an audited statement for the year ending December 31, 1968. I have not got an audited statement for 1966 or 1967 with me. I could let the Committee have it at a later date.

Mr. McGrath: Can you give us an approximate total?

Mr. Davies: I would guess in 1966 about \$1,000; in 1967 about \$20,000 and in 1968 \$23,451. If the Committee is agreeable, I will enter this if anyone wants to see it.

Mr. McGrath: It is not necessary.

Mr. Hogarth: Excuse me. Could the witness sit on the other side of his counsel so we could see.

Mr. Davies: I am deaf in this ear and I would prefer to have the counsel at my good ear.

The Chairman: Incidentally, the projector has arrived and, any time that the Committee wishes, we could see the film again.

Mr. Hogarth: I think we should see the film now.

Mr. McGrath: I will change my line of questioning. Mr. Davies that represents a total of about \$50,000. Is that correct?

Mr. Davies: No, it is not correct, sir.

Mr. McGrath: There is \$2,000 for your film.

Mr. Davies: No. That is inclusive in the \$20,000.

Mr. McGrath: I see. So it is about \$45,000.

Mr. Davies: About \$44,000 or \$45,000. All right.

Mr. McGrath: This money has been used to finance your travels and to finance your newspaper advertising campaign: is that correct?

Mr. Davies: This money has been used in the normal operation of an organization that

[Interpretation]

M. Crouse: Alors, vous soutenez que le film présenté ce matin était complet et le même qui nous a été présenté en 1966?

M. Davies: Oui, c'est exact.

M. Crouse: Rien n'a été enlevé?

M. Davies: A ma connaissance, rien n'a été enlevé.

M. McGrath: Pouvez-vous dire, monsieur Davies, combien cela a coûté pour financer le film et pour financer votre campagne que vous avez commencée en 1965?

M. Davies: Je dirais que le film a coûté 2,000 dollars. J'ai un état financier pour l'année se terminant le 31 décembre 1968. Je n'en ai pas pour 1966-67. Je pourrais le transmettre plus tard au Comité.

M. McGrath: Pourriez-vous nous donner un montant approximatif?

M. Davies: Je dirais qu'en 1966 c'était 1,000 dollars. En 1967, à peu près 20,000 dollars. En 1968, 23,451 dollars. Si le Comité le veut bien, je pourrais distribuer ces documents.

M. McGrath: Ce n'est pas nécessaire.

M. Hogarth: Le témoin pourrait-il s'asseoir de l'autre côté de son avocat afin que nous puissions le voir.

M. Davies: Je n'entends pas bien de ce côté et j'aimerais avoir mon avocat du bon côté.

Le président: Le projecteur vient d'arriver et, dès que le Comité le voudra nous pourrions visionner le film.

M. Hogarth: Je crois que nous devrions visionner le film maintenant.

M. McGrath: Monsieur Davies, cela représente un total de l'ordre de près de 50 mille dollars. Ai-je raison?

M. Davies: Non, ce n'est pas juste.

M. McGrath: Votre film a coûté \$2,000.

M. Davies: Cela est inclus dans les 20 mille dollars.

M. McGrath: Alors, il s'agirait de 45 mille dollars à peu près.

M. Davies: Disons 45 mille dollars.

M. McGrath: Cet argent a servi à financer vos voyages et votre campagne publicitaire dans les journaux? Ai-je raison?

M. Davies: Cet argent a servi au fonctionnement normal d'une association qui tient à

[Texte]

seeks to achieve something it thinks worthwhile. That includes the rental of aircraft so that we can cover the seal hunt in the Gulf of St. Lawrence. I should note that the Fisheries Department has decided that it does not wish to take us out at their expense. That is a fair decision.

• 1605

Mr. McGrath: Does it include advertising in newspapers and magazines outside of Canada?

Mr. Davies: No, sir. Money used to finance newspaper advertising outside of Canada would have come from outside of Canada.

Mr. McGrath: To whom?

Mr. Davies: To the New Brunswick SPCA.

Mr. McGrath: Is that over and above that amount you gave us?

Mr. Davies: You asked me how much we spent? Did you want to know how much our income was?

Mr. McGrath: Yes.

Mr. Davies: In 1967?

Mr. McGrath: For the same years that you gave us the other figures.

Mr. Davies: In 1966 and 1967 we would have spent virtually all that we raised. In 1968 we spent \$23,451. I now have the figure here for 1967: It is actually \$22,743. As far as I can tell from this audited statement, which the Committee is welcome to have it looks as though there was an excess of receipts over disbursements of about \$3,000 in 1968.

Mr. McGrath: Will you table that?

Mr. Davies: Yes. I will.

Mr. McGrath: Did you appear on Channel 5 television in New York City in the early part of March?

Mr. Davies: Yes, sir, I did.

Mr. McGrath: Were you interviewed at that time?

Mr. Davies: Yes, sir, I was.

Mr. McGrath: Did you tell the interviewer that you saw seals being skinned alive in Canada?

Mr. Davies: I said that I believed I saw one seal that was alive when the hunter was skinning it yes. I think I did.

Mr. Hogarth: On a supplementary. I am going to read from a transcript that has been given to us and we have been told it is a transcript of that broadcast.

[Interprétation]

réaliser certains buts. Cela inclut la location de l'avion qui nous permet de suivre la chasse aux phoques, dans le golfe Saint-Laurent. Je dois dire que le ministère des Pêches n'a pas jugé bon de nous amener à ses propres frais.

M. McGrath: Cela comprend-il des annonces de publicité dans les journaux et les revues à l'extérieur?

M. Davies: Non, monsieur. L'argent consacré à financer les annonces à l'extérieur du Canada provient de l'extérieur du Canada.

M. McGrath: Qui reçoit cet argent?

M. Davies: La Société protectrice des animaux du Nouveau-Brunswick.

M. McGrath: Est-ce en plus du montant que vous nous avez donné?

M. Davies: Vous voulez dire combien nous avons dépensé? Quel est notre revenu?

M. McGrath: Oui.

M. Davies: En 1967?

M. McGrath: Disons pour les mêmes années.

M. Davies: En 1966-1967 nous avons dépensé tout ce que nous avons pu recueillir; en 1968, nous avons dépensé 23,451 dollars; pour 1967, il s'agissait de 22,743 dollars. D'après cet été financier, je suppose qu'il y a eu un excédent de recettes par rapport au déboursé de l'ordre de 3 mille dollars en 1968.

M. McGrath: Allez-vous déposer ce document?

M. Davies: Oui.

M. McGrath: Avez-vous paru au canal 5 à New-York, au début de mars?

M. Davies: Oui, monsieur.

M. McGrath: Avez-vous été interviewé à l'époque?

M. Davies: Oui.

M. McGrath: Avez-vous dit à l'interviewer que vous avez vu écorcher des phoques vivants au Canada?

M. Davies: J'ai dit que je croyais avoir vu un phoque qui était encore vivant lorsque le chasseur l'a écorché.

M. Hogarth: Je vais vous lire une partie du compte rendu de l'émission qui nous a été donné.

[Text]

Announcer: Mr. Davies, explain exactly what happens in the Gulf of St. Lawrence.

Mr. Davies: Well, on the Canadian seal hunt in the spring of the year, large ice-breaking vessels make their way to the floating ice, floating on the sea disgorge hundreds of hunters who then move into the breeding grounds of the harp seals, with clubs, and beat at the baby seals.

Announcer: With the intention of killing them?

Mr. Davies: With the intention of killing them but unfortunately for the baby seals the hunters are not always successful.

Announcer: So in effect he skins them alive?

Mr. Davies: Yes in effect he skins them alive.

Is that a transcript of that broadcast, as you recall it?

Mr. Davies: Not a complete transcript, sir, no.

Mr. Hogarth: Is that part a transcript of the broadcast?

Mr. Davies: That is part of a transcript of the broadcast but it is out of context. . .

Mr. Hogarth: Those were your words.

Mr. McGrath: Did you say that?

Mr. Davies: Part of what I said was that but it is out of context. It makes no sense as you read it like that.

Mr. McGrath: You did say it? Are you finished Mr. Hogarth?

Mr. Hogarth: This was in connection with the broadcast of February 20, witness. You said. Here is the phraseology again:

Announcer: With the intention of killing them?

Mr. Davies: With the intention of killing them but unfortunately for the baby seals the hunters are not always successful.

Announcer: So in effect he skins them alive?

Mr. Davies: Yes in effect he skins them alive.

What is out of context about those remarks?

Mr. Davies: I have a copy of the transcript here from the Fisheries Minister and the question in point is: "With the intention of killing them but unfortunately for the baby

[Interpretation]

Annonceur: Monsieur Davies, pourriez-vous nous expliquer exactement ce qui se produit dans le golfe Saint-Laurent?

M. Davies: Au Canada, lors de la période de chasse au phoque au printemps, de gros brise-glace se fraient un chemin à travers les glaces flottantes et y déposent des centaines de chasseurs qui se dirigent vers les endroits où sont rassemblés les phoques; là, ils assomment les petits phoques à coups de bâton.

Annonceur: Dans l'intention de les tuer?

M. Davies: Dans l'intention de les tuer mais, malheureusement pour les phoques, ils n'y réussissent pas toujours.

Annonceur: En fait, les phoques sont écorchés vivants?

M. Davies: De fait, c'est ce qui se produit.

Est-ce une transcription de l'émission en question, selon vous?

M. Davies: La transcription n'est pas complète.

M. Hogarth: Est-ce une partie de la transcription?

M. Davies: C'est une partie de la transcription, mais elle est hors contexte. . .

M. Hogarth: Ce sont vos propres mots.

M. McGrath: N'avez-vous pas dit cela?

M. Davies: C'est une partie de ce que j'ai dit, mais c'est hors contexte, ce qui lui enlève toute sa signification.

M. McGrath: Vous l'avez quand même dit. Avez-vous fini, monsieur Hogarth?

M. Hogarth: Toujours en rapport avec cette émission du 20 février, vous avez dit, et je cite:

Annonceur: Dans l'intention de les tuer?

M. Davies: Dans l'intention de les tuer mais, malheureusement pour les phoques, ils n'y réussissent pas toujours.

Annonceur: En fait, les phoques sont écorchés vivants?

M. Davies: De fait, c'est ce qui se produit.

En quoi ces remarques sont-elles hors de contexte?

M. Davies: J'ai une copie de la transcription en question. Le point en litige est: «Dans l'intention de les tuer mais, malheureusement pour les bébés phoques, les chasseurs n'y

[Texte]

seals the hunters are not always successful and..." I said something else after that which is not here.

Mr. Hogarth: What did you say?

Mr. Davies: I would imagine that I said that sometimes the seal is not dead when he skins it—something like that.

Mr. Hogarth: That is not what is given to us by the Minister of Fisheries as a transcript of that broadcast.

Mr. Davies: I am prepared to table this and you will see I finished the sentence with the word "and" and this is something that I would not normally do. I am somewhat careful to use the right words and the right phrases.

● 1610

Mr. Hogarth: Have you seen baby seals skinned alive?

Mr. Davies: That is not the point. The point is...

Mr. Hogarth: I asked you, have you seen baby seals skinned alive?

Mr. Davies: I have seen a seal with the hunter in the process of skinning it that I believe was alive at the time.

Mr. Hogarth: One seal?

Mr. Davies: One seal.

Mr. Hogarth: Out of how many taken that year?

Mr. Davies: Maybe 80,000.

Mr. Hogarth: So one seal out of 80,000, so far as you know, was skinned alive. Is that your evidence?

Mr. Davies: No, sir, that is not correct.

Mr. Hogarth: What is your evidence?

Mr. Davies: The evidence is evidence from a veterinary pathologist who found that a large number of skulls were intact, and in her evidence said that she believed these animals were alive when the hunter started to skin them.

Mr. Hogarth: Who was she?

Mr. Davies: Dr. Elizabeth Simpson.

Mr. Hogarth: Did she file a report?

Mr. Davies: Yes.

Mr. McGrath: Mr. Davies, we have also had evidence from the General Manager of the Ontario Humane Society who said he saw no evidence of cruelty or seals being skinned alive; we have evidence from an eminent animal pathologist from the University of

[Interprétation]

réussissent pas toujours». Et j'ai ajouté quelque chose qui ne figure pas au compte rendu.

M. Hogarth: Qu'avez-vous dit?

M. Davies: Quelque chose comme: «quelquefois le phoque n'est pas mort lorsqu'on le dépece».

M. Hogarth: Mais, ce n'est pas ce que le ministère des Pêches nous a donné en tant que compte rendu de cette émission.

M. Davies: Je suis disposé à déposer ce document et vous verrez que j'ai fini la phrase avec un «et», ce que je ne fais pas normalement. Je fais bien attention à utiliser les mots justes.

M. Hogarth: Je vous demande si vous avez vu des bébés phoques écorchés vifs.

M. Davies: Là n'est pas la question...

M. Hogarth: Je réitère ma question.

M. Davies: J'ai vu un phoque en train d'être écorché par un chasseur et qui était vivant, je crois.

M. Hogarth: Un phoque?

M. Davies: Oui, un.

M. Hogarth: Combien ont été tués cette année?

M. Davies: Environ 80,000.

M. Hogarth: Un phoque sur 80,000 a été dépecé vivant à votre connaissance, c'est là toute votre preuve?

M. Davies: Non, ce n'est pas exact.

M. Hogarth: Quelles sont vos preuves?

M. Davies: J'ai le témoignage d'un vétérinaire qui a constaté que bon nombre de crânes étaient intacts et il a dit que ces animaux étaient vivants lorsqu'on a commencé à les écorcher.

M. Hogarth: Qui était-ce?

M. Davies: Le Dr Elizabeth Simpson.

M. Hogarth: A-t-elle remis un rapport?

M. Davies: Oui.

M. McGrath: Monsieur Davies, nous avons aussi le témoignage du directeur général de la Société protectrice des animaux de l'Ontario. Il n'a jamais vu de preuve de cruauté ou des phoques écorchés vifs. Nous avons le témoignage d'un vétérinaire de l'Université de Mu-

[Text]

Munich who reaches the same conclusions; we have evidence from Dr. Eugene A. Costello, Plant and Equipment Officer, Meat Inspection Division of the Health of Animals Branch, Department of Agriculture under date of March 28, 1968; we have evidence from Dr. Forbes MacLeod; we have evidence from a number of eminent people including, I might say, the SPCA of Montreal, the SPCA of New Brunswick and the SPCA on Ontario—all of whom indicate in their evidence that they could find no evidence of cruelty at the seal hunt nor could they find any evidence of seals being skinned alive.

Yet, according to your reply to Mr. Hogarth, on the basis of seeing what you thought was one animal being skinned alive you have launched a worldwide campaign which is doing serious damage to Canada's international reputation and which, by your own admission in a statement made in Halifax last week, has succeeded in reducing the value of the seal industry in Newfoundland by a half million dollars. Did you make that statement last week?

Mr. Davies: I said that I believed the value of the industry in the Gulf of St. Lawrence was now a half million dollars.

Mr. McGrath: Here is a CP press release dated April 11 from Halifax.

The Executive Secretary of the New Brunswick Society for the Prevention of Cruelty to Animals, says the annual seal hunt in the Gulf of St. Lawrence "is a monstrous crime against the men involved."

I submit, Mr. Davies, that your crusade is the crime against the men involved.

I continue:

Brian Davies said in a Halifax interview yesterday that the men are economically forced to hunt seals.

With that statement, Mr. Davies, I agree.

"It's a matter of dollars and cents," he said, and added: "I haven't met a man out there who likes to kill seals."

Then you went on to claim that your organization had successfully reduced the economy of Newfoundland by a half million dollars. The way I heard the story and the way I read it you were boasting about this—Mr. Davies said the sealing industry was previously

[Interpretation]

nich qui est arrivé aux mêmes conclusions. Nous avons le témoignage du D^r Eugene A. Costello, agent de l'équipement à la Division de l'inspection des viandes de la Direction de l'hygiène vétérinaire au ministère de l'Agriculture, témoignage en date du 28 mars 1969. Nous avons aussi le témoignage du D^r Forbes MacLeod. Nous avons aussi des témoignages d'un bon nombre de spécialistes y compris les Sociétés protectrices des animaux de Montréal, du Nouveau-Brunswick et de l'Ontario. Toutes ces sociétés témoignent n'avoir connaissance d'aucune preuve de cruauté à la chasse aux phoques, ni d'animaux écorchés vifs.

Pourtant, d'après votre réponse à M. Hogarth, le fait qu'il vous a semblé voir un animal écorché vif vous a suffi pour lancer une campagne mondiale qui a terni la réputation du Canada et qui, comme vous l'avez reconnu dans une déclaration faite à Halifax la semaine dernière, a réussi à réduire la valeur de l'industrie du phoque à Terre-Neuve de près d'un demi-million de dollars. Avez-vous bien fait cette déclaration, la semaine dernière?

M. Davies: J'ai dit que je croyais que l'industrie dans le golfe du Saint-Laurent rapporte actuellement un demi-million de dollars.

M. McGrath: Voici le texte d'une dépêche de l'agence CP diffusée le 11 avril d'Halifax. Je cite:

«Le secrétaire exécutif de la Société protectrice des animaux du Nouveau-Brunswick a déclaré que la chasse au phoque annuelle dans le golfe du Saint-Laurent est un crime monstrueux commis contre les hommes qui en sont chargés».

Je soutiens, moi, monsieur Davies, que c'est votre croisade qui est un crime contre ces hommes. Je cite de nouveau:

«Brian Davies a dit, au cours d'une interview, hier à Halifax, que ces hommes étaient économiquement obligés d'aller à la chasse au phoque.»

Je suis bien d'accord avec vous sur ce point, monsieur Davies.

Je cite encore:

«C'est une affaire de dollars et de cents», a-t-il dit, ajoutant: «Je n'ai pas encore rencontré de chasseur qui aime tuer les phoques.»

Puis après vous avez prétendu que votre organisation avait réussi à priver l'économie de Terre-Neuve d'un demi-million de dollars. J'avais l'impression que vous vous en vantiez. «M. Davies a déclaré que la chasse au phoque avait auparavant un chiffre d'affaires d'un

[Texte]

worth one million dollars; he has demanded that a solution be found for the hunters' plight.

Mr. Davies, do you believe that your campaign is in the best interests of the fishermen who hunt seals to supplement their income in the Magdalen Islands in Newfoundland?

Mr. Davies: If I first of all may say so, I do not think that you have read a verbatim transcript of the material that you have there.

Mr. McGrath: I will hand it to you, Mr. Davies, and you can read it yourself.

Mr. Davies: Thank you very much. I would appreciate that.

Mr. McGrath: It is a press release and I identified it as such.

Are you aware that following your appearance on Channel 5...

The Chairman: Do you wish the witness to read the press release?

Mr. McGrath: Do you want him to read it? Let him read it himself first, if he is not satisfied with my reading of it.

Mr. Davies: I see nothing here about Mr. Davies boasting.

Mr. McGrath: I did not say you boasted. I said the way I read it and the way I heard it, it sounded as if you were boasting.

Mr. Davies: I see. It says here:

He is convinced the campaign to end the hunt is having an effect and estimates the value...

Mr. McGrath: Do you not think that is boasting, Mr. Davies?

Mr. Davies: Do you mind if I finish, sir—please.

Mr. McGrath: I asked you a question.

Mr. Davies: I promise not to interrupt you.

Mr. McGrath: You cannot interrupt me today because you are a witness, but I can interrupt you. That is the difference, you see.

Mr. Davies: Mr. Chairman.

The Chairman: Complete your reading, witness.

Mr. Davies:

He is convinced the campaign to end the hunt is having an effect and estimates the value of the industry has dropped to half a million dollars from a million dollars a year.

[Interprétation]

million de dollars. Il a demandé qu'on trouve une solution au problème des chasseurs.»

Monsieur Davies, croyez-vous que votre campagne sert les intérêts des pêcheurs qui vont à la chasse au phoque dans les îles de la Madeleine, en Terre-Neuve, pour se faire un peu plus d'argent?

M. Davies: Avant tout, je voudrais dire que je ne pense pas que vous ayez lu textuellement le document que vous avez là.

M. McGrath: Je vais vous le communiquer, monsieur Davies, vous pourrez le lire vous-même.

M. Davies: Merci beaucoup. Je vous en serais bien reconnaissant.

M. McGrath: C'est une dépêche d'agence de presse et je l'ai bien précisé.

Savez-vous qu'après votre interview au canal 5...

Le président: Voudriez-vous que le témoin lise la dépêche?

M. McGrath: Voudriez-vous qu'il le fasse? Qu'il commence par la lire pour lui-même, si ma lecture de la dépêche ne lui a pas plu.

M. Davies: Je ne vois rien là-dedans à propos de M. Davies qui se vantait.

M. McGrath: Je n'ai pas dit que vous vous étiez vanté. J'ai dit que vous donniez l'impression de le faire.

M. Davies: Je vois. Voici le texte:

Il est convaincu que la campagne contre la chasse au phoque a donné un résultat et estime à...

M. McGrath: Ne pensez-vous pas que c'est de la vantardise, monsieur Davies?

M. Davies: Me permettez-vous de finir, monsieur, s'il vous plaît?

M. McGrath: Je vous ai posé une question.

M. Davies: Je promets de ne pas vous interrompre.

M. McGrath: Vous ne pouvez pas le faire aujourd'hui parce que vous êtes un témoin, mais moi je peux vous interrompre. Voilà toute la différence, voyez-vous.

M. Davies: Monsieur le président...

Le président: Terminez votre lecture.

M. Davies:

Il est convaincu que la campagne contre la chasse au phoque a donné un résultat et estime à \$500,000 la baisse du chiffre d'affaires de cette industrie, chiffre qui était de un million de dollars par an.»

[Text]

Mr. McGrath: Are you aware that following your appearance on Channel 5 in New York early in March that there were three demonstrations against the Canadian Consul General's office in New York.

Mr. Davies: I am aware that there were demonstrations, sir, yes.

Mr. McGrath: Did you participate in those demonstrations?

Mr. Davies: I did not.

Mr. McGrath: Were you aware that those demonstrations were taking place?

Mr. Davies: Were taking place?

Mr. McGrath: Were you aware of the plans to hold those demonstrations?

Mr. Davies: I was not aware of the plans to hold those demonstrations.

Mr. McGrath: One of those demonstrations was a consequence of a public meeting. Did you attend that meeting as an SPCA official?

Mr. Davies: Where, sir?

Mr. McGrath: In New York City.

Mr. Davies: No.

Mr. McGrath: I have no further questions at this time, Mr. Chairman.

The Chairman: Next is Mr. Stafford.

An hon. Member: We want to see the film next.

The Chairman: Do you wish to see the film first?

Mr. Stafford: I do not need to see the films for the few questions I have. May I continue with mine?

The Chairman: Mr. Stafford.

Mr. Stafford: What position do you hold with the SPCA, Mr. Davies.

Mr. Davies: I am the Executive Secretary.

Mr. Stafford: Is that for the whole province of New Brunswick?

Mr. Davies: Yes, sir.

Mr. Stafford: So you and I have at least one thing in common I spent part of my life in Fredericton. What was your occupation before you went into this type of work?

Mr. Davies: I was an infantry soldier in the Canadian Army.

Mr. Stafford: And what was it that first prompted your interest in the SPCA? What made you leave the army and go into this?

[Interpretation]

M. McGrath: Savez-vous qu'à la suite de votre parution au canal 5 de New York, en mars, il y a eu trois manifestations devant les bureaux du Consul général du Canada aux États-Unis?

M. Davies: Oui, je le sais, monsieur.

M. McGrath: Avez-vous participé à ces démonstrations?

M. Davies: Non.

M. McGrath: Savez-vous que ces manifestations avaient lieu?

M. Davies: Avaient lieu?

M. McGrath: Connaissiez-vous des projets d'organiser ces manifestations?

M. Davies: Non.

M. McGrath: L'une des manifestations a suivi une réunion publique. Avez-vous assisté à cette réunion à titre de représentant d'une SPA?

M. Davies: Où cela se passait-il, monsieur?

M. McGrath: Dans la ville de New York.

M. Davies: Non.

M. McGrath: Je n'ai pas d'autres questions à poser, pour le moment, monsieur le président.

Le président: M. Stafford est le suivant.

Une voix: Verrons-nous le film ensuite?

Le président: Voudriez-vous voir le film?

M. Stafford: Je n'ai pas besoin de voir le film pour poser les quelques questions que j'ai. Puis-je les poser tout de suite?

Le président: Monsieur Stafford?

M. Stafford: Quelle est votre fonction au sein de la Société protectrice des animaux, monsieur Davies?

M. Davies: J'en suis le secrétaire exécutif.

M. Stafford: Et c'est pour toute la province du Nouveau-Brunswick?

M. Davies: Oui, monsieur.

M. Stafford: Ainsi donc, nous avons au moins une chose en commun. J'ai passé une partie de ma vie à Fredericton. Quelle était votre profession, avant d'entrer à la SPA?

M. Davies: J'étais soldat dans l'infanterie de l'Armée canadienne.

M. Stafford: Comment en êtes-vous venu à vous intéresser à la SPA? Pourquoi avez-vous quitté l'armée pour vous occuper de ces questions?

[Texte]

Mr. Davies: A puppy was struck by a car outside my house in Oromocto, New Brunswick. I took it indoors and called the SPCA and was advised that there was no SPCA in Oromocto. I then offered to take the animal to Fredericton where there was an SPCA and where it could be looked after. I told the people with the SPCA there that if anything like this occurred again in Oromocto, because they had no one there to look after it, that I would be very glad to do it for them.

Mr. Stafford: So actually starting with a genuine interest in the welfare of animals you continued on with that type of work. How long after that was it before you had a definite interest in the seals?

Mr. Davies: I would say about five years, sir.

Mr. Stafford: One of your movies has already been shown here. In May 1967 I was at that meeting over in the Centre Block where you showed your film. Was that the only film that was made under your direction, or that you made?

Mr. Davies: That is correct, sir. Would you like me to explain the making of that film?

Mr. Stafford: Yes. How did you happen to make it, why did you make it, and how many people went up with you to make it.

Mr. Davies: I had gone out to see the seal hunt and had been deeply disturbed by what I saw not only for the animals but the men involved as well. I felt that a motion picture perfectly portraying the sort of thing that takes place would help us to create and open a public debate in Canada, where the seal hunt takes place, and in Europe, where most of the pelts are sold. I went out there with a young man from Fredericton by the name of Ralph Kay.

Mr. Stafford: Ralph Hay or Ralph Kay?

Mr. Davies: Kay. Do you know him?

Mr. Stafford: Very well. I went to law school with him.

Mr. Davies: No, that is not the same one. He works for Harvey Studios in Fredericton.

Mr. Stafford: Oh, I am sorry.

Mr. Davies: He took a week of his holidays and he was paid \$100 to go out and make this film. The instructions I gave him were, "Do not talk to a sealer. Do not ask a sealer to do anything."

[Interprétation]

M. Davies: Un chiot a été blessé par une voiture devant ma maison à Omorocto, au Nouveau-Brunswick. Je l'ai porté chez moi et j'ai essayé de téléphoner à la SPA. On m'a appris qu'il n'en existait pas à Omorocto. Je me suis offert à amener l'animal à Fredericton où il y avait une SPA qui pourrait s'en occuper. J'ai aussi offert aux responsables de cette SPA de m'occuper de tout animal accidenté dans la localité, jusqu'à ce qu'ils puissent eux-mêmes en prendre soin, puisqu'ils n'avaient pas de bureau à Omorocto.

M. Stafford: Ainsi donc, ayant commencé par prendre soin des animaux, vous en êtes arrivé à en faire une profession. Combien de temps après avez-vous commencé à vous intéresser aux phoques?

M. Davies: Je dirais 5 ans.

M. Stafford: Un de vos films a été présenté ici en mai 1967. J'ai assisté à la réunion où l'on a présenté ce film. Est-ce le seul film que vous avez mis en scène ou produit?

M. Davies: Oui. Voudriez-vous savoir comment ce film a été fait?

M. Stafford: Oui. Comment l'occasion s'en est-elle présentée? Pourquoi l'avez-vous fait et combien de personnes vous ont accompagné pour le faire?

M. Davies: J'ai assisté à une chasse au phoque et j'ai été profondément touché par ce que j'ai vu, non seulement pour les animaux, mais aussi pour les chasseurs. J'ai pensé qu'un film qui pourrait dépeindre fidèlement ce qui se passe nous aiderait à ouvrir un débat public au Canada, où la chasse a lieu et en Europe où les peaux sont vendues. Je me suis donc rendu sur les lieux avec un jeune homme de Fredericton, Ralph Kay.

M. Stafford: Ralph Hay ou Ralph Kay?

M. Davies: Kay. Le connaissez-vous?

M. Stafford: Très bien. Il était mon camarade de classe, à la faculté de droit.

M. Davies: Non, ce n'est pas le même. Il travaille pour les Harvey Studios à Fredericton.

M. Stafford: Oh, je m'excuse.

M. Davies: Il a pris une semaine de vacances et il a touché \$100 pour se rendre sur les lieux et réaliser ce film. Je lui ai donné instruction de ne pas parler aux chasseurs de phoques, de ne pas leur demander de faire quoi que ce soit.

[Text]

Mr. Stafford: You said he went to make the film—where?

Mr. Davies: Off the Magdalen Islands.

Mr. Stafford: Did you go with him?

Mr. Davies: Yes.

Mr. Stafford: Just the two of you?

Mr. Davies: No, no, no. There was myself, Ralph Kay, John Grey from the Montreal Star, sitting there.

Mr. Stafford: That is three. Is that all?

Mr. Davies: No. There was Dr. A. B. Johansson.

Mr. Stafford: Is this the same Johansson that we have a brief from today? Is that the same Johansson whose brief was handed around to us?

Mr. Davies: Yes, I would think so.

Mr. Stafford: In other words, it was Dr. A. B. Johansson, D.V.M.?

Mr. Davies: I would think so. There were Dr. Elizabeth Simpson, Mr. Peter Simpson and Mr. Frederick Bearisto. We went out onto the ice and the veterinarians proceeded to do postmortems. I proceeded to take some pictures with my still camera, Mr. Grey proceeded to report for the Montreal Star, and Mr. Kay proceeded to take his movie.

Mr. McGrath: I have a supplementary question. What was your concern for the men involved, Mr. Davies?

Mr. Davies: They have been, sir, depicted by some people as cruel, vicious men. I do not see them this way. My experience with the Newfoundland fishermen—and he is the same type of person I served with in the Army—is that he is a damned decent fellow. If the seal hunt is unethical...

Mr. Lundrigan: I have a supplementary question.

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: A supplementary question, Mr. Chairman. We have heard all these frilly phrases and I just want to ask Mr. Davies before he continues so that I will know what he is telling me and that I am reading correctly. Was it your voice that was evident in the second film we saw this morning referred to in the meeting as the Davies film?

Mr. Davies: No, that was not my voice.

Mr. Lundrigan: Was the choice of words yours,—“killer”, “massacre”?

[Interpretation]

M. Stafford: Vous dites qu'il s'est rendu sur les lieux. Lesquels?

M. Davies: Au large des Îles-de-la-Madeleine.

M. Stafford: Avez-vous été dans la région avec lui?

M. Davies: Oui.

M. Stafford: N'y avait-il que vous deux?

M. Davies: Non, non. J'y étais avec Ralph Kay, John Grey du *Montreal Star* ici présent...

M. Stafford: Cela fait trois. C'était tout?

M. Davies: Non. Il y avait aussi le Dr A. B. Johansson.

M. Stafford: Est-ce le même Johansson qui nous présente un mémoire aujourd'hui, dont le mémoire nous a été distribué?

M. Davies: Oui, je crois que c'est le même.

M. Stafford: Il s'agissait donc du Dr A. B. Johansson, D.V.M.?

M. Davies: Je crois. Il y avait aussi le Dr Elizabeth Simpson, M. Peter Simpson et M. Frederick Bearisto. Nous nous sommes rendus sur la glace et les vétérinaires ont fait les constatations post-mortem. J'ai fait quelques photos avec ma caméra; et M. Grey s'est consacré à faire son reportage pour le *Montreal Star* et M. Kay a filmé les scènes.

M. McGrath: J'ai encore une question: quel intérêt portez-vous aux chasseurs eux-mêmes?

M. Davies: On a dit d'eux qu'ils sont cruels et vicieux. Mais je ne vois pas la chose de cette façon. D'après mon expérience avec les pêcheurs de Terre-Neuve, ce sont des gens du même genre que mes camarades de l'armée, ce sont d'excellents gars. Si la chasse au phoque est immorale...

M. Lundrigan: Je voudrais simplement poser une question.

Le président: M. Lundrigan.

M. Lundrigan: J'ai une autre question. Après avoir entendu toute ces belles phrases, je voudrais demander ceci à M. Davies avant qu'il ne poursuive afin que je comprenne ce qu'il me dit et ce que je lis. Est-ce que c'est votre voix qui a été enregistrée pour le deuxième film que nous avons vu ce matin et qu'on a appelé lors de la réunion le film Davies?

M. Davies: Non, ce n'était pas ma voix.

M. Lundrigan: Est-ce que le choix des termes employés était le vôtre, «tueur», «massacre»?

[Texte]

Mr. Davies: I would say that the words are the responsibility of the New Brunswick SPCA.

Mr. Lundrigan: All these words, "The killers descended on to the ice," "the massacre" were the responsibility of the same group that you represent, and you as well perhaps...

Mr. Davies: Yes.

Mr. Lundrigan: ...and this was their description of the people involved, and yet you say that the people you are talking about are the decent folk and so on and so forth.

Mr. Chairman, if I am not in order I will rise on a point of order. Could I ask the witness a further supplementary and ask if, in fact, in his interview in New York to which questions have already been directed that he did say:

Announcer: So you suggest a less cruel method of killing a seal

Mr. Davies: Frankly I don't think there is a less cruel way. The Canadian Government don't want these men to have guns because they feel they will perhaps kill each other, either accidentally or if they get into the ship's rum, perhaps on purpose...

Is this your statement, Mr. Davies?

Mr. Davies: I would say probably I said that, yes.

Mr. Lundrigan: This seems to be a vicious contradiction and perhaps a reflection—I had better watch myself because I am likely to make some observations which might reveal a little prejudice—but in fact have you ever seen the sealers get into the ship's rum and attempt to kill each other, or is this just a sort of wayward statement emanating from a wayward person?

Mr. Davies: I have had the seal hunters frequently on the ice ask me if I had a drink, and I can assure you they were not asking for a drink of water.

Mr. Lundrigan: Mr. Chairman, the witness is not answering my question. My question was, have you ever seen the sealers get into the ship's rum, as you say here, and have you ever seen these men, having gotten into the ship's rum, attempt to kill each other?

Mr. Davies: I never said that they would. I said they might.

Mr. Lundrigan: You said they might.

[Interprétation]

M. Davies: Je dirais que les termes étaient la responsabilité de la SPA du Nouveau-Brunswick.

M. Lundrigan: Tout ce dialogue: «Les tueurs sont descendus sur la glace», «le massacre» était préparé par le groupe que vous représentez sans doute, et par vous aussi peut-être...

M. Davies: Oui.

M. Lundrigan: ...et c'est ainsi qu'ils ont décrit ces personnes, des gens que vous dites être cependant, de très braves gens et tout.

Monsieur le président, si je ne suis pas à l'ordre, je désire parler sur un point d'ordre. Est-ce que je pourrais poser une autre question au témoin et lui demander si, lors de son interview à New York, il a dit effectivement:

L'annonceur: Vous estimez qu'il faudrait trouver un moyen moins cruel pour abattre les phoques.

M. Davies: Franchement non, je ne pense pas que ce soit possible parce que le gouvernement canadien ne veut pas que ces hommes aient des fusils; ils pourraient se tuer accidentellement, ou à dessein, s'ils s'enivraient avec le rhum du navire.

Est-ce là ce que vous avez dit, M. Davies?

M. Davies: Oui, probablement.

M. Lundrigan: Il me semble qu'il y ait une contradiction très grave ici et peut-être un reflet—je suis mieux de me surveiller car je pourrais faire des remarques qui montreraient que j'ai un peu de préjugés—mais est-ce que vous avez déjà vu des chasseurs essayer de s'entretuer ou si c'est simplement quelque chose de fantasque dit par une personne fantasque?

M. Davies: Les chasseurs de phoques m'ont souvent demandé sur la glace si j'avais quelque chose à boire et je puis vous assurer qu'ils ne demandaient pas un verre d'eau.

M. Lundrigan: Monsieur le président, le témoin ne répond pas à ma question. J'ai demandé, avez-vous déjà vu les chasseurs s'enivrer avec le rhum du navire comme vous le dites, et avez-vous déjà vu ces gens s'étant enivrés essayer de s'entretuer?

M. Davies: Je n'ai jamais dit qu'ils s'entretueraient. Cela pourrait peut-être arriver.

M. Lundrigan: Vous avez dit qu'ils pourraient.

[Text]

Mr. Davies: And I have never seen it happen.

Mr. Lundrigan: Mr. Chairman, the witness is not answering my question. My question is, have you ever seen them do this?

Mr. Davies: No, I have never seen them.

Mr. Lundrigan: Is this then just a fantasy?

Mr. Davies: No, no, it is not . .

Mr. Lundrigan: Or a guess or a stab in the dark.

Mr. Davies: Yes, this is a guess.

Mr. Lundrigan: This is a guess. Thank you, Mr. Chairman.

The Chairman: Mr. Stafford, a supplementary.

Mr. Stafford: I want a certain line of questions to finish here and if you are counting this in my time, I would ask that you take that into consideration.

Mr. Crouse: There is no time limit, Mr. Chairman.

The Chairman: Will you allow a supplementary to Mr. Hogarth? Mr. Hogarth.

Mr. Hogarth: Witness, you said that the Canadian government does not want these men to have guns. Who told you that?

Mr. Davies: I discussed this with a member of the Fisheries Department, Dr. Sprules, some considerable time ago and he said—I am going back now and I am stretching my memory somewhat—that one of the reasons was the danger of accidents. I want to make it quite plain he never suggested that they would get into the ship's rum and shoot each other.

Mr. Hogarth: Was that his personal opinion?

Mr. Davies: I do not know.

Mr. Hogarth: Did you believe that there was any person who spoke with authority on behalf of the Canadian government who said these men could not have guns because they would get into the rum and shoot one another?

Mr. Davies: No sir, I do not think that at all.

Mr. Hogarth: You made that statement, did you not?

Mr. Davies: I do not see it here in the transcript, sir.

[Interpretation]

M. Davies: Et je ne les ai jamais vu le faire.

M. Lundrigan: Monsieur le président, le témoin ne répond pas à ma question. Je vous demande si vous les avez jamais vus le faire.

M. Davies: Non, je ne les ai jamais vus.

M. Lundrigan: C'est simplement une fantaisie.

M. Davies: Non, non, ça ne l'est pas . .

M. Lundrigan: Ou une supposition, un trait au hasard.

M. Davies: Oui, c'est une supposition.

M. Lundrigan: C'est une supposition. Merci, monsieur le président.

Le président: Monsieur Stafford, une question supplémentaire?

M. Stafford: Je veux qu'un certain genre de questions se terminent ici et si vous calculez cela sur mon temps, je voudrais que vous le preniez en considération.

M. Crouse: Il n'y a pas de limite de temps, monsieur le président.

Le président: Vous voulez poser une question supplémentaire, monsieur Hogarth? Monsieur Hogarth.

M. Hogarth: Monsieur le témoin, vous avez dit que le gouvernement canadien ne voulait pas que ces gens aient des fusils. Qui vous l'a dit?

M. Davies: J'ai parlé de la question avec quelqu'un du ministère des Pêcheries, le docteur Sprules, il y a assez longtemps. Et il m'a dit—maintenant j'essaie de me rappeler exactement, il y a très longtemps de cela—mais il y avait un danger d'accidents. Je veux que ce soit très clair, il n'a jamais dit qu'ils pourraient s'enivrer avec le rhum du navire et s'entretuer.

M. Hogarth: Est-ce que c'était son opinion personnelle?

M. Davies: Je ne sais vraiment pas.

M. Hogarth: Est-ce que vous croyez que quelqu'un qui a parlé au nom du gouvernement canadien aurait dit que ces personnes ne pouvaient pas avoir ces fusils parce qu'ils risquaient de s'enivrer au rhum et s'entretuer?

M. Davies: Non, je ne le crois pas du tout.

M. Hogarth: Vous avez fait cette déclaration, n'est-ce pas?

M. Davies: Je ne la vois pas ici dans la transcription.

[Texte]

Mr. Hogarth: I am referring to my copy of the transcript, and it is exactly what Mr. Lundrigan read.

Frankly I don't think there is a less cruel way. The Canadian Government don't want these men to have guns because they feel they will perhaps kill each other, either accidentally or if they get into the ship's rum, perhaps on purpose—

And you said you have made those statements.

Mr. Davies: Did I say I made those statements?

Mr. Hogarth: Yes. That is the way I understand your answer to Mr. Lundrigan.

Mr. Davies: I may have made that statement, yes.

Mr. Hogarth: And yet you had no knowledge whatsoever of anybody with the authority of the Canadian government to say such a thing and indeed nobody ever did say such a thing.

• 1625

Mr. Davies: I think it is a not unreasonable thing to say in the circumstances.

Mr. McGrath: How did you know there was rum on sealing ships?

The Chairman: Order please. Mr. Stafford it is your time.

Mr. Stafford: It is right, then, that you and approximately half a dozen people went up under the money that you had collected, that you have just described to us, and took this film, taking along Mr. Grey, I suppose, so you would get some advertising out of it.

Mr. Davies: That is unfair, sir.

Mr. Stafford: Why take Mr. Grey, then? Did he have some interest in seals before this? I just put this in as politicians sometimes think of newspapermen as giving people lead print in the newspaper.

Mr. Davies: I would say in fairness to Mr. Grey, and I would hope that you will accept this, that he went there to report objectively about a seal hunt.

Mr. Stafford: We will come back to that in a few minutes, but you do realize, of course, that the news media including television are always willing to show the unusual, or the fantastic or whatever you want to call it? You knew that before you went did you not? Anything unusual or cruel, they are always quite anxious to show, are they not, sir?

[Interprétation]

M. Hogarth: J'ai une copie ici, et c'est exactement ce qu'a lu M. Lundrigan.

Franchement, je ne pense pas qu'il y ait un moyen moins cruel. Le gouvernement canadien ne veut pas que ces hommes aient des fusils parce qu'ils pourraient s'entretuer accidentellement, ou à dessein s'il s'enivraient avec le rhum du navire.

Et vous dites que vous avez fait ces déclarations.

M. Davies: Ai-je dit cela?

M. Hogarth: Oui. C'est comme cela que j'interprète votre réponse à M. Lundrigan.

M. Davies: J'ai pu faire cette déclaration, oui.

M. Hogarth: Et pourtant, vous n'avez aucune connaissance d'un représentant du gouvernement qui ait fait une telle déclaration, et en fait personne n'a jamais rien dit de semblable.

M. Davies: Ce n'est pas déraisonnable de le dire dans les circonstances.

M. McGrath: Comment saviez-vous qu'il y avait du rhum sur les navires qui vont à la chasse aux phoques?

Le président: A l'ordre, s'il vous plaît. Monsieur Stafford, c'est à vous.

M. Stafford: Avec tous les fonds que vous avez recueillis, vous venez de nous le dire, vous avez fait ce film avec environ une demi-douzaine d'autres personnes. Vous aviez M. Grey avec vous sans doute pour en retirer une certaine publicité.

M. Davies: Vous n'êtes pas très juste.

M. Stafford: Pourquoi avoir amené M. Grey? Était-il intéressé aux phoques avant cela? Je vous en parle simplement car les politiciens voient parfois les journalistes comme des gens qui leur accordent quelques lignes dans les journaux.

M. Davies: Pour être juste avec M. Grey, et j'espère que vous accepterez ceci, il nous a accompagnés pour faire un rapport objectif sur la chasse.

M. Stafford: Nous allons revenir sur ce sujet dans quelques minutes. Vous vous rendez compte évidemment que les moyens de communication y compris la télévision s'intéressent toujours aux choses qui sortent de l'ordinaire, au fantastique ou quelque chose de semblable. Vous le saviez avant de partir n'est-ce pas? Tout ce qui est inhabituel ou cruel, ça leur plaît de le montrer, n'est-ce pas?

[Text]

Mr. Davies: I would not say that at all, sir.

Mr. Stafford: Did you ever show this film on the CBC?

Mr. Davies: It has been shown on many television stations. Presumably one of them is a CBC affiliate.

Mr. Stafford: Approximately how many times did you say this film has been shown over CBC stations?

Mr. Davies: Four or five.

Mr. Stafford: What year was this?

Mr. Davies: Since 1967.

Mr. Stafford: Since 1967. What year would it be?

Mr. Davies: I do not remember. I imagine it was shown on television in 1967, 1968.

Mr. Stafford: Did the CBC pay your Association for the use of this film.

Mr. Davies: We have never sold this film, sir.

Mr. Stafford: Did you have the film...

Mr. Davies: Let me requalify. Where someone wishes to borrow the film to show and then return it, we have never asked a fee. Where someone wishes to purchase a copy of the film, they have paid the material cost in film of the film.

Mr. Stafford: To your knowledge on how many occasions has the CBC shown parts of this film or all of it over the CBC network?

Mr. Davies: I really do not know. Several times.

Mr. Stafford: But they have several times?

Mr. Davies: I think so, yes.

Mr. Stafford: Do you know how many times the film or parts of it was shown in Europe over television?

Mr. Davies: Maybe three or four times, sir.

Mr. Stafford: And actually you do realize that the letters that M.P.'s received and the letters to the editor as a result of this film were quite considerable. You have heard that before, have you not?

Mr. Davies: I would say, sir, and this is my own personal opinion, and is an intuitive opinion, I think, to a large extent, that the mail directed at Members of Parliament in Canada has come through magazine articles—the consumer type magazine articles—and not because of the showing of films.

Mr. Stafford: You mentioned a little while ago about forming a sanctuary and ending the

[Interpretation]

M. Davies: Non, je ne dirais pas cela.

M. Stafford: Est-ce que vous avez déjà montré ce film à Radio-Canada?

M. Davies: Oui, sur plusieurs postes de télévision. Un de ceux-là était probablement affilié à Radio-Canada.

M. Stafford: Combien de fois environ est-ce qu'on l'a montré, ce film sur les postes de Radio-Canada, avez vous dit?

M. Davies: Quatre ou cinq.

M. Stafford: En quelle année?

M. Davies: Depuis 1967.

M. Stafford: Depuis 1967. Quelle année exactement?

M. Davies: Je ne me souviens pas. Je suppose qu'il a été montré à la télévision en 1967, 1968.

M. Stafford: Est-ce que Radio-Canada a payé votre Association pour montrer ce film?

M. Davies: Nous n'avons jamais vendu ce film, monsieur.

M. Stafford: Aviez-vous le film...

M. Davies: Laissez-moi m'expliquer. Quand quelqu'un veut emprunter ce film, et le retourne nous ne le faisons jamais payer. Si quelqu'un veut acheter une copie du film, ils paient le coût des matériaux du film.

M. Stafford: A votre connaissance combien de fois ce film a-t-il été montré en totalité ou en partie sur le réseau de Radio-Canada?

M. Davies: Je ne sais vraiment pas. Plusieurs fois.

M. Stafford: Plusieurs fois?

M. Davies: Je le crois, oui.

M. Stafford: Savez-vous combien de fois ce film, ou des parties de ce film, ont été montrés à la télévision en Europe?

M. Davies: Trois ou quatre fois, peut-être.

M. Stafford: Vous vous rendez compte que les lettres que les députés reçoivent, et les lettres aux rédacteurs des journaux, à la suite de ce film, ont été très nombreuses.

M. Davies: Oui. J'en ai l'impression, et c'est simplement une opinion personnelle, mais les lettres adressées aux députés au Canada sont venues à cause d'articles parus dans les revues—le genre d'article qui s'adresse au consommateur—et non pas à cause du film qu'on a passé.

M. Stafford: Vous avez mentionné il y a quelque temps la création d'un sanctuaire

[Texte]

hunt. If no seals were killed what would happen to the fish population? This is just a little diversion.

Mr. Davies: May I read an extract, sir?

Mr. Stafford: If it is just a fairly short one.

Mr. Davies: I think that it is very unfortunate really, sir, that Mr. David Sargeant, the government biologist who is the expert in this field is not here to answer your questions about this because apparently it is a critical question from Members of Parliament and from the public, because I think probably he might be able to set your mind at rest.

Mr. Stafford: The reason I am asking you the question is that you have made these statements and I take it you have looked into this matter before you would say there should be no more killing of seals.

Mr. Davies: Yes, sir. This is the *Halifax Chronicle-Herald*...

Mr. Lundrigan: Mr. Chairman, can we agree to come back after the vote?

The Chairman: Immediately after the vote.

Mr. Lundrigan: Immediately.

The Chairman: We will rise for a vote in the House. Our first duty is to the House.

Mr. Hogarth: Mr. Chairman, I move we adjourn and reassemble after the vote and in the meantime the camera be set up so we can see the pictures.

Mr. Lundrigan: I will second the motion.

The Chairman: Immediately after the vote.

• 1630

The Committee is adjourned for the vote.

The Chairman: I will call the meeting to order. We will resume with the questioning by Mr. Stafford.

Mr. Stafford: Just before the vote I was asking you—not that I expect you to be a veterinarian or a biologist—if no seals were killed what would happen to the fish population. I was just wondering whether you had looked into that and what you had found it.

Mr. Davies: Well, sir, in the *Halifax Chronicle-Herald* of March 15 is an interview between Barbara Hinds and Dr. David Sar-

[Interprétation]

pour mettre fin à la chasse. Et pourtant si on ne poursuivait pas cette chasse, qu'arriverait-il aux poissons? C'est pour faire diversion un peu.

M. Davies: Puis-je vous en lire un passage?

M. Stafford: Si c'est court, je veux bien.

M. Davies: Je crois qu'il est très regrettable que le docteur David Sargeant, le biologiste du gouvernement qui est expert dans ce domaine, ne soit pas présent pour répondre à vos questions sur ce sujet parce qu'il semble que ce soit une question très sérieuse de la part des Députés et du public. Il me semble qu'il pourrait peut-être vous rassurer à ce sujet.

M. Stafford: La raison pour laquelle je vous pose cette question, c'est parce que vous avez fait ces déclarations et je suppose que vous avez étudié la question, avant de dire qu'il ne devrait plus y avoir de tuerie de phoques.

M. Davies: Oui, c'est le *Chronicle-Herald* de Halifax.

M. Lundrigan: Sommes-nous d'accord, monsieur le président, pour revenir après le vote.

Le président: Immédiatement après le vote?

M. Lundrigan: Immédiatement.

Le président: Nous ajournons pour un vote à la Chambre.

M. Hogarth: Monsieur le président, je propose de clore les débats et de nous réunir après le vote. On pourrait dans l'intervalle installer la caméra pour que nous puissions avoir le film immédiatement après le vote.

M. Lundrigan: Je seconde la proposition.

Le président: Immédiatement après le vote.

La séance est ajournée pour le vote.

Le président: A l'ordre. Nous reprenons le questionnaire avec M. Stafford.

M. Stafford: Je vous demandais avant le vote, non pas que je m'attende à ce que vous soyez vétérinaire ou biologiste, on ne tuait pas de phoques, qu'est-ce qui arriverait au peuplement de poissons? Je me demandais si vous aviez examiné la question et ce que vous avez découvert.

M. Davies: Le *Chronicle Herald* d'Halifax du 15 mars, publie une entrevue entre M^{lle} Barbara Heinz et M. David Sargeant, qui est

[Text]

geant who is the Department of Fisheries expert on harp seals. The concluding paragraph is:

In the Arctic, the harp seals' diet is mainly of crustaceans. Unlike Harbour and Grey seals—with smaller populations—they do little damage to fisheries, according to biologists, who have frequently examined stomach contents as part of their research work.

If I may go on very briefly, sir, in a conversation with Dr. M. J. Dunbar, Chairman, Marine Sciences Centre McGill University, he told me that the claim that seals would seriously harm fishing if the hunt is stopped is not supported by present evidence. Dr. Ian A. McLaren who is a biologist specializing, I believe, in seals at Dalhousie University in essence told me the same thing, that the evidence does not suggest that seals will seriously harm fishing if the hunt is stopped.

Mr. Stafford: Then to go one point farther, would there be a danger of the seals starving to death eventually if there were too many of them?

Mr. Davies: I can only give you opinions, sir.

Mr. Stafford: Well, in order for you to form the opinions you have, if you are going to form a sanctuary to protect these seals I take it that you have at least studied these two points.

Mr. Davies: Yes; it seems that the herd right now, sir, is about a million and the natural levels probably will be about 1,750,000. The seals probably have a very fine ecological balance in the Gulf of St. Lawrence and if the hunt is stopped this ecological balance will be maintained.

It has been suggested that probably the main check on the herd population—and you do not really know until you stop the hunt, obviously—will be infertility brought about by stress due to the larger population in the breeding areas. Dr. Ian McLaren agrees with me that if this is so, this is the least cruel of natural checks.

Mr. Stafford: Referring to your film, the second film we saw this morning, do you think it is a factual presentation of a typical seal hunt, or did you have it interspersed with an explanation that would put a certain slant or bias on it?

[Interpretation]

un spécialiste du domaine. Le dernier alinéa de l'article se lisait comme il suit:

Dans l'Arctique, le régime du phoque est surtout fait de crustacés. Contrairement aux phoques de port et aux phoques gris, qui sont moins nombreux.

Il n'endommage guère les pêcheries, d'après ce que disent les biologistes qui ont souvent examiné le contenu stomacal, au cours de leurs travaux de recherches. Et maintenant qu'on me permette de citer brièvement une conversation avec M. M. J. Dunbar, président du département des sciences marines de l'Université McGill, qui disait que la prétention que les phoques causent des dommages dans la population des poissons n'est pas prouvée à l'heure actuelle. M. Ian A. McLaren, qui est biologiste spécialisé, je crois, sur la question des phoques, à l'Université Dalhousie, me dit en fait la même chose, que rien ne prouve que les phoques feraient du tort aux pêcheries si la chasse est supprimée.

M. Stafford: Alors, pour aller plus loin, qu'arriverait-il si les phoques devenaient trop nombreux? Est-ce qu'il n'y en aurait pas danger qu'ils meurent de faim?

M. Davies: Je ne puis vous donner qu'une opinion.

M. Stafford: Mais pour vous former les opinions que vous avez, si vous devez créer un sanctuaire pour protéger ces phoques, vous devez vous appuyer sur les études que vous avez faites de ces deux points.

M. Davies: Oui, il semble que le troupeau compte environ 1 million de phoques maintenant et que le niveau normal serait 1,750,000. Les phoques ont un équilibre écologique excellent dans le golfe du Saint-Laurent et si la chasse est arrêtée, cet équilibre sera maintenu. On dit que probablement, ce qui surtout empêchera le troupeau d'augmenter trop, et naturellement on ne le sait pas tant qu'on n'aura pas arrêté la chasse, sera l'absence de fertilité amenée par les tensions causées par le surpeuplement dans les régions d'élevage. M. Ian McLaren convient avec moi qu'il en est ainsi. C'est le moins cruel des contrôles naturels.

M. Stafford: Pour en revenir à votre film, le film n° 2, que nous avons vu ce matin, pensez-vous que c'est une présentation réelle d'une chasse au phoque typique ou l'avez-vous fait intercaler avec une explication qui en ferait une présentation biaisée?

[Texte]

Mr. Davies: I would say quite frankly, sir, in fairness to the Committee, that the film would tend to be anti-seal hunt.

Mr. Stafford: That is right. There were statements at the start of the film, many of which I did not take down because I did not realize their importance until later. There were statements such as "profits are feverishly calculated" and then further on you or someone said "Take note and draw the obvious conclusion". Later still you said "The annual massacres are as useless as they are cruel". All that was designed to create a certain viewer and listener interest, was it not?

Mr. Davies: Yes, sir.

Mr. Stafford: Were it not for statements like that I suppose the CBC would never show it, would they?

Mr. Davies: I do not know, sir.

• 1710

Mr. Stafford: What did you mean—and this was brought up by one of the members opposite this morning—that "36 per cent of the skulls were intact"? Did you take this just after looking at a few and of what significance is it? Do you mean to say that a skull has to be cracked before the seal is sufficiently knocked out in order to skin it. What do you mean?

Mr. Davies: In 1967 Dr. Elizabeth Simpson, a veterinary pathologist conducted—I forget the exact number—number of postmortems on the carcass of seals and her observations were that in something in excess of 30 per cent she could detect, as I remember the report now, nothing that would indicate to her, the animal had been killed prior to the skinning in her postmortem investigation. Of the number that she did, this 30 per cent was the figure that she came up with and if you extrapolate from that that her figure was indicative of the whole hunt, and I do not see why it would not be, then you can draw your own conclusions.

Mr. Stafford: But possibly the 36 per cent of the skulls, even though they were intact, the seals could have been knocked out sufficiently so that they felt nothing?

Mr. Davies: That is possible, sir.

Mr. Stafford: But this is only a guess.

Mr. Lundrigan: A supplementary question, Mr. Chairman, if Mr. Stafford would permit.

The Chairman: Mr. Lundrigan on a supplementary.

[Interprétation]

M. Davies: Très franchement, en toute justice vers le Comité, je tiens à dire que le film tend à se prononcer contre la chasse au phoque.

M. Stafford: C'est vrai. Il y avait des déclarations au début du film. Je n'en ai pas notées beaucoup parce que je n'ai réalisé leur importance que plus tard. On disait: «les profits sont calculés fiévreusement,» et plus loin, où quelqu'un d'autre a dit: «Prenez note et tirez les conclusions évidentes». Et plus loin vous dites: «Les massacres annuels sont aussi inutiles qu'ils sont cruels». Tout cela a été conçu pour capter l'intérêt du spectateur, n'est-ce pas?

M. Davies: Oui, monsieur.

M. Stafford: Ces déclarations ne sont-elles pas la cause du refus de Radio-Canada de présenter le film?

M. Davies: Je ne sais pas.

M. Stafford: Qu'est-ce que vous vouliez dire, un de nos vis-à-vis en a parlé ce matin, par «36 p. 100 des crânes étaient intacts». Avez-vous constaté cela après en avoir regardé quelques-uns, et qu'est-ce que cela signifie? Voulez-vous dire qu'un crâne doit être fracassé avant que le phoque soit suffisamment inconscient pour être écorché?

M. Davies: En 1957, Elizabeth Simpson, pathologiste vétérinaire, a fait plusieurs autopsies sur les carcasses des phoques et d'après ses observations, disait que sur plus de 30 p. 100 des bêtes, elle pouvait détecter rien qui nous montre que l'animal a été tué avant d'être écorché, d'après cet examen post-mortem. Et sur le nombre de phoques qu'elle a examinés, elle en est arrivée au chiffre de 30 p. 100. En faisant des projections pour la chasse entière, je ne vois pas pourquoi on ne pourrait pas retenir cette proportion de 35 p. 100; alors vous pouvez tirer vos propres conclusions.

M. Stafford: Mais, peut-être que, malgré que le 36 p. 100 des crânes étaient intacts, les phoques étaient suffisamment étourdis pour ne rien ressentir?

M. Davies: C'est possible.

M. Stafford: Mais ce n'est que conjecture.

M. Lundrigan: Une question supplémentaire, monsieur le président, si M. Stafford le permet.

Le président: Monsieur Lundrigan.

[Text]

Mr. Lundrigan: Does the witness accept the percentage offered by the eminent lady that he refers to and does he use this information in his deliberations on his meetings with people? In other words, is this your scientific evidence that you use in your communications and your efforts with respect to ending the seal hunt?

Mr. Davies: Not now, sir, no, because the picture has changed. Because of great efforts on the part of the Fisheries Department there has been a dramatic improvement in that area. Could I just read a very short paragraph here?

Mr. Lundrigan: No, that is fine, you answered the question. Could I ask you a further supplementary and ask whether in fact you do use the most recent evidence, much of which was referred to by Mr. McGrath earlier, which has been amassed as a result of very scientific investigations conducted on a worldwide basis, not necessarily from New Brunswick or any part of the Atlantic region but throughout the whole world? Have you been using this kind of evidence, the kind of evidence which has been referred to, and undoubtedly you have read this in detail, by people such as the University of Munich personnel referred to, the gentleman from Toronto referred to earlier, Mr. T. I. Hughes, and there is Dr. Forbes McLeod, Dr. Douglas Pimlott, Mr. John Walsh, and so on, there are dozens of them and we could go on for half an hour on this. Have you been using this kind of scientific evidence? Some of the conclusions are so obvious that it is perhaps worthwhile that at least one of them be referred to and put on record. I would like this to go on record, and it will only take about ten seconds, Mr. Chairman. The Dr. Arne Johannsen report of March 9, 1967, drew the conclusion, for example, that much of the slaughter, if you want to use the choice word which has been used by some people, is more humane than what you find in an abattoir.

Further, indications are from another report which I have here that the percentage of skulls left intact are very few, certainly far below the 36 per cent mentioned, and that in fact there is little if any evidence of cruelty. Our own Minister of Fisheries earlier this year made a tour of the gulf area and he arrived at the same conclusion, which was reported, I think, not only to the House of Commons in Canada but to the embassies where they were getting complaints.

Do you subscribe to the Minister's position and the position of other experts that in actual fact there is little evidence of cruelty, if

[Interpretation]

M. Lundrigan: Est-ce que le témoin accepte le pourcentage suggéré par cette éminente dame dont il parle? Et est-ce qu'il s'est servi de ce pourcentage dans ses réunions avec les gens? Autrement dit, est-ce que se sont les données scientifiques que vous employez lors de vos communications et de votre campagne pour mettre fin à la chasse aux phoques?

M. Davies: Non. Le tout a changé. Par suite d'efforts intensifs déployés par le ministère des Pêches, on remarque une amélioration dramatique dans ce domaine. Puis-je lire un très court paragraphe?

M. Lundrigan: Non, vous avez répondu à la question. Une question supplémentaire. Est-ce que vous vous servez des données les plus récentes, dont M. McGrath parlait tout à l'heure, qui ont été recueillies par suite d'enquêtes très scientifiques menées à l'échelle mondiale, pas nécessairement au Nouveau-Brunswick, ou quelque partie de la région Atlantique mais dans le monde entier? Est-ce que vous vous servez des conclusions dont il a été question, et sûrement vous l'avez lu en détail, par des gens, tels les membres de l'Université de Munich dont il a été question, cet homme de Toronto, M. T. I. Hughes, et il y a les docteurs Forbes MacLeod, Douglas Pimlott, et M. John Walsh et ainsi de suite, il y en a des douzaines et on pourrait y passer une demi-heure. Est-ce que vous avez employé ce genre de constatations scientifiques? Certaines conclusions sont tellement évidentes que peut-être il vaut la peine d'en relever une. Je vais la citer, et cela ne va prendre que dix minutes, monsieur le président. Le rapport du docteur Anne Johannsen du 9 mars 1967 tirait la conclusion qu'une bonne partie du massacre, si vous voulez employer ce mot de choix dont se servent certaines personnes, a un caractère plus humanitaire que les méthodes appliquées dans un abattoir.

De plus, d'après un autre rapport que j'ai ici, le pourcentage des crânes intacts est très faible, bien inférieur au chiffre de 36 p. 100 mentionné et qu'il y a très peu de preuves montrant la cruauté. Notre ministre des Pêches s'est rendu au début de l'année dans la région du golfe et il a tiré la même conclusion que celle qui a été présentée, je pense, non seulement à la Chambre des communes mais dans les ambassades où il y avait des plaintes.

Est-ce que vous approuvez la position du ministre et celle d'autres experts disant qu'il y a peu de preuves, s'il y en a, que les

[Texte]

any evidence of cruelty, and in actual fact there is little evidence that seals are being skinned alive or that skulls are being left intact, or are you still using the 1965 criterion, or whichever year our lady friend did her study, which was not very scientific; in fact, it was so unscientific that most people of any renown in the field do not even refer to it any longer.

Mr. Davies: I do not remember all the questions. Well, with regard to what evidence I am using now, sir, this is a little magazine that we put out and I would say that this—it is a very short paragraph—would let you know if I read it to you exactly what we are saying. May I read it to you?

• 1715

Mr. McGrath: Do you have copies for distribution?

Mr. Davies: Yes, sir.

Mr. McGrath: May we have them distributed?

Mr. Davies: Yes, sir.

Mr. Lundrigan: Well then, I will read it and then I will react. Mr. Chairman, I will ask a supplementary on that question, seeing that Mr. Stafford is passing out the information, a very short supplementary while he is doing his clerical work. I would like to ask the witness if in fact his aim is to have the seal hunt, as we certainly all do, conducted in a humane fashion, that is, humanely conducted, or if in fact he is interested in preventing the killing of animals? Could you answer that question?

Mr. Davies: I have got an awful lot of questions before me now. Which one shall I answer first?

Mr. Lundrigan: Well, you reflected on the last one and I would prefer to read your statement that you are going to read to me before you answer that one.

Mr. Davies: O.K. I would say that it is the position of the people that I work for and the people who support us and, frankly, my own position that the seal hunt runs counter to modern human ethics and that I frankly feel it is being made as less cruel, probably, as it is possible to make it right now and that the area should be turned into a sanctuary for these animals.

Mr. Lundrigan: So therefore you are not interested in the humane aspect of it at all, really it is a much broader question, and the evidence which has been revealed through the day's proceedings and the tremendous

[Interprétation]

phoques sont écorchés vifs ou que les crânes sont laissés intacts, ou est-ce que vous servez toujours de cette proportion de 1965, ou de l'année au cours de laquelle notre amie a mené son étude, qui n'était pas très scientifique; de fait, elle était si peu scientifique que la plupart des personnes réputées dans ce domaine n'en tiennent plus compte.

Mr. Davies: Je ne me souviens plus de toutes les questions que vous m'avez posées. A propos des données dont je me sers présentement, voici une petite revue que nous publions, qui contient un paragraphe assez succinct qui vous mettra au courant de notre position. Est-ce que je peux vous le lire?

Mr. McGrath: Est-ce que vous avez des exemplaires que vous pouvez distribuer?

Mr. Davies: Oui, monsieur.

Mr. McGrath: Est-ce que vous pouvez les faire distribuer?

Mr. Davies: Oui, monsieur.

Mr. Lundrigan: Et bien alors, je vais le lire alors et ensuite je réagirai. Monsieur le président, je poserais une question supplémentaire à ce sujet, puisque je vois que M. Stafford est à distribuer les exemplaires, une question très courte pendant qu'il fait son travail de commis. Je voudrais demander au témoin si, en fait, il veut que la chasse soit faite de façon humanitaire, comme nous le voulons tous, ou s'il tient à ce qu'on mette fin à l'abattage des animaux? Pouvez-vous répondre à cette question?

Mr. Davies: J'ai beaucoup de questions à répondre. A laquelle vais-je répondre d'abord?

Mr. Lundrigan: Bien, vous avez pensé à la dernière et je préférerais lire la déclaration que vous allez me lire avant d'y répondre.

Mr. Davies: C'est bien. Les personnes qui appuient nos efforts et les personnes pour qui je travaille ont cette position, et qui est la mienne. Ils prétendent que la chasse aux phoques va à l'encontre des principes humanitaires modernes et, franchement, je crois que maintenant on l'a rendue la moins cruelle possible et que toute la zone devrait être transformée en sanctuaire de conservation de ces animaux.

Mr. Lundrigan: L'aspect humanitaire ne vous intéresse donc pas. C'est une question beaucoup plus large qui vous intéresse. Toutes les preuves scientifiques qu'on a pu amasser et tout ce qui a été dit au cours de la

[Text]

amount of scientific evidence amassed, this does not make any difference to your position, you are basically against killing these animals regardless.

Mr. Davies: Yes, sir, in fairness I would say that.

Mr. Lundrigan: Can we assume therefore that other areas of animal resource productivity in Canada will be the next target in the event that you succeed in your St. Lawrence area quest?

Mr. Davies: No, sir, that does not necessarily follow.

Mr. Lundrigan: It does not follow?

Mr. Davies: With different types of animals. It does not necessarily follow that I will do anything after this.

Mr. Lundrigan: A lot of people will be happy to hear that one, I will tell you.

The Chairman: Gentlemen, I do not think we should continue with these long supplementaries. We are only at the second questioner since we started at noon and I think we should keep our supplementaries as short as possible to give every member who has so indicated a chance to question. I think we should finish with Mr. Stafford without any further interruption because he is trying to come to a point and he has to leave early tonight.

Mr. Stafford: If I am to get there.

In view of the statements that I just pointed out that were made in the film, would it be something like Stanley Burke's film on pollution in the Niagara Peninsula, if you stretched the point a little you might get more attention. Is that what you had in mind?

Mr. Davies: No, sir.

Mr. Stafford: But all the time these films were being taken up there and you were pointing the camera on the seals there were observers, inspectors and photographers present, were there not?

Mr. Davies: I was not there most of the time when the film was taken.

Mr. Stafford: But naturally these killers, as you mention, would realize that the photographer was taking pictures, would they not?

Mr. Davies: Some of the photography was done with a long lens. I think there are not that many sequences of killing, actually.

Mr. Stafford: You heard on film No. 3 this morning that under Canadian law—I think

[Interpretation]

journée ne changent pas votre position; vous êtes contre l'abattage des animaux.

M. Davies: Oui, monsieur, en toute honnêteté, je dois le dire.

M. Lundrigan: Pouvons-nous donc supposer que d'autres domaines de productivité de ressources animales du Canada seront votre prochain objectif si vous réussissez votre campagne pour la région du Saint-Laurent.

M. Davies: Il ne s'ensuit pas nécessairement que j'agirai ainsi.

M. Lundrigan: On ne peut le conclure.

M. Davies: Avec différents genres d'animaux. On ne peut pas conclure que je ferai nécessairement quelque chose après cela.

M. Lundrigan: Il y en a plusieurs qui vont être contents de l'apprendre.

Le président: Je ne pense pas que nous devrions continuer avec ces questions supplémentaires très longues. Nous en sommes qu'au deuxième interrogateur depuis ce midi, et je pense que nous devrions abrégier autant que possible nos questions supplémentaires afin de donner à tous les membres la possibilité de poser des questions. Je crois que nous pouvons terminer l'interrogatoire de M. Stafford, sans autre interruption puisqu'il veut en arriver à un point et il doit partir tôt ce soir.

M. Stafford: Si je peux m'y rendre. Étant donné les déclarations que j'ai indiquées et qui ont été faites dans le film, est-ce que c'est semblable au film de Stanley Burke sur la pollution dans la péninsule du Niagara; si vous exagérez un peu, vous attirez davantage l'attention? Était-ce votre but?

M. Davies: Non, monsieur.

M. Stafford: Mais pendant tout ce temps-là, on tournait ces films, et vous dirigiez la caméra vers les phoques; il y avait là des observateurs, des inspecteurs et des photographes, n'est-ce pas?

M. Davies: Je n'étais pas là la plupart du temps quand le film a été tourné.

M. Stafford: Mais, en fait, ces tueurs, comme vous les appelez, se rendaient compte que le caméraman les photographiait, n'est-ce pas?

M. Davies: Certaines prises de vue ont été faites avec des lentilles télescopiques. Je ne pense pas qu'il y ait plusieurs séquences d'abattage, en fait.

M. Stafford: Vous avez entendu dans le troisième film de ce matin qu'en vertu de la

[Texte]

the exact words were, "It is an offence to cause cruelty to animals, to skin them while wiggling is wrong." Would not the proper thing for you and others to do if you saw an injustice or a violation of the Criminal Code be to lay charges and have them brought up in the respective provinces in which you see the crimes committed?

Mr. Davies: I believe, sir, that Canadian criminal law does not, and did not in 1967, extend into the Gulf of St. Lawrence. That any infractions of the regulations, and they were fisheries regulations, were to be dealt with by the Fisheries officials at the scene. My job, I felt while I was there, was merely to go there and report. I could have run around stopping individuals doing things that I thought were not very nice.

Mr. Stafford: That is not quite the question. The thing is this, under the Criminal Code...

Mr. Davies: Well, the Criminal Code is not operative there.

Mr. Stafford: ...there are sections where you can always lay charges for cruelty to animals. Now, do you mean to say that you could not lay charges and have these brought up in a court under our good Canadian system of justice like any other charges to be heard?

Mr. Davies: I believe that an attempt was made to lay charges by the Ontario Humane Society and it was not successful because of the territorial question.

• 1720

Mr. Stafford: Well, the Ontario Humane Society lay charges down in my area for people who do not feed their pigs, and many things like this, and have them going around thin in the barnyard. Do you mean to say...

Mr. Davies: In all fairness, sir, this is the Gulf of St. Lawrence.

Mr. Stafford: That is right, but this is still part of the—the Magdalen Island not still part of...

Mr. Davies: It is outside of the three-mile limit and outside of the—there is a gentleman behind you who can give you the answer to that. My understanding is that the Criminal Code was not operative out there. When this new law goes through Parliament making the Gulf of St. Lawrence Canadian, it may be, I do not know.

[Interprétation]

loi canadienne, je pense que les termes exacts sont, «C'est un crime d'agir avec cruauté envers les animaux, de les écorcher pendant qu'ils bougent». Est-ce que ce ne serait pas un geste convenable pour vous et pour d'autres si vous êtes témoins d'une injustice ou un délit en vertu du Code pénal de les poursuivre en justice et d'intenter des poursuites, dans les provinces où ces crimes ont été commis?

M. Davies: Je ne crois pas que le Code criminel puisse être appliqué au Golfe du Saint-Laurent, que toutes infractions aux règlements, et c'étaient des règlements de pêches, devraient être prises en main par les fonctionnaires responsables du ministère des Pêches surveillant la chasse. Mon travail était, d'après moi, de simplement aller sur les lieux et de faire rapport. J'aurais pu arrêter les chasseurs qui faisaient des choses que je n'aimais pas.

M. Stafford: Ce n'est pas là la question. Le problème est qu'en vertu du Code criminel...

M. Davies: Le Code criminel n'est pas en vigueur là.

M. Stafford: ...il y a des dispositions en vertu desquelles vous pouvez intenter des poursuites pour cruauté envers les animaux. Voulez-vous dire que vous ne pourriez pas porter d'accusation et les porter devant les tribunaux en vertu de notre bon système juridique canadien comme toute autre accusation?

M. Davies: Je crois que la Société protectrice des animaux de l'Ontario a cherché à porter plainte, mais n'a pas pu le faire à cause de problèmes de territoire.

M. Stafford: Bien, la Société protectrice des animaux de l'Ontario a porté plainte contre des personnes dans mon district qui ne nourrissent pas leurs porcs et autres choses du genre, et qui les laissent maigrir. Voulez-vous dire que...

M. Davies: En toute honnêteté, il s'agit du Golfe Saint-Laurent.

M. Stafford: C'est vrai, mais il fait toujours partie de—est-ce que les Îles-de-la-Madeleine font toujours partie de...

M. Davies: C'est en dehors de la limite de trois milles et en dehors de... Le monsieur derrière vous peut vous donner la réponse à cette question. Je crois comprendre que le Code criminel ne s'appliquait pas. Lorsque la nouvelle Loi sera adoptée par le Parlement pour nationaliser le golfe du Saint-Laurent, la chose sera possible, je ne sais pas.

[Text]

Mr. Stafford: You will admit—I am getting to the end of my questioning here—if you took a camera even into a slaughter house, and I am not trying to minimize any possible cruelty, but if you took a camera into a slaughterhouse, you took close-up shots of throat cutting of pigs, cows and lambs, that the flowing blood in a colour film would be just as revolting as the blood that we saw here coming from the sealpups, would it not?

Mr. Davies: That is correct, sir.

Mr. Stafford: So actually, when it gets right down to it, would it not be more fair to ask the viewers of your film to compare it with the films of other animals being killed so that then they could say this is really inhumane and cruel to animals?

Mr. Davies: I would say not, sir.

Mr. Stafford: You would not?

Mr. McGrath: I have a supplementary. If you were to be consistent and logical, Mr. Davies, surely you must carry your crusade to the abolition of all animal killing. Is that correct?

Mr. Davies: I would not say that is correct; no, sir.

Mr. McGrath: Yet, we saw evidence this morning of pigs being stuck when they were living, and there is ample evidence from experts that any abattoir conditions under which animals are killed are much more inhumane than the seal hunt. Why pick on the seal hunt? Why pick on a segment of the population that depends upon this meagre supplement to earn a living?

Mr. Davies: I think that one cruelty does not justify another necessarily. For a lot of reasons of chance, I suppose, I became involved in the seal hunt. I think the question really, in my opinion, sir, is that the seal hunt is unnecessary killing.

Mr. McGrath: Are you a vegetarian?

Mr. Davies: No.

Mr. McGrath: Do you eat bacon?

Mr. Davies: No; look, my diet...

Mr. McGrath: I am just asking you a question Mr. Davies and it is a sensible question. Are you a vegetarian? Do you eat bacon?

Mr. Davies: My dietary habits, sir, are of no concern to this Committee.

Mr. McGrath: You do eat meat? Mr. Chairman, I am directing a question to the witness.

An hon. Member: I cannot hear the answer.

[Interpretation]

M. Stafford: Vous admettez, je termine mon interrogatoire, que si vous apportez une caméra dans un abattoir, et je n'essaie pas de minimiser la cruauté possible, mais si vous apportez une caméra dans un abattoir, et si vous prenez des vues en gros plans de l'égorgeage de porcs, de vaches et de moutons, le sang qui coule dans un film en couleur serait aussi répugnant que le sang des petits phoques que nous avons vu tout à l'heure, n'est-ce pas?

M. Davies: C'est juste, monsieur.

M. Stafford: Alors, serait-il plus juste de demander vos propres opinions et de les comparer avec les films d'abattages d'autres animaux qui sont tous aussi inhumains et cruels?

M. Davies: Je dirais non, monsieur.

M. Stafford: Vous ne voudriez pas?

M. McGrath: J'ai une question supplémentaire. Si vous étiez cohérent et logique monsieur Davies vous devriez entreprendre une croisade pour l'abolition de toutes les tueries d'animaux.

M. Davies: Je ne dirai pas que c'est exact.

M. McGrath: Mais nous avons vu qu'on abattait des porcs vivants et les preuves existent prouvant que dans tous les abattoirs la tuerie est beaucoup plus inhumaine que l'abattage des phoques. Pourquoi choisir la chasse aux phoques? Pourquoi choisir une tranche de la population qui dépend sur ce maigre supplément pour vivre?

M. Davies: Une cruauté n'en justifie pas une autre. Pour beaucoup de raisons dues au hasard, j'ai été appelé à m'intéresser à la chasse aux phoques. La raison est je pense que cette chasse est une tuerie inutile.

M. McGrath: Êtes-vous végétarien?

M. Davies: Non.

M. McGrath: Mangez-vous du bacon?

M. Davies: Non, voici mon régime...

M. McGrath: Je vous ai posé une question, monsieur Davies, une question logique, êtes-vous végétarien? Mangez-vous du bacon?

M. Davies: Mes habitudes alimentaires ne regardent pas ce Comité.

M. McGrath: Vous mangez de la viande? Monsieur le président, je pose une question au témoin.

Une voix: Je n'entends pas la réponse.

[Texte]

Mr. McGrath: I cannot hear the answer, either.

Mr. Davies: Mr. Chairman, I really feel that there is an important issue before this Committee and my dietary habits really have no concern in this issue. I would ask, Mr. Chairman, for the protection of Section 309 of Beauchesne's Rules of Parliamentary Procedure.

Mr. McGrath: I am perfectly happy; I have made my point. I am not prepared to pursue it.

Mr. Borrie: On a point of order, Mr. Chairman, the point of pursuing this matter is that we have been led to believe by the witness that he is no longer interested in cruelty to animals. This is not the purpose of his campaign. It is completely to obliterate the killing of seals.

An hon. Member: That is right; he said that.

Mr. Borrie: It therefore makes a difference to what his thinking is or what his diet is; it does have a reflection because we are going beyond the scope of an SPCA who are concerned with cruelty to animals.

An hon. Member: Hear, hear.

Mr. Davies: Mr. Chairman, it is not correct to say that I am no longer interested in cruelty to animals.

Mr. Borrie: I think some of the replies that you have given, Mr. Davies, led this Committee to believe that.

Mr. Davies: I would just like to make a statement now that it is not true.

Mr. Hogarth: On a point of order, Mr. Chairman, Mr. Stafford was to finish questioning the witness and then we were to see the film.

Mr. McGrath: Mr. Chairman, before the film is shown is it possible to stop the film at any given point? I would like to have the film stopped at that particular point where it shows...

The Chairman: You can ask the operator.

Mr. McGrath: I am asking you to ask the operator.

The Chairman: Could the operator clarify us on this? Is it possible to stop the film at any point?

Mr. MacDonald: Mr. Chairman, the operator tells me he can stop it and start it again but he cannot stop it at a particular frame.

[Interprétation]

M. McGrath: Je n'entends pas non plus.

M. Davies: Monsieur le président, j'estime qu'il y a une question importante soumise au Comité et mes habitudes alimentaires n'ont rien à voir avec la question et je demande monsieur le président, la protection de l'article 309 du Beauchesne sur la procédure parlementaire.

M. McGrath: Je suis parfaitement heureux; j'ai marqué mon point, je n'insiste pas.

M. Borrie: En appel au règlement, pour faire suite à cette question, le témoin a laissé entendre qu'il n'était plus intéressé à la cessation de la cruauté envers les animaux. Ce n'est pas le but de sa campagne; c'est tout simplement l'abolition de la chasse aux phoques.

Une voix: C'est exact, il a dit cela.

M. Borrie: Voilà qui établit une distinction entre son opinion et ses habitudes alimentaires; nous allons au-delà des activités de la société protectrice des animaux qui essaie d'empêcher la cruauté envers les animaux.

Une voix: Bravo!

M. Davies: Monsieur le président, il est faux de dire que je ne m'intéresse plus à la cruauté envers les animaux.

M. Borrie: Les réponses que vous avez données laissent entendre que c'est exactement votre position.

M. Davies: Je vous dirai simplement que ce n'est pas vrai.

M. Hogarth: J'en appelle au règlement, monsieur le président. M. Stafford devait finir de poser ses questions, puis nous devons voir le film.

M. McGrath: Avant de présenter le film, monsieur le président, pourra-t-on arrêter le film à un endroit donné. J'aimerais qu'on arrête le film à la scène...

Le président: Il faut demander cela à l'opérateur.

M. McGrath: Je vous demande de le faire.

Le président: L'opérateur peut-il le faire? Peut-on arrêter la projection à une scène particulière?

M. MacDonald: L'opérateur m'indique qu'il peut arrêter et recommencer, mais pas s'arrêter sur une image.

[Text]

Mr. Whelan: May I ask a question, Mr. Chairman? Are you going to use the order to those members of the Committee who are desirous of asking the witness questions?

The Chairman: This is in the hands of the Committee; do they so wish? Do they consider it a reasonable question?

Mr. Whelan: I means a reasonable order. What I am asking is do we continue with the procedure that we have been on, regardless of the film. You have a list of names; are you going to continue with that list of names that you have?

The Chairman: I will continue with the same order of questioning...

Mr. Whelan: I gathered from what Mr. McGrath said that you were going to go along with the film...

The Chairman: I misinterpreted your question. If the Committee is willing, we will show the film and then resume questioning.

Mr. Hogarth: Let us see the film.

Some hon. Members: Agreed.

An hon. Member: Since 3.30 we have been trying to see the film.

• 1730

The film is being shown.

Mr. Lundrigan: Mr. Chairman, why cannot the Committee reconvene while the problem is being resolved? It might take twenty minutes. That time is too valuable to lose.

The Chairman: I think that is a very good suggestion. We can carry on. Mr. Lundrigan?

Mr. Lundrigan: Mr. Chairman, I have some questions but I would welcome any intervention or supplementaries because they are all related. Even though I have the floor I would certainly not prevent anybody from asking questions. I hope the film will be made ready while we are carrying on with our discussion.

Mr. Chairman, may I ask the witness a question which was raised earlier today about an insignificant little matter of dollars and cents? I think I heard some statements about \$22,000 and \$2,000 and \$40,000 odd, and so on, in connection with the various moneys which have been expended directly or indirectly in connection with Mr. Davies. I would like to ask Mr. Davies what his salary is relative to his involvement with the SPCA in New Brunswick.

[Interpretation]

M. Whelan: Puis-je poser une question, monsieur le président? Allez-vous considérer l'ordre des députés qui désirent poser des questions au témoin?

Le président: Cela concerne le comité; que désire-t-il? Pense-t-il que c'est raisonnable?

M. Whelan: Je veux dire un ordre raisonnable. Ce que je demande est, continuons-nous avec la même procédure, nonobstant le film. Vous avez une liste de noms; continuerez-vous avec cette liste?

Le président: Nous poursuivrons avec la liste que j'ai.

M. Whelan: D'après ce qu'a dit M. McGrath, nous allons voir le film.

Le président: Alors, j'ai mal compris votre question. Maintenant, si le Comité le veut, nous allons présenter le film. Après, nous reprendrons la période des questions.

M. Hogarth: Voyons le film.

Des voix: Adopté.

Une voix: Depuis 3 h. 30, nous essayons de voir ce film.

Présentation du film.

M. Lundrigan: Monsieur le président, pourquoi le Comité ne se réunit-il pas à nouveau pendant que le problème est résolu? Cela pourrait durer vingt minutes. Notre temps est trop précieux pour le perdre.

Le président: Je crois que c'est une bonne suggestion. Poursuivons. Monsieur Lundrigan?

M. Lundrigan: Monsieur le président, j'ai des questions à poser mais j'accepterais volontiers que d'autres interventions soient faites puisque ce sont toutes des questions connexes. Même si j'ai la parole, je ne veux empêcher personne de poser des questions. J'espère que le film sera prêt après que nous aurons terminé votre discussion.

Puis-je soulever une question qu'on a posée plus tôt aujourd'hui à propos d'un détail de finance. On a parlé de \$22,000 et de \$2,000, ainsi que de \$40,000 ou quelque chose comme, à propos des sommes qu'on aurait consacrées directement ou indirectement aux efforts de M. Davies. Puis-je demander à M. Davies le traitement qu'il touche pour ses activités au sein de la Société protectrice des animaux?

[Texte]

Mr. Davies: Do you mind if I do a little sum? I will not be a moment. It is \$2,500 for animal welfare in New Brunswick.

Mr. Lundrigan: May I ask the witness, Mr. Chairman, if this is the total amount of moneys he derives from his involvement with the SPCA?

Mr. Davies: No; this is just in New Brunswick. My total salary for work in New Brunswick and seals is \$7,500 a year.

Mr. Lundrigan: May I ask the witness, Mr. Chairman, what his total income is for the year?

The Chairman: I think that is reasonable.

Mr. Davies: I suppose, \$8,500 a year.

Mr. Lundrigan: May I ask the witness if he is deriving any moneys indirectly from his involvement as a result of contributions made by certain people who might want to contribute to the SPCA movement and his campaign to end seal-fishing in the St. Lawrence? In other words, from people who have a genuine interest in animals, who are animal lovers, and who might have an extra dollar in their pockets? May I ask the witness if he is getting any of this—if it is creaming off in any way into his own personal account?

Mr. Davies: No.

Mr. Lundrigan: I raise the question, Mr. Chairman, because a number of people have made the observation—I certainly have had it

[Interprétation]

M. Davies: Est-ce que je peux faire une petite addition? Ce sera l'affaire d'une minute. Mon travail à la Société protectrice, au Nouveau-Brunswick me rapporte \$2,500.

M. Lundrigan: Je peux demander au témoin le total de la rémunération qu'il a gagné en rapport avec ses activités au sein de la Société protectrice des animaux?

M. Davies: Non, il s'agit seulement du travail au Nouveau-Brunswick. Mon salaire total pour mon travail au Nouveau-Brunswick et mes activités en rapport avec les phoques est de \$7,500 par année.

M. Lundrigan: Puis-je demander au témoin, monsieur le président, quel est son revenu total pour l'année?

Le président: Cela me paraît une question sensée.

M. Davies: Disons, \$8,500 par année.

M. Lundrigan: Puis-je demander au témoin s'il retire de l'argent de façon indirecte de ses activités en rapport avec la chasse aux phoques, par les contributions de certaines gens qui sont intéressés au mouvement et à la campagne que vous menez pour mettre fin à la chasse aux phoques dans le Golfe Saint-Laurent? En d'autres mots, est-ce qu'il reçoit des contributions des gens qui sont vraiment attachés aux animaux et qui ont peut-être quelques dollars à dépenser. Puis-je demander au témoin s'il retire quelque profit de ces contributions?

M. Davies: Non.

M. Lundrigan: J'ai posé la question parce que plusieurs personnes en ont fait la remarque. On m'a même signalé que le témoin s'é-

• 1735

made to me, as a Member of Parliament—that the witness is in actual fact not only conducting a campaign against the seal fishery in the St. Lawrence but is also doing a very healthy job of making a very good personal investment. In other words, he has a vested interest in it, and it is more than seal fishery. I think it would be very nice to clear up this point because I am sure that there are many people, nationally and internationally, who would like to know whether in fact it is a matter of its being a business venture. Certainly if it is then it sheds new light on the situation, and I would be able to look at it from a different point of view.

tait lancé non seulement dans une campagne contre la chasse aux phoques mais aussi dans une entreprise très profitable pour lui. En d'autres mots, il a un intérêt personnel dans cette affaire, ce n'est pas seulement une question de pitié pour les phoques. Il conviendrait, je crois, de tirer cette affaire au clair, car il y a beaucoup de gens, tant au pays qu'à l'étranger, qui veulent savoir s'il s'agit d'une entreprise commerciale? S'il s'agit d'une entreprise commerciale, alors, il faut considérer l'affaire d'un autre point de vue. Si quelqu'un veut se lancer dans une campagne contre quelque chose, une campagne, disons, contre le meurtre des gens, s'il est bien payé

[Text]

If a person wants to conduct a campaign against anything, a campaign, let us say, for killing people, he is getting well paid for it, and there are those in the world who make a living from this kind of business, I understand; and that makes for underground movements. But if he can get a living from it then it creates a different impression.

The question I want to ask, Mr. Chairman, is whether, in fact, there are any moneys coming into the SPCA from people outside Canada?

Mr. Davies: How many questions are you asking there?

Mr. Lundrigan: That is the question you have to answer. The rest of my remarks constituted a statement.

Mr. Davies: Frankly, I think your remarks are unworthy of you.

Mr. Lundrigan: Mr. Chairman, on a point of order. I am not going to accept this kind of contemptuous attitude on the part of the witness. I am saying, as a Member of Parliament that I have received an indication that the particular witness we have before us has a vested interest in the business. That is why I ask the question. Now he is saying that my remarks are unworthy of me. My remarks, therefore, are unworthy of the people whom I represent, and I will not accept this kind of contemptuous attitude on the part of this gentleman.

Therefore, Mr. Chairman, my question is: Are there any funds coming from people outside Canada, specifically in England, which are used to finance the efforts of the witness we have before us?

Mr. Davies: I do not know what your question is, but if you are intimating that I am—

Mr. Lundrigan: I am asking, Mr. Chairman—and this is not information at all—if any moneys are coming from outside the country and being used by the witness to carry on his campaign, and if these funds are coming specifically from England? This is my question.

Mr. Davies: All the funds that come to the "Save the Seals" Fund are used for this work. All of the funds are audited at the end of the year...

Mr. Lundrigan: Mr. Chairman, that is not my question. The witness, Mr. Chairman, should be reminded that he is under oath and should answer the questions. I am not asking about the auditing of the account. I am asking: Are there funds coming into the

[Interpretation]

pour mener cette campagne, et il y en a qui gagnent leur vie de cette façon, alors, il faut voir l'affaire d'un autre point de vue.

Je voudrais savoir donc si des étrangers font des contributions à la Société protectrice des animaux.

M. Davies: Combien de questions avez-vous posées?

M. Lundrigan: Voilà la question que j'ai posée, le reste constitue une déclaration.

M. Davies: Vraiment, je crois que vos remarques sont indignes de vous.

M. Lundrigan: Monsieur le président, j'invoque le Règlement. Je n'accepterai pas cette attitude de mépris de la part du témoin. Je dis, en tant que député, que j'ai reçu des témoignages à l'effet que le témoin que nous interrogeons actuellement a un intérêt personnel dans cet affaire. Voilà pourquoi je pose cette question. Et, il dit que mes remarques sont indignes de moi. Alors mes remarques sont indignes de ceux que je représente; je n'accepterai pas une telle attitude de mépris de la part de ce témoin.

Ma question, monsieur le président, est celle-ci: est-ce qu'il y a des fonds qui viennent de l'extérieur du Canada, plus particulièrement d'Angleterre, et qui sont utilisés pour financer la campagne que mène le témoin.

M. Davies: Je ne sais pas quelle question vous posez, mais si vous laissez à entendre que je suis...

M. Lundrigan: Je demande, monsieur le président, et il ne s'agit pas là d'une demande de renseignements, je demande donc s'il y a des sommes provenant de l'extérieur du pays qui sont utilisées par le témoin pour mener sa campagne. Et est-ce que ces fonds viennent de l'Angleterre? Voilà ma question.

M. Davies: Toutes les sommes qui sont adressées au fonds «Save the Seals» sont utilisées pour cette campagne. Et tous les mouvements de fonds sont examinés à la fin de l'année.

M. Lundrigan: Ce n'est pas ma question, monsieur le président. Il faudrait peut-être rappeler au témoin qu'il est sous serment et qu'il doit répondre à ma question. Je ne veux rien savoir à propos de la vérification des fonds. Je veux savoir s'il y a des fonds prove-

[Texte]

SPCA from outside the country and being used by the witness? And are any of these from England? That is the question, and it is a very simple one.

Mr. Davies: What was all this business about—

Mr. Lundrigan: Mr. Chairman, on a point of order. The witness is not aware that he is before a parliamentary committee and that there is a question before him.

Mr. McGrath: He is not addressing the annual meeting of the SPCA now.

Mr. Davies: That is quite evident. Yes there is money coming from England to the New Brunswick SPCA, which is used—

Mr. McGrath: I am going to raise a question of privilege and ask that that remark of the witness, which was contemptuous, be stricken from the record. I reminded him, in supporting my colleague, that he was not addressing the annual meeting of the SPCA, and he said very sarcastically that that was quite evident. This has been in keeping with the generally contemptuous attitude that he has been showing this afternoon.

Mr. Lundrigan: Mr. Chairman, I would like to have the answer.

Mr. Davies: The answer is yes, money does come to the Save the Seals Fund from England, and it is spent.

Mr. Lundrigan: May I ask you how much money does come from England, and what are the sources of this money? Could you give me one, or the other, or both, of the answers?

Mr. Davies: The audited statement says it quite clearly. I think it is something like \$8,000—I am giving you an estimate now—and it comes from people who support the work that we do.

Mr. Lundrigan: Is there one main contributor?

Mr. Davies: No, there is not.

Mr. Lundrigan: What about other countries? What are the main contributors to your movement?

Mr. Davies: The only main contributor has been Dr. Grzimek of the Zoological Society in Frankfurt, Germany.

[Interprétation]

nant de l'extérieur du pays qui ont été versés à la Société protectrice des animaux et qui sont utilisés par le témoin. Est-ce que certains de ces fonds viennent de l'Angleterre? Voilà ma question; je crois qu'il n'y a rien de compliqué là-dedans.

M. Davies: De quoi parlions-nous?

M. Lundrigan: J'invoque le Règlement, monsieur le président. Le témoin ne se rend pas compte qu'il se trouve devant un comité parlementaire et qu'on lui a posé une question.

M. McGrath: Il n'est certainement pas à la réunion annuelle de la Société protectrice des animaux.

M. Davies: Cela ne fait pas de doute. Oui, il y a de l'argent qui vient d'Angleterre et qui est versé à la Société protectrice des animaux du Nouveau-Brunswick, et ces sommes...

M. McGrath: Je soulève une question de privilège et je demande que cette remarque du témoin, qui était méprisante, soit biffée du compte rendu. Je lui ai rappelé, pour venir en aide à mon collègue, qu'il ne s'adressait pas à la réunion annuelle de la Société protectrice des animaux et il m'a répondu, très sarcastiquement, que cela ne faisait pas de doute. Cette réponse est bien dans le ton de l'attitude méprisante qu'il a manifestée tout l'après-midi.

M. Lundrigan: Monsieur le président, j'aimerais qu'on réponde à ma question.

M. Davies: Oui, il y a de l'argent qui vient d'Angleterre, qui est versé au fonds «*Save the Seals*» et qui est dépensé aux fins de la campagne.

M. Lundrigan: Puis-je vous demander combien d'argent vient d'Angleterre et quelles sont les sources? Voulez-vous répondre à l'une ou l'autre des questions ou aux deux?

M. Davies: Le bilan vérifié l'indique très clairement. Cette somme s'élève à à peu près \$8,000; c'est une estimation que je vous donne. Ces sommes viennent de personnes qui sont sympathiques à notre action.

M. Lundrigan: Est-ce qu'il y a une personne ou une organisation en particulier qui y contribue de façon importante?

M. Davies: Non.

M. Lundrigan: Et dans le cas des autres pays. Quels sont les principaux appuis financiers du mouvement?

M. Davies: Il y a surtout le docteur Grzimek, de la Société zoologique de Francfort, en Allemagne.

[Text]

Mr. Lundrigan: Thank you.

Mr. Hogarth: I have a supplementary. What is the largest donation your fund has received within Canada?

Mr. Davies: It is \$1,000, I think; yes, \$1,000.

Mr. Hogarth: Was that one donation, or is it an annual donation?

Mr. Davies: This is the seals fund?

Mr. Hogarth: The "Save the Seals" Fund, or any moneys that have been received by your association for the purposes of your crusade?

• 1740

Mr. Davies: The \$1,000 is the largest. No, it was not repeated, I do not think.

Mr. Hogarth: It was not repeated?

Mr. Davis: I do not think it was.

Mr. Hogarth: Who donated that?

Mr. Davies: I feel that—

Mr. Hogarth: You might feel; I just want to know.

Mr. Davies: I feel that the identity of people who donate to this work is confidential.

Mr. Hogarth: Mr. Chairman, I submit that the witness has to answer that question.

Mr. Davies: Would you make a decision? I feel that the person who made this donation probably would not want the name mentioned.

Mr. Hogarth: I want the answer, Mr. Chairman.

The Chairman: It depends on how this person gave this money, and what protection he was given by the—

Mr. Hogarth: No, sir. With the greatest respect, Mr. Chairman, we are entitled to get at the facts of this matter, and if other persons engaged in other industries competitive with the seal industry have been donating money to this fund we are entitled to get at that, and I want to start now. I think we are entitled to the answer to that question.

The Chairman: We will allow it.

Mr. Hogarth: Thank you. What is the name of that donor, witness?

Mr. Davies: Miss G. H. Copp.

Mr. Hogarth: What is her occupation?

Mr. Davies: I do not know.

[Interpretation]

M. Lundrigan: Merci.

M. Hogarth: J'ai une question supplémentaire. Quel est le don le plus important que votre Société a reçu en provenance du Canada?

M. Davies: \$1,000. Je crois, oui, \$1,000.

M. Hogarth: C'était un don unique ou un don fait sur une base annuelle?

M. Davies: Nous parlons toujours du fonds pour sauver les phoques?

M. Hogarth: Oui, le fonds «*Save the Seals*» ou toute autre somme d'argent que votre association a reçue pour appuyer votre campagne.

M. Davies: Mille dollars, c'est la contribution la plus forte. Et ce ne fut pas répété, je crois.

M. Hogarth: Ce ne fut pas répété?

M. Davies: Je ne pense pas.

M. Hogarth: Qui l'a donné?

M. Davies: Je pense que...

M. Hogarth: Vous pouvez penser, si vous voulez; mais moi, je veux savoir.

M. Davies: J'estime que l'identité des gens qui ont fait ces dons est confidentielle.

M. Hogarth: Monsieur le président, je considère que le témoin devrait répondre à cette question.

M. Davies: Quelle est votre décision? Je suis certain que la personne qui a fait ce don ne voudrait pas qu'on relève son nom.

M. Hogarth: Je voudrais une réponse monsieur le président.

Le président: Cela dépend de la somme en cause et si on a donné l'assurance au donateur que...

M. Hogarth: Avec tout le respect que je vous dois, je n'accepte pas la réponse, monsieur le président. Nous avons le droit de connaître les faits et de savoir si d'autres personnes qui s'occupent d'industries concurrentielles à l'industrie du phoque ont contribué à ce fonds. Je crois que nous avons droit d'avoir ces renseignements.

Le président: Votre demande est recevable.

M. Hogarth: Merci. Quel est le nom du donateur, monsieur Davies?

M. Davies: M^{lle} G. H. Copp.

M. Hogarth: Et quelle est son occupation?

M. Davies: Je l'ignore.

[Texte]

Mr. Hogarth: Have there been any other donations of over \$500?

Mr. Davies: In Canada?

Mr. Hogarth: Yes?

Mr. Davies: Not that I can recollect.

Mr. Hogarth: What is the largest European donation in terms of Canadian dollars?

Mr. Davies: Dr. Grzimek's.

Mr. Hogarth: How much was that?

Mr. Davies: The largest would have been about \$12,000.

Mr. Hogarth: Now why would Dr. Grzimek give \$12,000 to your Society? What is his occupation?

Mr. Davies: Well, I do not know whether it came from him personally but it came through him. He is Director of the Frankfurt Zoological Society. He is also, I think, the German President.

Mr. Hogarth: Do you know how that money was raised?

Mr. Davies: No, I do not.

Mr. Hogarth: Do you know what the source of that money was?

Mr. Davies: No.

Mr. Hogarth: There are industries in Europe, the Persian lamb industry in particular, that is in great competition with our seal industry. Is that not so?

Mr. Davies: I had not heard that it was.

Mr. Hogarth: You do not know that the Persian lamb industry is in competition with the seal industry?

Mr. Davies: No, I did not know that.

Mr. Hogarth: You did not know that? Did you not make any enquiries at any time?

Mr. Davies: I did not know that.

Mr. Hogarth: Did you ever make an enquiry as to where this \$12,000 came from?

Mr. Davies: Dr. Grzimek is a person very well known in Germany and is considered to be a man of high ethics. It was sufficient to me that he would do this.

Mr. Hogarth: Did you make any enquiry about it?

Mr. Davies: No, sir.

Mr. Hogarth: Dr. Grzimek was involved in a lawsuit in Germany, is that correct?

[Interprétation]

M. Hogarth: Est-ce qu'il y a eu d'autres dons de plus de \$500?

M. Davies: Au Canada?

M. Hogarth: Oui.

M. Davies: Pour autant que je me souviens, non.

M. Hogarth: Quel est le plus important don que vous avez reçu de l'Europe, en dollars canadiens?

M. Davies: Celui du Dr Grzimek.

M. Hogarth: A combien s'élevait-il?

M. Davies: Le don le plus important s'élevait à \$12,000 environ.

M. Hogarth: Et pourquoi le docteur Grzimek donnerait-il une telle somme à votre Société? Quelle est son occupation?

M. Davies: Je ne sais pas si c'est lui qui a fait ce don personnellement, mais c'est venu directement de lui. Il est directeur de la Société zoologique de Francfort, et je crois qu'il est président de la société en Allemagne aussi.

M. Hogarth: Savez-vous comment les fonds ont été réunis?

M. Davies: Non, je ne le sais pas.

M. Hogarth: Savez-vous d'où viennent ces fonds?

M. Davies: Non, je ne le sais pas.

M. Hogarth: Il y a des industries en Europe, l'industrie d'astrakan persianer en particulier qui est un important concurrent de votre industrie de phoque.

M. Davies: Je ne le savais pas.

M. Hogarth: Vous ne savez pas que l'industrie de l'astrakan persianer fait concurrence à l'industrie du phoque?

M. Davies: Non, je ne le savais pas.

M. Hogarth: Vous ne le saviez pas? Est-ce que vous vous êtes renseigné à ce moment-là?

M. Davies: Je ne le savais pas.

M. Hogarth: Est-ce que vous vous êtes renseigné sur la source de ces \$12,000?

M. Davies: Le docteur Grzimek est une personne que l'on connaît très bien en Allemagne, une personne d'une très haute moralité. Cela me suffisait.

M. Hogarth: Est-ce que vous avez fait des recherches à ce sujet.

M. Davies: Non, monsieur.

M. Hogarth: Le docteur Grzimek a eu des poursuites en Allemagne.

[Text]

Mr. Davies: I believe that is correct.

Mr. Hogarth: Over statements he had made with respect to the seal industry here?

Mr. Davies: I believe statements he had made with respect to the fur industry in Germany was what involved him in the lawsuit.

Mr. Hogarth: But it also involved the seal industry in Canada, did it not?

Mr. Davies: Yes.

Mr. Hogarth: And some of the statements were said by the German fur industry to have been scandalously false. Is that not so?

Mr. Davies: I do not know, sir.

Mr. Hogarth: Well, do you not know anything about the lawsuit that occurred in Germany?

Mr. Davies: Very little.

Mr. Hogarth: Well, what little do you know about it?

Mr. Davies: That there was a lawsuit involving Dr. Grzimek and the fur trade in Germany and there was a settlement that involved him sending out—them sending out as a group four veterinary pathologists to the ice in 1968.

Mr. Hogarth: So the principal part of the lawsuit must have been statements that Dr. Grzimek was making in Germany about the Canadian seal industry?

Mr. Davies: I cannot answer you.

Mr. Hogarth: You do not know.

Mr. Davies: No, I do not know.

Mr. Hogarth: Did you not enquire from him?

Mr. Davies: No.

Mr. Hogarth: I see. Well, you were the one who organized the expedition. Is that not so?

Mr. Davies: Yes, that is correct.

Mr. Hogarth: Did you not enquire from those zoologists and veterinarians that went on that expedition just what this was all about?

Mr. Davies: No.

Mr. Hogarth: You never even asked?

Mr. Davies: I do not remember asking.

Mr. Hogarth: You were not interested?

Mr. Davies: Not particularly.

Mr. Hogarth: I have no more supplementary questions.

[Interpretation]

M. Davies: Je pense que oui.

M. Hogarth: Il s'agit des déclarations qu'il avait faites au sujet de la chasse aux phoques.

M. Davies: Je croyais que c'était surtout au sujet de l'industrie de la fourrure en Allemagne.

M. Hogarth: Mais l'industrie du phoque au Canada y était aussi impliquée.

M. Davies: Oui.

M. Hogarth: L'industrie de la fourrure en Allemagne prétend que des déclarations tout à fait fausses ont été faites. N'est-ce pas vrai?

M. Davies: Je ne le sais pas.

M. Hogarth: Est-ce que vous êtes au courant des poursuites?

M. Davies: Très peu.

M. Hogarth: Qu'est-ce que vous en savez?

M. Davies: Je sais qu'il y a eu des poursuites en Allemagne au sujet du Dr Grzimek et le commerce de fourrure, qu'il y a un règlement, et le docteur Janick a envoyé des pathologistes vétérinaires dans le Nord en 1968.

M. Hogarth: La partie principale des poursuites consistait des déclarations faites par Dr Grzimek sur l'industrie canadienne du phoque.

M. Davies: Je ne saurais vous dire.

M. Hogarth: Vous ne le savez pas?

M. Davies: Non, vraiment pas.

M. Hogarth: Est-ce que vous avez essayé de vous renseigner à ce sujet?

M. Davies: Non.

M. Hogarth: Je vois. Vous étiez pourtant celui qui a organisé l'expédition, n'est-ce pas?

M. Davies: Oui, c'est juste.

M. Hogarth: N'avez-vous pas demandé aux vétérinaires et aux zoologues de quoi il s'agissait exactement.

M. Davies: Non.

M. Hogarth: Vous n'avez même pas demandé.

M. Davies: Je ne m'en souviens pas.

M. Hogarth: Vous ne vous y intéressez pas?

M. Davies: Non, pas particulièrement.

M. Hogarth: Je n'ai pas d'autres questions supplémentaires.

[Texte]

Mr. Lundrigan: I must thank Mr. Hogarth for his supplementary questions. That gave me time to reassess my own situation.

Mr. Crouse: I have a few supplementaries I would like to ask the witness, Mr. Chairman.

Was your film made before or after the opening of the sealing season?

Mr. Davies: After the opening.

Mr. Crouse: In 1967 the New Brunswick SPCA took to the ice and your film followed the hunt. Is this correct—or was the hunt you photographed staged?

Mr. Davies: No, sir, the hunt I photographed was not staged. No, no—hold it: I did not photograph it. I had someone photograph it and I gave him certain instructions. I know him well and I do not believe that he staged any of it.

Mr. Crouse: You said earlier that a telephoto lens was used. Is that correct?

Mr. Davies: Yes. Judging from some of the scenes, yes, a telephoto lens was used.

Mr. Crouse: Well, the expert advice that I have been able to get from a professional who saw the film this morning—he says that in his opinion a telephoto lens was not used, which would lend evidence to the theory that there was some staging.

Mr. Davies: Who was your expert, sir?

Mr. Crouse: Mr. Henri Stadt, who gave evidence earlier this morning.

Mr. Davies: Well, Mr. Chairman, I am prepared to have the film submitted to experts. Possibly a telephoto lens was not used—I do not know.

Mr. Stadt: Can I ask you what is a telephoto lens?

The Chairman: Order, order!

• 1745

Mr. Crouse: Mr. Chairman, the witness has stated that he ordered the film to be made but he cannot tell this Committee whether it was a staged film or whether it was actually scenes taken at the hunt. Is this correct?

Mr. Davies: Well, clearly, you are going to have to get that evidence from the gentleman who filmed it. I could say that not for one moment do I believe that he would have done that.

Mr. Crouse: But this is only your personal opinion?

[Interprétation]

M. Lundrigan: Je dois remercier M. Hogarth de ses questions supplémentaires ce qui m'a donné le temps de réfléchir un petit peu à ce que je voulais dire.

M. Crouse: Je voudrais demander au témoin, est-ce que le film a été réalisé avant ou après l'ouverture de la saison de la chasse aux phoques.

M. Davies: Après l'ouverture.

M. Crouse: En 1967, la société du Nouveau-Brunswick est allée sur place et votre film a été pris par la suite. Est-ce correct, ou est-ce que la chasse que vous avez filmée était reconstituée?

M. Davies: Non, ce n'était pas reconstitué. Ce n'est pas moi qui ai tourné le film, quelqu'un est venu pour réaliser le film et je lui ai donné certaines directives. Je le connais bien et je ne pense pas que ce soit un film reconstitué.

M. Crouse: Vous avez dit auparavant qu'on s'est servi d'un téléobjectif, est-ce correct?

M. Davies: Oui, d'après quelques scènes, on s'est servi d'un téléobjectif.

M. Crouse: L'avis d'un expert que j'ai pu obtenir d'un professionnel qui a vu le film ce matin disait que, selon lui, qu'on ne s'est pas servi d'un téléobjectif. On pourrait présumer alors qu'une partie a quand même été reconstituée.

M. Davies: Qui était cet expert, Monsieur?

M. Crouse: M. Henri Stadt qui était témoin ce matin.

M. Davies: Monsieur le président, je suis prêt à présenter le film à des spécialistes. On n'a probablement pas utilisé un téléobjectif, mais je n'en suis pas sûr.

M. Stadt: Puis-je vous demander ce que c'est un téléobjectif.

Le président: A l'ordre.

M. Crouse: Monsieur le président, le témoin a dit qu'il a donné l'instruction de tourner ce film, mais il ne peut pas préciser devant ce comité s'il s'agit d'un film reconstitué ou certaines scènes ont vraiment été prises à la chasse.

M. Davies: Mais vous allez obtenir ce renseignement du Monsieur qui a tourné le film. Je ne crois pas un instant qu'il l'a fait.

M. Crouse: Mais c'est simplement votre opinion personnelle.

[Text]

Mr. Davies: That is correct.

Mr. Crouse: You have nothing to substantiate that statement before this Committee?

Mr. Davies: I have asked the man in question and he said specifically no, he did not stage the film.

Mr. Crouse: Who narrated your film?

Mr. Davies: I cannot remember his name. It was somebody in Montreal.

Mr. Crouse: How many officers are there in the new Brunswick SPCA, what are their names, and who has the authority to approve of your travel expenditures?

Mr. Davies: Senator S. A. McGrand, President; Mr. Alwy Cameron, Vice-President; Mr. J. E. Hoover, Vice-President; Professor Marion Owen, Treasurer; the directors are Professor William Cragg, Professor Jerry Ward, and Mr. Frederick Beasto. That is all I can remember right now. First of all, the annual meeting approves our opposition to the seal hunt. Then the "Save the Seals" Fund is administered by a board of directors comprising Mr. Alwyn Cameron, Professor Marion Owen, Professor Jerry Ward, Mr. Frederick Beasto and Professor Yves Guerre.

Mr. Crouse: Thank you, Mr. Chairman.

Is the audit that is conducted on your Fund conducted on the animal welfare work you do in New Brunswick or is it also conducted on the "Save the Seals" Fund?

Mr. Davies: They are two separate audits, sir—one for animal welfare work in New Brunswick and one for the "Save the Seals" Fund.

Mr. Crouse: You, therefore, have two separate accounts.

Mr. Davies: Yes, sir.

Mr. Crouse: . . . covering your activities in New Brunswick.

Mr. Davies: Yes, sir.

Mr. Crouse: Does the same company do the audit on both funds?

Mr. Davies: Yes, Thorne, Gunn and Helliwell, I think it is.

Mr. Crouse: What is the major source of your finances? You have already told the Committee that roughly \$8,500 a year is your total income?

Mr. Davies: What is that?

Mr. Crouse: You have stated before this Committee today that you have an income of \$2,500 for animal welfare in New Brunswick

[Interpretation]

M. Davies: C'est juste.

M. Crouse: Vous n'avez rien pour justifier cette opinion devant ce comité.

M. Davies: J'ai demandé à la personne en question et elle m'a dit explicitement qu'il n'a pas reconstitué le film.

M. Crouse: Qui a fait le texte du film?

M. Davies: Je ne me souviens pas de son nom. C'est quelqu'un de Montréal.

M. Crouse: Combien d'employés y a-t-il de la S.P.A. au Nouveau-Brunswick? Quels sont leurs noms et qui donne l'approbation au sujet des frais de voyage?

M. Davies: Le sénateur S. A. McGrand, le président; M. Alwy Cameron, le vice-président; M. J. E. Hoover, le vice-président; le professeur Marian Owen, trésorier; les directeurs sont le professeur William Cragg; le professeur Jerry Ward; M. Frederick Beasco. Je ne me souviens pas d'autres personnes pour le moment. Tout d'abord, la réunion annuelle approuve notre opposition envers la chasse au phoque. Le fonds «Sauver les phoques» est dirigé par le conseil d'administration, dont M. Alwy Cameron, les professeurs Marion Owen, Jerry Ward, M. Frederick Bairstow et le professeur Yves Guerre.

M. Crouse: Merci, monsieur le président.

Est-ce que la vérification comptable de votre fonds va sur le travail que vous faites pour les animaux au Nouveau-Brunswick ou pour la campagne pour les phoques?

M. Davies: Il y a deux vérifications distinctes, il y a un groupe qui travaille pour les animaux au Nouveau-Brunswick et un autre pour les le fonds concernant les phoques.

M. Crouse: Donc vous avez deux comptabilités . . .

M. Davis: Oui, monsieur.

M. Crouse: . . .pour vos activités au Nouveau-Brunswick.

M. Davies: Oui, monsieur.

M. Crouse: Est-ce que c'est la même société qui se charge de la vérification des comptes?

M. Davies: Oui. C'est Thorne, Gunn and Helliwell, je crois.

M. Crouse: Quelle est la source principale de vos finances? Vous avez déjà mentionné que votre revenu s'élève à \$8,500 par année.

M. Davies: Qu'est-ce que vous dites?

M. Crouse: Vous avez dit devant ce comité que votre revenu est de \$2,500 pour les animaux au Nouveau-Brunswick, et \$7,500 pour

[Texte]

and \$7,500 from the "Save the Seals" Fund. As I total it up, that comes to \$10,000 but then you later said your total income was \$8,500. Would you be a little more definitive and tell us exactly whether it is \$8,500 or \$10,000.

Mr. Davies: It is approximately \$8,500.

Mr. Crouse: Approximately \$8,500. There is a little oddity then in your statement.

Mr. Davies: Excuse me, sir but the \$2,500 should not be added to the \$7,500—it should be deducted.

Mr. Crouse: Well, if he \$2,500 is deducted from the \$7,500...

Mr. Davies: Right. Then that is what I get from sealing and then you add the \$2,500, what I get from N.B., to make \$7,500.

Mr. Crouse: And this is your total income?

Mr. Davies: From SPCA, it is \$7,500, yes.

Mr. Crouse: You stated that 36 per cent roughly of skulls examined were intact and seals were skinned alive. Could you tell the Committee just how you arrived at that deduction, and how this could be done?

Mr. Davies: Dr. Elizabeth Simpson arrived at that deduction.

Mr. Crouse: I see. For what purpose did you start on your program to destroy the Canadian sealing industry? Were you motivated at any time by hope of personal gain?

Mr. Davies: No, sir.

Mr. Crouse: You were not. Did you at any time following the making of your film arrange to take flying instruction at Fredericton Aviation in New Brunswick?

Mr. Davies: That is correct, sir. Yes.

Mr. Crouse: Did you make an agreement with Mr. Carl Harvey, chief flying instructor of Fredericton Aviation to the effect that if you supplied \$6,000 to \$7,000 worth of helicopter flying time during the 1967 sealing season that you would receive a free flying course valued at approximately \$650.

Mr. Davies: That is not exactly correct.

Mr. Crouse: Not exactly correct.

Mr. Hogarth: On a supplementary: What was the agreement?

Mr. Davies: May I go on and answer this in detail, sir?

The Chairman: I think they would be interested.

[Interprétation]

la campagne de protection des phoques, ce qui ferait \$10,000, mais vous avez parlé de \$8,500. Pourriez-vous être plus précis et nous dire s'il s'agit de \$8,500 ou de \$10,000.

M. Davies: C'est environ \$8,500.

M. Crouse: Environ \$8,500. Disons qu'il y a un petit écart dans votre déclaration.

M. Davies: Je m'excuse, monsieur, mais il ne faudrait pas ajouter les \$2,500 aux \$7,500, il faudrait les déduire.

M. Crouse: Si les \$2,500 sont déduits des \$7,500...

M. Davies: C'est juste. C'est ce que je reçois du fonds pour la campagne de la protection des phoques, ensuite vous ajouter \$2,500 ce que je reçois du Nouveau-Brunswick pour faire \$7,500.

M. Crouse: C'est votre revenu total.

M. Davies: De la S.P.A. je reçois \$7,500.

M. Crouse: Vous avez dit que 36 p. 100 environ des crânes examinés n'étaient pas endommagés et on a écorché des phoques vifs. Pourriez-vous dire au comité comment vous arrivez à cette déduction.

M. Davies: C'est M^{me} Elizabeth Simpson qui a calculé cette déduction.

M. Crouse: Pourquoi avez-vous lancé cette campagne, afin de détruire l'industrie canadienne du phoque? Est-ce que vous pensez en retirer quelque chose vous-même?

M. Davies: Non monsieur.

M. Crouse: Est-ce que, après votre film vous avez pris des leçons de pilotage à «Fredericton Aviation» au Nouveau-Brunswick.

M. Davies: C'est juste, monsieur. Oui.

M. Crouse: Vous avez convenu avec M. Carl Harvey l'instructeur en chef de pilotage de «Fredericton Aviation» que si vous assuriez un certain nombre d'heures de vol d'une valeur de \$6,000 à \$7,000 au cours de la saison de la chasse aux phoques que vous recevriez un cours gratuit d'une valeur d'environ \$650.

M. Davies: Ce n'est pas tout à fait exact.

M. Crouse: Non, pas tout à fait.

M. Hogarth: Une question supplémentaire. Qu'est-ce que vous avez convenu?

M. Davies: Puis-je continuer et répondre à cette question de façon détaillée.

Le président: Je pense qu'ils seront intéressés.

[Text]

Mr. Crouse: I think so.

Mr. Davies: In 1967 we approached Fredericton Aviation and wanted to rent an aircraft, a helicopter, and we said there was approximately \$7,000 available and as it is the S.P.C.A. would it be possible to get a reduction in this price so that we would get it cheaper. They said, well, no, because the Department of Transport regulations do not permit this. And in the discussion that went on I said that in my work in the province it would be of considerable benefit to the Society if I was able to fly, if I was able, therefore, to move more rapidly around the province, and would the Fredericton Aviation consider teaching me to fly so that we could have this benefit for the SPCA. The outcome of that was that at first they said yes and then they said no.

Mr. Crouse: Mr. Carl Harvey, Mr. Chairman, was replaced as chief flying instructor at Fredericton Aviation Limited in Fredericton by Mr. W. W. Walsh. Did Mr. Walsh confirm at any time the free flying arrangement with you?

Mr. Davies: Yes, they said that they could not do that for a variety of reasons but that they would knock a \$100 off the flying lessons.

• 1750

And then it turned out—I forget just what the reason was—I could not get—there is a government grant of \$100 they give people that fly—and I could not get that grant because I am deaf in one ear or I have poor sight in one eye or something like that.

Mr. Crouse: But is it not true that Mr. G. H. Coffin, the office manager of Fredericton Aviation Ltd., retains two flying accounts at Fredericton, one specifically for yourself and one for the New Brunswick Society for Prevention of Cruelty to Animals?

Mr. Davies: I do not know about that specifically, sir. I should go on and say that while this business of my deafness in one ear or lack of sight in one eye was being determined, I did take some flying hours to the amount, I think, of about \$100, which would have been replaced with this government grant or something along those lines. And I owe Fredericton Aviation \$100.

Mr. Crouse: What flying certificates do you hold at present?

Mr. Davies: None.

Mr. Crouse: You hold no flying certificates?

[Interpretation]

M. Crouse: Je pense que oui.

M. Davies: En 1967, nous sommes entrés en contact avec «Fredericton Aviation» pour louer un hélicoptère. Nous avions environ \$7,000 disponibles. A titre de société protectrice des animaux, est-ce que nous pourrions avoir une réduction pour arriver à un prix meilleur marché. Ils ont dit, non, ce ne serait pas possible parce que le règlement du ministère des Transports ne le permet pas. Et au cours de la discussion j'ai précisé que pour mon travail dans la province il serait très utile pour la société si je pouvais me déplacer par avion ou par hélicoptère. Ceci me permettrait de me déplacer plus rapidement dans la province. Est-ce que «Fredericton Aviation» considérerait de m'apprendre à piloter un avion pour obtenir cet avantage pour la S.P.C.A. D'abord, ils ont accepté et ensuite ils ont refusé.

M. Crouse: M. Carl Harvey le président, fut remplacé comme instructeur en chef de pilotage chez «Fredericton Aviation» à Fredericton par M. W. W. Walsh. Est-ce que M. Walsh a confirmé la possibilité de vous permettre de voyager gratuitement?

M. Davies: Oui, ils ont dit que ce ne serait pas possible pour plusieurs raisons mais qu'ils diminueraient le prix des cours de \$100.

Et ensuite j'oublie la raison qu'ils ont donnée, mais il me semble qu'il y a une bourse de \$100 du gouvernement pour les gens qui apprennent à piloter un avion. On ne m'a pas accordé cette bourse parce que je suis sourd d'une oreille ou parce que j'ai une mauvaise vue.

M. Crouse: N'est-il pas vrai que M. G. H. Coffin, le directeur de *Fredericton Aviation Ltd.*, a deux comptes de vol à Fredericton, un compte pour vous-même et un autre pour la Société protectrice des animaux du Nouveau-Brunswick?

M. Davies: Je ne le sais pas, monsieur. Je dois vous dire que, pendant qu'on établissait cette surdité d'une oreille et cette cécité partielle dans un œil, j'ai fait certains vols pour une valeur, je crois, d'environ \$100, qui auraient été remplacés par cette subvention du gouvernement ou quelque chose du genre. Je dois \$100 à la *Fredericton Aviation*.

M. Crouse: Quels diplômes de pilotage détenez-vous présentement?

M. Davies: Aucun.

M. Crouse: Aucun diplôme de pilotage.

[Texte]

Mr. Davies: No. I cannot afford to learn to fly and I feel that the S.P.C.A. cannot afford to pay for me to be taught to fly.

Mr. Crouse: In other words, you did not take up the \$650 worth of free flying time that you had arranged with the flying club?

Mr. Davies: That is correct, sir.

Mr. Crouse: Were there any other arrangements whereby you may have personally benefited, because this is what we are talking about personal benefits which should or could be added to your personal income as a result of your activities? Were there any other—well, sometimes, we politicians are accused of accepting kick-backs, so I will use that word—where there any other kick-backs to you personally as a result of your activities?

Mr. Davies: In aviation?

Mr. Crouse: With regard to aviation, with regard to the entire field of work in which you are engaged; that is, the destruction of the Canadian sealing industry.

Mr. Davies: Well, first of all, I should say that the business about the flying which we felt was a good thing for the S.P.C.A. did not materialize. There have been no instances where I have taken kick-backs from the aviation people or from anyone else for that matter.

Mr. Crouse: Well, Mr. Chairman, this may be a good thing for the S.P.C.A. It may be a nice thing for me as a Member of Parliament if I could fly. But if I wish to fly I must pay for it. I submit this would have been an extra benefit to the witness.

Mr. Davies: No, sir, I do not agree. It is a nice thing for pilots in Air Canada to learn to fly, but Air Canada trains them to fly. It is a very good thing for the S.P.C.A. to have me as...

• 1755

Mr. Crouse: Mr. Chairman, I must ask that this statement be struck from the records. Air Canada does not train its pilots to fly. A pilot, before he is accepted by Air Canada, must have at least a minimum of 1,000 hours which he must obtain by other methods. So this type of evidence cannot be accepted. I will pass for the moment.

Mr. Lundrigan: Mr. Chairman, may I continue my questioning?

The Chairman: Mr. Lundrigan.

Mr. Lundrigan: Could I ask the witness, Mr. Chairman, how many helicopters they

[Interprétation]

M. Davies: Non, je ne puis pas me permettre d'apprendre à piloter un avion et j'estime que la SPA ne peut pas se permettre de payer ces cours.

M. Crouse: Autrement dit, vous n'avez pas profité des heures de vol d'une valeur de \$650 mis à votre disposition par l'aéroclub?

M. Davies: C'est exact.

M. Crouse: Est-ce qu'il y avait d'autres arrangements dont vous auriez bénéficié personnellement, car c'est ce dont nous parlons, des avantages personnels que vous pourriez ajouter à votre revenu par suite de vos activités? Est-ce que vous avez, comme on nous accuse souvent, en tant que politicien, d'accepter des pots-de-vin, je me servirai donc de ce mot, reçu d'autres pots-de-vin personnellement à la suite de votre activité.

M. Davies: Dans l'aviation?

M. Crouse: L'aviation et tout le champ de votre activité, c'est-à-dire la destruction de l'industrie de la chasse aux phoques au Canada?

M. Davies: Tout d'abord, je dois dire que le projet d'aviation que nous avons cru avantageux pour la SPA ne s'est pas réalisé. Je n'ai jamais reçu de pots-de-vin de la compagnie d'aviation ou d'aucune autre personne.

M. Crouse: C'est peut-être une bonne chose pour la Société. En tant que député, ce serait très utile que je sache piloter un avion. Mais si je veux suivre des cours, je dois les payer moi-même. Je crois qu'il s'agit d'un avantage supplémentaire accordé au témoin.

M. Davies: Je ne suis pas d'accord. C'est une bonne chose pour les pilotes d'Air Canada d'apprendre à piloter, mais c'est Air Canada qui leur donne des cours. C'est une bonne chose pour la SPA que je sache...

M. Crouse: Monsieur le président, je demande qu'on biffe ce commentaire. Air Canada ne forme pas ses pilotes. Avant d'être acceptés par Air Canada, les pilotes doivent avoir inscrit au moins 1,000 heures de vol acquis par d'autres moyens. Donc, ce genre de témoignages n'est pas acceptable. C'est tout pour le moment.

M. Lundrigan: Puis-je poursuivre mes questions?

Le président: Monsieur Lundrigan.

M. Lundrigan: Puis-je demander au témoin combien d'hélicoptères ils ont eus en service

[Text]

had in use during the past season in their efforts to destroy the Canadian seal industry?

Mr. Davies: Actually there were two helicopters that I was associated with: one was rented by *Paris Match* and one was rented by the "Save the Seals" Fund.

Mr. Lundrigan: Do you own your own helicopter?

Mr. Davies: No.

Mr. Lundrigan: Could you tell me the cost to the group you work for for the particular endeavour—the use of the helicopter and aircraft?

Mr. Davies: This helicopter—approximately \$1,400.

Mr. Lundrigan: Do you concur in the total film production of film No. 2 we saw today? Do you concur in it? Do you go along with the film and do you subscribe to it and present it and speak for it and support it?

Mr. Davies: Yes, sir, I would say.

Mr. Lundrigan: You do. Do you go along with the language used in it?

Mr. Davies: Yes, sir.

Mr. Lundrigan: You do. The language about the killers descending on the ice and the massacre, and the very well chosen words? Do you subscribe to this?

Mr. Davies: It is a dramatic event and there is dramatic language used.

Mr. Lundrigan: Yes. Is this your telegram from Halifax—a statement from Halifax—CP release, April 14, 1969:

The Executive Secretary of the New Brunswick Society for the Prevention of Cruelty to Animals, says the annual seal hunt in the Gulf of St. Lawrence 'is a monstrous crime against the men involved'.

Brian Davies said in a Halifax interview yesterday that the men are economically forced to hunt seals.

The statement "a monstrous crime against the men involved"; what do you mean by that statement?

Mr. Davies: I personally think that the seal hunt is brutal and that it is brutalizing to the men involved. I have talked to many commercial hunters, and without exception they have always told me that if there were some

[Interpretation]

pendant la dernière saison dans leurs efforts pour mettre fin à l'industrie de la chasse au phoque au Canada?

M. Davies: Nous en avions deux dont je me suis servi, l'un était loué par *Paris Match* et l'autre par l'organisation de la campagne «*Save the Seals*».

M. Lundrigan: Êtes-vous propriétaire d'un hélicoptère?

M. Davies: Non.

M. Lundrigan: Quel est le coût de l'hélicoptère et des aéronefs au groupe pour lequel vous travaillez?

M. Davies: Environ 1,400 dollars pour l'hélicoptère.

M. Lundrigan: Est-ce que vous êtes d'accord avec tout le deuxième film que nous avons vu aujourd'hui? Est-ce que vous êtes d'accord avec ce film? Est-ce que vous le présentez? Est-ce que vous faites de la publicité en sa faveur et le défendez?

M. Davies: Oui, je dirais que oui.

M. Lundrigan: Est-ce que vous êtes d'accord avec les termes employés dans ce film?

M. Davies: Oui.

M. Lundrigan: Vous êtes d'accord. Le commentaire où l'on parle des tueurs qui arrivent sur la glace, qui massacrent les phoques? Vous êtes d'accord avec les termes bien choisis qu'on y emploie.

M. Davies: C'est un événement très dramatique et on se sert de termes dramatiques.

M. Lundrigan: Oui. Est-ce que ce document est bien votre télégramme, votre déclaration de Halifax, du 14 avril 1969?

Le secrétaire exécutif de la Société protectrice des animaux du Nouveau-Brunswick dit que la chasse aux phoques annuelle dans le Golfe du Saint-Laurent est «un crime honteux envers les hommes qui y participent».

Brian Davies a dit, au cours d'une entrevue à Halifax hier, que les hommes sont économiquement forcés de chasser les phoques.

Votre déclaration est «un crime honteux envers les hommes qui y participent». Qu'est-ce que vous voulez dire par cette déclaration?

M. Davies: J'estime personnellement que la chasse aux phoques est brutale, et qu'elle rend les hommes qui y prennent part brutaux. J'ai parlé aux chasseurs et ils m'ont toujours dit que s'ils avaient une autre façon

[Texte]

other way of making a dollar, they would not be out on the seal hunt.

Mr. Lundrigan: Could I ask the witness what he means by "brutalizing to the men involved". What does this mean?

Mr. Davies: Well, I think that it brutalizes a man, it makes him something different perhaps to you and I when he goes out into this very beautiful area and proceeds to club X number of baby seals. I think that that is a brutalizing experience.

Mr. Lundrigan: I submit, Mr. Chairman, that I have met thousands of these sealers and the fact that we have the witness here today is an example that they are very humane people because nobody has taken any vendetta against the gentleman who is conducting his effort and this kind of statement certainly is one which is open to challenge.

I would like to ask a further question. You indicated, I think, and it was indicated in the film, that the primitive club—I think this was the phrase used—is not effective. Is this true? Do you go along with this feeling that it is not effective?

Mr. Davies: I think that clubbing is extremely primitive and not at all effective.

Mr. Hogarth: A supplementary.

The Chairman: Mr. Hogarth.

Mr. Hogarth: What would you suggest?

Mr. Lundrigan: I am not suggesting anything.

Mr. Hogarth: I am asking the witness. You told us in one of your statements that there was no less cruel way of doing it. What would you suggest as the alternative to the club?

Mr. Davies: To leave them alone.

Mr. Lundrigan: Not to kill them at all?

Mr. Davies: Correct.

Mr. Lundrigan: I see.

The Chairman: Mr. St-Pierre on a supplementary.

Mr. St-Pierre: The seal hunts have been going on now for generations in this area, have they not?

Mr. Davies: Yes, sir.

Mr. St-Pierre: So there has been ample time for the brutalizing influence to have affected these people. Would you explain to us how they have become more brutal than other Canadians in their character?

[Interprétation]

de gagner leur vie, ils ne participeraient pas à la chasse aux phoques.

M. Lundrigan: Qu'est-ce que vous voulez dire par «rendre les hommes qui y participent brutaux»?

M. Davies: Il me semble qu'elle rend l'homme brutal, elle le transforme; il n'est plus le même après s'être rendu dans ces très beaux endroits et qu'il a abattu tant de phoques à coup de bâton. Je crois que c'est une expérience qui rend brutal.

M. Lundrigan: Monsieur le président, j'ai rencontré des milliers de ces chasseurs et j'estime que le fait que le témoin est ici démontre que ce sont des gens très humains, car aucun d'eux ne s'en est pris à ce monsieur qui tente, par tous ses efforts, de les ruiner. Ce genre de déclaration est sûrement sujet à discussion.

Je voudrais poser une autre question. Vous avez dit, je crois, et on le dit dans le film aussi, que le bâton primitif, je crois que c'est le terme que vous avez utilisé, n'est pas efficace. Est-ce vrai? Etes-vous d'accord pour dire qu'il n'est pas efficace?

M. Davies: J'estime que l'emploi d'un bâton est une méthode tout à fait primitive et ne donne pas de bons résultats.

M. Hogarth: Une question complémentaire.

Le président: Monsieur Hogarth.

M. Hogarth: Que proposez-vous?

M. Lundrigan: Je ne propose rien.

M. Hogarth: Je m'adresse au témoin. Vous avez dit à un moment donné qu'il n'y avait pas de façon moins cruelle de procéder. Alors, selon vous, comment devrait-on s'y prendre?

M. Davies: Il vaudrait mieux laisser les phoques tranquilles.

M. Lundrigan: Ne pas les abattre du tout?

M. Davies: Oui.

M. Lundrigan: Je vois.

Le président: Monsieur St-Pierre.

M. St-Pierre: Une question supplémentaire. La chasse au phoque se poursuit depuis des générations dans cette région, n'est-ce pas?

M. Davies: Oui.

M. St-Pierre: Elle a donc eu tout le temps voulu pour rendre ces gens plus brutaux. Pourquoi est-ce que ces gens seraient plus brutaux de caractère que d'autres?

[Text]

Mr. McGrath: I am very interested in that question, Mr. Chairman, because my father went to the ice for many years. Many Newfoundlanders did. I see no evidence of this having affected him.

Mr. Davies: Well, I would just ask you sir to use your own imagination.

Mr. St-Pierre: I am asking you to answer the question, witness.

Mr. Davies: I told you, sir, that I think the seal hunt is brutalizing and I think it must brutalize the men involved to go out there day after day and club to death these animals.

Mr. St-Pierre: There has been ample time for this to have had its effect upon these people—generations—I wish you to explain to me what evidence you see that these men are more brutal in their character.

Mr. Davies: I have no evidence to offer about that.

• 1800

Mr. St-Pierre: No evidence whatever?

Mr. Lundrigan: Mr. Chairman, I will not ask the question as to the effect that these kinds of statements are having on the lives of the men involved, their families, their heritage, their whole way of life. I will not ask that question because I will not get a responsible answer. But I would like to quote from a March 29, 1968 report by Mr. Hughes which was referred to briefly this morning in which he says:

In my opinion, after spending some 24 hours on the ice over several days watching all classes of sealers at work, the seal hunt is now a well-regulated, carefully controlled slaughter operation in which both the methods and techniques are greatly superior to many of the smaller slaughterhouses in Canada today.

And he goes on to say that the use of the club for the...

• 1801

I will quote exactly, Mr. Chairman:

The wooden club appears to be an entirely suitable instrument for stunning and killing, however repulsive this may be to some people.

It is an entirely suitable instrument for stunning and killing. This is supported by a report of a Commission, I imagine, in 1968 and reported by the gentleman from the

[Interpretation]

M. McGrath: Cette question m'intéresse, monsieur le président, car mon père est allé faire la chasse aux phoques pendant bien des années. Beaucoup de Terre-Neuviens ont fait la chasse aux phoques. Je n'ai pas constaté de mauvaise influence sur lui.

M. Davies: Je vous demanderais, monsieur, de vous servir de votre imagination.

M. St-Pierre: Je vous demande de répondre à ma question.

M. Davies: Je vous ai dit qu'à mon avis la chasse aux phoques rend les hommes plus brutaux, et je crois que ce doit être le cas pour ceux qui participent à la chasse et qui vont, jour après jour, tuer ces animaux à coups de bâton.

M. St-Pierre: Suffisamment de temps s'est écoulé pour que cette influence se fasse sentir, des générations. Comment peut-on dire que ces hommes sont plus brutaux que les autres? Quelles preuves pouvez-vous nous donner?

M. Davies: Je n'en ai aucune.

M. St-Pierre: Aucune preuve du tout?

M. Lundrigan: Je ne poserai pas de questions quant à l'effet de ce genre de déclarations sur la vie des chasseurs en cause, sur leurs familles, leurs traditions, leur façon de vivre. Je ne poserai pas de questions car je ne recevrai pas une réponse sérieuse. Mais je voudrais vous citer un rapport du 29 mars 1968 préparé par M. Hughes auquel on a fait allusion ce matin:

A mon avis, après avoir passé 24 heures sur la glace pour surveiller toutes les catégories de chasseurs, la chasse aux phoques est maintenant une forme d'abattage bien réglementée et contrôlée dont les méthodes et les techniques sont bien supérieures à bon nombre de petits abattoirs du Canada.

Et plus loin, on dit dans le même rapport que l'usage d'un bâton pour... Je vais vous citer

exactement ce qu'on dit dans le rapport:

La masse en bois semble convenir parfaitement pour assommer et tuer ces animaux aussi repoussant que cela puisse paraître à certains.

Cet instrument convient pour assommer et tuer ces animaux.

Cela est appuyé par un rapport d'une Commission, j'imagine, en 1968, et rapporté par

[Texte]

University of Munich. Is the witness indicating that all these observations are out of order, and that his observation is absolutely correct and the only one that we should accept?

Mr. Davies: No, absolutely not, sir. I think everyone is entitled to his point of view. I think Mr. Hughes is entitled to his. I hope I am entitled to mine.

Mr. Lundrigan: You were certainly making enough noise in making your point of view.

Mr. Chairman, I would just like to ask one last question. I think it was mentioned in the film this morning, and I would like to see that film again if we are ready, because I might be misquoting what was said, but the witness indicated right here before this Committee that he subscribes to the total film. I asked the question and I repeat the question. Do you concur with the total film production? I mentioned the use of language. I mentioned the other aspects of it. I raised the point of the primitive club. And the film, if I recall correctly, did indicate that 36 per cent of the skulls were left intact and it continued from there to indicate, if not directly then certainly by intimation, that a good percentage of these seals were skinned alive.

We heard earlier today that in his efforts and his recollection he had seen only one seal skinned alive. We do not know who did this, or under what conditions. We have already heard that the people have been paid to do this for film production. So after all his long experience, as only having seen one incident, how can he go along with the statements made in the film? So perhaps if we are ready and could see the film, we might get a reflection. There seems to be a contradiction.

Mr. Davies: My statement that many seals are skinned alive does not come from visual observation. It comes from a veterinary pathologist's evidence from post mortems.

Mr. Hogarth: What pathologist gave evidence that seals were skinned alive in the sense that they were not either deeply unconscious or dead at the time that they were skinned?

Mr. Davies: I do not think anyone has suggested that they were not deeply unconscious. Personally I would suggest that many of them are conscious when they are skinned.

Mr. Hogarth: On what basis do you suggest that?

[Interprétation]

un professeur de l'Université de Munich. Est-ce que le témoin assume que toutes ces observations sont hors d'ordre, et que la sienne est exacte et la seule que nous devrions accepter?

M. Davies: Non, absolument pas, monsieur. Tout le monde a droit à son opinion. Je pense que M. Hughes a droit à son opinion et j'espère que, du même coup, j'ai droit à la mienne.

M. Lundrigan: Vous avez sûrement fait assez de bruit en le faisant valoir.

Monsieur le président, encore une dernière question. Je crois qu'on mentionnait, dans le film de ce matin, je voudrais revoir ce film si nous sommes prêts, pour bien citer ce qui a été dit, mais le témoin disait au Comité qu'il était d'accord avec toute la production. J'ai demandé la question et je la répète. Êtes-vous d'accord avec toute la production? J'ai mentionné de l'utilisation d'une trame sonore, et toutes les autres aspects. J'ai soulevé la question du bâton primitif. Je me souviens bien que le film indiquait que 36 p. 100 des crânes étaient intacts et il continuait en indiquant, si non explicitement, du moins, à mots couverts, qu'une bonne moyenne de ces phoques étaient écorchés vivants.

Nous avons entendu plus tôt aujourd'hui, qu'il se souvient n'avoir vu qu'un phoque écorché vivant. Nous ne savons pas qui l'a fait ni dans quelles conditions. Nous avons entendu dire que quelqu'un avait été payé pour le faire aux fins de la production du film. Ainsi, après toute sa longue expérience, comme de n'avoir vu qu'un incident, comment peut-il approuver ces déclarations faites dans le film? Donc, si nous sommes prêts à revoir le film, nous aurions peut-être matière à réflexion. Il semble y avoir contradiction.

M. Davies: Ma déclaration que bien des phoques étaient écorchés vivants ne vient pas de mon observation, elle vient du témoignage d'un pathologiste-vétérinaire et résulte d'autopsies qu'il a pratiquées.

M. Hogarth: Quel pathologiste a rendu témoignage que les phoques ont été écorchés vifs, en ce sens qu'ils n'étaient ni complètement assommés ni morts au moment où ils étaient écorchés?

M. Davies: Je ne pense pas que quelqu'un ait dit qu'ils n'étaient pas complètement assommés. Personnellement, je dirais qu'un grand nombre de phoques sont conscients lorsqu'ils sont écorchés.

M. Hogarth: Sur quoi vous appuyez-vous pour le dire?

[Text]

Mr. Davies: When you have a man killing a baby seal with a fairly heavy hardwood club, and the regulations require that he strike the seal on the forehead, and where you have many seals with crushed skulls, when I am presented with evidence that some seals do not have crushed skulls, do not have fractures of the skulls, do not have any injury that would indicate they were dead or deeply unconscious prior to being skinned, frankly, sir, I think that they were alive when they were skinned, and that quite clearly some of them are going to be conscious as well.

Mr. Hogarth: Why do you take that view when the eminent pathologists or veterinarians who did these reports will refuse to take it themselves? Why do you jump to that conclusion when these men who are experts in the field will not do that?

Mr. Davies: Could I read you a section from the report we received from Dr. Lars Karstad of the University of Guelph, himself an eminent veterinary pathologist?

Mr. Hogarth: Does he say that they were skinned alive and conscious?

Mr. Davies: No, he does not. He says that
• 1805

the evidence cannot lead him to claim that they were dead or unconscious.

Mr. Hogarth: Some of these pathologists were inconclusive. Is that not so?

Mr. Davies: Inconclusive?

Mr. Hogarth: Yes. They could not say one way or the other.

Mr. Davies: That is correct.

Mr. Hogarth: And yet you have come to the conclusion in your mind that some of these seals must have been conscious. On what basis do you come to a conclusion opposite to what they do?

Mr. Davies: I have not come to a conclusion opposite.

Mr. Hogarth: Oh, yes you have.

Mr. Davies: No, I have not.

Mr. Hogarth: All right. I have no further questions, Mr. Chairman.

Mr. Davies: May I answer that question? He was asking on what I base my conclusion that seals are alive and conscious sometimes when they are skinned.

[Interpretation]

M. Davies: Lorsqu'on a un homme qui tue un petit phoque avec un bâton de bois dur assez lourd et que le règlement l'oblige à frapper le phoque sur le front, lorsqu'il y a un grand nombre de phoques dont le crâne est fracassé, quand on me donne la preuve que certains phoques n'ont pas le crâne fracassé, n'ont pas de fracture du crâne, n'ont pas de blessures qui indiqueraient qu'ils étaient morts ou complètement assommés avant d'être écorchés, franchement, Monsieur, je crois qu'ils étaient vivants quand ils ont été écorchés, et qu'il est assez clair que certains d'entre eux pourront bien être conscients.

M. Hogarth: Pourquoi avez-vous cette opinion quand des vétérinaires et les pathologistes célèbres qui ont rédigé ces rapports refuseront eux-mêmes de conclure dans ce sens? Pourquoi concluez-vous ainsi alors que ces hommes, qui sont des spécialistes dans ce domaine ne le feront pas.

M. Davies: Puis-je vous donner lecture d'une partie du rapport reçu du D^r Lars Karstad, pathologiste-vétérinaire éminent de l'Université de Guelph?

M. Hogarth: Est-ce qu'il dit qu'ils étaient écorchés vifs et conscients?

M. Davies: Non, il ne le dit pas. Il dit que

la preuve ne peut pas l'amener à conclure qu'ils étaient morts ou assommés.

M. Hogarth: Par conséquent certains de ces pathologistes, ne pouvaient se prononcer, n'est-ce pas?

M. Davies: Ne pouvaient se prononcer?

M. Hogarth: Oui, ils ne pouvaient se prononcer ni dans un sens, ni dans un autre.

M. Davies: C'est vrai.

M. Hogarth: Et encore, vous en êtes venu à la conclusion, dans votre esprit que certains de ces phoques devaient être conscients. Sur quoi vous appuyez-vous pour en arriver à une conclusion contraire à la leur?

M. Davies: Non, je n'en suis pas arrivé à une conclusion contraire.

M. Hogarth: Oui, vous l'avez fait.

M. Davies: Non, je ne l'ai pas fait.

M. Hogarth: Très bien. Je n'ai pas d'autres questions à poser, monsieur le président.

M. Davies: Puis-je répondre à cette question? Il demandait sur quoi je me fondais pour déclarer que les phoques étaient vivants et conscients quand ils étaient écorchés.

[Texte]

The Chairman: Yes. Answer it, please.

Mr. Davies: As I told you, when the name of the game is smashing a seal's head with a club, and when there is no evidence that that has been done, when the only evidence presented is that it died from the skinning operation, as a reasonable person, not as a scientist, I have to seriously question the humanity of this. I have to assume, for want of evidence to the better, that some of these animals in fact were conscious when this happened. But there is no evidence to suggest that they were not.

Mr. Hogarth: Of course, even if the knife-thrust was made without the seal being clubbed on the head, the seal is dead within seconds. Is that not so? Within 10 or 15 seconds?

Mr. Davies: Yes, sir, that is correct.

Mr. Hogarth: So any pain that the seal might have suffered would be 10 or 15 seconds long, and that would consist of bleeding to death.

Mr. Davies: Yes, sir.

Mr. McGrath: A supplementary question. If your "Save the Seals" campaign were to be abolished tomorrow, your income would be reduced to \$2,500 a year. Is that correct?

Mr. Davies: More than that.

Mr. McGrath: You said you made \$2,500 a year.

Mr. Davies: From animal welfare work.

Mr. McGrath: The rest was from the "Save the Seals" fund.

Mr. Davies: Correct, sir.

Mr. McGrath: Fine, sir. Thank you.

The Chairman: The meeting is adjourned until 8 o'clock.

[Interprétation]

Le président: Oui, répondez-y, s'il vous plaît.

M. Davies: Comme je vous l'ai dit lorsqu'il s'agit de fracasser le crâne d'un phoque avec un bâton, et qu'il n'y a pas de preuve que cela a été fait, quand la seule preuve présentée est qu'il est mort à la suite de l'écorchement, à titre de personne raisonnable, non à titre scientifique, je dois douter sérieusement de l'humanité de cette action. Je dois supposer, faute de preuve dans le sens contraire, que certains de ces animaux, de fait, étaient conscients lorsque cela s'est produit. Mais il n'y a pas de preuve attestant qu'ils ne l'étaient pas.

M. Hogarth: Naturellement, même si le coup de couteau a été donné sans que le phoque n'ait reçu le coup sur la tête, il meurt dans quelques secondes. N'est-ce pas exact? Dans l'espace de 10 ou 15 secondes?

M. Davies: Oui, monsieur, c'est exact.

M. Hogarth: Ainsi, le phoque peut n'avoir souffert que pendant 10 ou 15 secondes, et cela voudrait dire qu'il est mort au bout de son sang.

M. Davies: Oui, monsieur.

M. McGrath: Une question supplémentaire. Si votre compagnie «Sauvons les phoques» devait être abolie demain, votre revenu serait réduit de \$2,500 par année. Est-ce exact?

M. Davies: De plus que cela.

M. McGrath: Vous avez dit que vous receviez \$2,500 par année.

M. Davies: Du travail que je fais pour le bien-être des animaux.

M. McGrath: Le reste vous venait du fonds de la campagne «Sauvons les phoques».

M. Davies: Exact, Monsieur.

M. McGrath: Très bien, Monsieur, merci.

Le président: La réunion s'ajourne jusqu'à 8h:00.

EVENING SITTING

• 2010

The Chairman: I see a quorum, gentlemen. The projector is ready. Perhaps we should start with the film.

Film is being shown.

• 2020

The Chairman: When we adjourned Mr. Lundrigan was questioning.

Mr. Lundrigan: Mr. Chairman, my question is going to be very brief. When we adjourned

SÉANCE DU SOIR

Le président: Je vois que nous avons quorum, messieurs. Le projecteur est réglé. Nous pourrions commencer par visionner le film.

Projection d'un film.

Le président: Lorsque nous avons ajourné, monsieur Lundrigan avait la parole.

M. Lundrigan: Je poserai des questions très brèves. Lorsque nous avons ajourné, je posais

[Text]

I was asking about the seeming contradiction, to me, between the statement made by our witness earlier this afternoon, that in his experience he had seen only one instance of a seal being skinned alive, and his answer to a question this afternoon when he told the Committee that he completely accepted the film.

I used the phrase, "the total production", which included language, and I raised the point of language and the point of clubbing. Yet the film uses the words "They will be skinned alive". This, granted, is taken out of context but the statement is made that the seals will be skinned alive. This seems to me to be quite a contradiction in view of the fact that the witness has shown the film on at least one occasion—and perhaps quite a number—and has shown willingness to go along with what appears to be a contradiction. The witness' statement indicated that he does not have this experience, yet he accepts it. Perhaps he would like to make a correction. Or perhaps this is the approach being used.

I saw evidence there, for example, of the carcasses of the young being approached by the mother seal, or the cow.

May I ask the witness whether it is common for the adult seal to return to the carcass of the baby seal?

Mr. Davies: I believe it is a common practice.

Mr. Lundrigan: The evidence submitted today by Mr. McGrath and other members was that it is a very uncommon practice for the mother to return; that cadaver-sniffing is very uncommon; and that the mother abandons the young seal with sort of a recklessness. And all the pathologists, or the persons who were investigating, indicated—I think I am correct on this—that the mother seal is an unusual animal in that it does not have the same kind of motherly affinity with its young that many other animals have.

This might be a bit of evidence worth considering by the Committee because it might point out that the film, in actual fact, represents only very isolated incidents and very selective bits of information so as to present a very, very biased picture. I think this should go on record.

Mr. McGrath: Mr. Chairman, by way of a supplementary, may I quote from some of the evidence that we have before us? This is from Bruno Schiefer, D.V.M., Lecturing Professor, Institute of Animal Pathology, University of Munich. He says:

Behaviour of the mother seals and the "white coats": With quite rare exceptions the mother seals are not interested

[Interpretation]

une question relative à la contradiction apparente entre la déclaration faite au début de l'après-midi par le témoin, et son expérience. Il n'aurait vu qu'un seul phoque qui ait été écorché vif et dans une réponse à une question, cet après-midi, il a dit au Comité qu'il avait entièrement accepté le film. J'ai employé l'expression «toute la production» ce qui inclut le langage parlé et j'ai soulevé la question relative à la langue et à l'assomage. Dans le film, on fait emploi des termes «Ils seront écorchés vifs». Il est vrai que ceci est tiré du contexte mais la phrase dit que les phoques seront écorchés vifs. Cela me semble être une contradiction étant donné le fait que le témoin a visionné le film au moins en une occasion et peut-être plusieurs fois, et a semblé faire preuve de contradiction. D'après la déclaration du témoin, il n'a pas eu cette expérience, mais il l'accepte. Celui-ci aimerait peut-être faire une correction ou peut-être est-ce la méthode utilisée. J'ai vu, par exemple, des mères phoques ou les femelles qui s'approchaient des carcasses des jeunes. Puis-je demander au témoin s'il est courant de voir le phoque adulte, de revenir à la carcasse du bébé phoque.

M. Davies: Je crois que c'est le comportement normal du phoque.

M. Lundrigan: D'après le témoignage de monsieur McGrath et d'autres membres, il est assez inhabituel que la mère revienne à son petit; que le reniflage des cadavres est peu courant et que la mère abandonne le petit avec une certaine insouciance. Tous les pathologistes et les personnes qui ont mené des enquêtes ont indiqué, je crois que je suis exact là-dessus, que la mère phoque est un animal exceptionnel, en ce sens qu'elle n'a pas le même instinct maternel que les autres animaux. C'est une preuve que le Comité devrait examiner car elle peut souligner que le film ne représente en réalité, que des cas isolés et choisis pour donner une représentation très partielle. Je crois que cela devrait être consigné au compte rendu.

M. McGrath: Une question complémentaire. Puis-je citer des dépositions dont nous sommes saisis. Monsieur Bruno Schaeffer, vétérinaire et professeur chargé de cours à l'Institut de la pathologie animale à l'Université de Munich décrit:

Le comportement de la mère phoque et des petits: A de rares exceptions près, la mère ne s'intéresse pas à ce qui se

[Texte]

in the events on the ice. It must, therefore, be doubted, in my opinion, that any significant measure of cruelty is inflicted upon the mother seals. The greatest difficulties arise in the evaluation of the reflex action of the "white coats" simulating death.

In the light of that type of evidence, Mr. Davies, how can you, as a sincere person, make the statement you have just made?

Mr. Davies: Mr. Chairman, I have been asked three questions so far. I have not had an opportunity of answering any of them.

I would like to make this quite clear, sir. I do not know what you can do to me if I refuse to go along with this charade of justice—you may put me in jail, if you wish—but I demand the opportunity of answering each question at length before further questions are put to me.

Mr. McGrath: Mr. Chairman, on a point of order. This is not a charade of justice. This is a parliamentary committee carrying out an investigation under a reference by the Parliament of Canada. I do not think the witness has the right to make that type of statement. I ask you to rule accordingly.

The Chairman: I think that when questions are asked he should have the right to answer and then—

● 2025

Mr. McGrath: This is not a charade of justice. That is how the witness has just described the Committee.

The Chairman: That is right; but I would ask the members of the Committee to state their questions and let him have a chance to answer each question as it is asked.

Mr. McGrath: Mr. Chairman, I have just raised a point of order, and I ask you for a ruling. The witness has just described this Committee, which is operating under a reference of Parliament, as a charade of justice. I ask that the witness withdraw that statement.

The Chairman: Well, I think that you are right, I would assert, on that.

Mr. Anderson: On the same point of order, Mr. Chairman, I do think it is important that we space our questions. It is unbelievable to me that a whole series of questions and editorial comment can come at the same time. That is no way to find out the truth or otherwise of this film that Mr. Davies has made, or the truth or otherwise of the statements he has made.

The Chairman: I agree, sir.

[Interprétation]

passé sur les banquises. On doit par conséquent douter qu'on infirme à la mère une quelconque cruauté. Les plus grandes difficultés proviennent de l'évaluation du réflexe des petits qui simulent la mort.

Compte tenu de cette déposition, monsieur Davies, comment pouvez-vous sincèrement faire la déclaration que vous venez de faire?

M. Davies: Monsieur le président, jusqu'à maintenant on m'a posé trois questions. Je n'ai pu répondre à aucune. Je tiens à dire catégoriquement que je ne sais pas ce que vous pouvez me faire si je refuse de participer à cette charade de justice. Vous pouvez me mettre en prison mais qu'on me donne la chance de développer chacune des questions.

M. McGrath: J'invoque le règlement. Ce n'est pas une parodie de la justice, c'est un comité parlementaire, chargé de faire une enquête pour le Parlement fédéral.

Le président: Il me semble qu'après chaque question il devrait avoir le droit de répondre et...

M. McGrath: Ce n'est pas une parodie de la justice. Voilà les termes que le témoin vient d'utiliser de décrire notre comité.

Le président: C'est juste et je demanderais aux membres du Comité de poser les questions et de laisser la chance au témoin de répondre.

M. McGrath: Je viens d'en appeler au règlement, et je vous demande d'y remédier. Le témoin vient de décrire notre comité, qui est autorisé à siéger pour le Parlement, comme une parodie de la justice. Je demande au témoin de retirer cette phrase.

Le président: Je crois que vous avez raison. Je vous appuierais.

M. Anderson: Sur le même appel au règlement. Monsieur le président, il me semble qu'il est important d'espaier les questions. Il me semble incroyable que toute une série de questions et d'éditoriaux soient amenés en même temps. Il n'y a pas moyen de savoir la vérité sur le film de monsieur Davies ou sur ses déclarations.

Le président: J'approuve.

[Text]

Mr. Anderson: I feel very strongly that you should revert to your list of questioners. We should work through the list properly, and questions should be asked one by one.

Mr. Lundrigan: Mr. Chairman, I feel that my integrity as a Committee member has been questioned. I raised the question whether it was common for the adult seal to reappear at the scene of death, if I may choose that phraseology, and the simple answer was no. I then proceeded to give evidence which sort of contradicted the witness. That is the only question which has been asked since the meeting reopened.

However, I will go along with this. I know we should space our questions. I will ask my final one or two simple questions, Mr. Chairman.

Could the witness indicate exactly when the film was made?

Mr. Davies: In 1967.

Mr. Lundrigan: Could you also indicate when the research was done for the report which is quoted in the film, relative to the 36 per cent of the intact skulls?

Mr. Davies: In 1967.

Mr. Lundrigan: Prior to the film, or during, or at about the same time?

Mr. Davies: The veterinary pathologist did her examinations of the carcasses at approximately the same time that the film was made.

Mr. Lundrigan: Was it done specifically for use in the film?

Mr. Davies: No.

Mr. Lundrigan: Thank you.

The Chairman: Mr. Anderson?

Mr. Anderson: Mr. Chairman, I believe you had Mr. Hogarth before me on your list. He did put his hand up before me.

The Chairman: Mr. Hogarth?

Mr. Hogarth: Witness, is the Society for the Prevention of Cruelty to Animals a New Brunswick association?

Mr. Davies: There are many in Canada. The New Brunswick Society for the Prevention of Cruelty to Animals is one.

Mr. Hogarth: I also noticed that your film was connected with the World Federation for the Protection of Animals.

Mr. Davies: That is correct, sir.

Mr. Hogarth: What is the nature of that society?

Mr. Davies: It is a federation of animal welfare societies from various parts of the world.

[Interpretation]

M. Anderson: Réellement, monsieur le président, nous devrions revenir à la liste des interrogateurs, la suivre à la lettre et poser les questions l'une après l'autre.

M. Lundrigan: Mon intégrité à titre de membre du Comité a été mise en doute. J'ai posé la question à savoir si le phoque adulte revient sur la scène de la mort, si je puis employer cette expression, et on m'a dit que non. J'ai ensuite fait part d'observations qui ont en quelque sorte contredit le témoin. C'est la seule question qui a été posée depuis que nous avons repris la séance. Je tiendrais compte toutefois de la décision qui vient d'être prise. Nous devrions espacer les questions, je le sais. Je poserai encore une ou deux questions bien simples. Le témoin peut-il nous dire exactement quand le film a été fait.

M. Davies: En 1967.

M. Lundrigan: Pouvez-vous nous dire quand a été faite la recherche relative au rapport cité dans le film et qui parle des 36 p. 100 des crânes intacts?

M. Davies: En 1967.

M. Lundrigan: Avant ou après ou pendant le tournage?

M. Davies: La pathologiste vétérinaire a examiné les cadavres à peu près à la même époque.

M. Lundrigan: Pour que vous vous en serviez dans le film?

M. Davies: Non.

M. Lundrigan: Merci.

Le président: Monsieur Anderson.

M. Anderson: Monsieur le président, je crois que monsieur Hogarth me précède sur la liste. Il a levé la main avant moi.

Le président: Monsieur Hogarth.

M. Hogarth: Est-ce que la Société protectrice des animaux a une association au Nouveau-Brunswick.

M. Davies: Il y en a plusieurs au Canada et la Société protectrice des animaux du Nouveau-Brunswick en est une.

M. Hogarth: J'ai remarqué que votre film était rattaché à l'Association mondiale protectrice des animaux.

M. Davies: C'est juste.

M. Hogarth: Quel est la nature de cette société?

M. Davies: C'est une fédération de sociétés de protection des animaux dans différents pays.

[Texte]

Mr. Hogarth: And may I take it that this film was made on behalf of the World Federation for the Protection of Animals by the New Brunswick society?

Mr. Davies: Yes, I would say so, sir.

Mr. Hogarth: As I understand it, the Society for the Prevention of Cruelty to Animals in the province I come from is not opposed to the killing of animals. It is opposed to the inhumane killing of them. Is that correct?

Mr. Davies: I do not know what province you come from, sir.

Mr. Hogarth: I come from British Columbia.

Mr. Davies: I do not know. You should know.

Mr. Hogarth: I am asking you.

Mr. Davies: I have no idea.

Mr. Hogarth: Is the Society for the Prevention of Cruelty to Animals of New Brunswick opposed to the killing of animals?

Mr. Davies: Not *per se*.

Mr. Hogarth: No; so it is concerned with the humane killing of animals; is that correct?

Mr. Davies: Not necessarily; I think each issue warrants careful attention and a policy.

Mr. Hogarth: I appreciate that; but can you recall any instance of the Society for the Prevention of Cruelty to Animals in New Brunswick having taken issue with the death of animals, *per se*, for the use of the man?

Mr. Davies: Bullfighting.

Mr. Hogarth: Are there bullfights in New Brunswick?

Mr. Davies: No.

Mr. Hogarth: So the Society for the Prevention of Cruelty to Animals in New Brunswick is concerned with bull fighting?

•2030

Mr. Davies: Yes, in a general sense.

Mr. Hogarth: I see, but particularly with respect to the province.

Mr. Davies: With respect to the province? Let me think. I do not think so, sir—not that I can remember at the moment.

Mr. Hogarth: So the concern of your Association in New Brunswick is with the humane killing of animals for the use of man when it is necessary, is that correct?

[Interprétation]

M. Hogarth: Dois-je comprendre que ce film a été fait au nom de la Fédération mondiale de la protection des animaux par la Société du Nouveau-Brunswick?

M. Davies: Oui, je crois.

M. Hogarth: Si je comprends bien, la Société protectrice des animaux de la province d'où je viens ne s'oppose pas à ce que l'on tue des animaux mais à ce qu'on les abatte de façon cruelle. Est-ce exact?

M. Davies: Je ne sais pas de quelle province vous venez.

M. Hogarth: Je viens de la Colombie-Britannique.

M. Davies: Je ne sais pas, vous devriez le savoir.

M. Hogarth: Je ne le sais pas.

M. Davies: Je n'en ai aucune idée.

M. Hogarth: Est-ce que la Société protectrice des animaux du Nouveau-Brunswick s'y oppose.

M. Davies: Pas en soi.

M. Hogarth: Non, elle s'intéresse à ce qu'on ne tue pas cruellement les animaux, n'est-ce pas?

M. Davies: Pas nécessairement. Je pense que chaque cas fait l'objet d'une attention et de l'adoption d'une ligne de conduite.

M. Hogarth: Je comprends mais y a-t-il des cas dont vous vous souvenez où la Société protectrice des animaux du Nouveau-Brunswick s'est prononcée contre l'abattage des animaux, en tant que tel, pour l'emploi de l'homme.

M. Davies: Les combats de taureaux.

M. Hogarth: Y a-t-il des combats de taureaux au Nouveau-Brunswick?

M. Davies: Non.

M. Hogarth: La Société protectrice des animaux du Nouveau-Brunswick s'occupe de tauromachie?

M. Davies: Oui, en générale.

M. Hogarth: Je vois, mais particulièrement de la province.

M. Davies: De la province? Je ne pense pas, non, pas que je me souviennne, pour l'instant.

M. Hogarth: Votre association au Nouveau-Brunswick s'intéresse aux méthodes humanitaires d'abattage des animaux pour les besoins de l'homme quand c'est nécessaire. Est-ce exact?

[Text]

Mr. Davies: It is the prevention of cruelty to animals.

Mr. Hogarth: Yes. Now you will admit that it is essential to kill animals for the use of man.

Mr. Davies: I will not admit it, personally.

Mr. Hogarth: Do you think that it is not essential, generally, to kill animals for the use of man?

Mr. Davies: I think it is questionable.

Mr. Hogarth: You think that it is not necessary that we have meat to eat?

Mr. Davies: No, I did not say that. I said that I think it is questionable.

Mr. Hogarth: What is questionable about killing animals to have meat to eat?

Mr. Davies: I am not saying that I am, as a person, opposed to the killing of animals to eat.

Mr. Hogarth: Thank you.

Mr. Davies: However, in the context of your remarks I am not at all sure that it is necessary to kill animals for the human population to survive.

Mr. Hogarth: I see. Well, that is a pretty generalized theory, in it not?

Mr. Davies: Yes, of course.

Mr. Hogarth: All right. So I take it that essentially you are against the killing of animals, period.

Mr. Davies: No.

Mr. Hogarth: I see. Then I take it that we can kill animals for the use of man in New Brunswick, as far as you are concerned.

Mr. Davies: What animals?

Mr. Hogarth: Any animal that is necessary for the use of man.

Mr. Davies: I cannot answer that. You have to be more specific, sir.

Mr. Hogarth: All right.

Mr. McGrath: You cannot kill cute little animals. Is that what you mean?

Mr. Davies: Mr. Chairman, would you protect me from those sort of remarks?

Mr. Hogarth: Witness, we can kill beef.

Mr. Davies: If you say so.

[Interpretation]

M. Davies: Elle prévient la cruauté envers les animaux.

M. Hogarth: Oui. Maintenant vous admettez qu'il est essentiel de tuer des animaux pour les besoins de l'homme.

M. Davies: Personnellement, je ne l'admets pas.

M. Hogarth: Vous croyez qu'il n'est pas essentiel généralement de tuer les animaux pour le besoin des hommes.

M. Davies: Je pense que c'est discutable.

M. Hogarth: Vous croyez que ça n'est pas nécessaire d'avoir de la viande à manger.

M. Davies: Non, je n'ai pas dit cela. J'ai dit que je croyais que c'était discutable.

M. Hogarth: Qu'est-ce qui est discutable dans le fait de tuer des animaux pour avoir de la viande à manger?

M. Davies: Je ne veux pas dire que, personnellement, je m'oppose à ce qu'on tue des animaux pour les manger.

M. Hogarth: Merci.

M. Davies: Mais, d'après ce que vous dites, je ne suis pas très sûr qu'il soit nécessaire de tuer les animaux pour que les humains survivent.

M. Hogarth: Je vois. C'est une théorie assez générale n'est-ce pas?

M. Davies: Certainement.

M. Hogarth: D'accord. Je vois que essentiellement vous êtes contre l'abattage des animaux, un point c'est tout.

M. Davies: Non.

M. Hogarth: Je vois. Par conséquent, j'en déduis que, au Nouveau-Brunswick, on peut tuer des animaux pour le besoin des hommes, en autant que vous êtes concerné.

M. Davies: Quels animaux?

M. Hogarth: N'importe quels animaux pour le besoin des hommes.

M. Davies: Je ne peux pas répondre. Il faut que vous soyez plus précis.

M. Hogarth: Très bien.

M. McGrath: On ne peut tuer les jolis petits animaux. C'est ce que vous voulez dire.

M. Davies: Monsieur le président, voulez-vous me protéger contre ce genre de remarques?

M. Hogarth: Monsieur le témoin, on peut tuer une bœuf.

M. Davies: Si vous le dites.

[Texte]

Mr. Hogarth: I am asking you, witness, if in your opinion it is essential in New Brunswick that beef be killed for the use of man?

Mr. Davies: I think with our present level of civilization I would say, yes.

Mr. Hogarth: Yes, thank you. Now, similarly, in the sealing industry and the other fur industries in Canada it is essential to kill animals for the use of man, if the industries are to be justified.

• 2035

Mr. Davies: You used the word "essential"; I question that it is essential.

Mr. Hogarth: Well, assuming that the industries are essential...

Mr. Davies: No, I cannot assume that.

Mr. Hogarth: Well, I ask you to do that for the purpose of my question.

Mr. Davies: I have absolutely no intention of assuming anything of the kind.

Mr. Hogarth: I see. So your point is that it is not essential to kill fur-bearing animals in Canada for the use of man.

Mr. Davies: I have not said that; you have said it.

Mr. Hogarth: I ask you, is that your opinion?

Mr. Davies: I would have to give very serious consideration...

Mr. Hogarth: Well, give some serious consideration.

Mr. Davies: I cannot give it here. It requires more time and more research than I am able to give at this time.

Mr. Hogarth: Then, if your opinion is differed with, it may be in the eyes of the people of Canada essential that we have a fur-bearing industry, and that involves the killing of animals.

Mr. Davies: That may be.

Mr. Hogarth: All right. What authority does the Society for the Protection of Cruelty to Animals in New Brunswick have to establish sanctuaries for animals? And was there a resolution of the board that brought about this determination of yours or the society that they were going to establish a sanctuary for seals?

Mr. Davies: I am not sure. The resolution was in 1966.

Mr. Hogarth: I asked you was there a resolution?

[Interprétation]

M. Hogarth: Je vous demande, monsieur le témoin si, à votre avis, il est essentiel au Nouveau-Brunswick de tuer des bœufs pour les besoins de l'homme?

M. Davies: Au niveau actuel de notre civilisation je dirais oui.

M. Hogarth: Merci. De même, pour les industries de peaux de phoques et autres animaux à fourrure il est essentiel de tuer les animaux pour les besoins de l'homme.

M. Davies: Vous avez dit «essentiel». C'est discutable.

M. Hogarth: A supposer que les industries sont essentielles...

M. Davies: Non, je ne suis pas d'accord.

M. Hogarth: Je vous le demande aux fins de ma question.

M. Davies: Je n'ai absolument pas l'intention de présumer quoi que ce soit.

M. Hogarth: Je vois. Vous dites qu'il n'est pas essentiel de tuer des animaux à fourrure pour les besoins de l'homme.

M. Davies: Je ne l'ai pas dit; c'est vous qui l'avez dit.

M. Hogarth: Je vous le demande, est-ce votre opinion?

M. Davies: Il faudrait que j'y pense sérieusement...

M. Hogarth: Bon, pensez-y sérieusement.

M. Davies: Je ne peux donner de réponse ici. Cela me demanderait plus de temps et plus de recherche que je ne peux y consacrer ici.

M. Hogarth: Alors si on diffère d'opinion avec vous, il se peut qu'aux yeux de la population canadienne, il soit essentiel que nous ayons une industrie des animaux à fourrure, et cela comprend l'abattage des animaux.

M. Davies: Cela se peut.

M. Hogarth: Très bien. Quelle autorité a la Société protectrice des animaux pour établir des réserves d'animaux au Nouveau-Brunswick. De plus, l'idée d'établir ce sanctuaire est-elle venue d'une résolution de la Société.

M. Davies: Je ne suis pas sûr. La résolution était de 1966.

M. Hogarth: Je vous demande s'il y avait une résolution?

[Text]

Mr. Davies: Would you just let me make my point.

Mr. Hogarth: Just answer my question: was there a resolution?

Mr. Davies: I cannot answer your question now.

Mr. Hogarth: You do not know whether there was a resolution or not?

Mr. Davies: If you will allow me to speak, I will explain.

Mr. Hogarth: I am just asking you if there was a resolution?

Mr. Davies: There was a resolution but I cannot remember at this point whether it said it was opposed to the seal hunt and a sanctuary should be declared or whether it said it was opposed to the seal hunt or whether it said a sanctuary should be declared.

Mr. Hogarth: So you do not know whether there was ever a resolution of the SPCA for New Brunswick as to the establishment of a sanctuary which was beyond the scope of that association?

Mr. Davies: I cannot remember right now.

Mr. Hogarth: No. All right. Now, in any event you set out, as I understand it, to suggest that the seals should be protected by a sanctuary. Is that correct?

Mr. Davies: Yes, I would say that is correct, sir.

Mr. Hogarth: And the book that you have described as "Animals" published by the New Brunswick Society for the Prevention of Cruelty to Animals, this is the current book advocating that cause? Is that correct?

Mr. Davies: Yes, sir.

Mr. Hogarth: And when was the last edition of that printed and published?

Mr. Davies: I think last November.

Mr. Hogarth: It was after all the reports—

Mr. Davies: It was last November or December.

Mr. Hogarth: That would be of 1968.

Mr. Davies: That is correct, sir.

Mr. Hogarth: It was after many of the reports that have been referred to here were in your hands. Is that correct?

Mr. Davies: That is correct, sir.

Mr. Hogarth: I beg your pardon.

Mr. Davies: That is correct was my answer.

[Interpretation]

M. Davies: Laissez-moi avancer mon point de vue.

M. Hogarth: Répondez-moi. Y a-t-il eu une résolution?

M. Davies: Je ne puis répondre maintenant.

M. Hogarth: Vous ne savez pas s'il y a eu une résolution?

M. Davies: Si vous me laissez parler, j'expliquerai.

M. Hogarth: Je vous demande simplement s'il y eu une résolution.

M. Davies: Il y a eu une résolution. Je ne me souviens pas si elle s'opposait à la chasse aux phoques ou si elle déclarait qu'un refuge devait être créé, ou les deux.

M. Hogarth: De sorte que vous ne savez pas si la Société protectrice des animaux du Nouveau-Brunswick a adopté une résolution établissant un refuge de phoques, ce qui dépassait sa compétence?

M. Davies: Je ne peux pas répondre à la question, je ne me souviens plus.

M. Hogarth: De toute façon, vous semblez avoir prétendu que les phoques devraient être protégés dans un refuge. Ai-je raison?

M. Davies: Oui, c'est exact.

M. Hogarth: De plus, le livre qui a été publié par la Société protectrice des animaux, intitulé *Animals*, soutient cette déclaration, n'est-ce pas?

M. Davies: C'est exact.

M. Hogarth: Quand a paru la dernière édition de ce livre?

M. Davies: En novembre, je pense.

M. Hogarth: Après tous les rapports...

M. Davies: Je crois que c'est en novembre ou décembre.

M. Hogarth: Donc en 1968.

M. Davies: C'est cela.

M. Hogarth: Après que nombre des rapports mentionnés ici vous soient parvenus, n'est-ce pas?

M. Davies: C'est juste.

M. Hogarth: Pardon?

M. Davies: J'ai dit que c'était exact.

[Texte]

Mr. Hogarth: Now referring to the last page of that there is a picture of a cow seal approaching the entrails of a young seal, whether it is that cow seal's young or not we do not know and it says: "With a love that lasts after death a mother harp seal crawls back to what was once her baby."

In the light of the evidence of the veterinarians and the pathologists that we have before us that is not true, is it?

Mr. Davies: That is not a fact, sir.

Mr. Hogarth: I asked you that is not true in the light of the evidence that you have heard?

Mr. Davies: I am afraid I disagree with you.

Mr. Hogarth: Would you give me some reference in the material that has been referred to today where it can be established that a mother seal has any love for its young after its death?

Mr. Davies: Could you give me any...

Mr. Hogarth: I asked you, witness, would you give me—

Mr. Davies: You asked me if a seal did not have love for her baby after death?

Mr. Hogarth: Would you give me any reference in the material that has been referred to today or in any material that you have from a competent veterinarian or pathologist that the mother seal gives any consideration to its young after death?

Mr. Davies: I am afraid that a mother seal's love is hardly something that a competent veterinarian or pathologist can pass judgment on. I think it is something that human beings, such as myself, can pass judgment on.

Mr. Hogarth: I see, and you are suggesting that veterinarians are not human beings? Were these veterinarians not concerned with the relationship between the mother seal and the young on many occasions throughout these reports?

Mr. Davies: I have no idea.

Mr. Hogarth: Have you not read the report?

Mr. Davies: Yes.

Mr. Hogarth: Did they not say that the mother seal showed a disregard for its protection of the young?

Mr. Davies: Some of them may have.

Mr. Hogarth: Did the reports not almost unanimously say that in no instance did the

[Interprétation]

M. Hogarth: A la dernière page de cette brochure, on voit une photographie de la mère phoque s'approchant des restes d'un jeune phoque; on ne sait pas s'il s'agit de son propre petit, mais la légende dit: «Une mère s'approche des restes de son petit, poussée par l'amour qui va plus loin que la mort.» D'après les dépositions que nous avons des pathologistes et vétérinaires, est-ce vrai?

M. Davies: Ce n'est pas possible.

M. Hogarth: Je vous demande si c'est vrai ou si ce n'est pas vrai, selon les témoignages que vous avez entendus.

M. Davies: Je ne suis pas d'accord avec vous, je crains.

M. Hogarth: Voulez-vous me prouver, selon ce qui a été dit aujourd'hui, que la mère phoque a un amour maternel pour le petit qui est mort.

M. Davies: Donnez-moi...

M. Hogarth: Je vous demande, monsieur...

M. Davies: Vous m'avez demandé si la mère continuait à être attachée à son petit après la mort.

M. Hogarth: Nommez-moi un cas où un vétérinaire ou un pathologiste a affirmé que la mère phoque s'occupe du petit qui est mort, dans ce que vous avez entendu aujourd'hui.

M. Davies: Je ne crois pas qu'un vétérinaire ou un pathologiste compétent puisse se prononcer sur l'amour d'une mère phoque. Ce sont des êtres humains, comme moi-même, qui peuvent juger de cela.

M. Hogarth: Alors vous dites que les vétérinaires ne sont pas des humains? Ne se préoccupaient-ils pas des rapports entre la mère phoque et son petit à plusieurs reprises dans ces rapports.

M. Davies: Je ne sais pas.

M. Hogarth: N'avez-vous pas lu le rapport?

M. Davies: Oui.

M. Hogarth: Est-ce qu'il n'est pas dit que la mère phoque n'a pas tenu compte, ne s'est pas occupé, de protéger son petit?

M. Davies: Certains le disent, peut-être.

M. Hogarth: Est-ce que les rapports ne disent pas presque unanimement qu'en aucun

[Text]

mother seal show any interest whatsoever in its young?

Mr. Davies: What year are you talking about, and what reports?

Mr. Hogarth: I will refer to the report of Dr. Schiefer. He reports on page 3:

During the whole day I observed only once that a mother seal emerged from an airhole and sniffed at a cadaver, obviously one of its own young, repeatedly circling it and then, without showing any perceptible sentiment, disappeared again in the water.

You are aware of those reports, are you not?

Mr. Davies: May I answer that point, sir?

Mr. Hogarth: Yes.

Mr. Davies: The year you are talking about is 1968. In 1968 the seal hunt was late. It started when most of the mothers, I believe, had left the young by the natural process that they go through, therefore you would not expect either the females to protect the young or the females to come back after the young were killed.

Mr. Hogarth: No, but these young are helpless.

Mr. Davies: Now you are asking what happened in 1968 and I told you.

Mr. Hogarth: Does the affection the mother feels for its young change from year to year?

Mr. Davies: The date that the seal hunt opens determines whether or not the females are protective.

Mr. Hogarth: All right. In any observations made in other years by competent veterinarians and zoologists, have you any evidence that there is any change in that situation?

Mr. Davies: I cannot remember the specific reports but I know that in 1967 and in 1966 I saw quite a lot of evidence that seals protect their young—not all by any means—and also that seals go back to the carcasses.

Mr. Hogarth: I ask you, witness, in light of the fact that you are here to give evidence before this Committee—and you have spent an extensive amount of time concerning yourself with reports—do you know of any report from a competent zoologist, veterinarian or pathologist who was on the scene who would testify before this Committee that the mother, with a love that lasts after death, crawls back to see what was once her baby. Is there any evidence of that from competent specialists in this field that you know of?

[Interpretation]

cas la mère phoque n'a manifesté un intérêt quelconque pour son petit.

M. Davies: De quel rapport parlez-vous?

M. Hogarth: Je parle du rapport du docteur Schiefer qui dit à la page 3:

Pendant toute la journée je n'ai vu qu'une seule fois une mère sortir d'un trou et venir renifler le cadavre d'un de ses petits et sans manifester de sentiments disparaître sous l'eau.

Vous êtes au courant de ces rapports?

M. Davies: Puis-je répondre à cela?

M. Hogarth: Oui.

M. Davies: L'année dont vous parlez est 1968. En 1968, la chasse aux phoques était en retard. Elle a commencé quand la plupart des mères avaient abandonné leurs petits, par processus naturel, de sorte qu'il ne fallait pas s'attendre à ce que la mère protège les petits ou revienne une fois qu'ils étaient tués.

M. Hogarth: Non, mais ces jeunes sont sans défense.

M. Davies: Vous m'avez demandé ce qui s'est passé en 1968 et je vous l'ai dit.

M. Hogarth: Est-ce que l'affection de la mère pour ses petits change d'année en année?

M. Davies: La date à laquelle commence la chasse détermine si les femelles sont protectrices ou non.

M. Hogarth: Très bien. D'après tous les rapports des pathologistes et des vétérinaires avez-vous une preuve que la situation ait changé?

M. Davies: Je ne me souviens pas des rapports en particulier, mais en 1967 et même en 1966 j'ai eu beaucoup de preuves que les phoques protègent leurs petits—pas tous non—et également que les phoques reviennent sur les cadavres des petits.

M. Hogarth: Je vous demande, monsieur le témoin, étant donné que vous êtes venu pour témoigner au Comité, que vous avez passé beaucoup de temps à étudier les rapports, connaissez-vous un rapport d'un zoologiste, d'un vétérinaire ou d'un pathologiste qui ont assisté à la scène et qui témoigneraient au Comité que la mère éprouvant un amour qui survit à la mort revienne voir ce qui reste de son bébé? Y a-t-il des preuves de spécialistes compétents dans ce domaine, dont vous êtes au courant?

[Texte]

Mr. Davies: This year, I believe, the gentleman from Zurich mentioned the defensive nature of the female seals. I mentioned myself having seen this and Dr. Ronald of Guelph University said to me, "Ah, you have noticed this too". So apparently, sir, the competent veterinarians, zoologists, pathologists and what have you finally noticed this happening this year.

Mr. Hogarth: So it is your suggestion now that there is evidence available from these persons to this Committee that the mother seal really cares for the young.

Mr. Davies: Some do.

Mr. Hogarth: I beg your pardon?

Mr. Davies: I think that some do.

Mr. Hogarth: You see, you have stated in this document as a matter of fact that there is no doubt...

Mr. Davies: There is no doubt in my mind.

Mr. Hogarth: ...with a love that lasts after death and so on. The fact of the matter is that that is not absolutely true, is it?

Mr. Davies: I believe it is.

Mr. Hogarth: You may believe it is but from the knowledge that you have of the reports of the competent zoologists it is not true, is it?

Mr. Davies: No, not at all.

Mr. Hogarth: I see. And you cannot name any zoologist who would testify to that effect—that the mother seal comes back on the ice and looks to the entrails of its young.

• 2040

Mr. Davies: It happens; I have seen it happen. I do not know what these zoologists saw.

Mr. Hogarth: Why, witness, did you put that in this publication?

Mr. Davies: Because to me it is one of the most distressing aspects of the seal hunt.

Mr. Hogarth: Would you not admit it is an exaggeration?

Mr. Davies: No.

Mr. Hogarth: Is there no exaggeration in that statement at all?

Mr. Davies: I think not.

[Interprétation]

M. Davies: Cette année, je crois, un monsieur de Furich a mentionné la nature défensive de la mère phoque. J'ai dit moi-même l'avoir remarquée et le docteur Ronald de l'université de Guelph m'a dit: «Oh, vous l'avez remarquée aussi». Il semble donc que les vétérinaires, zoologistes et pathologues compétents et autres l'aient finalement remarquée cette année.

M. Hogarth: Vous prétendez qu'il y a eu des témoignages émanant de ces personnes, qui ont témoigné devant le Comité à l'effet que la mère a beaucoup d'affection pour ses petits.

M. Davies: Certaines, oui.

M. Hogarth: Pardon?

M. Davies: Je pense que certaines mères ont de l'affection.

M. Hogarth: Vous voyez, vous avez déclaré dans ce document, en tant que fait, qu'il n'y a aucun doute...

M. Davies: Il n'y a pas de doute dans mon esprit.

M. Hogarth: ... que cette affection se poursuit après la mort, etc., à la vérité ce n'est pas tout à fait vrai, n'est-ce pas?

M. Davies: Je crois que ça l'est.

M. Hogarth: Vous pouvez être de cet avis, mais d'après la connaissance que vous avez des rapports des zoologistes compétents ce n'est pas vrai, pas du tout.

M. Davies: Non, pas du tout.

M. Hogarth: Je vois et vous ne pouvez pas citer un zoologiste qui pourrait témoigner dans ce sens, à savoir que la mère revient sur la glace et regarde les entrailles de ses petits.

M. Davies: Ça arrive. Je l'ai déjà vu. Je ne sais pas ce qu'ont vu les zoologistes.

M. Hogarth: Pourquoi avez-vous inséré cela dans cette publication?

M. Davies: Parce que, pour moi, c'est un des aspects les plus alarmants de la chasse aux phoques.

M. Hogarth: N'admettez-vous pas qu'il y a eu exagération?

M. Davies: Non.

M. Hogarth: Il n'y a aucune exagération dans cette déclaration?

M. Davies: Je ne crois pas.

[Text]

Mr. Hogarth: I want to refer to the report of Dr. Johansson of 1967. He says at page 4:

On the evidence, I think it would be correct to say, that although the maternal instinct is fairly intense in a small percentage of the young cow, the duration of this intense protective attitude is very short, in comparison with other mammals.

Would you agree with that?

Mr. Davies: Not necessarily.

Mr. Hogarth: I see. You quoted Dr. Johansson not too long ago as an authority.

Mr. Davies: No, I did not.

Mr. Hogarth: Are you disagreeing with his authority.

Mr. Davies: I said that he came out to the ice with me.

Mr. Hogarth: You were aware when you set out on this crusade, were you not, that there was a substantial sealing industry in the Gulf of St. Lawrence?

Mr. Davies: I was aware that there was a sealing industry that took perhaps 80,000 or 90,000 young seals a year and perhaps 20,000 adults.

Mr. Hogarth: You were aware that the people of the Magdalen Islands and the people of Newfoundland relied on that industry for some part of their sustenance. Is that not so.

Mr. Davies: That is so, sir.

Mr. Hogarth: I beg your pardon?

Mr. Davies: Yes, that is correct.

Mr. Hogarth: And in order to establish your sanctuary you decided that you would attack the markets of the seal industry. Is that not so?

Mr. Davies: That is correct, sir.

Mr. Hogarth: And this was your method of attacking the seal industry itself.

Mr. Davies: Not in total, but in part.

Mr. Hogarth: And you knew that what you were setting out to do was to lower the market for sealskins by the various and sundry films and propaganda that you set out.

Mr. Davies: In part, sir, yes.

Mr. Hogarth: And that was for the purpose of destroying the hunt, so that it would not be profitable.

Mr. Davies: That is correct, sir.

Mr. Hogarth: You must admit that you used to a certain extent some exaggerations in that regard, did you not?

[Interpretation]

M. Hogarth: Je me réfère au rapport de 1967 du D^r Johansson, où il dit, à la page 4:

On pourrait dire, sans s'abuser, que même si l'instinct maternel est assez fort chez un faible pourcentage de jeunes femelles, cet instinct de protection ne se prolonge pas longtemps, comparative-ment à celui des autres mammifères.

Êtes-vous d'accord avec cela?

M. Davies: Non, pas forcément.

M. Hogarth: Je vois. Vous avez cité le D^r Johansson, il n'y a pas très longtemps, comme étant une autorité en la matière.

M. Davies: Non.

M. Hogarth: Alors, vous ne partagez pas son opinion?

M. Davies: J'ai dit qu'il est venu sur les glaces avec moi.

M. Hogarth: Vous saviez, n'est-ce-pas, lorsque vous avez entrepris cette croisade, qu'il y avait une grande industrie du phoque dans le golfe Saint-Laurent?

M. Davies: Je savais qu'il y avait une industrie du phoque qui prenait peut-être 80,000 ou 90,000 bébés phoques par an, et peut-être 20,000 phoques adultes.

M. Hogarth: Vous saviez que les habitants de Terre-Neuve et des Îles-de-la-Madeleine dépendent en partie de cette industrie pour leur subsistance, n'est-ce pas?

M. Davies: En effet.

M. Hogarth: Pardon?

M. Davies: Oui.

M. Hogarth: Et afin d'établir votre sanctuaire, vous avez décidé d'attaquer les marchés de l'industrie du phoque, n'est-ce pas?

M. Davies: En effet, monsieur.

M. Hogarth: Et c'était là votre méthode d'attaquer l'industrie du phoque elle-même?

M. Davies: Pas totalement, mais en partie.

M. Hogarth: Et vous saviez que vous alliez réduire le marché des peaux de phoques en tournant divers films de propagande.

M. Davies: En partie, monsieur, oui.

M. Hogarth: Et ce, dans le but de détruire la chasse pour qu'elle ne soit plus rentable?

M. Davies: En effet.

M. Hogarth: Vous devez admettre aussi que, dans une certaine mesure, vous avez exagéré à ce sujet, n'est-ce pas?

[Texte]

Mr. Davies: No, sir, I do not admit to that at all.

Mr. Hogarth: Why is it that you said earlier today that the film was inflammatory?

Mr. Davies: I never said it was inflammatory.

Mr. Hogarth: Witness, I quote you as having said earlier that the film was inflammatory.

Mr. Davies: I do not think so.

Mr. Hogarth: You deny that?

Mr. Davies: There have been so many things from so many people being hammered at my head that at this moment I may have said yes to practically anything.

Mr. Hogarth: Yes, but this film was inflammatory, was it not?

Mr. Davies: I think, in fairness to the Committee, that it would be unreasonable to expect an animal welfare society to make a film about the seal hunt that it is dedicated to stop without even unconsciously producing a film that is very detrimental to the seal hunt.

Mr. Hogarth: Before you embarked upon this program of destroying the sealskin markets did you have any correspondence with the Minister of Fisheries about what was going on?

Mr. Davies: I cannot remember now. That is 19...

Mr. Hogarth: I cannot hear you, witness.

Mr. Davies: I cannot remember now. That is quite a while ago.

Mr. Hogarth: It is not that long ago. You must have written to the Minister of Fisheries and protested what was going on.

Mr. Davies: I probably did. I cannot remember.

Mr. Hogarth: Can you give us the date of that correspondence?

Mr. Davies: No.

Mr. Hogarth: Have you your files with you?

Mr. Davies: Some, but I do not have that correspondence.

Mr. Hogarth: Do you know what answer was given to you?

Mr. Davies: I cannot remember.

[Interprétation]

M. Davies: Non monsieur, je ne l'admets pas du tout.

M. Hogarth: Pourquoi alors avez-vous dit plus tôt, aujourd'hui, que le film prêtait à controverse?

M. Davies: Je n'ai jamais dit cela.

M. Hogarth: Je vous cite, car vous avez dit plus tôt que le film prêtait à controverse.

M. Davies: Je ne crois pas.

M. Hogarth: Vous le niez?

M. Davies: On a dit tellement de choses, en si peu de temps, que j'ai pu alors répondre oui à n'importe quelle question.

M. Hogarth: Oui, mais ce film prêtait à controverse, non?

M. Davies: Je crois, en toute justice envers le Comité, qu'il ne serait pas raisonnable de s'attendre qu'une société de protection des animaux réalise un film sur la chasse aux phoques qu'elle veut faire cesser, sans même inconsciemment tourner des scènes qui pourraient faire du tort à l'industrie de la chasse aux phoques.

M. Hogarth: Avant de vous consacrer à la destruction des marchés des peaux de phoques, avez-vous eu des contacts avec le ministère des Pêcheries au sujet de ce qui se passait?

M. Davies: Je ne peux pas me rappeler; il y a...

M. Hogarth: Je ne vous entends pas.

M. Davies: Je ne peux pas me rappeler; il y a assez longtemps de cela.

M. Hogarth: Il n'y a pas si longtemps que cela. Vous avez dû écrire au ministre des Pêcheries pour protester contre ce qui se passait.

M. Davies: Probablement. Je ne m'en souviens pas.

M. Hogarth: Pouvez-vous nous donner la date de cette lettre?

M. Davies: Non.

M. Hogarth: Vous n'avez pas vos dossiers avec vous?

M. Davies: Quelques-uns, mais je n'ai pas cette lettre.

M. Hogarth: Savez-vous quelle réponse on vous a donnée?

M. Davies: Je ne m'en souviens pas.

[Text]

Mr. Hogarth: Your suggestion is that you may have had correspondence, you do not know what was said, you do not know when it was sent and you do not know what the answer was.

Mr. Davies: I would suggest to you, sir that I am under oath and doing my best to give you honest factual answers.

Mr. Hogarth: I am not suggesting you are not, witness. I am just putting it to you that that correspondence, whatever you sent, could not be of too much concern.

Mr. Davies: I would agree, sir, that you are putting it to me.

Mr. Hogarth: So then in the first instance you did not concern yourself with the Minister of Fisheries, as he then was, and endeavour to take steps in that direction to humanize the so-called seal hunt. Is that correct?

Mr. Davies: I do not think that is correct, sir.

Mr. Hogarth: All right. What did you do then?

Mr. Davies: Well, I was out to see the seals in 1965 and following that I presented a brief to the Canadian Federation of Humane Societies, which was presented through them to the Minister of Fisheries, suggesting some improvements—and I am very happy to say that some of these improvements are acted on specifically. I believe that because of this brief the use of .22 calibre rifles was banned, I believe it was made an offence to take live seals from the hunt, I believe that the hunting of hooded seals was stopped, and there may have been something else that I cannot remember.

Mr. Hogarth: But it is so vague in your mind that you cannot tell us specifically what was said or done other than that. Is that correct?

• 2045

Mr. Davies: I think those are important items, sir.

Mr. Hogarth: I cannot hear you, witness.

Mr. Davies: I think that they were important items that I just mentioned to you.

Mr. Hogarth: Nonetheless last fall you published in your document entitled "Animals": Armed with conclusive evidence that the seal hunt was unbelievably cruel and ugly, the New Brunswick SPCA Save the Seals Fund set out to convince Canada and indeed the

[Interpretation]

M. Hogarth: Vous prétendez alors que vous avez pu avoir écrit. Mais vous ne savez pas ce qu'on y a dit, vous ne savez pas quand cette lettre a été écrite, ni quelle a été la réponse?

M. Davies: Je vous rappellerais, monsieur, que je suis sous serment et que je fais de mon mieux pour vous donner des réponses exactes.

M. Hogarth: Je ne prétends pas le contraire, mais je vous dis que cette lettre, quelle qu'elle soit, pourrait ne pas avoir tellement d'intérêt.

M. Davies: Vous me le dites.

M. Hogarth: Ainsi, dans le premier cas, vous ne vous êtes pas occupé du ministre des Pêcheries, d'alors, et vous avez pris des mesures dans ce sens, pour humaniser ce qu'on appelle la chasse aux phoques, n'est-ce pas?

M. Davies: Non, ce n'est pas exact, monsieur.

M. Hogarth: Alors, qu'est-ce que vous avez fait?

M. Davies: J'ai assisté à la chasse aux phoques en 1965, et, par la suite, j'ai soumis un mémoire à la *Canadian Federation of Humane Societies* qui l'a présenté au ministre des Pêcheries en proposant certaines améliorations—et je suis heureux de dire que certaines de ces améliorations ont vu le jour. Je crois qu'à cause de ce mémoire, l'utilisation de fusils de calibre 22 a été abolie, de même que l'écorchage de phoques vivants, et la chasse aux phoques à capuchon; d'autres mesures ont été prises, mais je ne peux pas me les rappeler.

M. Hogarth: Est-ce assez vague dans votre esprit que vous ne vous rappelez pas ce qui a été dit ou fait?

M. Davies: Ce sont les mesures importantes que je viens de vous signaler.

M. Hogarth: Je ne vous entends pas, monsieur.

M. Davies: Ce sont les mesures importantes que je viens de signaler.

M. Hogarth: En automne dernier, cependant, vous avez publié dans votre document intitulé *Animals* le texte suivant: armée de la preuve irréfutable que la chasse aux phoques était incroyablement cruelle et affreuse, la campagne «Save the Seals» de la SPA du

[Texte]

world that this sanctuary should be established. Is that correct?

Mr. Davies: Yes, sir.

Mr. Hogarth: What was the unbelievable cruelty that you were concerned with?

Mr. Davies: Cruelty, sir, is a term that is very subjective. Cruelty to you may not be cruelty to me and vice versa. I can only say in all honesty that to me the seal hunt is unbelievably cruel and ugly.

Mr. Hogarth: In what regard is it unbelievably cruel?

Mr. Davies: That is the way that I feel. I think that it is wrong to go into an area of very great natural beauty—it is just the most fantastically beautiful place I think it is possible to go to—and destroy that.

Mr. Hogarth: Yes, but where is the unbelievable cruelty that we are concerned with?

Mr. Davies: I think it is unbelievably cruel to go amongst these animals and club them to death.

Mr. Hogarth: You have mentioned that there is no better way of dealing with them or dispatching them.

Mr. Davies: That is correct.

Mr. Hogarth: I want to know where the unbelievable cruelty is.

Mr. Davies: Well if you are going to execute a man there is probably no better way than gassing him or hanging him or electrocuting him.

Mr. Hogarth: We are dealing with capital punishment of human beings.

Mr. Davies: I know, but it is all relative, sir.

Mr. Hogarth: I would like to know where this unbelievable cruelty came in.

Mr. Davies: I told you, as far as I am concerned as an individual, with the right of free speech in this country, that the seal hunt is unbelievably cruel.

Mr. Hogarth: And this document was authorized by your Association?

Mr. Davies: Yes.

Mr. Hogarth: Despite the fact that those words were a subjective viewpoint of your own.

Mr. Davies: Oh well now, the document does not pretend to be not subjective in parts.

[Interprétation]

Nouveau-Brunswick est en route pour convaincre le Canada et même le monde que l'on devrait assurer un tel refuge. Est-ce vrai?

M. Davies: Oui, monsieur.

M. Hogarth: Quelle était cette cruauté qui vous préoccupait?

M. Davies: «Cruauté», monsieur est un terme très subjectif. La cruauté à votre égard ne peut peut-être pas être de la cruauté à mon égard, et vice versa, je peux dire en toute honnêteté que la chasse aux phoques est incroyablement cruelle.

M. Hogarth: Qu'est-ce que vous entendez par «incroyablement cruelle»?

M. Davies: C'est ce que je ressens. J'estime qu'on a tort d'aller dans une région d'une si grande beauté naturelle et de la détruire.

M. Hogarth: En quoi consiste-elle, cette «cruauté incroyable»?

M. Davies: Je crois qu'il est incroyablement cruel d'aller et de battre ces bêtes jusqu'à les tuer.

M. Hogarth: Vous avez mentionné qu'il n'existait pas meilleur moyen de s'en débarrasser.

M. Davies: C'est vrai.

M. Hogarth: Je veux savoir où est cette cruauté incroyable.

M. Davies: Si vous allez exécuter un homme, n'y a-t-il peut-être pas de meilleur moyen que de l'asphyxier, le pendre ou l'électrocuter par la chambre à gaz.

M. Hogarth: Il ne s'agit pas d'exécution d'êtres humains, en ce moment.

M. Davies: Je sais, mais tout est relatif.

M. Hogarth: Je voudrais savoir en quoi cette cruauté est «incroyable»?

M. Davies: En tant qu'individu jouissant de la liberté d'expression dans ce pays, je vous ai dit que la chasse aux phoques est incroyablement cruelle.

M. Hogarth: Et ce document a reçu l'autorisation de votre association?

M. Davies: Oui, monsieur.

M. Hogarth: Malgré le fait que vos paroles représentaient votre propre point de vue subjectif.

M. Davies: Le document ne prétend pas ne pas être subjectif en partie.

[Text]

Mr. Hogarth: I beg your pardon.

Mr. Davies: The document does not pretend to be not subjective in parts. Why should it be?

Mr. Hogarth: It is not an objective document, that is for sure.

Mr. Davies: In part it is an objective document.

Mr. Hogarth: I see. The film that you produced was for the purpose of establishing your ultimate aim. Is that not so?

Mr. Davies: It was produced with that view in mind, yes.

Mr. Hogarth: In short, it was not an objective film?

Mr. Davies: I would not say that categorically.

Mr. Hogarth: You think it was objective?

Mr. Davies: In part.

Mr. Hogarth: You think the use of words such as "massacre", "the killers", "barbaric scenes" and so on was objective reporting of what happened?

Mr. Davies: Yes, I think so.

Mr. Hogarth: I see.

Mr. Lundrigan: Mr. Chairman, on a point of order, I have had two or three supplementary questions flash across my mind that I would have liked to relate to the first witness we had. Would it be possible to have both witnesses before us at the same time? The reason I ask is that the first witness we had today indicated certain feelings about the second film, which we are now talking about, and I thought perhaps it might be wise to put ourselves in a position where we could pose a question or two to the second witness as well. Would it be in order to call the second witness in addition to the present witness we now have—aside from the fact that the second witness has a time limit or something that he might want to keep.

The Chairman: If a connection in this regard can be established I do not think there is any objection to recalling the prior witness.

Mr. Anderson: Mr. Chairman, could I speak against that. The first witness spoke to us after we had seen the second film for the first time. We did have an opportunity of asking him questions about the second film. I feel that if we get two witnesses before us we will simply be saying that one is contradicting the other and this already fairly free swinging

[Interpretation]

M. Hogarth: Je n'ai pas bien entendu.

M. Davies: Le document ne prétend pas ne pas être subjectif en partie. Pourquoi devrait-il l'être?

M. Hogarth: Ce n'est pas un document objectif, cela est certain.

M. Davies: Dans une certaine mesure, c'est un document objectif.

M. Hogarth: Je vois. Le film que vous avez produit avait pour objet d'atteindre votre but ultime, n'est-ce pas?

M. Davies: Oui, c'est dans ce but qu'il a été produit, oui.

M. Hogarth: Bref, ce n'était pas un film objectif?

M. Davies: Je ne dirais pas cela catégoriquement.

M. Hogarth: Vous croyez que c'était un film objectif?

M. Davies: Je pense que le film était objectif en partie.

M. Hogarth: Voulez-vous dire que les mots «massacre», «les tueurs», les «scènes barbares», etc. faisaient partie d'un reportage objectif?

M. Davies: Oui, monsieur, je le crois.

M. Hogarth: Je vois.

M. Lundrigan: Monsieur le président, je fais appel au Règlement. J'ai eu deux ou trois questions supplémentaires qui me passent par la tête et je voudrais les poser au premier témoin que nous avons eu. Y a-t-il moyen d'avoir les deux témoins devant nous en même temps? C'est que le premier témoin a laissé entendre un certain point de vue à propos du second film dont nous sommes en train de discuter et j'ai cru utile d'être en mesure de poser une ou deux questions au second témoin aussi.

Pouvez-vous convoquer le second témoin en même temps que le premier, étant donné aussi que le second témoin n'a pas tellement de temps disponible.

Le président: Je ne pense pas qu'on pourrait s'opposer à cette procédure.

M. Anderson: Monsieur le président, permettez-moi de m'opposer à cette motion. Le premier témoin a témoigné après la projection du second film pour la première fois. Nous n'avons pas pu l'interroger au sujet du deuxième film. Si on convoque les deux témoins, cela voudra dire que l'un contredit l'autre et cette session quelque peu houleuse

[Texte]

session of this Committee will degenerate into more and more of a brawl. I am dead against such a suggestion.

Mr. Lundrigan: That is your point of view.

Mr. St. Pierre: Mr. Chairman, I would like to support Mr. Anderson in this. It seems to me much too complex for us to have two witnesses before the committee at one time.

Mr. Whelan: I would suggest, Mr. Chairman, that we continue on as we are.

The Chairman: If it is the wish of the Committee we can.

Mr. Lundrigan: That is fair enough. It was a suggestion and if the Committee does not feel like going along with it, that is fair enough.

The Chairman: Before we continue, does anybody here intend to recall the first witness at a future time? I think it is unfair to keep him here unnecessarily if he is not to be recalled.

• 2050

Mr. Lundrigan: Mr. Chairman, how can we recall the first witness if the Committee is not in favour of the suggestion—or can we just assume that once this witness is finished we then can recall him? Is this the understanding? There have been times when we have had five or six witnesses before the Committee at one time. So what is the situation?

The Chairman: Is there any comment?

Mr. Whelan: I think probably what Mr. Anderson says has a lot of merit—that to have two witnesses of conflicting views before the Committee at the same time would prove troublesome.

The Chairman: I asked if at a future time anybody wanted or intended to recall the first witness.

Mr. Whelan: It is humanly impossible to finish this hearing today, as far as I am concerned. There will be other days and there is not going to be any more seal hunting till next year, next March, and surely we have time to call these witnesses back at a later date.

Mr. Lundrigan: Then, Mr. Chairman, if we are not going to recall the second witness now I do not see any reason for our keeping him here. He certainly should be excused.

The Chairman: That is my point.

Mr. Lundrigan: I will go along with that, if we are not going to recall him now.

[Interprétation]

pourrait dégénérer en bagarre. Je suis catégoriquement contre cette proposition.

M. Lundrigan: C'est votre point de vue.

M. St-Pierre: Monsieur le président. Je tiens à appuyer la proposition de M. Anderson. Il serait trop compliqué de questionner deux témoins en même temps.

M. Whelan: Je propose, monsieur le président, de continuer comme nous le faisons actuellement.

Le président: Si c'est là le désir du Comité, d'accord.

M. Lundrigan: C'est d'accord. Ce n'était qu'une suggestion et si le Comité ne croit pas utile de l'accepter, je m'incline.

Le président: Y a-t-il des députés ici qui ont l'intention de reconvoquer le premier témoin à une date ultérieure? Je pense qu'il est injuste de le retenir ici sans raison, si l'on n'a plus besoin de lui.

M. Lundrigan: Comment peut-on convoquer le premier témoin si le Comité n'est pas en faveur de la proposition? Ou pourrait-on supposer que lorsqu'on a fini d'interroger ce témoin, on pourrait le convoquer une autre fois? Il est arrivé parfois d'avoir cinq ou six témoins en même temps devant le Comité. Par conséquent où en sommes-nous?

Le président: Y a-t-il des commentaires?

M. Whelan: J'ai l'impression que ce que M. Anderson a dit est juste, car le fait d'avoir deux témoins aux opinions contradictoires devant le Comité pourrait causer des difficultés.

Le président: Je demande si quelqu'un a l'intention de convoquer un autre témoin à une date ultérieure?

M. Whelan: A mon avis, il est impossible de terminer cette audience aujourd'hui. Nous avons tout le temps devant nous et, de toute façon, la chasse aux phoques ne reprend que l'année prochaine. Nous avons certainement le temps de reconvoquer les témoins à une autre époque.

M. Lundrigan: Si nous ne pouvons pas reconvoquer le deuxième témoin, monsieur le président, pourquoi le garder ici, on pourrait lui permettre de se retirer.

Le président: C'est ce que je disais.

M. Lundrigan: D'accord.

[Text]

The Chairman: We will continue with the questioning, Mr. Hogarth?

Mr. Hogarth: I would like to continue. Relative to the actual death of the seals, as you said earlier, before the supper hour, the seal, at all events, dies within 15 seconds. Is that not so?

Mr. Davies: I would think so, sir, yes.

Mr. Hogarth: That is true?

Mr. Davies: I do not know that it is true. I think so.

Mr. Hogarth: You are aware of the situation with regard to traplines in Canada, are you?

Mr. Davies: To some extent, sir.

Mr. Hogarth: The animals take much longer to die, do they not? They suffer much longer?

Mr. Davies: I would think they do.

Mr. Hogarth: And this is a relatively brief period of time for an animal to suffer; is that not so?

Mr. Davies: Yes, sir.

Mr. Hogarth: And even if it does suffer, if its skull is not fractured, it is very brief.

Mr. Davies: I would suggest, sir, that you hold a lighted cigarette to your hand for 15 seconds.

Mr. Hogarth: I appreciate that, witness, and that if its skull is not fractured the animal might be caused some pain; but it is a relatively brief period relative to how other animals might die in traplines and in hunting expeditions; is that not so?

Mr. Davies: I do not think there is any relativity involved. If trapping animals is cruel I fail to see how it justifies inflicting torment on seals.

Mr. Hogarth: In any event, there are a very small number of seals that are not killed immediately. Is that not so—or rendered so unconscious that they feel no pain?

Mr. Davies: What would you call a small number?

Mr. Hogarth: You are familiar with the report of Dr. Loliget?

Mr. Davies: Yes.

Mr. Hogarth: He reports that of a total of 361 examined carcasses of skinned white-coats 354 carcasses, 98.1 per cent, showed serious injuries of the skull which, with a likelihood next to certainty, resulted in the

[Interpretation]

Le président: Poursuivons les questions. Monsieur Hogarth.

M. Hogarth: Pour ce qui est de la mort de phoques, les jeunes phoques meurent dans dix ou quinze secondes, de toute façon, n'est-ce pas?

M. Davies: Oui, je le pense, monsieur.

M. Hogarth: Est-ce bien vrai?

M. Davies: Du moins je le pense.

M. Hogarth: Êtes-vous au courant de la situation en ce qui concerne le piégeage au Canada?

M. Davies: Oui, un peu.

M. Hogarth: Est-ce que l'animal ne souffre pas plus longtemps? Est-ce qu'il ne met pas plus de temps à mourir?

M. Davies: Je pense que oui.

M. Hogarth: Cette période est tout de même assez courte n'est-ce pas?

M. Davies: Oui.

M. Hogarth: Même si l'animal souffre, si son crâne n'est pas brisé, c'est très bref.

M. Davies: Essayez donc de vous tenir une cigarette contre la main pour 15 secondes...

M. Hogarth: Oui, je vois ce que vous dites. Si l'animal n'a pas le crâne brisé, il souffre plus. Il s'agit d'une brève période d'agonie par rapport à celle d'autres animaux qui sont pris au piège ou victimes du chasseur. Est-ce exact?

M. Davies: Je crois que cela n'a aucun rapport; si le piégeage des animaux est cruel, je ne vois pas que cela justifie la cruauté de la chasse au phoque.

M. Hogarth: Il y a très peu de phoques qui ne meurent pas immédiatement ou qui ne sont au moins assez inconscients pour ne rien sentir, n'est-ce pas?

M. Davies: Qu'est-ce que vous appelez un petit nombre?

M. Hogarth: Connaissez-vous le rapport du docteur Loliget?

M. Davies: Oui.

M. Hogarth: Il a constaté que, sur 361 phoques examinés, 354, soit 98.1 p. 100, avaient des lésions au crâne, ce qui indique que l'animal était irrémédiablement inconscient ou mort avant qu'on lui arrache la peau, et donc

[Texte]

deep, irreversible unconsciousness, or immediate death, of the animals, which means that the skinning carried out thereafter was not painful to the white-coats. You are familiar with that report?

Mr. Davies: I am familiar with that report, sir.

Mr. Hogarth: You concur with that, do you?

Mr. Davies: Not exactly, no.

Mr. Hogarth: It is pretty well consistent with what has been said by the others. Is that not so?

Mr. Davies: I see here that our veterinary pathologist, Dr. Karstad, indicated that 3.3 per cent of the seals he was party to examining in 1968 did not have lesions which ensured that they would be unconscious when skinning began.

I might point out that in this particular document he went on to say that they may have been unconscious but he had no evidence from *post mortem* examination that they were. Now...

Mr. Hogarth: This 3 per cent ..

Mr. Davies: Let me finish. That was the deal. That point three per cent does not appear, on the surface, to be a very significant figure, but when one considers that in a normal year in the Gulf some eighty thousand baby seals are killed and that the sample taken by a veterinarian is representative of the hunt as a whole, then this simple mathematical figure explodes into what might very well be blinding agony for some 2,640 young mammals.

Mr. Hogarth: Except that that report, which is concurred in by others to a certain extent, leaves the area of doubt we discussed before the supper hour. Is that not so?

Mr. Davies: It leaves no area of doubt in my mind...

Mr. Hogarth: I appreciate how your mind works, witness, but I am just pointing out that the other pathologists would not come to the conclusion that any of these seals had suffered.

Mr. Davies: And they would not come to the conclusion that any of those seals did not suffer.

• 2055

Mr. Hogarth: I appreciate your answer. And Dr. Eugene A. Costello of the West Inspection Division of the Health of Animals Branch of the Department of Agriculture stated that he was on the ice for more than 24

[Interprétation]

qu'il n'avait pas souffert. Connaissez-vous ce rapport?

M. Davies: Oui, je connais ce rapport.

M. Hogarth: Êtes-vous d'accord avec ce rapport?

M. Davies: Pas exactement, non.

M. Hogarth: Mais c'est assez semblable à ce qui a été dit par d'autres, n'est-ce pas?

M. Davies: Je vois que notre pathologiste vétérinaire, le docteur Kavstad, a dit que 3.3 p. 100 des phoques examinés par lui en 1968 n'avaient pas de lésions à l'appui du fait qu'ils étaient inconscients lorsque l'écorchage a commencé. J'ajouterais que, dans ce rapport-ci, le docteur a bien dit qu'ils étaient peut-être inconscients mais il n'en avait aucune preuve d'après l'autopsie.

M. Hogarth: C'est 3 p. 100...

M. Davies: Un instant, laissez-moi finir comme nous avons convenu. A première vue, 3.3 p. 100 ne semble pas un chiffre important, mais lorsqu'on se rend compte que dans une année normale, on tue 80,000 petits phoques dans le golfe, ce chiffre, établi par un vétérinaire, et représentant la chasse globale, signifie une agonie prolongée pour 2,640 jeunes mammifères.

M. Hogarth: Ce rapport, accepté par d'autres dans une certaine mesure, laisse quand même du doute dans le domaine que nous avons étudié avant le dîner, n'est-ce pas?

M. Davies: Il n'y a aucun doute dans mon esprit...

M. Hogarth: Je comprends comment votre esprit fonctionne, monsieur, mais les autres pathologistes n'arriveront pas à la conclusion que ces phoques ont souffert.

M. Davies: Et ils ne concluraient pas que ces phoques n'ont pas souffert non plus.

M. Hogarth: Oui, je comprends. Le docteur Eugène Costello, de la Division de l'inspection des viandes de la Direction de l'hygiène vétérinaire du ministère de l'Agriculture, a déclaré qu'il avait été sur la glace 24 heures

[Text]

hours over a three-day period and saw hundreds of seals killed; and that none of these animals was conscious of pain—that is, they had been rendered insensitive to pain by the blow from the sealer's club before they were flensed. There is an opinion in another report that differs from yours. Is that not so?

Mr. Davies: It would appear to be so, yes.

The Chairman: I must advise you, Mr. Hogarth, that your time has expired, but if it is the wish of the Committee that you continue it is all right.

Mr. Hogarth: If I may, Mr. Chairman, I have just a few more questions.

Witness, when you prepared your document called *Animals* and your film why did you not report the findings of these pathologists and zoologists?

Mr. Davies: To whom?

Mr. Hogarth: To the people to whom you were writing?

Mr. Davies: We reported the findings of the veterinary pathologists that we ourselves took to the hunt...

Mr. Hogarth: But why did you not report all the significant information that was available—and I am particularly referring to the very objective report of Dr. Loliger.

Mr. Davies: Dr. Loliger was not representing the New Brunswick SPCA "Save the Seals" Fund on the ice.

Mr. Hogarth: I appreciate that. But why did you not give an objective report of all the evidence of these pathologists, which was then available to you?

Mr. Davies: I think that the report that we gave from Dr. Karstad was objective and not very much different from the reports of the other people.

Mr. Hogarth: Why did you...

Mr. Davies: I did not think it was necessary to go beyond that.

Mr. Hogarth: Why did you not mention Dr. Loliger's report, that of the seals he examined 98.1 per cent died instantaneously, or were rendered so unconscious as not to feel pain?

Mr. Davies: No particular reason; I preferred to stay with the evidence produced by our own people.

[Interpretation]

sur une période de trois jours et qu'il avait vu tuer plusieurs centaines de phoques. Aucun de ces animaux selon lui n'étaient conscients de la douleur parce qu'ils y étaient rendus insensibles par le coup de bâton avant d'être écorchés. Il y a une opinion dans un autre rapport qui diffère de la vôtre, n'est-ce pas?

M. Davies: Apparemment oui.

Le président: Je dois vous dire que votre temps est écoulé, mais avec la permission du comité vous pouvez continuer.

M. Hogarth: Monsieur le président, je voudrais poser quelques autres questions. Monsieur Davies, lorsque vous avez préparé le document *Animals* et votre film, pourquoi n'avez-vous pas rapporté les conclusions des zoologistes et des pathologistes?

M. Davies: A qui?

M. Hogarth: Aux gens à qui vous écriviez.

M. Davies: J'ai rapporté les conclusions des vétérinaires pathologistes qui nous ont accompagné sur la glace.

M. Hogarth: Pourquoi n'avez-vous pas rapporté tous les renseignements importants qui étaient disponibles? Je pense particulièrement au rapport très objectif du docteur Loliger.

M. Davies: Le docteur Loliger ne représentait pas le *Save the Seals Fund* de la Société protectrice des animaux du Nouveau-Brunswick.

M. Hogarth: Oui, mais pourquoi n'avez-vous pas fait une description objective de toutes les constatations des pathologistes qui vous étaient accessibles?

M. Davies: Le rapport du docteur Karstad a été objectif et n'était pas tellement différent des rapports des autres.

M. Hogarth: Pourquoi avez-vous...

M. Davies: Je n'ai pas jugé utile d'aller plus loin que cela.

M. Hogarth: Pourquoi n'avez-vous pas mentionné le rapport du docteur Loliger, qui disait que 98.1 p. 100 des phoques examinés étaient morts instantanément ou avait été rendus inconscients au point de ne rien sentir?

M. Davies: Je n'avais pas de raison, je préférais m'en tenir aux faits recueillis par mon personnel.

[Texte]

Mr. Hogarth: In the film the narrator says that you hope the viewer of the film will draw the obvious conclusions. What were those that you wanted the viewer to draw?

Mr. Davies: The conclusion, I would think, would be that the seal hunt was aesthetically ugly.

Mr. Hogarth: All killing is aesthetically ugly, is it not?

Mr. Davies: If you say so—and that the seal was contrary, I think, to advancing human ethics.

Mr. Hogarth: I beg your pardon?

Mr. Davies: And that the seal hunt was contrary to advancing human ethics.

Mr. Hogarth: You apply that to the killing of all animals for the uses of man?

Mr. Davies: No, sir.

Mr. Hogarth: I have no further questions.

Mr. Lundrigan: Mr. Chairman, on a supplementary.

Therefore, can we not conclude, as a Committee, having heard the last statement by the witness, that the film was deliberately filmed and presented in order to draw these conclusions; and, therefore, that it was a very, very definitely biased film, fraudulent to the extent that it presented only a small segment of the situation, and a one-sided picture? That was the impression I got that the production was for the purpose of making us draw the obvious conclusions.

Mr. Davies: Are you asking me, or telling me?

Mr. Lundrigan: I am asking you.

Mr. Davies: I think that the film of the seal hunt accurately portrays the seal hunt and emphasizes some of the worst aspects.

Mr. Lundrigan: Mr. Chairman, I want to ask further supplementary relating to a question which has been raised several times this year. The witness has indicated that helicopters were used.

Can you tell me how frequently your society members and yourself and your workers frequented the ice floes this season?

Mr. Davies: Fairly frequently.

Mr. Lundrigan: Almost every day?

Mr. Davies: No.

Mr. Lundrigan: How many helicopters were used at the peak of your activity?

Mr. Davies: By the SPCA?

[Interprétation]

M. Hogarth: Le narrateur du film a dit que l'on pourrait en tirer une conclusion évidente; quelle est-elle?

M. Davies: La conclusion serait, je crois, que la chose au phoque est très peu belle à voir.

M. Hogarth: Cela va pour toute espèce de chasse, ne trouvez-vous pas?

M. Davies: Si vous voulez. On pourrait dire que la chasse au phoque ne fait pas progresser l'éthique humaine.

M. Hogarth: Pardon?

M. Davies: La chasse au phoque ne fait pas progresser l'éthique humaine.

M. Hogarth: Cela va pour toute mise à mort d'un animal pour les besoins de l'homme?

M. Davies: Non, monsieur.

M. Hogarth: Je n'ai plus de questions.

M. Lundrigan: J'ai une question supplémentaire, monsieur le président. En tant que comité, ne pouvons-nous pas conclure, d'après les dernières déclarations du témoin, que le film a été tourné délibérément pour permettre de telles conclusions; donc, c'est certainement un film à parti pris, étant donné qu'il ne présentait vraiment qu'une partie des faits, vue unilatéralement. J'ai eu l'impression que le film voulait nous pousser à des conclusions évidentes.

M. Davies: Est-ce que vous me le dites ou si vous me le demandez?

M. Lundrigan: Je vous le demande.

M. Davies: Je pense que le film montre très exactement ce qui se passe pendant la chasse au phoque et souligne les pires aspects.

M. Lundrigan: Monsieur le président, en ce qui concerne une question qui a été posée plusieurs fois cette année, j'ai une question supplémentaire. On s'est servi d'hélicoptères selon le témoin; or, pouvez-vous me dire combien de fois les membres de votre Société ou vous-même vous êtes rendus sur la glace durant la dernière saison?

M. Davies: Assez souvent.

M. Lundrigan: Tous les jours?

M. Davies: Non.

M. Lundrigan: De combien d'hélicoptères s'est-on servi durant la période d'activité la plus intense?

M. Davies: Par la Société protectrice des animaux?

[Text]

Mr. Lundrigan: By the total group involved with your work, including yourself?

Mr. Davies: Two.

Mr. Lundrigan: Could you give us a brief description of the ice conditions on the Gulf of St. Lawrence this particular season?

Mr. Davies: I would say that they were rather difficult. The ice pans were rather small and jammed very tightly together.

Mr. Lundrigan: Was it scattered ice? Was it the normal, heavy ice that you find on the Gulf?

Mr. Davies: No; it was not the normal, heavy ice, but I would not say that it was scattered ice.

Mr. Lundrigan: Would you also indicate to me whether young seals can survive when they pup in the water?

Mr. Davies: I do not think there has been any scientific work done on this.

Mr. Lundrigan: You cannot tell me whether the young seal will survive when it pups in the water.

● 2100

Mr. Davies: No, I do not think. . .

Mr. Lundrigan: Have you ever seen a drowned seal—a dead seal floating in the water?

Mr. Davies: No.

Mr. Lundrigan: You have never seen a dead seal floating in the water?

Mr. Davies: No. In the 1964 film I saw several dead seals in the water. They had been shot.

Mr. Lundrigan: But you have never seen a dead seal in the water?

Mr. Davies: No; I do not remember that, sir.

Mr. Lundrigan: Did any of the authorities of the Department of Fisheries approach you, or any of your group, this year about the excessive use of helicopters on the seal hunt?

Mr. Davies: I do not think so, sir.

Mr. Lundrigan: You do not think so?

Mr. Davies: I do not recollect that.

Mr. Lundrigan: You do not recollect any instances of Department officials approaching your group and indicating that perhaps their excessive use might have been responsible for seals taking prematurely to the water?

Mr. Davies: This year?

Mr. Lundrigan: Yes:

[Interpretation]

M. Lundrigan: Par vous et le reste du groupe.

M. Davies: Deux hélicoptères.

M. Lundrigan: Pouvez-vous nous décrire les conditions de la glace dans le golfe du Saint-Laurent en cette saison particulière?

M. Davies: Les conditions étaient difficiles, les étendues de glace étaient assez réduites, étaient très serrées les unes contre les autres.

M. Lundrigan: La glace était-elle dispersée; était-ce la glace lourde que l'on voit habituellement sur le golfe?

M. Davies: Non, ce n'était pas la glace habituelle, mais elle n'était pas dispersée non plus.

M. Lundrigan: Pourriez-vous nous dire ce qui arrive aux jeunes phoques quand ils sautent à l'eau?

M. Davies: On n'a pas fait d'étude scientifique à ce sujet.

M. Lundrigan: Vous ne pouvez pas me dire ce qui arrive aux jeunes phoques dans l'eau?

M. Davies: Non, je ne pense pas que. . .

M. Lundrigan: Avez-vous déjà vu des phoques morts flottant dans l'eau?

M. Davies: Non.

M. Lundrigan: Vous n'en avez jamais vu?

M. Davies: Dans le film de 1964, on a vu des phoques morts dans la mer: ils avaient été abattus à coups de fusil.

M. Lundrigan: Mais vous n'avez jamais vu de phoques morts dans l'eau?

M. Davies: Je ne m'en souviens pas.

M. Lundrigan: Des officiers du ministère des Pêcheries ne vous ont-ils pas contacté, vous ou quelqu'un de votre groupe, au sujet de l'emploi excessif d'hélicoptères sur les lieux de la chasse au phoque?

M. Davies: Je ne crois pas, monsieur.

M. Lundrigan: Vous ne croyez pas.

M. Davies: Je ne m'en souviens pas.

M. Lundrigan: Vous ne vous rappelez pas que des représentants du ministère vous aient abordé et vous aient averti que l'emploi excessif des hélicoptères force les jeunes phoques à sauter à l'eau?

M. Davies: Cette année?

M. Lundrigan: Oui.

[Texte]

Mr. Davies: I do not remember that, sir.

Mr. Lundrigan: Was there ever an occasion on which Department of Fisheries officials approached you and indicated that excessive use of helicopters was undesirable?

Mr. Davies: Yes.

Mr. Lundrigan: Could you tell the Committee why the excessive use of helicopters might be undesirable? What was the contention of the Department of Fisheries officials?

Mr. Davies: I do not know about the word "excessive". I do not think the word "excessive" was actually used. The Department of Fisheries inspector felt that the use of helicopters in the area of the breeding seals might scare some females into the water and that they might have their babies in the water and that the babies might drown.

Mr. Lundrigan: Have you ever seen young seals, just prior to giving birth, take to the water, which is the expression used?

Mr. Davies: I really would not know whether they were just prior to giving birth.

Mr. Lundrigan: What was your reaction to the Department of Fisheries official who made this observation?

Mr. Davies: I do not remember now, but I will give you my reaction now, if you like, to this particular line of questioning.

Mr. Lundrigan: Did you react to the Department of Fisheries official? Did you indicate that you were in agreement? Were you in disagreement with him, or did you get out of there as quickly as you could; or did you proceed with your activities?

Mr. Davies: I do not really remember, sir, to tell you the truth.

Mr. Lundrigan: You do not really remember?

Mr. Hogarth: Mr. Chairman, on a point of order, this witness has an exceptionally bad memory in certain instances and I think that before we close with his testimony that he should be asked to go to the necessary files and bring the correspondence that he had with the Minister of Fisheries of that day—because I am most anxious to see it, and I think Mr. Lundrigan is too. Every time he is asked about this he becomes exceptionally vague. There was some correspondence, I would like to see it, I think it should be before us, and I would like to cross-examine him on the correspondence when it is produced.

[Interprétation]

M. Davies: Non, monsieur, je ne m'en souviens pas.

M. Lundrigan: Ils ne vous ont jamais dit de restreindre l'emploi d'hélicoptères, en aucune occasion?

M. Davies: Oui.

M. Lundrigan: Pourriez-vous nous dire pour quelles raisons il faudrait restreindre l'emploi d'hélicoptères? Que disaient les agents du ministère à ce sujet?

M. Davies: Je ne pense pas qu'on ait dit «emploi excessif»; l'inspecteur estimait qu'en se servant d'hélicoptères dans cette zone on pouvait pousser les mères vers l'eau où ils mettraient bas, les jeunes se noyant.

M. Lundrigan: Est-ce que vous avez vu de jeunes phoques qui venaient de naître se jeter tout de suite à l'eau?

M. Davies: Je ne pourrais savoir s'ils venaient tout juste de naître.

M. Lundrigan: Quelle a été la réaction que vous avez eue devant les observations des représentants du ministère?

M. Davies: Je ne me souviens pas, mais je puis vous dire ce que je pense de vos questions.

M. Lundrigan: Comment avez-vous réagi devant les commentaires du représentant du ministère? Étiez-vous d'accord? Étiez-vous opposé, ou avez-vous quitté l'endroit le plus vite possible ou avez-vous encore poursuivi votre activité?

M. Davies: A la vérité, je ne me souviens vraiment pas.

M. Lundrigan: Vous ne vous souvenez pas vraiment?

M. Hogarth: J'en appelle au règlement. Le témoin a une très mauvaise mémoire dans certains cas et je crois qu'avant la fin de l'interrogatoire, nous devrions lui demander d'aller voir au dossier et de rapporter les lettres qu'il a échangées avec le ministre des Pêcheries. J'aimerais beaucoup voir ce dossier tout comme monsieur Lundrigan, je crois. Chaque fois qu'on lui pose des questions à ce sujet, il devient très vague, je crois que le Comité devrait en être saisi et j'aimerais l'interroger contradictoirement lorsqu'il aura déposé ces lettres.

[Text]

Mr. Lundrigan: I will accept that, Mr. Chairman, because the witness is obviously aware of the reason for my line of questions which I have not developed yet and I cannot proceed because there are no answers forthcoming.

Mr. Davies: I am prepared to give you answers right now.

Mr. Lundrigan: Well, this is one of the questions: What was your reaction to the officials who approached you? You said you could not remember.

Mr. Davies: This was a spoken communication on the ice, I really cannot remember.

Mr. Lundrigan: Therefore, Mr. Chairman. . .

Mr. Davies: I have nothing—I have no letters on file.

Mr. Hogarth: Well, witness, you told me a few moments ago that you are sure you wrote, or you believed you wrote and you believed you had correspondence but you could not remember when or what it said.

Mr. Davies: Not about this particular item, sir.

Mr. Hogarth: Well is it a fact that you did not have any correspondence with the Minister of Fisheries?

Mr. Davies: No, I never said that.

Mr. Hogarth: Well then you might have some?

Mr. Davies: But not about this particular item.

Mr. Hogarth: Did you not write about the seal hunt and the cruelty you saw and the terrible conditions?

Mr. Davies: This gentleman was dealing with helicopters over-flying the herds.

Mr. Hogarth: I am asking you about the correspondence.

Mr. Davies: This is a new question now.

Mr. Hogarth: I am asking about the correspondence you referred to when I was examining you. Was there or was there not correspondence with the Minister of Fisheries about this matter before you embarked on your crusade?

Mr. Davies: About what matter?

Mr. Hogarth: About the killing of the seals.

Mr. Davies: Very likely there was.

[Interpretation]

M. Lundrigan: Je suis d'accord, monsieur le président, parce que le témoin est très conscient des raisons de mes questions et je ne peux continuer parce qu'il n'y donne aucune réponse.

M. Davies: Je suis prêt à vous répondre.

M. Lundrigan: Voici. Quelle réaction avez-vous eue face aux hauts fonctionnaires qui sont entrés en contact avec vous. Vous avez dit que vous ne pouviez vous rappeler.

M. Davies: Cette communication a été faite de vive voix sur la glace. Je ne peux vraiment pas me rappeler.

M. Lundrigan: Par conséquent, monsieur le président. . .

M. Davies: Je n'ai rien. Aucune lettre ne figure au dossier.

M. Hogarth: Mais il y a quelques instants, vous avez dit que vous étiez certain d'avoir écrit ou que vous croyez avoir écrit, et que vous croyez avoir reçu des lettres, mais que vous ne vous rappeliez pas à quel moment et ce qui a été dit.

M. Davies: Pas au sujet de cette question.

M. Hogarth: Est-il vrai que vous n'avez jamais échangé de lettres avec le ministre des Pêcheries?

M. Davies: Je n'ai jamais rien dit de tel.

M. Hogarth: Vous pourriez en avoir quelques. . .

M. Davies: Mais pas au sujet de cette question.

M. Hogarth: N'avez-vous pas écrit au sujet de la chasse au phoque, la cruauté dont vous avez été témoin et des conditions terribles?

M. Davies: Cette personne traitait des hélicoptères qui survolaient les bandes.

M. Hogarth: Je vous pose des questions au sujet de l'échange de lettres.

M. Davies: C'est une nouvelle question.

M. Hogarth: Je pense à l'échange de lettres dont vous avez parlé lorsque je vous ai interrogé. Y a-t-il eu, oui ou non, échange de lettres avec le ministre des Pêcheries au sujet de la question pour laquelle vous êtes parti en croisade?

M. Davies: A quel sujet?

M. Hogarth: Au sujet de l'abattage des phoques.

M. Davies: Il y en a eu très probablement.

[Texte]

Mr. Hogarth: All right. Now that is the correspondence I want, Mr. Chairman.

Mr. Lundrigan: Mr. Chaiman, could I just continue. The witness indicated that an official had approached him on the use of helicopters on the ice and he could not be sure of the reaction he gave the particular official at the time. I remember the question being raised earlier in the year and the Minister of Fisheries indicated, on being questioned in the House, that there was considerable evidence to the effect that young seals were drowning. I posed the question whether young seals were being drowned as a result of excessive use of helicopters and the Minister indicated that there was some evidence to this effect and that his Department was looking into it.

Now I am further of the impression that officials of the Department contacted the witness and indicated very strongly their objection to the fact that helicopters were being used—maybe even before the hunt began, from what I can learn—at a time when the young seals were only a day or two old

• 2105

and many had not been born. I understand that the witness indicated in his capacity then, not as a witness, his vehemence and was not at all satisfied with this kind of approach. Is it a fact or not that young seals were being forced to take to the water or were being driven into the water and that seals were pupping in the water as a result of the use of helicopters—or are the departmental officials just trying to needle you in your capacity for no real reason?

Mr. Davies: If I may answer this question now, Mr. Chairman, at some length, I think in fairness to the Committee you should realize that there are a large number of ships, skidoos, government helicopters, seal hunting helicopters, men on foot swinging clubs—and all of this disturbs the seals. There is no doubt but that the SPCA helicopters also disturbed the seals. They are a small part of the total and I would suggest to you gentlemen, in so far as the disturbing of the seals is of concern to you, that perhaps the seals had better be disturbed by our helicopters rather than by the ships and helicopters of the sealing companies and by—I should not say the Department of Fisheries because I think they do an excellent job of trying to enforce the regulations. But keep the thing in perspective.

Mr. Lundrigan: Mr. Chairman, I am not going to accept this kind of advice. I did not

[Interprétation]

M. Hogarth: Très bien. C'est précisément les lettres que je voudrais, monsieur le président.

M. Lundrigan: Monsieur le président, puis-je continuer? Le témoin a dit qu'un fonctionnaire du ministère lui avait parlé de l'emploi des hélicoptères sur la glace et qu'il ne pouvait pas être certain de la réponse qu'il lui avait donnée alors. Je me rappelle de la question qui a été soulevée au début de l'année et le ministre des Pêcheries a répondu à la Chambre que tout semble indiquer que les jeunes phoques se noyaient. J'ai demandé s'ils se noyaient parce qu'on faisait un usage excessif des hélicoptères. Le Ministre a répondu que certains faits semblaient le prouver et que le ministère faisait des recherches à ce sujet.

J'ai l'impression que des fonctionnaires du ministère se sont mis en rapport avec le témoin et lui ont fourni leurs objections, à l'effet que des hélicoptères étaient utilisés peut-être même avant que la chasse ne commence, d'après ce que j'ai su, au moment où les phoques n'avaient qu'un jour ou deux ou n'étaient même pas encore nés. Je crois que le témoin a montré sa véhémence, à titre personnel et non de témoin et qu'il n'était pas du tout satisfait de cette manière de procéder. Est-ce vrai que les jeunes phoques étaient forcés de se rendre à la mer, s'y étaient jetés et que les mères mettaient bas dans l'eau par suite de l'utilisation des hélicoptères qui survolaient ou est-ce que les fonctionnaires essaient de diminuer votre capacité sans raison aucune?

M. Davies: Permettez que je réponde, monsieur le président. En toute justice envers le Comité, vous devez vous rendre compte qu'il y a beaucoup de bateaux, de moto-neige, d'hélicoptères du gouvernement, les hélicoptères pour la chasse au phoque, les hommes qui frappent du bâton; tout cela effraie les phoques. Il ne fait aucun doute que les hélicoptères de la SPA les ont aussi effrayés. Ce n'est qu'une petite partie et, pour votre gouverne, peut-être les phoques ont été plus dérangés par vos hélicoptères que par les navires et hélicoptères des compagnies de chasse au phoque. Je ne devrais pas dire par le ministère des Pêcheries, parce que je considère qu'ils font un travail excellent en essayant d'appliquer les règlements. Mais gardez cette réponse dans son contexte.

M. Lundrigan: Je n'accepte pas ce genre de conseils. Je ne demande pas conseil au témoin

[Text]

ask for advice from the witness, although he seems very capable of giving it. I want to ask him a further question on this very same point. Does he, with his very broad knowledge of the situation and in-depth study of it, know for a fact or at all that young seals have been known to have drowned this particular season.

Mr. Davies: I do not know for a fact.

Mr. Lundrigan: Therefore would you say that perhaps the statement by the Minister and the statement by departmental officials is perhaps out of order?

Mr. Davies: I would not care—First of all I have the greatest respect for the Minister.

Mr. Lundrigan: We are all aware of your great respect for the Minister.

Mr. Davies: Would you let me finish my answer.
